THE IRON AGE.

36147

VOL. XLIII.

JANUARY-JUNE, 1889.

NEW YORK:
DAVID WILLIAMS,
66 & 68 DUANE STREET.

INDEX.

Abbe's patent sash-cord fastener.....	491	Automatic trimming-machine.....	769	Buchanan magnetic rolls.....	153
Acme gas furnace.....	417	Automatic vertical tapping-machine....	425	Buffalo exhaust fan.....	431
Adjustable clamping-block.....	689	Avery flush bevel protractor.....	108	Buffalo glass oil-cup.....	354
Adjustable transverse indicator.....	646	Awl, Combined belt-punch and.....	569	Buffalo railroad complaint.....	852
Adjustable window-screen.....	108	Axle setter and straightener, Little		Buffalo steam-pump, Water cylinder of	768
Adjustment for dies, New.....	492	Giant.....	830	Bug-boo of trusts.....	233
Adt butt machinery.....	355	Baggage protector.....	222	Building and loan associations.....	621
Advance of steel.....	588	Baile's improved damper.....	70	Building heavy boilers on the Pacific...	870
Aerated fuel.....	920	Balanced compound engine.....	615	Burgett safety whiffletree-hook.....	182
Africa, Commercial development of...	517	Ball bearings.....	272, 401	Business courtesy.....	929
Agitation, Freight.....	522, 594	Band-saw guide, Non-friction.....	867	Business methods.....	449
Agreement, Railroad presidents'.....	189, 320	Bank punch, Loudon.....	262	Butchers' tools, New.....	491
Aiken hydraulic crane and tongs....	806	Bankrupt law, National.....	354	Butt machinery, Adt.....	355
Air compressor for the Calumet and		Bankruptcy law, General.....	350	Butter packages, Cooley's patent wood-	
Hecla mines, Leavitt.....	657	Barb fence, Sjöström.....	110	jacket.....	793
Air-valve gear, New mechanical.....	688	Barb wire, New.....	644	Butterworth on the despotism of labor..	154
Air-valve, Pierce.....	394	Barn-door latch.....	686		
Alderney milk-strainer pail.....	454	Barnum, William H.....	705	Cable yoke contracts.....	740
Alligator shear, New.....	391	Bartlett's bit-box.....	416	Cables in the Berlin central stations, Lead	616
Allis, Edward P.....	591	Basic steel for horseshoe nails.....	622	Cables, Long wire-rope.....	293
Aluminium alloys.....	660	Bath-tub, Combination folding.....	717	California lawn-sprinkler.....	570
Aluminium process, New.....	615	Battle-ships, Cruisers and.....	768	Cambria Iron and Steel Works.....	843
Amalgamated Association.....	982	Battle-ships, Designs for new English..	732	Cambria Iron Works, Restoration of....	906
Amendments to the Interstate law....	399	Beams, Cut in.....	55	Can factory, Norton Bros.'.....	581
American and Russian petroleum ex-		Bean's compact home.....	830	Can for gasoline, Safety.....	644
ports in 1888.....	440	Bearings, Ball.....	272, 401	Canada, Commercial relations with....	362
American engineers in England.....	958	Behavior of tempered steel.....	85	Canada, Manufacturing in.....	966
American Exchange Bank losses.....	928	Belknap, W. B.....	430	Canada, Trusts in.....	701
American Iron and Steel Association,		Beil's eave-trough hanger.....	380	Canada's iron production in 1888.....	913
Report of the.....	627	Belt-punch and awl, Combined.....	569	Canada tariff changes in the direction	
American nations, Trade with.....	666	Belt strapping-machine.....	917	of free materials.....	884
American ocean steam traffic.....	852	Benedict's reservoir mucilage brush....	35	Canal, Nicaragua.....	320
American patents on foreign inventions	155	Bessemer steel.....	743	Canal, St. Mary's.....	155
American pig-iron warrants.....	167, 203	Bevel-protractor, Avery flush.....	108	Canal, Dominion.....	192
American screen-wire holder.....	493	Bicycle padlocks.....	302	Canceled contracts, Commissions on...	556
American Society of Mechanical En-		Bids for more cruisers.....	920	Canton lawn-rake.....	220
gineers.....	629	Bills of lading, Fraudulent.....	849	Cap, Rake.....	494
American tin-plates.....	475	Birmingham market.....	172, 251, 289, 367, 407, 559, 597, 713	Car-wheel chuck.....	543
American Tinned Plate Association....	884	131	Car-wheel press, Hydrostatic.....	427
American water-gauge reflector.....	942	Bisulphide of carbon motors.....	416	Car-wheels, Machined.....	505
American wheat competition, Russian		Bit box, Bartlett's.....	354	Car-wheels, Pig-iron for.....	766
and.....	363	Blackband iron.....	680	Carbonates, Roasting Hudson River....	159
America's oil supply.....	593	Blackmore pipe-hanger.....	584	Care of steam-boilers.....	214
Ancient monopolies.....	663	Blast-furnace shells, Protection of....	584	Carload-lot cases.....	237
Angle-bars, Drifting test for.....	729	Blast-furnaces, Condition of.....	57, 95, 243, 373, 400, 554, 590, 703, 740, 890	Carnegie on the condition of trade,	
Angle gate-valve for radiators.....	455	Blast-furnaces in Allegheny County....	232	Andrew.....	807
Annual Report of the Inspector of		Block plane, Knuckle-joint.....	608	Carnegie to his workmen, Andrew.....	510
Mines of Kentucky.....	12	Blowing-engine, Ashland.....	691	Carpenter Steel Company.....	811
Annual Report State Geologist of New		Boat, New torpedo.....	505	Cast-iron, Cupolas for remelting.....	878
Jersey.....	11	Boiler, Durant Kane automatic engine		Cast-iron, Drilling.....	630
Anthony Wayne washers, New.....	415	and.....	46	Cast-iron pipe, Joints in.....	861
Anthraxite furnaces, Early.....	348	Boiler-makers' meeting.....	464, 547, 619	Cast-pipe trust.....	11
Anti-friction elevator-door hanger....	868	Boiler, New naphtha.....	271	Caster, Clark's new imp'd anti-friction..	72
Apple, corer and slicer, Dandy.....	718	Boiler, Petroleum-burning.....	766	Casting small ingots.....	514
Apprentice, Reading Iron Works.....	814	Boiler, Sectional.....	621	Catasauqua scrap-iron frauds.....	657
Apprentice's stores, New.....	429	Boilers, Care of steam.....	214	Celery-earther, Planet, Jr.....	220
Apprentice system in Germany.....	653	Boilers for the new cruiser, Testing...	727	Center-drilling and countersinking ma-	
Apprentices in German machine shops.	883	Boilers on the Pacific, Building heavy..	870	chine, Double.....	358
Appropriation, Naval.....	161	Borcherdt's fishing-tackle box.....	262	Chain and nail trades.....	929
Aqueduct, New Croton.....	802	Boring lathe, Turning and.....	79	Chain cables, Increased strength of....	668
Arbitration at the Conference of Amer-		Boring test, Simple.....	936	Chain-making in England.....	646
ican Nations.....	774	Boss flush T-bevel.....	570	Challenge universal cutter, reamer and	
Armor-clads, Our new.....	351	Boulton apparatus for compressing steel.	730	face-grinder.....	276
Armor for ships.....	654	Brass-mill, New.....	431	Champion corn-husker.....	35
Armor, Snow.....	418	Brass scrap, German silver and.....	363	Chandler & Washburn's quick-action	
Armored coast-defense vessel.....	542	Brazilian and Argentine finances.....	589	vises.....	454
Arsenal, New Watervliet.....	235	Brazilian trade.....	587	Charcoal pig, La Grange.....	357
Art of speculation.....	944	Brewsters, Direct process at.....	119	Charcoal pig, Lake Superior.....	555
Artesian wells, Electricity and.....	44	Brewsters, Ore concentration at.....	124	Charleston, Cruiser.....	765
Ashland blowing engine.....	691	Bridging New York waters.....	131		
Aspirating ventilator.....	533	Bridges, Great destruction of.....	853	Chattanooga market.....	25, 62, 99, 136, 173, 210, 251, 289, 330, 369, 406, 445, 482, 523, 560, 633, 671, 709, 746, 783, 818, 857, 895, 931, 971
Assets of the Reading Iron Works....	768	Bridges, Wrecked Pennsylvania.....	929	Check-rein terret.....	904
Association, Amalgamated.....	982	British iron and metal markets, 27, 63,		Chic screen-door check.....	981
Association, Stove.....	169, 255	102, 139, 176, 213, 254, 292, 333, 371,		Chicago, Demurrage charges at.....	207
Associations, Building and loan.....	621	409, 448, 485, 525, 562, 600, 637, 673,		Chicago, Electrical exhibit at.....	275
Atlantic racer, Another.....	773	713, 750, 784, 822, 860, 899, 935, 973		Chicago Horseshoe Company.....	301
Audubon monument.....	96	British statistics for 1888.....	965	Chicago in 1888, Trade of.....	739
Austin Mfg. Company, F. C.....	468	Brock patent chain pipe-wrenches.....	379	Chicago incased screen-door hinge....	791
Automatic four-slide wire-forming		Boilers for gasoline stoves.....	869	Chicago iron trade.....	44
machine.....	352	Bronze, Deoxidized.....	442	Chicago market.....	22, 60, 97, 134, 171, 208, 249, 288, 334, 368, 404, 443, 460, 520, 557, 595, 631, 669, 707, 744, 780, 817, 855, 894, 930, 968
Automatic injector.....	845	Bronze, Recent tests of Tobin.....	563		
Automatic link snatch-block.....	36	Bruno's Island bridge.....	378		
Automatic roll-paper holder and cutter.	719	Brush-hook, New.....	568		
Automatic steam hammer.....	432				
Automatic testing machine.....	956				

Chicago tunnel.....	199	Connellsville coke trade.....	629	Die-stock, Ratchet.....	232	
Chili, Late developments in.....	927	Connellsville coke wages.....	47	Dies, New adjustment for.....	492	
Chilled slide-valves.....	914	Contracts, Cable yoke.....	740	Dipper-handles, Former for.....	869	
Chimney-draft improver, Steam-jet.....	583	Contracts, Southern pig-iron.....	96	Direct process at Brewsters.....	119	
Chimney stacks, Iron.....	546	Cook's spirit level.....	755	Distributor, Coal.....	158	
China, First railway in.....	220	Cooley's patent wood jacket butter pack-ages.....	793	Diverting trade channels.....	926	
China, Trade with.....	655	Cooper Union.....	953	Divider No. 85. New combination.....	340	
China's trade in metals, petroleum, &c.....	852	Copper.....	20	Dixon's metal-workers' crayon.....	791	
Chinese wall.....	352	Copper conferences, Paris.....	704	Domestic export to Australia, Our in-creased.....	965	
Chuck, Car-wheel.....	543	Copper, Crisis in.....	439	Dominion canals.....	192	
Cincinnati market. 24, 61, 100, 135, 173, 211, 250, 289, 330, 368, 406, 444, 483, 522, 560, 597, 633, 671, 708, 746, 818, 856, 896, 933, 970.....	970	Copper mining, Cost of.....	665	Door-bell, Fauber's electric-action.....	214	
Cigar-cutter, Walker's improved.....	831	Copper production in the United States in 1888.....	244	Door-check, Howard.....	221	
City of Paris, New Inman steamer.....	578	Copper situation.....	398, 478, 775	Door-opener, Ostrander.....	302	
Clamping-block, Adjustable.....	689	Copper, Ten-cent.....	554	Double-case World type-writer.....	943	
Clark's new improved anti-friction caster.....	72	Corea, Foreign intrigues in.....	86	Double center-drilling and countersink-ing machine.....	358	
Cleat former, Enright's.....	868	Cork-extractor, Empire automatic.....	718	Double-column milling-machine.....	500	
Cleveland market. 24, 61, 99, 135, 173, 210, 250, 289, 329, 367, 405, 444, 483, 523, 559, 597, 632, 671, 709, 745, 782, 819, 857, 896, 933, 970.....	970	Cork-extractor, Fifth avenue.....	719	Drawback system.....	321	
Cleveland weighing bureau.....	317	Cork-extractor, Greely's.....	792	Drawbacks on exports.....	281, 325	
Cliffs' seat spring.....	681	Cork-puller, Enterprise.....	418	Drawbridge, Electrically-operated.....	580	
Clock trade.....	793	Cork-puller, Sullivan.....	493	Drawing-press, New.....	8	
Coal and iron mines of the Tennessee Valley.....	7	Cork-puller, Walker's improved.....	793	Drawings, Leavitt.....	728	
Coal-burning locomotives, Early.....	46	Corkscrew, Giant self-extracting.....	531	Drifting test for steel angle-bars.....	729	
Coal, Comparative freight rates on.....	242	Corkscrews, Frary's.....	569	Drill, Portable power.....	159	
Coal consumption of heating furnaces.....	95	Corkscrews, New.....	680	Drilling cast-iron.....	630	
Coal-cutter, Electric.....	418	Corn-busker, Champion.....	35	Drilling-machine and link miller and slotter.....	316	
Coal distributor.....	158	Correspondence. 21, 95, 131, 206, 282, 324, 401, 441, 447, 556, 703, 740, 891.....	891	Drilling-machine, Radial.....	236	
Coal elevators, Portable.....	953	Cost formulas.....	56	Driving-ropes, Square.....	756	
Coal-lift, Portable.....	801	Cost of copper mining.....	665	Drop-forged tack claw.....	221	
Coal market. 26, 62, 100, 138, 174, 212, 253, 291, 332, 370, 446, 525, 562, 599, 636, 673, 712, 749, 784, 821, 859, 898, 935, 973.....	973	Cost of electric street lighting.....	9	Drop-press, New power-forging.....	315	
Coal, Natural gas vs. coke and.....	578	Cost of storage-battery power.....	689	Drummer, Hardware.....	867	
Coal for elevated railroad locomotives, Pea.....	43	Cotton-ties, Rates on.....	737	Dry-dock, Newport News.....	694	
Coal supply, Great Britain's.....	350	Courtesy, Business.....	929	Duplex hydraulic pressure pump.....	199	
Coals of the Pacific Coast.....	471	Crane and tongs, Aiken hydraulic.....	806	Duplex pump, Miller.....	193	
Coast-defense vessel, Armored.....	542	Crane, Power traveling.....	877	Durant-Kane automatic engine and boiler.....	46	
Coat and hat hook, New.....	980	Cream City grater and slicer.....	831	Dust-guard axle, Wentworth.....	340	
Coat and hat hooks, Crown wire.....	681	Cresson, New works of Geo. V.....	122	Duty on crop ends.....	193, 692	
Coffee biggins, Muhammed.....	262	Crimper and extractor.....	222	Duty on fancy nails.....	463	
Coffee-pot, Hotel.....	717	Crisis in copper.....	439	Duty on lead in silver ore.....	18	
Coffee pots, Wooden handle for tea and.....	36	Cronk's garden mattock.....	260	Duty on Mexican lead-silver ores.....	701	
Coinage and recoinage in China, Silver.....	702	Crop ends, Duty on.....	193, 692	Duty on steel-rail crop ends.....	240	
Coins of the world, Standard.....	12	Crop ends, Duty on steel-rail.....	240			
Coke and coal, Natural gas vs.....	578	Crops, Farm value of.....	237	Early anthracite furnaces.....	348	
Coke for fuel, Advantages of.....	132	Cross-tie, Standard metal.....	84	Eastern and Western pig-iron prices.....	738	
Coke manufacture, Economics of.....	692	Croton Aqueduct, New.....	802	Eave-trough hanger, Bell's.....	380	
Coke strike threatened.....	207	Crown wire coat and hat hooks.....	681	Eave-trough hanger, Economy.....	70	
Coke trade.....	414, 502, 767	Cruiser Charles.....	765	Eclipse man-head.....	395	
Coke trade, Connellsville.....	629	Cruiser, Testing boilers for the new.....	727	Economics of coke manufacture.....	692	
Coke trust, Flat-Top.....	45	Cruisers and battle-ships.....	768	Economy eave-trough hanger.....	70	
Coke wages.....	236	Cruisers, Bids for more.....	920	Economy of heating-furnaces.....	206	
Coke wages, Connellsville.....	47	Cruisers, Experimental stage of high-speed.....	881	Economy of heating-furnaces, Fuel.....	282	
Colby improved wringer.....	904, 942	Crumb pan, Electric dust and.....	417	Economy of recuperative gas heating-furnaces.....	401	
Cold-rolling process, Screw-making by the.....	3	Cupolas for remelting cast-iron.....	878	Edison exhibit at Paris.....	393	
Collieries and iron mines between Chattanooga and Birmingham.....	194	Curling iron, Gem.....	222	Elman & Simon wood mantels.....	493	
Collins furnace.....	357	Current hardware prices. 37, 73, 111, 147, 183, 223, 263, 303, 341, 381, 419, 457, 495, 535, 571, 609, 647, 683, 721, 759, 795, 833, 871, 907, 945, 983.....	983	Eiffel Tower.....	541	
Coloring of the steam jet.....	889	Current metal prices. 42, 78, 116, 152, 188, 238, 268, 308, 346, 386, 424, 462, 500, 540, 576, 614, 652, 688, 726, 764, 800, 838, 876, 912, 950, 988.....	988	Eiffel Tower, Elevators in the.....	839	
Colt's new double-action self-cocking revolver.....	109	Curry-comb, Flexible-back.....	417	Eight-jaw chuck, Sweetland.....	353	
Columbia Mills, Situation at the.....	567	Cut in beams.....	55	Elastic-hoop wooden ware.....	719	
Combination divider No. 85, New.....	340	Cut in Western freight rates.....	847	Elastic rail-supporter.....	547	
Combination folding bath-tub.....	717	Cut-nail trade, Western.....	476	Elbow, New sheet metal.....	756	
Combination friction drill.....	357	Cut nails, Wire nails vs.....	846	Electric-action door-bell, Fauber's.....	214	
Combination hay-carrier.....	756	Cut-off, Improved rain-water.....	36	Electric coal-cutter.....	418	
Combination tool, New.....	491	Cutter, reamer and face-grinder, Challenge universal.....	276	Electric dust and crumb pan.....	417	
Combined punch and shear.....	50	Cutting and threading machine, Pipe.....	951	Electric plant at Salem, Mass., New.....	882	
Combined sheeting and lath.....	755	Cyclone tank lift-pump.....	792	Electric street lighting, Cost of.....	9	
Combined ventilating and check-rail window-sash lock.....	416	Cylinder-boring machine.....	467	Electric street railways.....	518	
Commerce, State and interstate.....	204	Daisy lemon and lime squeezer.....	607	Electric welding.....	428	
Commercial development of Africa.....	517	Daisy wagon-wrench.....	71	Electric welding of metals.....	121	
Commercial law, Important ruling in.....	378	Damages for insufficient car service.....	693	Electrical exhibit at Chicago.....	275	
Commercial relations with Canada.....	362	Damper, Baile's improved.....	70	Electrical manufactory, Model.....	854	
Commercial travelers 30 years ago.....	681	Dandy apple parer, corer and slicer.....	718	Electrical rules, tables and formulae.....	944	
Commissions on canceled contracts.....	556	Dauber, Rubber.....	791	Electrically-operated drawbridge.....	580	
Common-Sense jack.....	71	Dauber, Sunshine.....	302	Electricity and artesian wells.....	44	
Compact home, Bean's.....	830	Decision, Important railroad.....	816	Electricity, Progress of.....	468	
Company stores in Illinois.....	433	Decision, Judge Thayer's railroad.....	917	Electro-plating machines.....	234	
Competition of Canadian railroads.....	738, 802	Decisions, Supreme Court.....	475	Elevated railroad locomotives, Pea coal for.....	43	
Competition of prison labor.....	236	Deep well drilling-machine.....	767	Elevator door-hanger, Anti-friction.....	868	
Compound locomotive, English.....	593	Delamater, Cornelius H.....	248	Elevators, Geared hoist for.....	123	
Compressing steel, Boulton apparatus for.....	750	Demurrage charges at Chicago.....	166, 207	Elevators in the Eiffel Tower.....	839	
Concentration at Brewsters, Ore.....	121	Deoxidized bronze.....	442	Emancipation in Brazil, First year of.....	889	
Condenser, Wheeler's surface.....	347	Design for a street letter-box, New.....	109	Empire automatic cork-extractor.....	718	
Condition of trade, Andrew Carnegie on the.....	807	Designs for new English battle-ships.....	732	Empire, Northwest.....	803	
Conference of American nations, Arbitration at the.....	774	Despotism of labor, Butterworth on the.....	154	Empire tea-kettle handle.....	830	
		Detachable Empire sash-cord fastener.....	72	Empire window-screen.....	379	
		Detachable-handle sad-iron, New.....	453	Engine and boiler, Durant-Kane auto-matic.....	46	
		Detroit market.....	62, 99, 136, 173, 211, 293, 331, 406, 445, 483, 523, 598, 631, 709, 782, 857, 897, 932, 971.....	971	Engine, Balanced compound.....	615
		Development of the sugar interest.....	281	Engine, Hoisting.....	153, 847	
		Diamond punch and die grinder.....	506	Engine lathe, Seventeen-inch imperial.....	9	
				Engine, Launch.....	619	
				Engine, Nash gas.....	229	
				Engine-room experience, Bits of.....	844	
				Engine-valve, New.....	86	
				Engine, Valves of the Wheelock.....	192	
				Engine, Independent steam.....	19	

Engines, Latrobe Steel Works.....	913	Freights in the Lehigh Valley.....	667	Heating-furnaces, Fuel economy of....	282
Engineering material, Steel as an.....	691	Freights, Southern pig-iron.....	244, 779	Heavy plowshare-grinder.....	390
Engineers abroad.....	916	Freights reduced, Ore.....	785	Henderson heating-furnace.....	133
Engineers' European excursion.....	814	Friction drill, Combination.....	357	Hewitt and the American iron trade, Mr.....	813
Engineers in England, American.....	958	Friction of locomotive slide-valves.....	85	Hinge, Hold-back.....	110
Engineers, Mechanical.....	741, 776	Friction track drill.....	905	Hinge, New gravity push and pull.....	182
Engineers, Mining.....	325	Frisbie valve and union.....	395	Hinge, New spring.....	221
England, Chain-making in.....	646	Fruit-pitter, Improved Eureka.....	981	Hinge, Perkins'.....	302
England, Hardware in.....	674	Fuel, Advantages of coke for.....	132	Hinkle furnace plant at Ashland, Wis..	465
England, Sodium manufacture in.....	694	Fuel, Aerated.....	920	History of the planing-mill.....	944
England, Sweating system in.....	786	Fuel economy of heating-furnaces.....	282	Hoes, Maynard's handled planters' and field.....	379
English compound locomotive.....	593	Fuel, Oil as.....	418	Hoist for elevators, Geared.....	123
English Merchandise Marks act.....	50	Funnel, Perfection.....	607	Hoist, Outtrigger.....	121
Eo-mous ore shipments.....	881	Furnace, Collins.....	357	Hoisting-engine.....	153, 847
Enright's cleat former.....	868	Furnace company, New.....	963	Hoisting-machine, Hatchway.....	868
Enterprise '89 lawn-mower.....	532	Furnace, Henderson heating.....	133	Hold-back hinge.....	110
Enterprise cork-puller.....	418	Furnace with detached melting-chamber, Open-hearth.....	960	Homestead, Reduction of wages at....	779
Envelope opener.....	568	Furnace plant at Ashland, Wis., Hinkle	465	Homestead wages scale.....	967

THE IRON AGE

THURSDAY, JANUARY 3, 1889.

■ The Standard Rocking Grate Bar.

■ The Standard Rocking Grate Bar which we illustrate on this page, and which is put on the market by the National Iron Works, of New Brunswick, N. J., possesses several features of excellence.

One of the principal improvements embodied in the new bar is the use of sepa-

rate leaves or fingers, which are cast independently of the main bearing bar, as shown in the small cut. These leaves are so constructed that when in position they cover the upper edge and sides of the bearing bar, and protect the latter from the direct action of the fire, thus preventing warping. The fuel lies on the upper edge of the leaves, and, consequently, there is a current of air passing between them and over that part which covers the upper edge of the bearing bar, and this

further tends to keep the bar from becoming overheated. While the leaves when placed on the bar and fastened by the key-leaf are firmly held in their places, they can be readily removed when desired and new ones put in their places without taking the bars out of the frames. The wear, it is claimed, has been reduced to a minimum, as it all comes on the removable

are crushed between them when the bars are rocked. The fuel is agitated just enough to cause the ashes and crushed clinkers to drop into the ash-pit. This method of handling the fire renders it unnecessary to use the slice bar, as with the ordinary grate.

There are two movements to the shaking apparatus. One is a moderate movement

Fig. 1.—General View.

Fig. 2.—View of Single Bars, Showing Adjustment of Movable Leaves.

THE STANDARD ROCKING GRATE BAR, MADE BY THE NATIONAL IRON WORKS, NEW BRUNSWICK, N. J.

rate leaves or fingers, which are cast independently of the main bearing bar, as shown in the small cut. These leaves are so constructed that when in position they cover the upper edge and sides of the bearing bar, and protect the latter from the direct action of the fire, thus preventing warping. The fuel lies on the upper edge of the leaves, and, consequently, there is a current of air passing between them and over that part which covers the upper edge of the bearing bar, and this

leaves, which cost but a small amount in comparison with the repairs necessary where the entire bar must be replaced. By casting the leaves separately the air space can be made of any desired width and much smaller than would be practicable where the fingers are cast on the bar. The coal being supplied to the upper surface of the bed of fuel, the ashes and clinkers find their way to the bottom and come in contact with the leaves of the bars. By the peculiar shape of the leaves the clinkers

for the purpose of cleaning the fire; the second is adjusted so that the entire bed of fuel can be dumped into the ash-pit while the fire and ash-pit doors remain closed, thus confining all dust inside of the furnace. The framing on which the bars are placed is made with four standards, or legs, which rest upon the bottom of the ash-pit, and do not depend upon any part of the walls for support. No alteration is therefore necessary in the walls of any furnace in order to use these bars. The

frames are made in sections, which can be passed through the fire or ash-pit doors and be put together inside the furnace space. All that is required is a clear space inside the furnace walls.

The leaves of the Standard bar are so constructed that during the entire shaking motion the space remains the same. As a consequence no coal is wasted by dropping through the bars into the ash-pit. The bars are adapted to all kinds of fuel and will, it is claimed, work equally well on fine or large size coal, and either anthracite or bituminous.

LEGALIZING RAILWAY POOLS.

Argument by a Barb-Wire Manufacturer.

The people of Iowa have made greater efforts than the citizens of almost any other State to solve the problem of equalizing railway rates. The State is peculiarly situated, being traversed by great east and west through lines of transportation, competing for traffic at heavy business centers outside of the State, and endeavoring to make local business in the State as profitable as possible to cover losses on through business. The result of this peculiar policy has been so detrimental to Iowa manufacturers and jobbers that they naturally regard it as a discrimination against them and in favor of outside interests. The Iowa Steel Barb Wire Company, of Marshalltown, have suffered seriously from this cause, and R. E. Sears, President of the Company, is deeply interested in the attempts now being made to secure a remedy through corrective legislation. The following article from his pen, published in the *Times-Republican* of Marshalltown, is a timely contribution to the discussion of the subject, which he treats in the utmost good temper, and with a desire to see entire fairness done to all interests.

It is an accepted fact that railway legislation has come to stay, and that hereafter railway managers must recognize a higher power than their own caprice and cupidity. Discrimination as between individuals of the same locality has ceased, or at least we no longer hear complaints of it. Discrimination as to localities and States still exists and is the subject of most serious consideration. The legislation in Iowa has been the result of an overwhelming demand on the part of its people that the discriminations of the railroads against them should cease. It is a fight for self-preservation, and to any one who has studied the history of the movement and the causes leading up to it, it is manifestly unjust to charge the people of Iowa with a spirit of hostility to railroads or corporations or capital. Nowhere in our broad land are the people more conservative or more sensitive to the rights of others than are the people of Iowa. Conscientious, patient, they wish to confiscate or unjustly depreciate no one's property, nor do they intend to have their own confiscated if there is any legal relief.

Railroads, unrestrained, can make and unmake not only individuals but localities and States. Their power, unchecked, is more potent than that of the officers and legislative bodies of this country in increasing or decreasing the values of property. The very extent of the power suggests the necessity of its restriction to such limits as shall be just to all. The highest tribunal has so adjudged. The decision in the granger cases is now the law of the land and its correctness is unquestioned. The discriminations causing dissatisfaction in Iowa were in part from a desire of railway managers to have large earnings and consequently larger dividends, and perhaps, in greater part from a relentless competition at competitive points. One result of these rate wars was that frequently the railways would haul freight a certain distance for half or less of the rate

they would haul the same freight half the distance. To illustrate: They would haul a car of cattle from Council Bluffs to Chicago—500 miles—for \$25, while from Marshalltown to Chicago—300 miles—over the same line and in the same direction for the same service they would charge \$50. I merely give approximate figures.

This manifest injustice, becoming general, was the cause of that clause of the Interstate law forbidding railways to charge more for a short than for a long haul over the same line and in the same direction. The effect of that clause has been not to stop rate wars (as was anticipated) but to reduce the earnings of the roads to such an extent that many of them are on the verge of bankruptcy, and if the wars are to continue, the country is threatened in consequence with a financial panic, disastrous alike to the owners of the roads and to the public generally. The roads are the authors of their own ruin and not Iowa legislators. It is certainly not the latter, for railway managers do not pretend to have complied for a single day with the rate requirements of the law. Actuated by a reckless desire to secure business and to cripple rivals, they have engaged in a species of hari-kari, alike deadly to themselves and to their patrons.

Rate wars, as a rule, are an injury to both the roads and the public. They are an injury to the roads because they not only give the service for less than the cost, including fixed charges, but the low rates stimulate large shipments that ordinarily would not go forward for months in the future, thus reducing the business that would otherwise have been hauled at a profit to the roads, burning the candle at both ends so to speak. It is an injury to the people because it induces them (particularly the merchants and manufacturers) to over-purchase for the sake of the low rates and to suffer the financial embarrassments consequent thereto; and, with the exception of a few articles like coal and lumber, the freight is so small an item of cost that the consumer receives no appreciable benefit. For instance, how much more sugar or coffee or tea or calico does a consumer receive for a dollar when the freight is \$25 per car from Chicago to Council Bluffs in place of \$50? Rate wars are a particular injury to the farmer in the shipment of his products to market, as the low rates stimulate heavy shipments and the markets are glutted and the prices thereby seriously depressed. How often is a \$10 per car reduction in freight followed by a $\frac{1}{4}$ to a $\frac{1}{2}$ cent per pound reduction in the market price of cattle and hogs, and a proportionate reduction in cereals?

The people of Iowa demand not a ruinously low rate, followed by an exorbitantly high rate, but a reasonable, relative and uniform rate—one that will give the railways fair compensation for the service rendered and at the same time will be fair to each section of the country. The rate must be relative—that is, must be in just proportion to the services rendered and the cost of service. It is clearly unjust to charge as much for a car of freight over the same line and in the same direction for 300 miles as for 500 miles, or for 100 miles as for 300 miles. What the proportionate charge shall be can be determined largely by the relative cost of service.

How to secure such reasonable, relative and uniform rates is the problem. If rate wars from terminal or competitive points below cost continue, we certainly cannot secure relative rates. Iowa's Governor, legislators and railway commissioners, however earnest their efforts and pure their motives, cannot give us the desired relief, because at least 80 per cent. of our freight is Interstate—that is, comes from other States into Iowa, or goes from Iowa into other States, and congress alone has authority to act in such cases. To secure relative rates we must first see that reasonable and uniform rates are charged at competitive points. By uniform rates I do not mean the same rate for all classes of freight, but a permanent or stable rate, one that is not constantly fluctuating. Then it will be possible for relative rates

to follow. Without the first we can never have the second. Stability in rates is of the utmost importance in business; fluctuating rates create demoralization, and anarchy.

He who points out the way whereby reasonable rates shall be received by the railways at competitive points and be maintained has done much toward solving the problem and reconciling the interests of the people and the railways, and securing harmonious action between them. Harmony on a just basis is better for both than strife. The industries of Iowa, farming, manufacturing and jobbing, were never so prosperous as when there was a strict and strong pool at the competitive points. These relative rates were possible and equalized rates—that is, the two local rates equaling the through rate, were given. There was then a stability to rates and consequently a stability to business. If the pool was strictly adhered to, the greater the stability; if violated, the greater demoralization to business. As pooling agreements were not enforceable at law, dishonest members often violated them and thereby brought on rate wars. I know how unpopular railway pools are in the public mind and how they are prohibited by the Interstate law. They were often unfair and unreasonable in their rates. The writer does not seek to vindicate them or to apologize for their defects. He is seeking a way, if possible, out from the present discriminations from which Iowa is suffering. If our remedy is through a pool, he would not throw away the remedy merely because he did not like the name. The rose would not lose its perfume from being called by another name. The remedy would not be more efficacious if it had a more popular name. It is not the name, but the substance that we want.

Suppose that part of the Interstate law prohibiting pools was repealed and a new clause substituted legalizing railway pools and the agreements between the roads constituting the same, that the long and short haul clauses be retained with its present provisions, that equalized rates be permitted, that the reasonable rates to such competitive points shall be fixed or at least approved by the Interstate commissioners, would not such an arrangement enable us to secure reasonable and stable rates at the terminal or competitive points and relative rates at the intermediate points? And when these were secured, would there not be an end to the discriminations under which our Iowa industries have languished and in some cases perished?

Legalizing railway pools is not new. A number of such pools in England have been legalized by acts of parliament. Railway pooling agreements received the sanction of the law in Germany and Belgium and the results have proven satisfactory. By making the rates subject to the approval of the Interstate commissioners, a check to extortionate rates is given. To insure a close feeling between the commissioners and people, it might in time be considered wise to have one or more national commissioners elected from each State, the number in each State depending upon the mileage in each State, who should be elected by the people the same as members of Congress are elected.

Fowler & Sons, of Buffalo, N. Y., request us to state that they are the sole proprietors of Anderson Bolt Works, of Anderson, Md., to which we referred in our report on the Indiana Natural Gas District. They add that they make Buffalo an Eastern distributing point for the product of their works, carrying there a large stock which enables them to fill orders quickly.

A large number of the younger members of the metal trade have passed, lately, memorial resolutions of regret and appreciation relating to Arthur L. Cort, whose sudden death in San Francisco was announced recently.

Screw Making by the Cold-Rolling Process.

About a year ago we briefly described and illustrated a new wood screw which the American Screw Company, of Providence, R. I., were preparing to put on the market. The screw, as we explained at the time, was in a measure based upon the patents of Mr. H. A. Harvey, which covered the formation of screw threads by a rolling or swaging process, but which have been supplemented since their purchase by the American Screw Company by the inventions of Mr. Charles D. Rogers. The process, as finally developed and now applied, differs radically from every other screw rolling process, not excepting Harvey's, and the product represents in every respect one of the most interesting and important achievements among the many in the manufacture of wood screws. Mr. Harvey, in rolling a thread on a screw blank carried the operation through three successive stages of rolling, deepening the thread slightly in each of the three rolls, and finally devised a rolling die in which the three originally separate dies were combined, and the deepening of the threads was accomplished gradually in one machine and in practically one operation. In this way he simplified his process considerably as compared with his earlier methods, but the screws which he turned out were in no way superior to those of ordinary make, and presented no difference except possibly in point of cost. In order, however, to obtain a clear field the American Screw Company secured control of the patents, and then, through Mr. Rogers, developed a new system, retaining the fundamental idea of producing a thread by rolling, but attaining the end in an entirely new way, and turning out a screw which appears to be superior in several respects to the well-known wood screw now on the market.

Through the courtesy of the company we are enabled to present in this issue engravings of the rolling machine which they use, and of which the manner of working will be understood with little difficulty. Before entering upon a description of the machine and process, however, it may be interesting to briefly review the ordinary processes of screw making as now practiced. To these we referred in a recent issue, but will repeat here that the wire rods which are used, and which are to a great extent imported, are first cleaned and drawn into wire of desired gauge for the different sizes, or rather diameters, of screws to be turned out. This wire on reels is next fed into what are known as heading machines, in which the screw blanks are partially formed, a proper length of wire for a screw being cut off and a head being formed by one or more blows from a heading hammer. The partially finished blanks having been rattled in sawdust, to remove the oil used in the heading operation, are then taken to the shaving and slotting machine. The process to which they are subjected there consists in shaving the head of the rough blank on top and around the countersink—that is, the side of the head; then the slot is cut by means of a saw. This makes re-shaving of the head necessary, as small burrs would otherwise be left on each side of the slot. The operation is entirely automatic, the blanks being fed along a slide, gripped, presented to the shaving and slotting tools and released one after another. The finished blanks are now taken to the threading machine. In this also the entire operation is automatic. The blanks pass along a slide, one by one, in the same way, are properly gripped and presented horizontally to a cutting tool

secured in a movable tool block. This has the necessary amount of longitudinal feed to give the desired pitch to the thread, and has a quick return motion, several cuts being taken before a finished thread is secured. Soda-water is used as a lubricant. The finished screws are here also dropped into a receptacle underneath the machine, and are then ready for cleaning, packing and shipment.

In the new process of manufacture the work of preparing the blanks before threading has been greatly simplified, all the operations being performed in the heading machine and no trimming or shaving of the heads being necessary. Aside from this the object to be attained in the heading machine is the production of finished heads of a larger size relatively to the wire from which the screw is formed than has been common heretofore. These several objects involve the use of solid dies which present no seams on the surfaces on which the screw heads are to be formed, since the marks of such seams would show on the surfaces of the heads. The use of three hammers also is made necessary, since the desired large head can be obtained only from an increased amount of metal. This means an increase in the length of wire to be upset, and such an increased length renders the wire more liable to "cripple," or bend under the action of a single hammer blow, or even of two, in such a manner as to make it impossible to produce either the symmetrical form required or a sound and strong head. The exact way in which the blanks, and more particularly the heads, are formed will become clear from the three small engravings shown in Fig. 19. The partially formed blanks are there arranged in the order in which they are turned out. We will suppose a reel of wire being fed into the heading machine. The proper length for a screw-blank being gripped in the dies, the first hammer blow partially upsets the projecting end, as in *a*. The collar thus formed more readily induces the flow of metal in the desired direction, and the second blow produces the shape *b*; the third completes the head and forms also the slot for the screw-driver. The fourth operation, finally, consists in cutting off the blank from the wire coil, and this corresponds practically with swaging the points. We have not shown the complete finished blank, as its appearance can readily be imagined. The slot in the head, we should here explain, is formed by a tongue extending from the face of the hammer, which finishes the head. This tongue is forced into the metal in advance of the action of the flat surface of the hammer upon the metal, and forms an obstacle to the flow of the metal from one side of the die to the other. It is important, therefore, that the metal, before this hammer acts upon it, shall be distributed symmetrically with reference to the slot upon the two sides of the die. Again, it is obvious that the tongue, as it is forced into the metal, must spread the metal laterally; but at the ends of the tongue it does not force the metal freely toward the surface of the die, but has a tendency to carry it downward, so as to produce an imperfect face at the ends of the slot. This tendency shows itself most decidedly in making the heads, as in this case, of a larger diameter across the face than has been commonly practiced heretofore, and explains why the blank after the second blow has a head formed as in *b*. It will be noticed there that the upper surface of the partially formed head is convex along one diameter, and it is in the line of this diameter that the slot is formed. There is, accordingly, ample metal at the parts adjoining the ends of the slot to admit of a good deal of stretching without tearing. The height and width of the convex portion will vary with the size of the screw-heads and the depth and width of the slot, and

also with the character of the metal. The simplicity and directness of the whole operation, which is carried out in one machine, as compared with the repeated handling of the incomplete blanks in the old method of shaving, trimming and nicking the heads is striking. It is noteworthy also that the metal is worked cold. The blanks, as they drop from the dies in the heading machine are complete in every way, though before being threaded they undergo rattling. The rattlers, as no doubt most of our readers know, are revolving boxes, and ordinarily are used for giving articles put in them a rough finish. In this case, however, they contain sawdust, which to some extent absorbs the oil with which the blanks are covered.

Of the machine which is employed for rolling the threads on the blanks, we give a large number of details besides the two general views on the plate. The operation, however, is, in the main, simple and can be followed with little difficulty. Taken altogether the machine offers an interesting illustration of what can be done by automatic mechanism. All that the attendant has to do, one being sufficient for several machines, is to dump the screw blanks into the receptacle at the top, marked H, in Fig. 2; the finished screws drop out underneath into the box shown in the side elevation. Those of our readers who remember the engravings which we published a year ago of the Simonds metal rolling machine, in which screws also could be turned out, will find in the present apparatus an apparent similarity, owing to the fact that reciprocating dies also are employed. It should be noted, however, that in this machine all the work is performed on cold, not hot, metal and the principle of forming the screw threads, moreover, is entirely different. That this is so will presently be seen. Perhaps the best idea of the construction and function of the machine can be gained by following a screw blank from the hopper through the different operations until it emerges as a finished screw. The blanks then are, as we have already said, dumped into this hopper (H in Fig. 2) as they come from the rattlers. Within the hopper is fitted a narrow double blade, *m*, Fig. 1, which moves up and down through the mass of blanks. Its upper edge is formed at an angle, so that as the blade arrives at the end of its upward movement any blanks it may have picked up will readily slide from it on to the track T, through an opening formed in the hopper and coinciding with the track. Motion is imparted to the blade or "pick-up" through the medium of a vertically guided rack, *m*², Fig. 2, which meshes into a small gear-wheel, *m*³, loosely mounted on a horizontal shaft, *s*. This shaft has a gear-wheel, *m*¹, secured to its inner end, which gears with rack-teeth, *m*, Figs. 2 and 3, formed on the upper face of the rack-connection, *d*². Practically it is found desirable to be able at times to prevent the "pick-up" from delivering the blanks. Therefore, the gear *m*² is loosely mounted, and is provided with lugs arranged to interlock with the clutch and nut, *n*. The clutch is splined to the shaft, and is adapted to slide endwise, as common to locking devices of this character. The way in which the rack connection, as we have termed the part *d*², is driven, will be understood from Figs. 1 and 2. Power, it will be noted, is transmitted to the machine through a belt and the pulley shown in the plan. Mounted on the other end of the pulley shaft is a pinion gearing into a larger spur-wheel which, as Fig. 1 shows, drives a cross-head, B, through a connecting rod, *c*. To this cross-head, near its lower side, is secured a strong, guided connection, *c*², having rack teeth formed in its inner vertical face. This connection is well supported and guided at its forward end by the extension *g*, formed in

shaped piece, a^4 (Fig. 4), is placed at, and forms a backing to, the seat h . It is worked by a nut and screw on the end as shown.

Referring to Figs. 1, 2 and 3, it will be noticed that a rack-rod, s^1 , is fitted into the upper part of the frame at the rear side. The front portion of this rod is provided with gear-teeth on its under side, which engage teeth s^1 cut into the shaft s (see Fig. 2). By this arrangement it is evident that a reduced reciprocating move-

cam plates F (Fig. 11). A slot, f^3 , is cut through to receive the previously mentioned pin u . Two slots, f^4 , are formed transversely in the plate C and communicate with a T-shaped groove seen in the section at the right in Fig. 9. This groove is formed in the under side of the plate and serves the purpose of retaining the blank-holding jaws shown in Figs. 5 and 6, marked e , in the latter figure. Gibs e^3 secured to the plate, prevent the jaws from

The plate F is provided with three cam-shaped slots, f, f', f'' (Fig. 11), cut through it, the first named slot being adapted to receive the pin u of the rack-rod s^1 . The other two, which are shorter and are arranged right and left, are adapted to receive the pins e^4 of the jaws e . It is obvious now that by placing the plate F in the planed-out portion of the cap-plate C, and also mounting the jaws in position beneath the latter plate, a longitudinal

MACHINE FOR COLD-ROLLING OF SCREWS, AT WORKS OF THE AMERICAN SCREW CO., PROVIDENCE, R. I.

ment is imparted to the rod s^1 in unison with the cross-head. An elongated opening, u^1 (Fig. 1), is formed in the center portion of the rear gib-plate, a^1 , through which a pin, u , secured to the rear end of the rod s^1 , projects. The object of this rod and attachments is to actuate the blank-checking and holding devices which we shall presently describe. A plate, C (Fig. 3), firmly unites the two sides of the frame, being bolted to them. Its center is directly over the center of the space formed by the separation of the dies when in their extreme position. Its upper surface is recessed as shown in Fig. 9 to receive the

dropping out, although permitting them to travel back and forth, as in opening and closing when combined with the cam-plate F. The jaws are each provided with a short pin, e^4 (Fig. 5), which passes through the openings, f^4 . The adjacent vertical faces of the jaws are cut out in a semi-circular form, k (Fig. 6), and are countersunk at the bottom, so as to freely receive the headed blanks. The jaws are reduced in thickness at the lower portion, as at e^1 , so that they may easily enter the space formed by the lateral separation of the dies, the edges being concave to more readily retain the blanks in position.

movement of the pin u , extending through the straight slots u^1, f^3 and into the cam-slot f (see Fig. 10), will cause the plate F to move back and forth across the machine a distance corresponding to the throw of the cam. At the same time, by reason of the engagement of the pins e^4 with the cam-slots f^1 , the jaws will be made to open and close, the distance traveled being governed, of course, by the offset of the cam. A portion of one of the arms of the cam-plate F extends above the general surface of the plate, and is provided with an additional cam-slot, f^2 (Fig. 12). This cam-slot is substantially of the same length

as the lower slot f^1 , as clearly shown by the full lines.

The checking device for the screw-blanks is arranged in a box, E, Figs. 5, 6 and 7, secured to the center of the cap-plate and clearly seen also in both perspective views. A vertical opening is formed in the rear wall of the box and coinciding with the mouth of the track T, the width of the opening being slightly in excess of the size of the shank of the screw-blank. The upper portion of the opening is made flaring, as at r , Fig. 7, to freely receive the heads of the blanks. A vertical slot is formed longitudinally of the checking box, intersecting the opening just described as coinciding with the mouth of the track T. A plate, p , is fitted to move back and forth in this slot, and has on its lower side a pin, p^3 , which engages the slot f^2 in the cam-plate F, the latter, in part, fitting into the base of the checking box. By means of this construction it will be seen that by moving the cam-plate back and forth across the machine the slot f^2 will cause the plate p to reciprocate longitudinally on the machine. It will now be clearly seen that when the plate is in its extreme left-hand position, as in Fig. 7, the column of blanks in the runway T is held in check, but by moving the plate in the opposite direction the opening in the check box opposite the track T will be uncovered, and the pressure of the column of blanks will force them ahead, one of them sliding into the path of the plate p ; this will be more readily understood from Figs. 5 and 6. The point of the blank rests upon and is supported by a ledge. A spring-pin, n^1 , mounted on the box E just in advance of the blank, serves to maintain the latter in position until the plate p , upon its return stroke, engages it, and forces it past the yielding pin and from the support. The blank then drops into the vertical circular opening in front, down through a central hole formed in the plate C, and into the holding jaws e , which at the instant are separated slightly for the purpose. A cover is provided to close the top of the box E. This also serves to prevent the blanks from rising, an extension of it at the same time maintaining the blanks in position upon the runway T (see Fig. 6). A pin, mounted at the rear of the checking-plate, and shown in the end view on the first plate page, serves, when pushed forward, to temporarily keep the column of blanks from passing into the machine. It will be seen, referring to Figs. 4 and 5, that two thin strips, h^1 , of metal, beveled at their upper edges, as at h^2 , are arranged to receive the blank between them immediately upon its being forcibly ejected from the box E. These metallic strips are secured to the cross-heads, contiguous to the front ends of the threading dies, and serve to support the blank until the ribs of the dies have fairly commenced to act upon it. At the same time the blank is maintained in a vertical position by the jaws e which inclose it.

In following the threading process to which the blank is subjected we will assume the main gear in Fig. 1, operating the connecting-rod c to move in the direction of the arrow. The front cross-head B, with its die, will then move ahead, and through the side racks and the pinion on the shaft d will force the opposite cross-head to move in the reverse direction. The relation of the cap C and cam-plates to each other is as represented in Fig. 10. This movement of the cross-heads will cause the cam-plate F to slide backward through the medium of the rod s^2 and the pin u , which works in the cam-slot f^1 , thereby, in conjunction with the two cam-slots f^1 and pins e^1 , separating the jaws e . At the same time the cam f^2 , acting upon the checking plate p will be forced back to uncover the opening in the check box E opposite the track T, the form and

travel of these several cams being so arranged and timed that the holding-jaws begin to open immediately after the ribs of the thread-forming dies D have seized upon the blank. The continued travel of the dies impresses a screw-thread into the blank. As the dies pass each other at the extremes of their travel the threaded blanks will drop from them into a space beneath. Upon the return stroke, and immediately preceding its termination, the next blank to be acted upon will be forced past the check-pin n^1 into the jaws e by the action of the cam f^2 and the checking plate p . At the commencement of the next forward stroke the blank will be retained by the closed jaws, and also supported by the strip h^1 , as clearly shown in Fig. 7. The dies now, in again traveling ahead, seize the new blank between them, and roll or impress a screw-thread upon it, as just described. It is, of course, understood that during the reciprocation of the cross-head the blanks are automatically fed from the hopper and along the track T to the checking device by the vertically traveling "pick-up" blade.

We come now to the threading dies and to the principle involved in forming the threads, which is both novel and ingenious. The upper part of Fig. 14 represents a plan of one die face, and the lower part a section along one of the grooves, as $x x$. We will explain here that the dark portions marked $b b$ represent grooves, and the parts $a a a$ indicate ribs. The dies, which are of hardened steel, are milled in special machines of ingenious design, which we cannot stop here to consider. The grooves are V-shaped, the sides having the same inclination to each other as the opposite sides of the screw thread to be produced. This inclination, we need perhaps scarcely add, is constant from one end of the die to the other, and the work of raising the thread is mainly performed by these sides. The height of each rib and the width of its face or top, however, vary throughout the length of the die, and are determined at every point by the depth of the adjacent grooves. The face of each rib is substantially level, and has the form of a truncated wedge, very narrow at the end h , where the rolling commences, and much wider at the opposite end. The rib, in fact, is made as narrow at the entering end as is consistent with strength, in order that but little metal need be displaced when it enters the screw blank. To facilitate its entrance the top may be slightly chamfered, as at f . The action of the dies, always considering that there are two of them moving in opposite directions, will probably be readily understood when it is noted that at the beginning of the stroke the narrow ribs h are at once forced into the screw-blank to as great a depth as it is desired the ribs shall go at any time during the stroke. We may consider, then, that wide but comparatively thin strips of the metal of the blank are taken into the correspondingly wide grooves of the die at that end, and as the rolling progresses and the grooves in the die blocks become narrower the metal in them and between the ribs becomes more and more compressed, and gradually expands into the grooves of the dies, until at the end of the operation it fills them and the thread is completed. The blank is not stretched in the slightest, the length of the finished screw and of the blank before entering the dies being identical. This is due to the fact that there is no pressure on the body of the blank, radially, but all the work is expended on the metal between the ribs of the dies.

Perhaps more light will be thrown on the operation by an examination of Figs. 15, 16, 17 and 18. The text beneath these gives all the explanation required. The threads of the screws rolled in this

way are very thin as compared with those of the ordinary cut wood screws. The advantage of this construction is that they enter the wood easily, and without displacing as much of it as does the cut thread, and with much less driving force. They have also long and tapering points, which at once commend themselves. The most important difference, however, in the new screw is the reduced diameter of the shank between the head and the commencement of the thread, doing away with the necessity of using two bits in hard wood to avoid splitting. The diameter of the shank of the screw is only slightly greater than the diameter of the core of the threaded portion, so that by using a single bit of the exact diameter of the unthreaded portion the body of the screw will exactly fill the hole made by the bit and the threaded portion will lie entirely in solid wood, into which the thread has entered, thus securing, it is claimed, a much firmer hold than is usually obtained, while the danger of splitting the wood is reduced to a minimum. To the more than ordinarily large heads of the screws for given sizes of wire we have already referred. Owing to the small shank for the size of screw produced, further, it is noteworthy that a No. 18 screw, for example, may be turned out from No. 12 stock, an advantage well worth considering. One other feature to be noted in the rolled screw is the very gradual reduction in the diameter of the body where the thread begins, and the breakages at this point noted in ordinary screws, due to the shoulders formed, are entirely avoided. The rolling process finally saves about 40 per cent. of waste metal which the operation of cutting screws entails. We understand that some of the screws have been put in the hands of large consumers who are competent judges, like the Brown & Sharpe Mfg. Company, Pullman's Palace Car Company, the C. B. & Q. Railroad shops, and many others, and, after careful tests, have been given very flattering testimonials. The American Screw Company inform us that they will probably exhibit some of their machines at Brussels. Companies may also be established in England and Germany.

We would add that the new processes involve such a complete revolution in screw manufacture, and the investigations are upon such entirely new ground, that the American Screw Company have found it desirable to secure home and foreign patents on the various mechanical devices, processes of manufacture and products exemplified. The company have experimented very carefully during the past few years and are now building machinery on a large scale as rapidly as possible for use in manufacturing.

The New York City budget for 1889, as just made up by the Board of Estimate and Appropriations, looks well for the tax payers. As finally passed it footed up \$37,637,069.91. Of this \$4,602,760.74 will come out of the general fund, leaving \$33,034,309.17 to be raised by general taxes. Comptroller Meyers stated that, while the budget is about \$600,000 more than last year the tax levy will be about \$800,000 less and the tax rate will probably be reduced from 2.22 to 2.16 or thereabouts. This reduction will be due partly to increased valuations, but more to the fact that large accounts which have been standing on the Comptroller's books for years have been turned into the general fund. The tax rate next year will be the lowest for many years. The city debt is now \$132,457,395.46.

The Boston Steam Fitters' Association was organized last week, to promote the interests of their trade. The association resolved to attend a course of lectures on Steam engineering by Prof. Peabody.

Coal and Iron Mines in the Tennessee Valley.

Allusion has been made in an article published in *The Iron Age* of December 13, page 890, to the large area of coal-bearing lands on the east of the line of the Cincinnati, New Orleans and Texas Pacific Railway. It is the great coal field of Tennessee, containing several mountains which rise over 3200 feet above sea level and many which are over 2500. These great heights take in a series of coal strata unknown to any area immediately on the line of railway. This great area, which has been denominated the "Upper Measure Coal Field of Tennessee," can be reached by branch roads up New River, up Black Wolf Creek, and by direct lines from Lansing or Oakdale. With the advantages of the road-bed of the Cincinnati Southern division for transporting freight at low rates, and the ease with which that area of coal can be reached, it should attract the attention of capitalists. A road with far better grades and curvature than that up the mountain at Tracy City can be built at comparatively low cost from Oakdale into the Crooked Fork coal field, where it would reach large area of coal, as well as a great amount of virgin timber. The road would have the great advantage of being all down grade with the loaded car. At Emory Gap, the Walden's Ridge Railroad forms a junction with the Cincinnati, New Orleans and Texas Pacific Railway. This road runs thence to Clinton on the Knoxville and Ohio Railroad, passing by the Poplar Creek Mines. These mines are 16 miles from the Cincinnati, New Orleans and Texas Pacific Railway, and a large part of their product should pass over it; and of such importance are they in the extent of the field and the superior character of the coal that they deserve notice, though they may not be considered as directly in the territory of the Cincinnati Southern. The larger part of the land in the Poplar Creek field is owned by the Coal Creek Mining and Mfg. Company, which company do not operate itself, but lease to others. A comparatively small area belongs to other parties. The locality has the capacity for being one of the important coal-producing areas in the South, there being so many points from which good entries can be made into the coal seams, as well as the number of easy outlets from the mountain. The companies now operating there are small, the complaint being most of transportation. From the Poplar Creek mines to the Cincinnati Southern is 18 miles, from that junction to Chattanooga is 79 miles, a total of 97 miles. But the coal does not travel that route now. It goes to Clinton, 16 miles, thence to Knoxville, 20 miles, thence to Chattanooga, 111 miles, total 146 miles. On the other hand, all coal from the Knoxville and Ohio Railroad for Kentucky points is brought to Clinton, thence over the Walden's Ridge Road to the junction at Emory Gap, and thence north by the Cincinnati, New Orleans and Texas Pacific.

The mining operations on Poplar Creek are as follows: Joe Richards & Sons, 60 hands, product about 150 tons per day. Winter's Gap Coal Company, 75 hands, product 125 tons per day. Eureka Coal Company, 33 hands, product 75 tons per day. Mitchell & Bro., 33 hands, product about 60 tons per day. Mt. Cartoon Coal Company (Wiley & Bro.), two openings, 39 hands, including those getting props and cross-ties, product 150 tons per day. The Cumberland Coal and Coke Company is a new one, which proposes large operations, but at present is only working in a small way, the number of hands being now 26, and the product 100

tons per day. The capital of this company is from Atlanta. The total present product is 660 tons, from an area which should ship at least 2500 tons of coal and coke per day. There is ample room for another railroad into this field.

The first mines on the line of railway after it reaches the Tennessee Valley are worked for iron ore of the red fossil variety. The foot of No. 1 mine is about 1 mile from the railroad station. It is operated by Col. Thos. Brown. The product averages 95 tons per day, and 35 miners and 8 outside men are worked. The distance to the railway is 610 yards, and loaded cars drop down by gravity. The mine is worked by a slope 400 feet long, the vertical height being 235 feet. The vein ranges from 2½ to 5 feet in thickness, averaging above 4 feet. The ore at the depth of 235 feet below water level is found to be about as good as that near the surface.

No. 3 mine is 2 miles from the station, and is also operated by Col. Thomas Brown. There are 23 miners and seven outside men employed there, and the average product is 75 tons. The vein averages 3 feet 3 inches in thickness. It is 700 yards from the railway, and the cars drop down by gravity as at No. 1. Nearly all the ore from both these mines goes to the Dayton furnaces. Between Nos. 1 and 3 another mine is being opened by Brown & Tarwater. It connects to the main line by a wide-gauge track. At Rockwood Brown & Tarwater operate two mines, the product of which all goes to the Rockwood furnaces.

The Rockwood furnace was the pioneer in the manufacture of iron with coke in the South and the forerunner of the great industrial development now flourishing in the Southern States. The mines were opened and the first furnace erected in 1867 by Gen. J. T. Wilder and H. S. Chamberlan. The coal mined is entirely used in the two furnaces, at which and in the mines is worked a total of about 250 hands. The product amounts to about 60,000 tons per annum. This coal is in Walden's Ridge, an outer wall-like part of the Cumberland Mountain, where the coal and all other strata dip at an angle of about 45°. A part of the coal mined is made into coke, and some is used raw as in the furnace. Only one stack is now running, and the product is about 40 tons per day. The property belongs to the Roane Iron Company, Mr. M. Duncan being the superintendent. There is no doubt but that these furnaces have been the most regularly profitable of any in the Southern States.

The Dayton Coal and Iron Company are one of the largest operators in the South, and is almost, if not entirely, owned in England. W. J. Isaacson, of Cincinnati, is managing director and Geo. Jamme general manager. No expense has been spared in the plant and equipment, and there is every indication that under present management the enterprise will be a success. The town of Dayton, where this operation is located, is 297 miles from Cincinnati, and 83 from Chattanooga. Eight years ago it was an old field; now it is a place of fully 4000 inhabitants, the development being caused by the erection of the iron furnaces, the working of the coal and iron mines and the building of the Cincinnati Southern Railway. The plant consists of two stacks, one 75 feet high with 20 feet bosh, the other 75 feet high with 18 feet bosh. No. 2 has averaged in October 92 tons per day, and No. 1 averaged for the same time 85 tons per day. They are each equipped with three Whitwell fire-brick stoves and three Weimer blast engines. The first furnace was put in blast in 1886 and the second in 1887.

The coke ovens are 1½ miles from the furnaces, and the coal mines in the mountain over them. The original coke ovens

erected here were built on a patented design in which the waste gas was used to heat the oven. Mr. Jamme took them out and used nothing but the plain bee-hive oven. Of these there are 250. There are two mines, one the Richland, the other the Nelson. The latter is by far their best and most reliable seam of coal, and must eventually be their dependence. It very regularly averages 4 feet thick, while the Richland is very variable, frequently running down to a small thickness. The output of these mines averages each about 1850 tons per week, almost all of which is made into coke.

The coke made here was for some time poor and very friable, but Mr. Jamme has introduced a machine called a disintegrator, through which he passes the coal before coking, greatly to its improvement. Coke made from coal not run through this machine is liable to be full of large pieces of slate frequently as large as one's hand, and, in handling, the coke was certain to break apart at those places where these pieces of slate were whether they were large or small. It is not claimed that the machine takes out the slate at all, but that it so finely disintegrates it that it is no longer perceptible to the eye, and that it is so disseminated through the coke that it does not affect its cohesiveness. The difference between the two cokes, disintegrated and non-disintegrated, is very apparent at a glance, and is clearly apparent in the working of the furnaces. On October 13, No. 1 stack running on coke from disintegrated coal made 101 tons of pig iron, while, on the common coke, under the same conditions of blast and weather, it only made 85 tons; No. 2 stack, running on coke from disintegrated coal, made 103 tons per day, while on ordinary coke she only made from 93 to 95.

The main entry in the Nelson mine is 2400 feet long, and is being continued onward. This company went about their work systematically, and, having an area of 80,000 acres, wanted to know what was under the surface. To this end they have had nine holes bored, and know the locality of the Nelson seam for several miles ahead. At 4200 feet distance it was found to be 6 feet 7 inches thick. Mining in the Nelson mine costs but little over half what it does in Richland; hence, when that mine has been sufficiently opened to fully supply their needs the cost of their coke can be very materially reduced. The number of miners employed is 400; and at the furnaces, 100; other hands, 200; a total of 700 employees. Thus we may safely assume that directly 4200 beings are dependent upon this enterprise which has grown out of a wilderness in less than 7 years. It is of value to the railroad in that its 1300 tons of iron per week must be carried away and fully 200 tons of ore brought in each week.

The company own a line of railroad to the Tennessee River, by which they bring in ore from the up-river mines, and on which is located one of their limestone quarries. They also have tracks to the coal mines and coke ovens and to another limestone quarry, all of the run being of standard gauge. The iron ore used is nearly all bought from outside parties. They use soft red fossil ore from Eureka mines (Welcker's) on the Tennessee River near Kingston; ordinary red fossil from Brown's, near Emory Gap; some soft ore from Attala, Ala., and a brown hematite from Georgia. They do not now use any of what is known as the hard red fossil ore. The average consumption is 2½ tons of ore to the ton of iron made, with 1.9 tons of coke, and 1 ton or less of limestone. North of Dayton, near Darwin, on land belonging to W. T. Darwin and Mr. Guess, leased by S. L. Wilkie, a seam of coal is being worked and a number of carloads shipped. He works about 80 hands. South of Dayton, at Graysville, a consider-

able operation has been commenced. It is carried by Winchester & Ivins, who lease from Chas. J. Fox. Shipments have just commenced and about 30 hands are employed. A narrow-gauge track connects from mine to main line of railway.

The Walden's Ridge Coal and Coke Company, located near Sale Creek Station, is the next mining operation on the line of the railway. Of this company M. H. Clift is president; J. M. Clift, secretary, and A. Lloyd, superintendent. The product is 200 tons per day, and 150 miners and other hands are employed. They have 45 coke ovens and make 100 tons of coke per day from slack coal. The mine is one mile from the main line and connected to it with a wide-gauge track. The seam worked is not in the main mountains and has an average thickness of 4 feet. The Soddy Coal and Coke Company is the oldest mining operation on the line of the road. The coal having been worked there before the war, and afterward long before the railway was built, the coal having been hauled to the river on a modern tram and boated to Chattanooga. M. H. Clift is president, Robt. Morrison, vice-president, and J. T. Hill, secretary and treasurer of the company; A. Lloyd is superintendent at the mines. The product of coal is about 8000 tons per month, the number of employees being 375 miners and outside hands. They have 165 coke ovens, and make, when running full time, 2000 tons of coke per month. The company erected apparatus for washing the slack, but not finding that they received any increased price for the coke from washed slack abandoned the plant. The distance from the main line to the mine is three-fourths of a mile. The company's property comprises 8200 acres of land. The station on the railroad is called Rathburn, which is 21 miles from Chattanooga, but the name of the post office is Soddy.

The Daisy Coal and Coke Company is the next operation, being three miles nearer Chattanooga, and is the last one on the line of the railway. This mine was opened six years ago and failed. It was, after lying idle for some time, taken hold of by Tabler & Crudup; later they sold out, and it is now operated by Aydelotte, Williams & Price. The product amounts to an average of 200 tons per day, all of which goes to the Central Railroad, of Georgia; and 100 hands are employed. They have 50 coke ovens, but are now running only 25, the product going to New Orleans for foundries, and to the Citico Furnace, near Chattanooga. The seam worked is about 4 feet thick, and is one mile distant from the main line of railway, with which it is connected by a narrow-gauge track.

The Philadelphia Natural Gas Company, at Pittsburgh, has sent a confidential circular to all the leading manufacturers of that city who use gas supplied by that company requesting them to prevent waste of that fuel at their respective works. The request, the circular suggests, can best be carried out by the managers of the various plants instructing watchmen, furnacemen and other employees to shut off the gas from all furnaces or other parts of the mill when the latter are not running. A large amount of the fuel is wasted, it is claimed, by allowing it to burn at night and over Sunday when the factories are closed down.

The coke operators of the Connellsville region held several meetings in Pittsburgh last week and finally concluded to make no advance in the price of coke for the present month. There was great diversity of opinion among the operators as to whether there should be an advance, four of the largest producers favoring it, while several others opposed it.

New Drawing Press.

A new drawing press, suitable for making drawn tinware, kitchen boiler and soda-water tank-heads and similar work, is being brought out by the E. W. Bliss Company, of Brooklyn, N. Y. The engravings which we annex explain the nature of the design.

The press embodies one feature especially novel in a tool of this size, though

the toggles were secured by a sort of straight-faced cam carried by the continuously reciprocating cross-head, and the blankholder was lifted directly by the latter.

In the improved press which we illustrate no cams are used, as will be made clear by reference to the sectional view. The cross-head A, which carries the drawing punch, is actuated by side-rods from the main cranks B, of which there are

Fig. 1.—General View.

NEW DRAWING PRESS, BUILT BY THE E. W. BLISS COMPANY, BROOKLYN, N. Y.

it has been in use for a few months past in smaller machines built by the same company. This is the introduction of a peculiar system of toggle link-work for operating the blankholder or pressure-plate, which admits of the intermittent motion required to be obtained from the continuous rotary motion of the main crank-pin. The idea in itself of using toggles for the purpose mentioned is not new, the novelty lying in the special arrangement for operating them. About seven years ago the Bliss Company built a large drawing press for export to Switzerland, in which the blankholder was held down by toggles, but in this machine

two, one at each end of the main shaft. The crank-pin on the left-hand side of the machine is made long enough for a connecting-rod, C, which imparts a vibratory motion to the rock-shaft D at the rear of the machine. This shaft imparts a similar motion to the cross-head E, from each side of which extend short links to the toggles. It will be seen that while the crank-pin is moving from the position shown to the point F the rock-shaft, and consequently the cross-head E, will receive very little motion, and, as the links which connect this cross-head with the toggles lie in a position at right angles with the line of its motion, the toggle levers will receive a

very small lateral motion, which will have no effect upon the yoke G, to which they are linked; so that while the main crank passes through the part of its stroke mentioned the yoke G, and consequently the blankholder H, to which it is connected by four tie-rods, will remain at rest. As the crank passes its center, after having done its work, the cross-head E is thrown downward, and at its extreme position carries the toggles into a horizontal position, T K, thus lifting the yoke G and the blankholder. The press takes a blank 36

only about $\frac{1}{8}$ of the energy of the fuel is used in the propulsion of the vessel; so that, notwithstanding the progress which has been made, there is still a wide field for the ingenuity of the engineer and the shipbuilder.

The Cost of Electric Street Lighting.

The following figures of the charges for lighting streets with arc lamps are of interest. They have been quoted from a communication of the Boston Citizens' Asso-

cost \$131,097.97. All of this, except \$11,299.54, was received by one company. It seems very clear that Boston needs a little healthful competition. It is interesting to notice how important a factor carbons are in the cost of electric arc lamps. It seems like hoping for an impossibility to think of indestructible electrodes being possible, yet until some advance in that direction shall have been made the electric light will be far from perfect.

Seventeen-Inch Imperial Engine Lathe.

This lathe was designed by Messrs. Lodge, Davis & Co., of Cincinnati, Ohio, to meet the demand for a tool without extra attachments, and is essentially a manufacturers' lathe. The name of "Imperial" was given to distinguish it from their original line of lathes that have a full set of extra attachments. While the Imperial lathe will be without compound rest, taper attachment or automatic stop, the quality of the material and the workmanship will be fully up to the high standard of their original lathes.

After a most careful study of the true requirements necessary to produce a first-class tool, the builders decided that a solid bearing, bored taper, with the spindle turned from crucible steel, as hard as it can possibly be worked, makes the best possible construction. There is much less liability of its losing alignment, there can be no tinkering with half boxes, no looseness of spindle in bearings, but as near to absolute solidity as is attainable. The head is designed with a special view of securing great strength for end thrust. Being hollowed out sufficiently to make room for a cone pulley and belt, the front and back are carried as high up as possible, and webbed clear across from end to end, making two beams, well tied together, and capable of resisting the most severe end strains. Any wear on the spindle or bearings is taken up by drawing the spindle toward the back end. The part to which the adjustable screw is fitted is cast with and forms part of the head. Using solid bearings has been objected to on account of taking apart and putting together of the head. This difficulty has been overcome by a means of taking out the key that fastens the face wheel, through the hub. No difficulty whatever, we are told, is experienced in taking the lathe apart. This little matter, simple as it seems, has probably deterred many makers from adopting this construction. The screw cutting arrangement (which cuts from 4 to 20 threads to the inch) is driven from the spindle on the outer end. The reverse plate is made particularly strong, the studs being part of the plate itself, and therefore cannot become loose. Great care has been taken in this particular in order to make it meet the demands made on it when cutting heavy screws.

The gearing is arranged so as to be close to the bearings. The lead screw, which is directly under the front of the lathe, is engaged by two half nuts fitted directly to the carriage, not fastened to the apron, and the whole design is so arranged that no part depends on the strength of either bolts or screws when chasing. The opening and closing of the half nuts is performed by a cam of new design which is very simple, durable and effective, locking itself both ways and operated from the front. The feeding devices are of the most substantial character, and no worm or worm gears are used. The tool block is of substantial design, and has a bearing on the cross side of the carriage of 18 inches. The tool post has a bearing in a square shoe, bored out so as to give full bearing to resist the heavy strain of the cut and the continual tightening and loosening of the tool. The

Fig. 2.—Details of Toggle Arrangement.

NEW DRAWING PRESS, BUILT BY THE E. W. BLISS COMPANY,
BROOKLYN, N. Y.

inches diameter, and will work stock up to about No. 8 gauge. The stroke of the punch is 20 inches, and that of the blankholder is 14 inches. The main shaft is 10 inches diameter, and is made of forged steel. In all parts the press is built exceedingly heavy, with large bearings, enabling it to do extra work. The total weight is about 50,000 pounds.

The complete efficiency of a marine engine is the resultant of the separate efficiencies of the boiler, the steam, the mechanism and the propeller. To give a rough idea of the value of this, the first of these components may be assumed at 0.6, the second at 0.2, and the third and fourth combined at 0.5, so that the resultant efficiency is 0.06—that is to say, that

ciation, which was addressed to the Board of Aldermen of that city for the purpose of showing that Boston is overcharged for this service. For New York, the average price is given as 34½ cents per lamp for one night's service. Brooklyn pays 55 cents, Buffalo 45 cents, New Orleans 34 cents, Philadelphia 50 cents (average), and Baltimore 50 cents. Boston pays 65 cents. The Citizens' Association of Boston claim that on the 695 lights used in their city the reduction in cost of carbons from the figures of 1882 represents 25 cents per lamp for each night, an aggregate of about \$60,000 per annum. The price of carbons in the last six years has fallen to less than one-third the original price. Yet Boston is now paying the same rate paid in 1882—65 cents per lamp. In 1887 the service

front bearing tapers 1 inch in its length, and is $2\frac{1}{4}$ inches in diameter. The lathe is furnished complete with all screw cutting gears, large and small face plates, steady and follow rests, and full counter-shaft, which has 12-inch tight and loose pulleys, and which should run 130 revolutions per minute. The lathe is made with 6, 8, 10 and 12 foot bed, and of 17-inch, 21-inch, 24-inch, and 30-inch swing.

A New Safety Lamp.

The important question of the application of electricity to miners' safety lamps was under discussion at the meeting of the Manchester Geological Society. Mr. Oswald Swete described a new safety lamp brought out by the Mining and General Electric Lamp Company of London. He stated that in 1885 a great advance in secondary batteries was made by Mr. D. G. Fitzgerald, who did away with the dead weight of support, and obtained a dense, hard, and highly conductive plate of solid peroxide of lead for his negative element, which he termed lithanode. It contains no support whatever, but consists wholly of active material, and a two-cell miner's lamp constructed with this kind of element will weigh from four to five pounds. The small weight of lithanode batteries brings them to the front for mining purposes, and besides this advantage there are others—no renewal of elements is required, no gases are evolved on discharging the current through the lamp, and there is therefore no necessity for valves or other complicated arrangements, while the present weight of the lamp, which is 5 pounds, can be considerably reduced. The electro-motive force is four volts, and it burns for twelve hours with one charge from a dynamo machine of five hours. The battery case is made of birch, occupying as small a space as possible, and rendered water and acid proof by a patented process. The glass protector covering the lamp is so arranged that in case of breakage the current is cut off before the blow that broke the cover can reach the incandescent lamp, and an explosion from contact with fire-damp is thus rendered impossible. The cover can be locked with a lead plug, as in ordinary safety lamps, and the action of putting on the cover lights the lamp, which the miner cannot put out except by breaking the sealed plug. By undoing four nuts inside the battery the whole of the elements can be instantly withdrawn when required for repair. So far the plates have been tested to two and a half years, and they are practically indestructible. The lamp can be turned upside down without detriment, and if turned at an angle does not go out. As to cost, he estimates 1000 lamps, with a 5-unit dynamo machine, instruments and wires, at £1090, and the lamps could be maintained at $2\frac{1}{2}$ d per lamp per week, burning 12 hours per day six days to the week. Mr. J. S. Burrows next gave the result of trials he had made of the Edison-Swan safety lamp, and, while fully recognizing the much superior light that was obtained from this lamp as compared with that given by the ordinary safety lamp, he said there were several important features requiring improvement. First and foremost is the heavy cost of the lamp, and in its construction there are one or two defects which ought to be removed, while it should also be more easy to repair than is the case at present. If this were done the lamp would soon take its proper place in the market for underground use.

A. H. Danforth has resigned from the position of general manager of the Colorado Coal and Iron Company, of South Pueblo, Col., and S. H. Dupuy, of New York, has been appointed to fill the vacancy.

The New Style Korting Double Tube Injector.

The new style Korting double tube injector which Messrs. L. Schutte & Co., Philadelphia, Pa., are now putting on the market, is, in several respects, a decided improvement on the older form and will at once commend itself to users of apparatus of this class. The engravings which we publish in this issue illustrate both types, and afford a ready means of comparing the two and understanding more clearly wherein they differ from each other. The older form we have

for Stationary and Marine Boilers and Locomotives. The exact nature of the improvement becomes apparent from Figs. 3 and 4, the latter, like Fig. 2, representing a longitudinal section. It will be noticed at once that the operating lever has been placed at the front and the steam connection has been changed from the side to the top. All the working parts, moreover, are on the outside and are more direct in action. The tubes themselves slightly converge. A specially interesting feature of the improvements is found in the mechanism for opening the steam valves. In the position shown in Fig. 4 these valves are

Fig. 1.—General View.

Fig. 2.—Longitudinal Section.

THE OLD STYLE KORTING DOUBLE-TUBE INJECTOR.

thus reproduced at the risk of being charged with repetition.

The double-tube feature itself, used in both designs, offered important advantages over the single-tube construction of the general class of injectors, and insured good work where other boiler feeders failed to operate, besides making adjustment with varying steam pressure unnecessary. The earlier injector, however, as shown in Figs. 1 and 2, was arranged with a side lever for operating, and accordingly was turned out in right and left hand patterns, and the steam and over-flow valves were worked by inside eccentrics. In the new form the whole arrangement has been much simplified, and the injector is now practically universal, there being but one standard form, with no occasion for right and left hand connections, and it is applicable both

closed, but by simply drawing the handle A over toward the position indicated by the dotted lines D, the valve of the lower or lifting nozzle, guided in one of the plugs or caps K, is opened through the intervention of a cross bar. Owing to the presence of a small amount of lost motion in the cross-piece connections, this valve can be opened appreciably while the upper valve still remains closed under the pressure of the entering steam. The latter, flowing through the lower nozzle, lifts the water through the tube; as soon as the water appears at the overflow B, the handle A is drawn over still further, closing the overflow valve through the bell crank on the outside (see Fig. 3) and opening wide the lower as well as the upper steam valve. The injector is then feeding into the boiler, the lower tube lifting and the upper one

forcing, the water. We need not specially comment on the new arrangement of working the steam and overflow valves as compared with the older inside eccentric movement. Its simplicity will no doubt be generally appreciated. The whole work of operating the injector in the new as well as in the old form is accomplished by means of only one handle, and there are no separate valves to give rise to confusion. The dirt stop, shown at the right, can be readily removed from the feed pipe in case cleaning should become necessary. The

but competition is so keen that there have been but two profitable years in the trade since the panic of 1873.

He says the duty on pipe has afforded no protection to this industry, except in so far as it has permitted the pipe used to be made in this country instead of imported. In the meantime it has furnished employment to a large number of people, has built up large works, and to all that extent has benefited and increased the wealth of the country. Continuing, Mr. Wanner said: "Such statements as the

Fig. 3.—General View.

Fig. 4.—Longitudinal Section.

THE NEW STYLE KORTING DOUBLE TUBE INJECTOR.

new injector, we would add, is turned out in 16 sizes.

The Cast Pipe "Trust."

Peter D. Wanner, president of the Melkert Foundry and Machine Company, and of the Reading Foundry Company, among the largest manufacturers of cast-iron pipe in the country, has written a letter to United States Senator John R. McPherson, of New Jersey, denying the statement made by the latter in the Senate, recently, to the effect that the cast-iron pipe industry had formed a trust, under which the price was to cover the foreign cost, the duties and all expenses. Mr. Wanner says the assertion is unwarranted, and that not only has no trust been formed,

one above complained of might be permitted to go unnoticed were it not for the fact that they put the members into a bad light before the consumers, who believe that they pay too much for what they buy, and also with their employees, whom they lead to believe that they are not properly remunerated for their work." In closing, Mr. Wanner trusts Senator McPherson will withdraw the objectionable statement. As no attention was paid to the letter Mr. Wanner gave it out for publication.

A bill before the South Carolina Legislature assuming that some of those who are benefited by cotton fires on shipboard are responsible for them and arouses very bitter feelings among those interested.

NEW PUBLICATIONS.

ANNUAL REPORT, State Geologist (Vol. 1), on the Geological Survey of New Jersey.

The first of final series of reports by the Geological Survey of New Jersey has just appeared. It deals exclusively with the topography and climatology of the State, and refers at some length to magnetic survey. The report, which is the compilation of Prof. George H. Cook, the State Geologist, is accompanied by a handsome map showing the elevations of different parts of the State above tidewater.

THE LAKE SUPERIOR COPPER PROPERTIES. By Henry M. Pinkham. Printed for the Author, Boston. Price 25 cents.

Mr. Henry M. Pinkham, who is connected with the financial press of Boston, has lately published a pamphlet descriptive of the copper mining properties of Lake Superior, taking up in turn the financial history of every leading mine in that famous section. The record is one of which Lake Superior may well be proud, the total dividends of the copper companies since copper was first found, aggregating \$46,421,120. The details are submitted below:

RECAPITULATION.

Calumet.....	\$300,000
Hecla.....	650,000
Calumet and Hecla.....	29,900,000
Total.....	\$30,850,000
Atlantic.....	480,000
Central.....	1,890,000
Copper Falls.....	100,000
Franklin.....	600,000
Minnesota.....	1,836,000
National.....	320,000
Osceola.....	1,222,500
Pewabic.....	460,000
Phoenix.....	20,000
Pittsburgh and Boston.....	2,518,620
Quincy.....	4,710,000
Ridge.....	100,000
Tamarack.....	440,000
Total.....	\$46,421,120

The facts still remain, however, and to which Mr. Pinkham does not allude, that the sums of money sunk in unprofitable ventures since the discovery of copper on the Peninsula have been very large.

THE MINERAL RESOURCES OF THE UNITED STATES, by David T. Day, Chief of Division of Mining Statistics and Technology. Published by the United States Geological Survey, J. W. Powell, Director, Washington, D. C., 1888. Price, 50 cents.

The fifth volume of the mineral statistics of the United States, collected by the Geological Survey, has just been published, covering the calendar year 1887. In its general scope, and in the personnel of its compilers, it has remained largely the same. Mr. James M. Swank has furnished a chapter on iron, some parts of which have already been printed from advance sheets in the technical press. Mr. John Birkinbine, of Philadelphia, deals with iron ore mining in 1887, reviewing in detail the leading districts throughout the country. He quotes a good many new analyses, and furnishes considerable data, among others brief references to ore concentration. The chapters on copper, lead, and zinc have been written by Mr. C. Kirchhoff, Jr., while manganese, coke, natural gas, and petroleum are from the pen of Mr. Joseph D. Weeks, of Pittsburgh. By far the most extensive single contribution is that of Charles A. Ashburner, on coal, that, probably, being the most thorough collection of coal statistics yet attempted in the United States. Exclusive of the colliery consumption, Mr. Ashburner makes the total production of coal in the United States 130,000,000 tons, the colliery consumption being placed at 6,000,000 tons. Mr. Ashburner takes up State by State, and furnishes a wealth of detail which will prove particularly valuable. Among the other contributors are Mr. R. L. Packard,

on aluminium; Wm. C. Day, on structural materials; George F. Kunz, on precious stones; W. A. Ramborg, on salt, and A. C. Peale, on mineral waters. The special feature of the work this year is a list of useful minerals of the United States, edited by Albert Williams, Jr. The minerals are arranged by States, their mineralogical name and common name being given, as also the locality. While it is not claimed to be complete, it is certainly very elaborate and extensive.

FIFTH ANNUAL REPORT OF THE INSPECTOR OF MINES OF KENTUCKY.

The fifth annual report of the Inspector of Mines of Kentucky is at hand. The book gives information of the various railroad extensions, especially those reaching into the coal districts of the State. It shows that coal mining has increased very much over previous years, and that the condition of the mines is more satisfactory and safer. Various means and devices for labor-saving are illustrated, as well as the designs for ventilation and handling the coal after it comes to the surface. A careful description of all the works in the State is given, and various comparative tables, showing the high value of certain coals for steam and other purposes. The great lack so far is good coking coal, but this, it is said, will be completely overcome by the opening up of the deposits in the Cumberland Gap region; but whether this coke can be carried to the furnaces in Tennessee and Alabama at a profit to the ovens and cheap enough for the consumers remains to be proven. For the year 1887 Kentucky produced only about 2,000,000 tons of coal, Illinois 10,000,000, Ohio 11,000,000 and Pennsylvania 80,000,000, and yet it is asserted that Kentucky has more coal area than the great coal State, showing, if this is a fact, that coal mining is hardly begun there yet. The cannel coal of Kentucky is widely known for its gas-producing qualities, and in certain sections of the State it lies so as to be easily and profitably worked. During the first six months of 1888 over 23,000 tons were mined, and 20,000 tons were shipped to points out of the State.

A "Tower Building."

J. Noble Stearns, the largest silk manufacturer in New York, realizing the increasing demand for well equipped offices, has erected a 15-story building in the vicinity of the New York Stock Exchange, at 50 Broadway. This building presents a striking appearance, since, although it widens as it runs through to the next street, the width of the Broadway lot on which the front part of the building stands is only 21½ feet, and, as the adjoining buildings are only four stories high, the tower building towers, in every sense of the word, above the entire neighborhood.

The interior arrangements of the building will be such as to make it a model office building. A series of pneumatic tubes will be so connected that messages may be sent to and from any floor in less than a minute. A mail chute will be placed on each floor so that letters may readily be dropped into the post-office mail box on the ground floor. The elevators will be of the Otis make. The entire building will be heated by a radically new method of steam heating, known as the Hussey reheater system, which reheats the exhaust steam and utilizes the reheated steam for heating; by this method the work can readily be accomplished by one boiler; two being required by any other plant.

There will be an improved electric light plant. The Hussey ReHeater and Steam Plant Improvement Company of 15 Cort-

landt street, New York, have the contract for placing the entire steam plant, including boilers, pumps, tanks, re-heater, steam pipes, radiators, &c. In order to economize room which is most valuable in that part of the city, the boilers will be placed under the sidewalk. Every room will have especially designed radiators, and the steam will be automatically regulated by an electric combination, therefore necessitating no attendance from occupants of offices. The building is entirely fire proof.

New Slotting Machine.

The Knowles Loom Works, of Worcester, Mass., are bringing out a new slotting machine, built in two sizes. The piece to be slotted is placed on a bushing upon a face-plate, and the slot cut by a single passage of the cutter in from 10 to 20 seconds. The slots may be made straight or of any taper required by a change in the bushing upon which the work is placed. One great

NEW SLOTTING MACHINE, BUILT BY THE KNOWLES LOOM WORKS, WORCESTER, MASS.

saving of time is affected by the use of this machine by the circumstance that the work does not have to be fastened to the machine, but is immediately brought to position and held by the bushing, through which the cutter passes. The same size of slot can be put into any number of different sized holes by means of eccentric bushings. Slotter No. 1 will cut a slot 6 inches long, ¼ inch wide, ¼ inch deep, and No. 2 a slot 12 inches long, 1 inch wide, ¼ inch deep, at a single passage of the cutter-bar. The machine will slot any piece less than 6 feet in diameter as it stands on the floor, and more than that by having a pit for the casing to swing in. Much larger slots can be cut by using two cutters, taking out a part of the stock with one cutter and finishing to proper size with a larger one.

Rand, McNally & Co., the well-known publishers, of Chicago and New York, will issue next month a new edition of their Indexed Business Atlas of the United States, Canada and Mexico. It will comprise in all 92 maps, corrected to date, to show new post offices and railroad stations. A new feature will be that each railroad will be shown in a distinct color. The price will be \$12.50.

The Standard Coins of the World.

Dr. James P. Kimball, Director of the Mint, has estimated the values of the standard coins of the various nations of the world, for publication January 1, 1889. The values of the gold coins have been ascertained by comparing the amount of pure gold in each with the amount in the gold dollar of the United States. The silver coins of countries having the double standard have been given the same valuations as the gold coins of such countries with which they are interchangeable. The values of the silver coins of countries having the silver standard have been ascertained by taking the bullion value of the pure silver contained in such coins based on the average price of silver in London for the period commencing October 1, 1888, and ending December 24, 1888—namely, 42.911 pence per ounce, British standard, equivalent, at the par of exchange, to \$0.94066 per ounce fine. The value of silver for the corresponding

period of last year was \$0.96645, a decline of a little over 2½ cents per ounce. The decline in the price of silver occasioned a change in the estimated values of the following coins:

Coins.	Value Jan. 1, '88.	Value Jan. 1, '89.
Florin, of Austria.....	\$0.545	\$0.536
Boliviano, of Bolivia.....	0.699	0.680
Sucre, of Ecuador.....	0.699	0.680
Peso, of Guatemala.....	0.699	0.680
Peso, of Honduras.....	0.699	0.680
Rupce, of India.....	0.332	0.323
Yen, of Japan.....	0.753	0.734
Dollar (Peso), of Mexico.	0.759	0.739
Peso, of Nicaragua.....	0.699	0.680
Sol, of Peru.....	0.699	0.680
Rouble, of Russia.....	0.559	0.544
Nahhub, of Tripoli.....	0.630	0.614
Dollar (Peso) of U. S. of		
Colombia.....	0.699	0.680
Bolivar, of Venezuela....	0.140	0.136

Shipbuilding in Maine continues depressed, although that State still holds the supremacy in turning out wooden vessels. During the year there have been built 54 vessels of all rigs, aggregating 16,173 tons, against 41 vessels, with a total of 17,454 tons, built in 1887. At Bath, the principal wooden shipbuilding port and the largest in the world, there have been built 24 vessels, with a total tonnage of 10,035, against 20 vessels, aggregating 10,319,

built in 1887. There were built 18 schooners, with a total of 8524 tons; 5 steamers, 855 tons, and 1 bark of 555 tons. At East Boston, Mass., there has been more activity than before for many years, the demand being for schooners in the coast-wise trade.

Improved Lock Washer.

A year or two ago we had occasion to present to our readers a description and illustration of a simple and effective lock washer brought out by the National Lock Washer Company, of Newark, N. J. The principle of the washer was applied in two different forms, one being intended for heavy work, as for example, in connection with track bolts, heavy machinery, &c., and the other for lighter work, and also for use in securing carriage bolts and in connection with wood and metal work in general. This latter form was a dished spring washer, provided with a rib extending entirely around its inner edge, and projecting outward, so as to act on the face of the nut, which was screwed down upon it, so that, on the washer being flattened out against the surface of the work through which the bolt was inserted, a portion of

Improved Lock Washer for Woodwork.

the metal of the nut was forced against the bolt, effectively locking the nut and guarding against its working loose.

Since then the Company have made some improvements, which are embodied in the washers shown in the annexed engravings. The principle has been retained, but it will be noticed that the inner edge of the dished washer, instead of being provided with the previously mentioned rib, has two projections, which are spirally inclined in the opposite direction from that of the threads on the bolt. By this arrangement these projections perform the displacing function upon the metal of the nut as the latter is screwed home. The pressure with which the dished washer bears upon the surface of the work while the nut is being screwed on is in the new arrangement greatly diminished, and the adaptability of the washer is therefore much increased for employment with nuts and bolts used in wooden structures, as there is a diminished tendency of the upper edge of the washer to indent itself into the wood. The importance of this point will be readily appreciated. The smaller of our engravings shows a partial top view of the washer, with the displacing projections clearly defined. The larger of the cuts represents a washer in position, with the nut ready to be screwed down upon it. From the engraving it can be understood with little difficulty just what will happen when this is done. The washers, so far as we know, have given excellent results since their introduction, and are turned out, we understand, at a relatively low cost.

A Steam Lamp.

Messrs. Lean & Blair, of Pittsburgh, Pa., are putting on the market what will be known as the improved "luminator," and which, in effect, is a steam lamp for burning cheap creosote and other heavy non-explosive hydro-carbon oils in conjunction with steam or air. We understand that it gives an intense, white flame, shedding a great amount of light, and is, accordingly, recommended as a most suitable and

Steam Lamp, Made by Lean & Blair, Pittsburgh, Pa.

economical light for foundries, boiler sheds, engineering works, shipbuilding yards and other similar establishments.

The manner in which this lamp works will be understood without much explanation, the construction being simple and the engraving quite clear. We may say right here that either compressed air or steam may be used, the results in either case being eminently satisfactory. The steam or air supply pipe is connected at A and the drain cock B is opened until steam or air passes freely. The cock is then closed and the valve C opened wide, allowing steam to pass through the luminator. The quantity of steam or air is regulated

by the valve E, giving a little to begin and then increasing or diminishing the quantity as required. The oil supply is regulated by the valve D. If the oil gets thick and cloggy by frost, the cock F should be left slightly open, so as to allow a small drip of water to pass, and so heat the oil by the pipe passing through the tank. The cock F should be shut off if the oil is getting too hot. The oil tank should be washed out with hot water occasionally by plug C. To put out the light, shut off steam or air at C, and open F.

The light is under perfect control and requires no skilled attendant. The lamp can be lighted or extinguished instantly. The consumption of oil varies from about 1.6 to 2 gallons per hour.

A Record of the Smith Heating Furnace.

We are indebted to Alex. Laughlin & Co., of Cleveland, for the following record of the product and fuel consumption of a 7 x 16 foot Smith heating furnace recently completed by them with the necessary gas producers at the works of the Ohio Iron Company, Zanesville, Ohio, under a guarantee as to fuel consumption:

This 182 1/2 tons finished iron with 46,588 pounds slack coal, making an average of 255 pounds to a ton of finished iron.

The coal used costs but 62 1/2 cents per ton delivered at the works, or 8 cents for each ton of iron heated, and the wages of the gasmaker cost \$1.65 per day, or about 7 1/2 cents to each ton of iron heated, making a total cost of 15 1/2 cents per ton, which is believed to be somewhat lower than any of the natural gas companies are charging. The iron was rolled on a 16-inch two-high bar mill, while a great deal of it should have been rolled on a 10-inch three-high mill. There was no telegraph from the furnace to the rolls, so that all the iron had to be run down on a buggy. These disadvantages together make it impossible for the rolls to take all the iron which the furnace could heat, and at the same time there was not a man about the furnace who had ever worked a gas furnace before.

THE WEEK.

Philadelphia is discussing the expedience of buying an electric lighting plant, which it is claimed would reduce the cost per lamp to about 17 cents, instead of about 50 cents per lamp, as at present. The plant would cost \$120,000.

The Governors of eight of the largest Southern States have, in compliance with a request from C. H. Wells, filled up blanks with official figures showing the progress made by the respective States during the last eight years. Georgia and South Carolina alike show the greatest increase in manufacture of cotton. In iron making Georgia also shows wonderful progress, and diversified small industries have been fostered with excellent results. Alabama's largest increase is in iron, with lumber, coal and quarrying close behind. In the line of manufacture Texas has shown the greatest increase in the making of iron and the converting of it into useful articles. Lumber comes second, flour milling third, with canned fruits next. In lumber manufacture Arkansas has made the greatest headway since 1880, cotton oil making coming second and mining third. Virginia's growth has been in the line of iron working and mining, as well as lumber cutting, wood working, and flour milling. In respect of assessed valuations Texas shows the largest gain, equal to \$354,600,000 in eight years. Alabama comes next with a net gain of \$92,039,000. Adding all the figures together the gross gain in eight States in eight years is \$794,900,000.

Lumbering in the Dominion has suffered a collapse since the election in the United States, enormous accumulations having been made in anticipation of free exports. The reaction is intensified by the imposition by the Government of an increased export duty on pine logs. Several American firms who bought timber on Georgian Bay in expectation of rafting the logs across the lakes to Michigan are severe sufferers.

The growing importance of steamship lines in the coastwise trade appears in the single fact that there are now five steamers a week between New York and New Orleans and at least 20 steamers are plying between New Orleans and Central America. Ten years ago there was barely one. In trade with Cuba and Mexico there is an equal growth.

The construction of the Naval Observatory at Washington City will be commenced in the spring.

New York manufacturers of domestic woolen goods about a year ago subscribed \$30,000 for the services of a special agent to be stationed at the custom houses to assist in the prevention of fraudulent valuation, and the report just made of the results causes much dissatisfaction among importers. Complaint is made with good show of reason, and it is claimed "that no agent of any domestic manufacturer ought ever to be allowed to handle the goods or to inspect the invoices of the importers. Experts should be employed, but they should be the sworn officials of the Government, and under no circumstances should the trade secrets thus laid bare to them be exposed to public gaze, much less to the rivals of those who own the goods."

The continued depreciation of silver works mischief in the trade of Mexico. When the Mexican dollar, worth intrinsically more than the Bland dollar, gets down to 73 cents in New York, as at present, and silver bars are quoted at 42½ in London, many important interests are seriously affected. A Mexican correspondent says: "Mexico is now importing \$50,000,000, silver value, of foreign goods, some \$26,000,000 of which comes from Europe and \$24,000,000 from the United States.

To meet this big bill she exports products other than silver about \$18,000,000 according to recent figures. The balance of \$32,000,000 goes out in silver. It is this condition of affairs which the united chambers of commerce of the country, combined in one association, known as the Mercantile Confederation of the Republic, are studying with great care. The confederation has been holding sessions during the past three weeks, and has, in a series of reports, gone into the matter with a boldness which will compel the Mexican people to stop and think seriously. The reports urge that the true remedy for overcoming the evil results of the continual drop in silver is to export more and more of products which, in relation to gold, the universal measure of values, have not depreciated, while some have risen, as for example, henequen and coffee."

The great work contemplated in the excavation of the Cape Cod ship canal at Sandwich, Mass., is the severance of the far-reaching peninsula from the main land, shortening the inside route from Boston to New York 76 miles, and the outside route 130 miles. During the last year nearly one mile was dug by a single steam dredger operated by 12 men, not quite seven miles remaining to be cut through. When finished, the canal will be 200 feet wide on top, 75 feet on the bottom, with an average depth of 23 feet at low water. There will be no locks.

Andrew Carnegie, the "Iron King," is said to have made his first big money in the oil business. He was one of the principal owners of the Story farm, on Oil Creek, Pa., which is estimated by practical oil men to have produced in the 20 years since the first discoveries were announced oil to the value of \$9,000,000 to \$10,000,000. In a single year the production of the farm was 141,508 barrels.

Philadelphia editors are now confident that the proposed improvement of League Island, as the site of a naval station, will be carried into execution. The cost will not be less than \$4,000,000.

Germany and England vie with each other in supplying Brazil with machines and machinery. A Berlin paper expresses dissatisfaction that their British rivals have acquired such an advantage, and recommends the exporters at home to keep the importers in Brazil well supplied with catalogues illustrative and descriptive, and lists of the German manufacturers' prices printed in either the Spanish or Portuguese languages, or both. They are also recommended not to attempt to deal direct with the Brazilian shopkeepers, but through German commission houses, who are able and willing to obtain good orders at a small commission and free of all risk to the manufacturer by the sole assistance of samples, catalogues and price lists. Goods should also be packed very strongly, and into as little space as possible. Americans may profit from these hints.

A strong effort will be made in the next Congress to provide for a deep water port on the coast of Texas, the location to be selected by a commissioner.

The City of Mexico is negotiating a loan of \$10,000,000 in London, for the purpose of carrying into execution the plans for building a great drainage tunnel, introducing water and improving sewers, upon which engineers have been engaged for some time past.

The net debt of the State of New York is less than \$3,000,000, there being \$4,000,000 in the Sinking Fund.

Electricity for car propulsion is gaining favor in this city. In Fulton street, east of Broadway, may be seen a section of the new cross-town electric railway. The current will be conveyed to every car from

the powerful dynamo at Burling Slip by means of two parallel copper bars suspended a few inches beneath each rail. A direct and constant connection will thus be maintained between the source of power and the car through a narrow slot which permits the free movement of a conducting rod. The Fourth Avenue line promise to have a dozen of the Julien electric cars running before the close of the winter.

The more general use of natural gas in Ohio and Pennsylvania has necessarily driven a large amount of bituminous coal out of those States to more distant markets.

It is a curious fact, if it be one, as now affirmed, that labor organizations as a whole, during a long term of years past, have not secured for themselves a higher rate of wages than is realized by workmen who have remained independent, seeking for themselves individually such compensation for their services as they might be able to command through an equitable agreement with the employer. Considering the enormous amounts of money that have been expended by associated workmen in maintaining organizations and aiding those of their fellows who went out "on strike," the practical operation of the two systems of labor, as thus indicated in results, affords a lesson of the deepest significance. It demonstrates yet again the difficulty of running counter to natural laws governing supply and demand throughout the whole realm of mundane affairs.

Foreign immigration into the United States during 11 months of 1888 did not quite reach 500,000, and the total for the year will probably exceed that of 1887 only about 10,000.

Commissioners have left Washington to locate a navy yard on the Pacific Coast above the 42d parallel.

The new city hall in course of erection in Richmond, Va., is of James River granite and will cost \$700,000. The population of the city is about 85,000.

Sales of real estate in Tacoma, W. T., during the year amount to \$8,250,000 and the boom is still on.

The East River Bridge has become a wonderful thoroughfare, in this respect repeating the experience of the elevated railroads, the business done exceeding by far anything that the most sanguine predicted. The aggregate number of passengers for the year was 33,116,000, showing an excess of 2,500,000 over the previous year. The receipt from tolls amounted to \$917,961, of which sum the railroad yielded \$833,700.

Work on the steel and iron railroad swing drawbridge which the Stonington and Providence Railroad Company are now swinging across the Thames River at New London will be somewhat delayed by the loss in Long Island Sound of a timber raft which had been towed from Georgia through the canals.

Many railroads are projected or in course of construction on both banks of the Hudson, in the vicinity of the Poughkeepsie Bridge. Among them are the eastern connections to the bridge, a line from Campbell Hall to Highland, one from Greycourt to Burnside, the Newburg and Wallkill Valley Line, the road from Brewsters to Anthony's Nose Bridge, and one from Fort Montgomery to Turners.

The long-continued depression in the raw silk market and the recent rise may make a synopsis of this market for some years back interesting. On June 30 of last year, which was the end of the season, stocks of raw silk in every country were smaller than ever before. The new crop in Canton showed a shortage of 55 per cent. Canton usually exports 20,000 bales to Europe and America. In Northern

China, which includes Shanghai, there was a deficiency of from 20 to 25 per cent. Italy showed a loss of from 15 to 20 per cent. At the end of October, 1888, the lowest price of the century ruled on all grades of silk. At that time a syndicate was formed in Italy which was composed of silk merchants and bankers, and the price was forced up about 25 per cent. In October of 1888 prices reached a lower basis than ever, and early in December of that year some leading houses in London, Lyons and China, who are heavy importers and exporters of raw silk, commenced to operate, and to this is partly due the recent advance.

The Persian Government has issued a decree prohibiting the construction of works with foreign capital, which does not tally with the spirit of recent utterances of the Persian Minister at Washington.

Fifteen thousand employees of the Panama Canal Company are liable to become destitute and desperate in case their resources are cut off for any reason, and, as many of them are almost savage Liberians, fears are entertained that hunger may drive them to pillage and destruction. According to the terms of agreement between the Government at Bogota and the canal company the entire plant, including railroad, shops, land and, in general, all property connected with the work of construction, are forfeited to the "concessionaires" without indemnity of any kind, in case the scheme is either abandoned or transferred to "any foreign government or nation."

The long-pending contest between the Dominion Government and the Province of Manitoba has ended in a decision by the Supreme Court, rendered unanimously, that the province has a right to authorize the construction of lines across the lines of the Canadian Pacific, the only condition being that the mode and place of crossing shall be approved by the Railway Committee of the Dominion's Privy Council. Manitoba henceforth will be untrammelled in reaching out across the boundary for closer commercial connections with the United States, with the special object of gaining an outlet for its stores of grain. The Canadian Pacific, on the other hand, is thwarted in a quarter where obstructions were least expected.

Several million dollars have been withdrawn from Connecticut savings banks during the year for investment in Western mortgage securities.

The wire rigging of the great five-masted schooner Governor Ames came down with a crash during a heavy blow, the ends of the wire having been cut too short in splicing, and all of the masts went overboard.

The Mexican Government is removing obstacles to the export trade of that country so far as possible in an effort to encourage the largest expansion.

Engineer Merrical, of the Nicaragua Canal Company, says a newly discovered mountain route will cost \$15,000,000 less than previous estimates, and discharged Panama Canal men can be had at 75 cents to \$1 per diem.

The Cincinnati Tin and Japan Company, owing to the steady growth of their business, have been compelled to seek larger quarters, both for manufacturing and trade purposes. This object was accomplished in securing the premises 174 and 176 Main street, between Fourth and Fifth streets, consisting of two pressed brick buildings of five stories each, having a frontage on Main street of 40 feet, running back 160 feet to the alley, on the opposite side of which is an additional building 25 x 50 feet, three stories high, this latter will be

used for manufacturing purposes exclusively. The basement of the main buildings will be used for the storage of Hollow-Ware, Refrigerators, Gasoline Stoves, &c., the first floor will contain a complete stock of Tin Plate and Sheet Iron, the offices will also be located on this floor; the second floor will be fitted up in an attractive manner as a sample-room, and where Stamped Ware will be kept. The third floor will be devoted entirely to Box Goods and Japanned Ware; the fourth floor, storage for Pieced Tinware, and the fifth floor will be used as a shop. On this floor and in the factory building already referred to, will be produced all the Japanned and Pieced Tinware, Sheet-Iron Goods and Solder, for which the firm enjoy an excellent trade. Broad stairways provide access to the various floors, which are in turn well lighted by means of extra large skylights. Two hydraulic elevators provide means of transportation of the heavier articles from floor to floor.

A Large Sand Wheel.

A dispatch from Scranton, Pa., under date of the 19th ult., says: "The largest wheel of the kind ever made in this country, and probably the largest of any kind, is now in course of construction at the machine shop of the Dickson Mfg. Company here. It is what is called a sand wheel, and is being made for the Calumet and Hecla Copper Company, of the Lake Superior region. The great wheel will be 53 feet in diameter and several feet wide, and the Dickson Mfg. Company will get \$70,000 for it. It is being built around a 20-inch hollow shaft of gun-metal, and it will weigh between 150 and 160 tons when completed.

When the great wheel is put in place at the copper mines it will be made to revolve slowly by means of enormous cogs on the surface of its circumference. These cogs are being cast in segments, and will weigh many tons in the aggregate. On each side of the mammoth wheel there will be 50 buckets, each of which will hold about 100 gallons, and these buckets will elevate the washings and dump them into a sluiceway. After the great wheel has been built up and all the finishing touches have been put on, it will be taken apart and shipped.

The first of the calendars from the Metal trade to reach us this season is one from Bruce & Cook, 186 Water street, New York, and its simple and tasteful design will be pleasant to look back upon from the midst of the over-ornamented and gorgeous productions that will in all likelihood come to us for notice during the next few weeks. The calendar is similar to those issued in former years by this firm. It is a nearly square piece of heavy white cardboard, edged with a broad band of fine scroll-work in black and red. Across the top is the firm's name and business, printed in large, plain type, and the months are paneled off in columns down the sides. In the middle of the card is a wood-cut representing the front and rear elevations of the firm's warehouse on Water and Pearl streets, while above and below the illustration are lists of the metals and goods kept in stock. The cut is evidently new, and though a great improvement on the one formerly used, its execution is hardly in keeping with the other decorations of the calendar. Messrs. Bruce & Cook are among the oldest houses in the American Metal trade, the dates 1812 and 1889, which are given a prominent position on the card, indicating the length of time the firm has been in existence. Accompanying their calendar Messrs. Bruce & Cook send a New Year's greeting to the trade in the form of a circular letter. After referring to their extensive line of goods and the saving in

shipping charges and freights to the purchaser who buys his goods in one lot, the circular presents the following review of the Metal markets during the past year: "The reaction from high prices of metals, to which we referred last year, came during the spring months, and since that time lower prices have ruled, except for Copper and for a short time in Pig Lead. The former still holds at a fictitious value owing to the operations of the syndicate, who have been successful, up to the present time, in maintaining a price not warranted by the ordinary conditions of supply and demand. The latter, by a vicious method of speculation, was forced during the early autumn above 5¢ $\frac{3}{4}$ lb, from which it dropped suddenly, owing to the inability of speculators to carry; and in its fall crushed the leaders in such unwarrantable operations, and is now ruling at a fair market rate.

Opalescent Glass.

C. Edward Henry, formerly of New Rochelle, N. Y., has just put in operation the Opalescent Glass Works, at Kokomo, Ind., for the manufacture of glass for decorative purposes. The location was chosen to take advantage of the natural gas found in that vicinity, which is furnished free to manufacturers. The works consist of a modest brick factory, containing a seven-pot furnace, a reheating furnace and annealing furnaces. The chief product of the works is drapery glass, now extensively used in this country for ornamenting windows. *Scribner's Monthly* for December contains an article on the uses to which this glass has been put, the writer claiming that our artists and decorators are now producing effects in stained glass windows far superior to the best work of European artists. He describes part of the process of manufacturing drapery glass as follows: "This is made from the glass as it is thrown in a melted state upon a flat table of iron to be rolled into a disk. When the glass is spread out, very much like pie crust, the roller by which it is spread keeping up the resemblance, the edges are seized by the glass maker, armed with short tongs, who overlaps an edge, or pulls and twists it in various directions as his fancy may suggest. This glass, when annealed and cooled, reveals in great variety the flow and twist of folds of drapery, and when the artist artisan, with the main direction of the lines of the draperies of the cartoon which he is following firmly fixed in his mind, visits the racks in which, row upon row, the disks of glass are stored, he is generally able to select pieces which, placed in the window, represent in the color of the glass, unaided by the painter's skill, the most subtle gradations of light and shade in the form of the drapery." The method in which the glass is colored is kept secret. The coloring matter used operates very singularly on the glass, being deep in some places, and fading in an irregular manner to the lightest tints. It is sometimes mottled and again very evenly disseminated. Some of the plates of glass have a very smooth surface, like window glass, while others are full of corrugations and waves. The plates as finished are about 2 feet square, and are sold by the pound. Mr. Henry's warehouse, adjoining the works, is a most fascinating place for a student of color. The plates are arranged in racks, classified by colors as nearly as possible, but hardly any two plates are precisely alike when held up to the light. The demand for this glass is large and constantly growing, the works in question having orders far beyond their capacity. Mr. Henry also manufactures glass insulators for incandescent electric lights. These are made in a press, in which molten glass is forced into the desired shape by suitable dies and molds.

MANUFACTURING

Iron and Steel.

The puddling department of the Norton Iron Works, at Ashland, Ky., that has been idle for the past two years, was started on December 17 on a contract for muck bar that will make steady work until March 1. The blast furnace is turning out its usual quantity of American Scotch pig iron, and the nail factory is in operation.

Cherokee Furnace, at Cedartown, Ga., out of blast for relining and repairs since July last, will resume operations early in the spring.

The Waugh Steel Works, of Belleville, Ill., are manufacturing steel rails, billets, slabs and nails. The company have also recently commenced the manufacture of steel shafting of all the different sizes, besides squares and flats. They have been running very successfully on soft steel, for which they find a ready sale. The company also manufacture all sizes of steel rails from 12 pounds to 35 pounds. They are constantly making additions to their works as fast as the demands of the trade require.

The United States Iron and Tin Plate Company, Limited, of Demmler Station, Pa., are contemplating the completion of a small new addition to their works. The building was commenced about a year ago, but was not finished on account of the uncertainty of the Tariff laws.

On Monday, the 24th ult., the Pottstown Iron Company, of Pottstown, Pa., closed down the nail department of their plant, and paid off and discharged all the employees. The average time made during the past month has been about ten days. The company complained that they were not making any money in nails, and about three weeks ago suggested that the men should agree to a reduction of wages for themselves. No action was taken by the men; hence the action of the company. It is thought the company will now fix a lower rate of wages, and resume with men who may accept it.

Macungie, Pa., Furnace, which has been undergoing repairs since July 1, is about completed, but will remain idle subject to a more favorable market.

A press dispatch from Steubenville, Ohio, under date of the 26th ult., says: "James F. Daton, receiver of the old Mingo Iron Works, which failed in 1879 with a large indebtedness, to-day declared the second dividend to the creditors. There were claims amounting to \$286,000 presented to the receiver, the heaviest one being by Singer, Nimick & Co., of Pittsburgh. Upon this amount the receiver has declared a dividend of 1 1/2 per cent. This is all the creditors will ever receive, as the settlement of to-day is final. The receiver has been discharged."

The blast furnace of Isaac McHose & Son, at Norristown, Pa., chilled on Monday, the 24th ult., and was blown out. It will be repaired and relined and put in operation again as soon as possible.

After an idleness of six months, during which complete repairs were made, Marshall Furnace, at Newport, Pa., will begin work on the 10th inst.

On Wednesday, the 26th ult., the Altoona Iron Company, of Altoona, Pa., declared its usual annual dividend of 10 per cent. on their capital stock of \$100,000.

From the Vermillion Iron Tribune of a recent issue we take the following: "A new iron company has been formed, to be known as the Vermillion and Grand Marais, with headquarters at Duluth. Their capital stock is \$5,000,000. The

incorporators are Hiram W. Sibley, New York; Henry M. Loud, Oscoda, Mich.; David S. Fox and Charles S. Brown, Flint, Mich.; Isaac Bearinger, East Saginaw, Mich.; George L. Walker, Detroit, Mich.; James Charnley, Chicago; Moses Stewart, Jr., Verdale, Minn.; William McKinley, Frederick W. Paine, Horace Williston and George T. Hughes, Duluth. The company own lands on the East Vermillion and also the Messaba. The company have in their possession between 12,000 and 15,000 acres of land, much of it first selections and containing many rich and very valuable iron outcroppings. It is scattered over the entire range. Officers and directors have been selected as follows: Henry M. Loud, president; M. Stewart and Wm. McKinley, vice-presidents; F. W. Paine, treasurer, and Horace Williston, secretary."

J. M. Coleman, of Niles, Ohio, has closed a contract with the Cherokee Land and Iron Company for the erection of a large and entirely modern rolling mill at New Birmingham, Ala. It is expected that a portion of the machinery will be on the ground within 30 days, and that the mill will be in full operation by next spring.

No. 1 of the Maryland furnaces, at Baltimore, having a monthly capacity of 600 tons, will go in blast about the middle of February, simultaneously with the blowing out of No. 2 for a new hearth.

We are authoritatively informed that the report that the plant of the National Tube Works Company, at McKeesport, Pa., would be closed down in the near future for an indefinite period is without foundation.

M. V. Smith, metallurgical engineer, of Pittsburgh, is constructing several new rolling mills in different parts of the country, including the mill for the Minnesota Car Company, at Duluth, Minn.; the mill for the Standard Spike Company, at Manchester, Va., and the mill for the Union Steel and Iron Company, at St. Joseph, Mo.

A change will shortly be made in the firm known as the Katahdin Charcoal Iron Company, at Katahdin, Me. Fred. W. Hill and Charles D. Sanford have bonded the controlling interest in the Katahdin Charcoal Iron Company, and will soon complete the purchase and assume the full management of the works and run them to the extent of their capacity. They will secure a lease of the Piscataquis Iron Company, which owns the plant and the township, to continue 50 years. The capacity of the work is about 25 or 30 tons per day, and the iron, as is well known, is of the very best quality. It is largely coming into use for car wheels, and the fact that the Canadian Pacific railway is to pass near the works, and that it is intimated that they will establish a foundry there for making car wheels may give the works one of the greatest possible booms in the near future.

The Millerton charcoal furnace, at Irondale, N. Y., blew out on Thanksgiving day, its resumption depending on future developments in the iron trade. In the meantime a new hearth will be put in and general repairs made.

From a recent issue of the *Age of Steel*, St. Louis, we take the following: "The St. Louis Ore and Steel Company are preparing to start their blast furnaces, and may finally follow with the steel works, though that depends upon circumstances. The company have over 100,000 tons of ore at their Pilot Knob Mine, and the idea is to turn this into iron. The ore is not sufficiently high grade to make the marketing of the resulting iron profitable at a distance, for instance, in Pittsburgh, and it is therefore very probable that the

steel plant will be reopened should the rail market improve. In that event the Jupiter blast furnace, though controlled by another corporation, would likely go into blast also, as its output would be needed to supplement that of the stacks at the steel works. "C" furnace at the latter place is expected to blow in early next week, and a second stack shortly thereafter."

On Friday the 21st ult. work was commenced on the erection of a large wire rod mill, at New Castle, Pa. The capital stock of the new company is \$150,000, all of which it is stated has been passed in. The proposed buildings will cover 4 acres of ground just east of the Crawford furnace, and will turn out about 150 tons of rods per day. President William Patterson, of the National Bank of Lawrence County, and other capitalists of New Castle and Pittsburgh are interested in the new concern.

Machinery.

H. K. Porter & Co., Limited, of Pittsburgh, manufacturers of light locomotives, are making an engine for display at the Paris International Exhibition, which opens May 5, 1889. The locomotive is especially designed for use on the coffee and sugar plantations of South America and the East Indies. On the 1st ult. this firm shipped to the Argentine Confederation, South America, six locomotives to be used on rural railroads near Buenos Ayres. The contract was received after close competition from English locomotive works.

The Crescent Foundry Company, Limited, have been organized at Pittsburgh, with a capital stock of \$5000. The company is composed of Louis Weitheimer, Jacob J. Kish, William C. Kish and Louis M. Kish.

The National Wrapping Machine Company, of Pittsburgh, have contracted with Bair & Gazzam, Limited, of that city, for the construction of ten soap-wrapping machines.

The Emerson Mfg. Company, of Lawrence, Mass., are to erect a new shop 150 x 40 feet and one story high for the manufacture of paper-making machinery.

The Youngstown Brass Works, John W. Morrison, proprietor, have recently been established at Youngstown, Ohio, for the manufacture of brass and bronze castings, tuyeres &c. They report that they are already receiving a liberal share of the trade.

Bids were opened at the Navy Department on the 27th ult. for machine tools for the Mare Island, Cal., Navy Yard, under an appropriation of \$100,000 for the purpose of fitting the yard for the repair of steel ships. There were 49 items, the principal one being a set of bending rolls, for which the Niles Tool Works made the lowest bid, \$40,290.

The James E. Thomas Company, founders, of Newark, Ohio, cast recently the fourth of a number of large band-wheels they are making for Corliss engines. Its dimensions were: Diameter, 16 feet; bore, 10 inches; rim, 36 x 4 1/2 inches. Its weight was 29,400 pounds. It was cast in one piece, and afterward cut in two for shipment, being provided with lugs for bolting together again.

B. F. Sturtevant has removed from his old salesroom, at 115 Purchase street, to much larger and convenient rooms at 34 Oliver street, corner of Franklin street, Boston.

The Collins-Gibbons Mfg. Company, of St. Louis, purpose at an early date to put in the necessary machinery and increase their force sufficiently to make four sizes of their automatic wire straighteners and cutters.

Hardware.

The Painesville Metallic Blind Company, Painesville, Ohio, O. G. Tuttle and C. C. Finneran, proprietors, recently moved into their new building at the corner of Elm and Railroad streets. This building is two stories high, 60 x 26 feet, with an L 16 feet square, which gives it a frontage of 42 feet on the railroad. Last March this firm bought out the business interest of Wilson & Reed in the manufacture of metallic binding, and have since then been constantly increasing their trade.

I. A. Weston & Co., Syracuse, N. Y., whose works were nearly destroyed by fire December 4, are rebuilding at Jamesville, N. Y., seven miles south of Syracuse, where they will have largely increased facilities. They refer to their business in their patent steel wheels as having developed into large proportions, many of the leading manufacturers of tricycles, velocipedes, hand carts, garden plows, wheelbarrows, &c., having adopted their wheels.

The Rock Island Knife and Shear Co. have removed their plant to Kokomo, Ind., to take advantage of the natural gas. Their facilities in their new location have been largely increased.

Ford & Co., late of Cory, Pa., have just commenced the foundry business at Kokomo, Ind., and report orders ahead.

The shipping, polishing and machine departments of the works of E. T. Fraim, Lancaster, Pa., were damaged by fire on the evening of the 24 ult. Mr. Fraim, however, announces that in two weeks he will be again in full operation.

The Rockford Bit Works, formerly at Rockford, Ill., are now in full operation at Kokomo, Ind. They employ about 40 hands.

It is reported that Wilkins Linhart has been appointed receiver of the property and effects of the Hollis Tack and Nail Company, Limited, at Pittsburgh.

Local barb wire manufacturers are exceedingly well supplied with orders, the season considered. The Freeman Wire Company reported a week ago that they were 400 tons behind demand, and the American Company at that time were 300 tons behind, after having depleted, to the point of exhaustion, all stocks in their warehouse. The Continental Wire Company cleaned out their stock some weeks ago. The Southern Wire Company restarted this week with a full force of hands. The last named had received from and disposed of a considerable surplus of wire made at Braddock, near Pittsburgh, until this was sold their local works were run only in a light and irregular way. Prices, however, have ruled extremely low all through the year, and are a prolific source of complaint among manufacturers. —*Age of Steel, St. Louis.*

Miscellaneous.

The wire nail factory of the Hartman Steel Company, at Beaver Falls, Pa., which has been idle for several months, has resumed operations, on double turn.

P. J. & C. A. D. Lynch have just commenced the manufacture of steam boilers at Kokomo, Ind. Their shops, which are substantially built, are 60 x 120 feet, with cupola of 75 feet. They will be known as the Kokomo Steam Boiler Works.

Michigan Stove Co., Detroit, Mich., have decided to still further improve the appearance of their works by the addition of an ornamental iron railing to go around the top of their mammoth buildings, and have contracted with E. T. Barnum, Detroit, for the work.

A circular has been issued announcing that owing to a large extension of manu-

facture the Avery Elevator Bucket Company, of Cleveland, Ohio, have considered it advisable to change their name to the Avery Stamping Company. They will continue to make seamless steel elevator buckets a prominent feature of their business.

The Williamson Trade School.

The keynote of Mr. I. V. Williamson's deed of trust, by which he provides for the organization and support of the Williamson Free School of Mechanical Trades, is sounded in the clause: "I especially direct that each scholar shall be taught to speak the truth at all times, and I particularly direct and charge as an imperative duty upon the trustees that each and every scholar shall be thoroughly trained to habits of frugality, economy and industry, as above all others the one great lesson which I desire to have impressed upon every scholar and inmate of the school is that in this country every able-bodied healthy young man, who has learned a good mechanical trade and is truthful, honest, frugal, temperate and industrious, is certain to succeed in life and to become a useful and respected member of society."

That expresses the essential purpose of Mr. Williamson's great gift, which he tells us in the deed of trust he has contemplated for 30 years, and for which he has saved and accumulated the means during that long period. The Philadelphia *Ledger* sketches briefly the character of the Williamson Free School of Mechanical Trades for which provision has thus been made. The trustees, John Baird, James C. Brooks, Lemuel Coffin, Edward Longstreth, William C. Ludwig, Henry C. Townsend and John Wanamaker, are given full control of the details of organization and administration, subject only to the general provisions herein sketched. To found and support the school stocks have been set aside of the par value of \$1,500,000, estimated to be worth in the market about \$2,250,000. Of this amount one-fifth, or about \$450,000, will be available as a building fund for the purchase of land, erection of buildings and the furnishing thereof. This would leave for an endowment fund about \$1,800,000, the income of which is available for the expenses, support, maintenance, renewals and repairs of the school, its furniture, plant and equipment. A rough calculation, based on the cost of similar schools, shows that, without accretions to the fund now provided, this gift may be made to extend the benefits of free mechanical education and support to not less than 300 pupils, and perhaps to double that number.

The buildings are to be substantial structures of stone or brick, expensive materials and elaborate ornamentation being avoided, and they are to be erected on grounds in the suburbs of Philadelphia or in Bucks, Delaware or Montgomery county, not exceeding 300 acres in extent, but additional ground may be bought, after the school has been organized, provided the aggregate holding (exclusive of ground given, conveyed or devised) shall not exceed 500 acres, nor the average of cost \$400 per acre.

The institution is to be an absolutely free home and school for healthy young male persons of ages between 12 and 18 years, who must be bound as indentured apprentices to the trustees for such periods as the latter may determine, provided it shall not be for less than three years nor extend beyond the minority of the scholar. Preference is to be given to the poor. Other preferences (in the order named) are to those born in Philadelphia, in Bucks, Montgomery and Delaware counties, in other parts of Pennsylvania, New Jersey, in other parts of the United States.

The pupils are to be fed, clothed and lodged during the term of their apprenticeship; those who require it are to be given a good common school English education, and each is to be taught such mechanical trade as he may be fitted for; they may also be instructed in the art of farming or gardening or either. The pupils are to have moral and religious training, but no attempt is to be made at proselytism nor is favoritism to be shown to any particular sect or trade. Their physical training is also to be attended to, so that each one may grow up with a sound mind in a sound body. The trustees are given full authority to expel pupils who are intractable or insubordinate, or guilty of vice or crime, or to cancel the indentures of any scholar for any reason which they deem good and sufficient; and, finally, the trustees are authorized to give deserving pupils, when they leave the school at the end of their term of indenture, a sum of money not exceeding \$50 to any one scholar.

It will be seen from the above sketch of the nature of the school to be established that it will resemble Girard College in that it provides for the support as well as the education of its pupils, and that it will differ from the college in that it will be open to boys with parents as well as to orphans and half orphans, and more especially differs from Girard College in that all pupils must be taught a mechanical trade. The last mentioned is an essential difference, for though in recent years Girard College has introduced mechanical training, in obedience to Girard's direction to have the pupils taught "facts and things, rather than words or signs," yet trades are not taught, and, indeed, the plan of the school, as sketched by Girard, required that the pupils shall simply be prepared to learn a trade or business, and be bound out for that purpose. Mr. Williamson's scheme is based upon the advanced thought of the day that some trades may be effectively taught in a school in less time and more advantageously than they can be picked up by learners in a shop. That such an institution, supplementing the work of Girard College by taking deserving pupils excluded therefrom, may be made of great value to the community is evident, and Mr. Williamson has selected a Board of Trustees clearly alive to the purposes he has in view and fully capable of carrying them out with honor to themselves and to the founder of this great charity.

Pensacola, Fla., is building a marine railway on a novel plan, under the direction of French engineer. To secure permanency the columns supporting the ways will be made of wrought iron. The base of each column is to be provided or armed with a flange 16 inches in diameter. The superstructure will be made of four strings of double standard steel rails of 76 pounds to the yard, strongly bolted, riveted, cross-tied and braced together. The length under water will be 285 feet. The part above the water, and resting on a yellow pine trestle-work, is to be 250 feet long. The cradle or ship carriage is to be 225 feet long, and will be provided with cast-iron rollers, the bearings of which will be bolted to the lower part of the cradle. The motive-power will consist of a 40 horse-power 144 automatic cut-off steam engine, making 275 revolutions per minute. The gearing will be that of a worm and worm-wheel, driving a powerful wrecking capstan.

The Pratt Institute opens the first term of the year with about 1000 pupils. All the appointments of the buildings, the tools and implements of the shops and foundry, and the fittings of the different departments are of the best and creditable to the city.

The Iron Age

New York, Thursday, January 3, 1889.

The Rail Trade in 1888.

The most prominent feature in the history of the iron trade during the past year has been the unsatisfactory condition of its greatest single industry, the manufacture of steel rails. Exceptionally prosperous in 1887, the rail makers have been notable sufferers from a decline in 1888. While the producers of other merchantable articles in the iron industry are dependent more upon the influences which shape the general prosperity of the country, the rail manufacturers are affected directly by rail road building and renewal. General consumption of iron and steel has been admittedly enormous during the past year, and has been reflected in a heavy volume of business done on a low level of prices. Railroad consumption has probably been below the normal quantity, considering the large mileage of the country.

The following table, showing the sales of steel rails, as compiled from month to month from the reports of the members of the association to its Board of Control, best reflects the wide differences there have been between the two years. On the 1st of February, 1887, there had been sold more steel rails for delivery in that year than had been entered for 1888 delivery on the 1st of December, 1888. All through 1887 it was the buyer who was endeavoring to place his orders. In 1888 there was an increasingly sharp struggle among the mills to secure work enough to keep going steadily.

Sales of Steel Rails, Gross Tons.

	1887.	1888.
To January 1.....	1,032,850	253,687
February 1.....	1,303,140	395,000
March 1.....	1,442,891	565,629
April 1.....	1,494,384	658,513
May 1.....	1,598,048	721,000
June 1.....	1,614,545	820,180
July 1.....	1,695,055	934,987
August 1.....	1,770,449	986,009
September 1.....	1,816,444	1,060,000
October 1.....	1,833,126	1,113,883
November 1.....	1,861,998	1,250,740
December 1.....	1,898,444	1,251,177

We may state in this connection that the reports of sales do not exactly record the time of the transaction, because in many cases business practically concluded but not formally settled by the signature of contracts is not reported until later. Still, the following table may prove of some interest as showing by monthly sales how the activity in the market fluctuated:

Monthly Sales of Rails, gross tons.

Months.	1887	1888	Delivery
Previous to January 1st.....	1,032,850	253,689	to December 1.
January.....	270,200	141,313	
February.....	130,751	170,629	
March.....	52,493	92,884	
April.....	103,664	62,487	
May.....	16,497	99,180	
June.....	80,510	114,807	
July.....	75,394	51,022	
August.....	45,995	73,691	
September.....	16,682	53,887	40,000
October.....	28,872	146,857	76,180
November.....	36,446	437	154,491
Total.....	1,898,444	1,251,177	270,671

The January report is, of course, not yet at hand, but from even a superficial knowledge of the business reported it may be stated that the sales for 1889 delivery to date are in advance of the aggregate of transactions closed for 1888 delivery at a corresponding period last year. This may or may not indicate heavier buying this year. On the whole, we are inclined to believe that it does. Thus far the bulk of the business done has been for renewals on old roads, and comparatively little for new construction. It is natural that for the former purpose the demand may be largely increased, because the cost of renewal is unprecedently low, owing to the fact that old iron rails are fetching within a few dollars a ton as much as new steel.

From a manufacturing point of view the following table showing the shipments of rails from the mills for each month for the years 1887 and 1888 is of considerable interest. In connection with it, as well as the other tables, it should be stated that the figures cover only heavy rails, light sections not being included in the reports:

Shipments of Steel Rails, Gross Tons.

	1887.	1888.
To February 1.....	1,042,226	29,861
March 1.....	235,160	98,361
April 1.....	389,532	184,580
May 1.....	564,403	249,556
June 1.....	747,181	448,149
July 1.....	907,351	585,558
August 1.....	1,045,048	710,502
September 1.....	1,219,717	824,000
October 1.....	1,390,825	921,363
November 1.....	1,569,033	1,029,179
December 1.....	1,729,108	1,116,788
January 1.....	1,833,649	

Official reports for the production of steel rails by all the mills, and of all weights, showed the total to have been 2,101,904 gross tons, or 268,255 tons more than the association shipments. For the first six months of 1888 Swank's production statistics gave a total of 692,197 gross tons, or 106,639 more than the shipments in the above table. This would indicate a total output of 1888 of between 1,350,000 and 1,400,000 gross tons. The capacity of the country is now between 2,400,000 and 2,500,000 gross tons, including the new mill.

So far as the outlook for the current year is concerned, there is nothing definite. It must depend very largely upon the railroad situation. The Eastern and Middle States and the Northwest are not expected to furnish much business as the result of new mileage. The principal demand is likely to come from the South, certain parts of the Southwest and the Pacific Slope. It would be idle to look forward to heavy buying because of low prices of rails. While it has its influence, experience has taught that railroad managers and speculators are not deterred from buying rails when they are high. The all-absorbing question with them is whether or not they can place bonds and market securities. Nor do low prices of rails notably stimulate construction, though they may influence renewal considerably.

A subject which has been attracting attention lately is the large capital of some of the Southern iron enterprises, be it in the form of stock or of bonds or both. In some cases heavy interest payments have caused anxiety to sell and have had some influence on the markets. We are far from considering this a subject for reproach, but the ownership of extensive tracts of

mineral lands has a natural tendency to lead to the building of additional furnaces. A few figures will illustrate this. Take, for instance, the case of a company whose property is represented stock and bonds to the extent of \$3,500,000, on which 6 per cent. dividends or interest must be earned. The company have mineral lands sufficiently developed to furnish the raw material for four modern furnaces, producing annually 150,000 tons of pig iron. This means the mining and coking of at least 300,000 tons of coal and, say, 375,000 tons of ore. Placing royalty, or its equivalent, allowance for exhaustion of lands at 5 cents a ton for coal and 10 cents a ton for ore—certainly modest figures—this would call for \$52,500 annually for a sinking fund. Add to it 6 per cent. on capital, including working capital, or \$210,000, reaching a total of \$262,500, equal to \$1.75 per ton on 150,000 tons of pig iron produced. How many Southern furnacemen make allowances for such fixed charges in their cost sheets?

The Duty on Lead in Silver Ore.

During the recent debate in the Senate on the Tariff bill a subject came up which has been widely discussed during the past year without apparently being well understood. Since our railroads penetrated into Mexico, and afforded transportation facilities to numerous mining districts, considerable quantities of Mexican ore have been shipped to American reduction works. The bulk of this ore has been entered as silver ore, in order to take advantage of a ruling of the Treasury Department some years since. The general practice has been that if an article contained or was composed of two or more substances the duty is dependent upon the rate of the component of greatest value. Silver ore is free; hence, under the ruling, ore carrying so much silver that the value of the precious metal is greater than that of any base metals it may contain comes in free. To illustrate: An ore carrying only 20 ounces of silver valued at, say, 90 cents an ounce, or \$18, could contain not less than 25 per cent. of lead, which, at 3½ cents, would be equal to \$17.50, and yet it would be pronounced a silver ore by the customs authorities.

The Senate Substitute bill contained the following item: "Lead ore and lead dross, 1½ cents per hundred, provided that lead ore containing silver ore, or silver ore containing lead, shall pay a duty of 1½ cents per pound."

The object of this proposed modification of the present law is to stop the evasion of a duty of 1½ cents a pound on every pound of lead contained in the alleged silver ore. This has become a matter of great magnitude. The only and latest official data we have on the subject are those given in the article on lead in the "Mineral Resources," published by the United States Geological Survey. It appears that during the fiscal year ending June 30, 1887, the lead contents of the silver ores imported amounted to 15,488 net tons of lead, valued apparently at 1 cent a pound. As the production of the metal was 160,700 tons in 1887, it is clear that not less than 10 per cent. of the whole product was derived from Mexican silver ore. Since then the quantity has very largely increased.

The smelters on the border pay 90 per cent. of the New York price for the silver and deduct about \$10 for smelting charges. They pay 1.75 cents per pound for the lead in the ore. The cost of smelting is probably not quite \$10, and the rate paid for the silver covers the loss in smelting, the allowance for loss in desilverizing and the express charges on the metal to market. The difference between the price paid for the lead at the smelter and the market price of 3.75 cents must cover the cost of desilverizing, the allowance for waste in that process, about 5 per cent., and the freights. It is clear that what advantage there is in the business accrues to the Mexican mine owners, because they receive the same rate of payment as the American ore producers. Practically, the amounts saved by evading the lead duty, through the importation of "silver ore," is made a gift to them. In other words, the mining districts of Northern Mexico are being stimulated at the expense of our own mines in the Rocky Mountains and in the Mississippi Valley.

Until the last few years only a very small quantity of lead has been produced in Mexico for shipment abroad, the bulk of what was made going to England as argentiferous base bullion. In some important districts the silver lead is simply cupelled, the baser metal being used only as a carrier in smelting. The country has not, generally speaking, the proper fuel at a sufficiently low price to become lead smelters of any consequence.

It is urged, in opposition to the demand for a suppression of the free lead imports in Mexican "silver ore," that it would ruin the two smelting works built during the past three years at El Paso, and that it would hurt a considerable number of other metallurgical establishments. So far as the El Paso works are concerned, they were built with the clear knowledge that, in reality, the whole lead imports were an evasion of the duty under the cover of a treasury ruling.

Independent Steam Engines.

It has for many years been the practice of manufacturers to consolidate their power as much as possible. Engine builders have been called upon to construct larger and larger engines, as much to meet the demand for a central source of power for the machinery of a large factory as for the requirements of very heavy special work which smaller engines were unable to perform. In this consolidation of power a large engine is located at a place adjacent to the boiler-room, and the power is thence transmitted or distributed by belts, shafts, pulleys, &c. Oftentimes power is thus transmitted over almost literally miles of shafting. It is carried from room to room, story to story, over or under alleys, and to out-of-the-way places requiring considerable engineering skill to apply the power where it is desired or to give the proper motion to the machinery. An inevitable waste of power occurs in operating any kind of machinery, but in the endeavor to run a whole factory of large size with a single engine fully as much power may be lost by friction or expended in driving heavy belts and long shafts as is utilized in the process of manufacturing.

From a mechanical engineer's standpoint,

the recent practice of a growing class of manufacturers is in some respects eminently superior to the system of consolidating power. A number of small engines are employed, being located in the various departments of the works where the power is to be used. Steam is conducted from the boilers, which are centrally placed, by well-protected pipes to the several engines. The loss by condensation in thus conveying steam any reasonable distance is not great, and the engine for each room or shop is set up in the most convenient place. The installation of such a power plant will not necessarily be more expensive than a large engine with its costly belting and shafting, but, on the contrary, it may for obvious reasons be less expensive, as with separate engines in each department the power needed can be more accurately gauged, thus avoiding the providing of a surplussage of power in the large engine which adds to its cost. Under special and frequently recurring circumstances there is a constant balance in favor of the independent engines from the time they start, as compared with the large central engine.

Aside from the question of economy there are other advantages brought forward by the advocates of independent power. The breaking down of an engine, a main shaft or a belt does not in this case stop the entire machinery of the works, but, on the contrary, each department, being independent of the others, can be operated without regard to breakdowns happening elsewhere. Even in cases where it might seem desirable, for some reasons, to locate the power in one place, this matter of breakdowns and consequent confusion throughout the entire establishment would seem to make the use of several small engines preferable. In the event of any one department working overtime, the entire steam plant and the entire shafting are not brought into use, but only the one engine necessary for that department, requiring less steam and consequently less fuel. Again, in establishments where more power is required at times than is usually the case, owing to the nature of the work in hand, the small engines are preferable, as an extra engine representing reserve power can be provided, but need not be run except just when heavy work is to be done. This is especially applicable to electric-light plants, in which by using the smaller engines the power required can be more readily adjusted to the needs of long and short time customers, city or commercial lights, domestic or manufacturing purposes, &c.

The increasing use of gas or oil for fuel assists the introduction of independent engines, since with such fuel the supply of steam is also made independent. The advantage of this in light manufacturing, or in departments in which power is used irregularly, or at times necessarily at variance with the usage of other departments, will readily be appreciated. The general convenience of oil firing, moreover, is another point worth considering. The development of the demand for engines to furnish independent power is causing quite a number of engine builders to pay special attention to this class of work. Their efforts are being directed to the construction of engines which will require a very small amount of care and attendance, and in this they are succeeding most admirably.

Mexico in 1888.

On December 1 last President Porfirio Diaz was inaugurated for a second term of four years. During his presidency Mexico has not only enjoyed the blessings of undisturbed peace, but had progressed rapidly in every respect. Spread over an area of 1,946,292 sq. km. the present population of the country is 11,000,000, 19 per cent. being whites, 38 per cent. Indians, and 43 per cent. mixed races. The population of leading cities is at present as follows: Mexico, 350,000; Puebla, 112,000; Guadalajara, 95,000; Leon, 60,000; Guanajuato, 52,000; Mérida, 40,000; San Luis Potosí, 35,000; Zacatecas, 30,000; Querétaro, 30,000; Oajaca, 28,000; Colima, 26,251; Saltillo, 26,000; Morelia, 25,000; Aguascalientes, 22,000; Vera Cruz, 21,000; Orizaba, 20,500; Pachuca, 20,200, and Durango, 20,000.

The foreign debt of Mexico amounts to \$28,800,000, and the home debt to \$100,000,000. The budget estimate of the Federal Government for 1888-89 fixes the income at \$37,900,000, and the outlay at \$38,537,239. The army has been kept in a good state of efficiency; it is 30,017 strong, commanded by 1950 officers. The navy consists of five gunboats. About 7500 km. of railway are in running order, and there are in operation 41,507 km. of telegraph, of which 21,453 are the property of the Federal Government, 6887 of States, 6143 of railroads, 4098 of private telegraph companies and 2926 Mexican cable. The Government has 339 offices in operation. There are 300 chief post offices and 724 minor ones, employing 1528 persons, the receipts being \$749,967 in 1887 and the expenses \$857,424. The post office dispatched last year 22,885,092 letters and postal cards through the home mails and 1,345,720 international letters. There entered Mexican ports in 1886-87 were 1240 seagoing vessels of a joint tonnage of 1,032,725, of which 653 were steamers, measuring 877,518 tons. The merchant marine of Mexico numbers 421 seagoing vessels and 847 coasting craft.

Mexican trade has fluctuated of late years as follows, reduced to thousands of dollars.

Fiscal year.	Import.		Export.	
	Merch'dise.	Merch'dise.	Silver.	Total.
1883-84..	\$34,025	\$13,252	\$33,473	\$40,725
1884-85..	35,839	14,515	32,157	46,672
1885-86..	38,715	13,741	29,906	43,647

Export in 1886-87.

	Merchandise.		Total.
	dise.	Silver.	
To the United States..	\$11,007	\$16,576	\$27,583
To England.....	2,397	11,122	13,519
To France.....	717	4,401	5,118
To Germany.....	891	1,290	2,181
To Spain.....	499	104	603
To other countries....	125	68	193

Totals..... \$15,636 \$33,561 \$49,197

The distribution of products exported was as follows:

Sisal hemp....	\$3,901	Istle fiber....	\$349
Coffee.....	2,627	Cattle.....	471
Hides and skins	2,211	Silver lead.....	323
Cabinet and dyewoods....	1,849	Other goods....	2,360
Tobacco.....	851	Silver.....	33,561
Vanilla.....	694	Total.....	\$49,197

The export of merchandise alone from January 1 to June 30, 1888, was \$10,169,485, showing an increase over the corresponding six months of 1887 of \$1,146,192 or 11 per cent., the United States receiv-

ing thereof 63 per cent., England 21 per cent., France 9, and Germany 5 per cent.

The American trade, merchandise only, exhibits the following figures:

Fiscal year.	Imports into the United States.	Domestic export to Mexico.
1888.....	\$17,329,889	\$9,242,188
1887.....	14,719,840	7,267,129
Increase.....	\$2,610,049	\$1,975,059

The parcel-post convention in a small way also stimulates commerce between Mexico and this country; out of the exchange of sample shipments by mail larger transactions frequently grow; everything, indeed, tends to increase our commercial intercourse with the neighboring republic since the railroad systems of the two countries are linked together, and that of Mexico uninterruptedly expands in all directions. The frequent mutual visits of merchants and others also contribute their share toward continually multiplying commercial and other relations, and in a couple of years Mexico will no doubt become the most important Spanish-American country we deal with, whether there be a reciprocity treaty or no.

Washington News.

(From Our Regular Correspondent.)

WASHINGTON, D. C., January 1, 1889.

Senator Allison and his colleagues of the sub-committee on their tariff substitute have lost no time during the holiday recess. They have held sessions daily, perfecting their bill by incorporating certain important amendments, so that every possible expedition might be thrown into the consideration of the measure in the Senate. There remain practically not more than 17 days till the 21st, the date fixed by common consent for taking a vote. Senator Allison says it will take every moment of that time to get the bill in a state of sufficient advancement to make the connection. To run over that date would reopen the whole subject unless the minority would agree to a few days extension if necessary. The Senator says that he will ask night sessions after a few days if that may seem necessary to the finishing up of the parliamentary part of the work in time.

The most important amendments which the sub-committee have been considering are the raising of the duty on tin plate from 1 to 2½ cents a pound, the classification of cotton ties as hoop iron and more clearly defining wire rods and wire for purposes of assessing duties. It is not improbable that Senator Brown, of Georgia, and possibly McPherson, of New Jersey, will vote for the Senate substitute. In the Republican ranks there is some opposition to sugar, especially on the part of Stanford, Ingalls, Plumb, Farwell and Cullom. Senator Allison, however, does not think that they will vote against the bill. In the House the fate of the Senate substitute for the Mills bill will be interesting. The chairman of Ways and Means and his party colleagues have been compiling data with a view to presenting a comparative exhibit of the operations of the two bills, Mr. Mills claiming that his bill is not practically hostile to American industries. The protection Democrats have been conferring as to their course. It is not improbable with the tobacco interests that the Senate bill will pass the House if brought to a vote. The Ways and Means party, however, with the co-operation of the Speaker, will not permit a vote until they shall have made a very careful canvass and satisfied themselves that they have the strength to defeat the Senate substitute.

THE STEEL CRUISERS.

The two steel cruisers contracted for on the Pacific are rapidly approaching completion. The Charleston will be ready for her sea trial about the middle of February, and the San Francisco will follow soon after. Mr. Scott, president of the Union Iron Works, of San Francisco, has been here and gives a very satisfactory account of the experience of his company in the construction of the two cruisers. He expects that this will be followed by the construction of the war vessels designed for the Pacific service. The steel plates for the vessels were contracted for in Pittsburgh. Mr. Scott says that the building of the two cruisers has given metallurgical industries, and particularly in steel, a great impetus, which he thinks will be permanent. To date about three-fourths of the steel used in the construction of 12 cruisers and armored cruisers for the United States on both coasts have been manufactured at Pittsburgh. The only exception, in fact, were the shapes turned out by the Phoenix Iron Company, at Phoenixville, and castings by the Standard Company, at Thurlow. The Pittsburgh establishments which have furnished this vast amount of steel for Government purposes are the Union Mills and Homestead Works of Carnegie, Phipps & Co., The Linden Steel Company, Oliver Bros. & Co., Park Brothers, Moorehead-McLean, and the Spang Company. The reports from the Bethlehem Company indicate that the plant for Government work is rapidly nearing completion.

CUSTOMS DECISIONS.

The following interpretation of the metal schedule in the statutes has been announced:

Certain automatic machines containing metallic clockwork, and which are used for the sale and distribution of chocolate, are dutiable as manufactures in part of metal.

Hooks and eyes coated with Japan varnish, and tinned and coated with lacquer, are not commercially known as japanned ware or as plated or gilt articles, and are dutiable as manufactures of metal.

Certain Odd Fellows' shields, 18 x 19 inches in dimensions, with various devices and lettering worked thereon in plush and metal, the groundwork being of the same materials, are held to be dutiable as manufactures in part of metal, and not as galloons, laces, &c., of gold, silver or other metal.

Certain steel clasps, with small steel chains attached for ornamentation, used in the manufacture of purses, are dutiable as manufactures of steel.

Reports as to the condition of winter wheat and the progress of seeding in California indicate better prospects than before at this season for the last three years. Reports from Washington Territory are of the same nature. Plowing and seeding has progressed uninterruptedly, and the area in wheat will be considerably increased over last season.

Boston is greatly exercised by an order from Secretary Endicott directing changes in the Charles River and Warren bridges to accommodate navigation, making necessary the expenditure of about \$2,500,000 to make the improvement. Congress assumed jurisdiction in this matter through the operation of the River and Harbor bill, regardless of harbor commissioners or other State authorities. It is claimed that in the interest of justice the question whether the existing structures are obstacles, and what extent of change is really needed, if any, for the convenience of navigation should be first fairly considered and determined by some adequate authority, giving the defendant city or corporation an opportunity to be heard.

THE METALS IN 1888.

Copper.

As from the very commencement of the year the French syndicate represented by M. Secrétan and the "Société des Métaux," of Paris, took the necessary steps to get control of the output of most of the leading Copper mines of the world, and succeeded in doing so for a number of years to come, the history of the Copper trade in 1888 on both sides of the Atlantic has been almost altogether that of the syndicate. Through the foresight and good management which marked those large and successful transactions the "Société des Métaux" established a well-earned reputation, and, much to the displeasure of consumers of Copper, the great—we may say unprecedented—monopoly stands at the close of 1888 stronger and more formidable than it did a year previous, in spite of the enormous load that has been fast accumulating on its shoulders. M. Secrétan, through his good management of this vast enterprise during the year, has indeed proved himself to be more of a "Grand Français" in 1888, than M. de Lesseps; the monster monopoly has become in the Copper trade the orb around which the proudest companies, the Calumet and Hecla, the Anaconda, the Tamarack, the Rio Tinto and others, have moved like satellites, and both in Europe and on this side people in the trade have stood fairly aghast at the magnitude and power of this big combination, with the annoying feature attaching to it that, hat in hand, the American consumer has to take the amount of domestic Copper apportioned him at a figure that may be called exorbitant considering the cost of production, and that a group of powerful capitalists from a distance dictates the price we have to pay for the product of our own mines. Humiliating as the reflection may be, the facts of the case are, however, more or less in keeping with those connected with other big monopolies that have grown up around us at home, being the outgrowth of the spirit of association in its latest, most unpleasant phases. Hence we have to get reconciled to such anomalies, of which the end is not yet to be foreseen. One of the most palpable results has been that the growth of a monopoly of the kind kills speculation on paper in the article monopolized. The lesson which the syndicate gave the bear cliques both in London and New York during the latter half of the past year evidently was not lost upon them, inasmuch as sales for a fall have since then become quite scarce; they would, of course, at once revive, and become more extensive than ever, from the moment the syndicate became seriously threatened or embarrassed in its position from some cause or other not to be foreseen at this writing. Meanwhile bear operations against the syndicate, on this side at least, have become pretty much extinct, depriving the Copper trade of one of its active features with which since the creation of the Metal Exchange we had become so familiar.

The year opened with Chili Bars on the spot in London at £85, and Lake at New York at 16¼¢. Both markets were irregular and weak in January, because the syndicate depressed prices; it was known later on that negotiations for control had meanwhile been set on foot with a number of leading companies in various quarters of the globe, our Lake region included, and London at one time was depressed to £73.15, closing at £78. 12/6, our own market declining to 15.90¢ and closing at 16.60¢. In February Copper continued dull and weak in our own market, going away from 16.60¢ to 16¢; London meanwhile first dropped from £77 to £74. 12/6,

but recovered under purchases made by the syndicate to £79. Smelters in England still declined purchasing furnace material. The Cape Copper Company declared a dividend of £2 7/8 share for the past three months, at the rate of 100 % per annum.

March developed no increase of activity among us, as, the price hardly varying at all from 16¢, the syndicate succeeded in selling the associated English smelters a considerable amount of furnace material, and at the same time secured the Namaqua (South Africa) Company's output for three years at £83. 15/-. London opened at £78. 17/8, and closed at £80.

Greater activity and strength developed in our own market in April, and Lake improved from 16¢ to 16.60¢. The closed shafts of the Calumet and Hecla Mine reopened on the 25th, the fire being extinguished. The Osceola Company, of Lake Superior, made a contract at 13¢ 7/8 lb with the syndicate for three years, dating from May 1, and half the profit over that figure. There was more doing in London, but no change, the quotation remaining £80. 5/. Toward the close of the month the syndicate threw overboard its holdings of Tin in London, thereby strengthening its hands as a Copper holder.

In May it was stated that the syndicate had made a contract with the leading Copper company in Japan; at the same time the terms transpired of contracts with other companies on the basis of £65 to the English companies, 13¢ 7/8 lb and half the profit in all over it, to the Lake companies; all for three years; and 11¢ to the Montana companies, the Anaconda only for the current year, production being stipulated to be curtailed in some of the American contracts. In addition to the contracts named, the syndicate held toward the close of May 45,000 tons of Chili Bars, supposed to average in cost £70. The syndicate made a pool sale to our manufacturers during the month of 10,000,000 lb Lake, spread over three months, at 16 1/2¢. Hardly anything to speak of transpired in our market besides this; opening at 16.65¢, it closed at 16.60¢, London opening at £80. 2/8, and closing at £80. 15/.

With the approach of midsummer the dealings in New York in June became trifling in extent; the little done consisted of purchases made by the syndicate, the month opening at 16.60¢, and closing at 16.55¢, the syndicate also buying some futures in London at £78. 7/8, while spot Bars opened at £80. 17/8, and closed at \$81. 2/8. The contract of the English smelters came to an end, as it was found not to work to mutual satisfaction; the syndicate then bought furnace material for its own account.

July was moderately active in this market, with a hardening tendency toward the close through covering by the shorts; opening at 16.65¢, the closing figure 16.75¢. London opened at £81. 2/8, dropped to £78. 6/8, and closed at £80. 17/8. The newly established standard alongside of Chili Bars, "good merchantable," advanced from £71. 5/ to £73. 15/. The syndicate bought furnace material freely. The Quebrada Company (Venezuela), producing 2606 tons fine in 1887, sold its estimated production for 1888, 1889 and 1890 to the syndicate; the Parrott Company, of Montana, made a similar contract for 16,500 tons of 2000 lb., all told, at 13¢, and 1/2¢ of any excess; the Boston Montana Company, 45,000 tons, for delivery over three years, at 12¢. Having been unable to make a contract with the Chili producers, the syndicate was compelled to pay them £77 to £81 as the Copper arrived, while obtaining, as shown above, the product of other producers at £53 @ £65.

In August and September the syndicate put the screws on and squeezed the Lon-

don and New York bears mercilessly, the price advancing in London from £80. 7/9 on August 1, to £105 on September 10; thence to recede to £91, and wind up September at £101. Lake Copper was driven in the meantime from 16.75¢ to 17.65¢, in order to close September at 17.60¢. Good merchantable brands improved from £73. 10/ to £78. 5/, the adoption of the latter being calculated to present a corner in Chili Bars, as above shown, in the future. To consumers the syndicate sold Chili Bars at £78 throughout the excitement. Meanwhile the notable advance in the discount rate in Europe rendered the holding of Copper over there more expensive. The Mason & Barry Company declared a dividend for the six months at the rate of 9 % per annum, equaling £24 7/8 ton profit on 7000 tons Fine annual production.

Operators for a fall in Copper all the way to January, 1889, had been so much scared on our Metal Exchange, and there was so little Lake Copper available outside of the amount controlled by the syndicate, that speculation received, so to say, a death blow on this side, and did not recover vitality for the rest of the year, *bona fide* consumers being supplied by the syndicate all along at about 1¢ below the nominal quotation on the exchange, the actual transactions at the latter dwindling to smaller and smaller proportions, and gradually becoming virtually extinct. In October the quotation on the exchange ranged from 17.60¢ down to 17.35¢, and in London receded from £101. 10/ to £78: while this was the case, the syndicate could not well shut its eyes to the fact that the visible supply of Copper in Europe and America increased steadily and in an alarming manner, that consequently either the selling price to consumers would have to be materially reduced so as to stimulate consumption or production curtailed. Not feeling disposed to reduce the price the syndicate in October and November made arrangements with Lake and other companies to reduce the output, and by way of compensation extend the contracts three or four times the original term. Many disinterested parties were at the time and are still of opinion that it would have been still better policy to reduce the figure at which the Copper is sold to consumers still further, and there was considerable disappointment at the non-adoption of such a course. But as the general public is not allowed to peep behind the curtain, and the cost of the Copper now under control of the syndicate may with commissions, interest, storage, freight in moving portions from England to France, &c., &c., be a great deal higher than is generally supposed, the syndicate cannot perhaps afford to reduce the present selling price to consumers to an extent that would be an inducement to consume the metal more freely, and again make use of it where other material has begun to take its place.

Under the circumstances, November was about as lifeless in the New York market as it possibly could be, while opening at 17.30¢ and closing at 17.40¢, London hardly varying from £78, at which it opened, closing at £77 10/. Meanwhile, various new Copper companies were being started in different countries, from Portugal to New Zealand, and some curiosity was expressed as to the coming Anaconda contract. In the meantime, the syndicate agreed with the Rio Tinto Company to prolong their contract till the year 1902.

December was ushered in with another fire in the Calumet and Hecla Mine, but it was deemed of minor importance and was got under control with great ease. The rumor received currency that the Calumet and Hecla and other companies had made the syndicate a proposal that the latter should pay them 14¢ in the future, without any share in the profits, instead of 13¢ and a share. This would simplify the accounting and at

the same time not keep the same pending so long, while the syndicate would be freer to sell the Copper at such rates as might appear expedient. It was added that there was some probability the syndicate would accede to this. Middle of December the visible supply of Copper in England and France was about 100,000 tons, while the syndicate held on this side 30,000 tons, constituting a total value at current prices of something like \$45,500,000. Early in December the syndicate made our manufacturers a pool sale of 20,000,000 lb of Copper, extending over three months, at 16 1/2¢. On our Metal Exchange hardly anything was done in the way of sales, the nominal range being 17.20¢ to 17.40¢, while London was steady at £77. 10/.

CORRESPONDENCE.

The St. Croix Range, Wisconsin.

To the Editor: About two years ago this country, known as the St. Croix Range, went through the agonies of a boom—not on iron, but on manganese ore. Reports of vast deposits of rich ore being found were circulated far and near; people went wild, as they generally do when anything savors of a boom. Mining companies to over 50 in number were formed, and every one was to become independently rich in an incredibly short period. However, in almost as short a time as it took to set the boom going, the enthusiasm dropped, and the St. Croix Range was declared a snare and a delusion. I must mention here that, with one or two exceptions, the parties who got up the boom and those who prospected the different companies' lands were lumbermen and farmers, totally ignorant of practical mining, and knew nothing whatever of ores. The excitement was merely created to promote stock-jobbing schemes.

Notwithstanding the chaos reigning and suspicion attached to mining on the St. Croix Range, there were two of us—Mr. J. A. Wilson and myself—who had faith in the range, not as a country containing large deposits of manganese, but one in which there is an extensive deposit of rich limonite iron ore, admirably adapted for foundry and car-wheel purposes. To satisfy ourselves that such was the case we commenced prospecting on one 40-acre tract, located within one mile of the town of Wilson and distant one-quarter mile from the Chicago and Northwestern Railroad, with the most satisfactory results. This property is now known as the Arthur mine. On about ten acres of this 40 alone, all we have as yet tested, we can show, by actual measurement, from 75,000 to 100,000 tons of ore, running as shown by the following analysis and letters from the furnace and foundry where the ore and iron were used:

ANALYSIS.

Analyst, Professor Hille.

BLACK RIVER FALLS, Wis., }
August 23th, 1888. }

J. A. Wilson, Esq.: DEAR SIR—We received three cars of "Arthur" mine ore August 21st, and have put the whole lot (147,580 pounds) through

the furnace, using 130,160 pounds alone, producing therefrom 64,315 pounds of pig iron, a yield of 49.4 per cent., using 114 bushels of charcoal per ton of pig iron (20 pounds of charcoal for a bushel). The rest of the ore was used in combination with Superior, one part of Arthur and three parts of Superior; total, both ores, 64,800 pounds, producing 37,230 pounds of pig iron, a yield of 57.34 per cent., on 91 bushels of charcoal per ton of iron. The first cast of iron, some 12 tons, showed considerable cold shortness, due probably to furnace conditions. The second cast of 16 tons was an average iron in strength, showing good color and quality. Both casts were No. 1 iron. We could use the Arthur ore, if selected, as this lot seemed to be, in mixture with Gogebic ores, whether to advantage as a matter of economy and cost further trial of ore and computation would only make known.

Yours truly,
H. E. BURT, Manager.

Since the above letter was written we made a further shipment of 540 tons of Arthur ore to Black River Falls, which has even given better satisfaction than the first lot, the furnace carrying 200 pounds more to the burden and making good No. 1 foundry on 85 to 90 bushels of charcoal. We have now a contract with the same furnace company (York Iron Company) for 5000 tons to be delivered at the rate of 40 tons per day. We are at present shipping 60 tons per day. The country is of a broken and rough nature, the ore coming to within 3 to 8 feet of the surface, admitting of its being stripped and the dirt got rid of in the cheapest possible manner, owing to the natural dumping grounds. The trend of the iron deposit is a little east of north and west of south, easily traced for several miles, and about 2 to 2½ miles in width.

Underlying the iron ore is a stratum of fairly rich manganese, which, by mixing with the iron ore, would give it the chilling qualities necessary for car-wheel purposes. In connection with the iron ore and manganese there are forests of the charcoal timber—maple, oak, &c.—besides being located within 50 miles of St. Paul and Minneapolis and within easy distance of other growing towns where foundries are in operation. The railroad facilities are good and rates reasonable. Practical men are becoming awake to the fact that, taking into consideration the large deposits of ore, the abundance of limestone and charcoal timber, the handy market and good railroad service, this is a good site for a blast furnace, so that before long I shall have the pleasure of informing you that contracts have been made for the erection of one. Yours truly,

P. A. GOUGH, Sup't Arthur Mine.
WILSON, ST. CROIX COUNTY, WIS., December 15, 1888.

An American in Korea who called on Minister Dinmore speaks of the condition of trade and the high favor which the king manifests toward citizens of the United States. In making contracts Americans are preferred, and it is suggested that the gold mines offer special attraction. At present gold is extracted by pulverizing the quartz under stone rollers. American cottons are in demand on account of their superiority. The foreign colony at Seoul is almost wholly American, and there is one large trading firm originally from Boston. The King's Royal School for the instruction of young Korean nobles is on the American plan under Professor Bunker. Seoul has a population of 300,000, but the trade is made up of what the Yankees would call a "whittling business."

Duluth, a rising city in the Northwest, during the past year has secured an independent direct railway line to the East, in addition to the advantages of deep water navigation and unsurpassed facilities for handling freights. Rates on goods from New York and Boston are as low as between those cities and Chicago, and Duluth's jobbing trade of late has grown rapidly.

TRADE REPORT.

Chicago.

Office of *The Iron Age*, 95 and 97 Washington street, CHICAGO, December 31, 1888.

The last week of the year has been characterized by general quietness, with consequently but slight variation in prices from those quoted in previous reports. Notwithstanding the dullness, a very cheerful view of the situation obtains in nearly every branch of trade, and the New Year is expected to bring with it a fair degree of prosperity. At present there is a remarkable dearth of disturbing elements to influence trade in general, while on the other hand enterprises are in progress or contemplated which ought to greatly increase the local consumption of Iron and Steel.

Pig Iron.—Representatives of furnaces in the Mahoning and Shenango Valleys are deeply interested in the advance of 50¢ per ton in freight rates to Chicago which goes into effect to-morrow. They will endeavor to put up the price of their Pig Iron to correspond, but it is questionable if the market will stand it. A similar advance in freight rates is expected from other points in Ohio. The manufacturers consider this action by the railroad companies unwarranted by the condition of trade, and will do all in their power to get rates reduced to the old standard. It is remarkable that this advance has been made by Northern railroad companies just at a time when the Southern railroads have made a reduction of 20¢ per ton on Pig Iron coming to the Northwest. Sales during the week have been quite limited, but inquiries are numerous, and are expected to lead to good business in January. Regular quotations are as follows for cash, f.o.b. Chicago: Lake Superior Charcoal, all numbers, \$19.50 @ \$20.50; Alabama Car-Wheel, \$26.25; Jackson County Softeners, No. 1, \$18.60; American Scotch (Blackband) No. 1, \$20 @ \$20.50; Hocking Valley Soft Foundry, No. 1, \$17.50 @ \$18.50; Lake Superior Coke, No. 1, \$17.50 @ \$18; No. 2, \$16.50 @ \$17; No. 3, \$15.50 @ \$16; Coke Bessemer, \$17.50; Southern Coke, No. 1 Foundry, \$17 @ \$17.25; No. 2 Foundry and No. 1 Soft, \$16.25 @ \$16.50; No. 3 Foundry and No. 2 Soft, \$15.50 @ \$15.75; Gray Forge, \$15; Mottled, \$14.25.

Bar Iron.—Considerable skirmishing for orders has taken place recently, and prices have receded slightly on Mill lots. Yet business is fairly active, and some large sales have been made. Common Bars are still quoted at 1.72¢ @ 1.75¢, half extras, f.o.b. Chicago, for Mill lots, and 1.90¢ @ 2¢ from store, but the advance in freight rates after January 1 will make the Mahoning Valley mills put their price to 1.75¢ @ 1.78¢, Chicago, and may also stiffen the views of others.

Structural Iron.—Orders for bridge material to the extent of 1500 tons were taken during the week, and some good Beam contracts for new buildings will shortly be placed. An advance of 2½¢ per 100 lb in freight rates from Pittsburgh is expected to stiffen weak spots recently developed. Quotations on Mill lots are as follows, f.o.b. Chicago: Angles, 2.15¢; Universal Plates, 2.20¢ @ 2.25¢; Tees, 2.55¢ @ 2.60¢; Beams and Channels, 3.40¢. Store prices are unchanged at 2.35¢ @ 2.50¢ for Angles; 2.60¢ @ 2.70¢ for Tees, and 3.80¢ for Beams.

Plates, Tubes, &c.—Nothing new has developed in this line, business having been quiet. Store prices are still as follows: Heavy Iron Sheets, Nos. 10 to 14, 2.60¢ @ 2.70¢; Steel Sheets, 3¢ @ 3.50¢; Tank Iron, 2.55¢ @ 2.65¢; Tank Steel, 2.75¢;

Shell Iron, 3¢; Shell Steel, 3.12½¢; Flange Iron, 4¢; Flange Steel, 3.50¢; Fire-Box Steel, 4.75¢ @ 5.75¢; Boiler Rivets, 4¢ @ 4.25¢; Ulster Iron, 3.75¢. Boiler Tubes, 60 ¢ and 82½ ¢ off.

Sheet Iron.—Mill lots of Black Sheets are quoted at 3¢ @ 3.02½¢, f.o.b. Chicago for No. 27. From store No. 24, sells at 3.10¢; Nos. 25 and 26 at 3.20¢ and No. 27 3.30¢. Small lots of Galvanized are unchanged at 60 ¢ and 5 ¢ off for Juniata, and 60 ¢ and 10 ¢ off for Charcoal. The demand has been checked for the time being, but stocks of the sizes and qualities most needed are still very low in all the warehouses.

Merchant Steel.—Some scattering sales of Spring and Machinery Steel are reported, but most houses have done very little business during the week. Quotations from stock are as follows: Bessemer Bars, 2.30¢; Tool Steel, 8.50¢ @ 9.50¢; Specials, 13¢ @ 25¢; Crucible Spring, 8.75¢; Open-Hearth Spring, 2.50¢; Open-Hearth Machinery, 2.40¢ @ 2.75¢; Crucible Sheet Steel, 7¢ @ 10¢.

Steel Rails.—No orders have been taken by local mills since our last report, but the inquiries in hand show that the railroad companies who have not yet closed for their year's requirements are being influenced by the recent stiffening of prices and will soon place orders for considerable quantities of Rails. The mills are firmly maintaining their quotation of \$30 and hope to be able to realize more in the near future.

Old Rails and Wheels.—A vigorous effort was made by some holders to sell their stocks of Old Iron Rails, for which they asked \$23, but they were unable to find any consumers within reach of this market willing to pay so much. A fair quotation is probably \$22.25 @ \$22.50. Renewed interest is manifested in Old Steel Rails, which can be sold at \$16 @ \$20, according to length, freedom from frogs, &c. Old Car-Wheels are being offered more freely, but the demand for them is light, \$19 being bid and \$19.50 asked.

Scrap.—Very light sales are reported. The continued mildness of the season has a tendency to keep stock plentiful and to weaken prices. An increased business is reported in New Axles, but it is not as yet sufficiently strong to affect the Scrap market. Quotations for carefully selected are as follows per ton of 2000 lb: No. 1 Railroad Wrought Scrap, \$20.50 @ \$21; No. 1 Wrought, from city dealers, \$21; Track Scrap, \$20.25 @ \$20.50; No. 1 Mill, \$14.50 @ \$15; No. 2 Mill, \$10; Horseshoes, \$20; Axles, \$26.50; Pipes and Tank, \$13; Cast Machinery, \$14 @ \$15; Stove Plate, \$11.50; Borings, \$10; Turnings, \$11; Axle Turnings, \$13; Mixed Steel, \$12.50; Coil, Leaf and Tire Steel, \$16. Mixed Country Scrap is worth \$15.

General Hardware.—The week has been pretty generally given up to stock-taking, making contracts with traveling salesmen for the coming year, reviewing the methods of the past and laying out the campaign for the future, and as far as possible getting matters in good shape to handle the business of 1889, which the jobbers of this city confidently expect will show a handsome increase over that of 1888. The only change in prices worthy of note is an advance in Sledges, which are now quoted to the ordinary trade at 70 ¢ off, instead 70 ¢ and 10 ¢ off.

Nails.—Wire Nails are now selling at \$2.50 from stock and \$2.45 in mixed carloads, the manufacturers' price being \$2.40 in large lots. Heavy purchases are being made at these reduced rates, but some manufacturers are refusing to book orders for delivery beyond January, in the

hope that prices can be advanced speedily. Steel Cut Nails are sold from stock at \$2 and in carload lots at \$1.95. When necessary to compete with manufacturers, these rates are shaded. The jobbers are still selling from stocks bought before the advance was made by the manufacturers, hence are able to compete with them. Manufacturers' prices are reported to be very firm at \$1.80, at mill.

Barb Wire.—Although some manufacturers have refused to sell for future delivery others have taken large orders and announce their capacity covered up to May. The price of Barb Wire is now a great deal firmer than it has been, but very low prices were made during the past month, Painted selling as low as 2.62¢, and Galvanized 3.25¢, which are believed to be the lowest prices ever accepted. Manufacturers' quotations for large lots are now 2.75¢ for Painted and 3.40¢ for Galvanized. Jobbers quote 2.90¢ for Painted and 3.60¢ for Galvanized in small lots, with the usual reduction for mixed carloads.

Pig Lead.—The week past has been very quiet, with 3.55¢ bid and 3.60¢ asked. Everett & Post have made a *résumé* of the year's business, from which we quote: "It is impossible to give an exact estimate of the production of Lead in the United States, but from what reports we have in we place it at 172,000 tons. The increased consumption may be accounted for by reason of large demand for underground cable work, water works, &c., and there is every reason to expect an increase of at least 10 % more in these several directions during the next year. Business at Chicago has been some 5000 tons in excess of any former year. The lowest price for the year was in December, and the highest in September. Monthly averages for the year in Chicago are as follows:

	Cents.		Cents.
January.....	4.875	July.....	3.85
February.....	4.80	August.....	4.30
March.....	4.80	September.....	4.875
April.....	4.45	October.....	4.55
May.....	4.15	November.....	3.525
June.....	3.85	December.....	3.50
Average for the year.....	4.30		
" " 1887.....	4.343		
" " 1886.....	4.50		
" " 1885.....	3.83		
" " 1884.....	3.58		

The North Chicago Rolling Mill Company have put one of their North Chicago furnaces in blast on Spiegeleisen with very satisfactory results. It has been in operation over three weeks and produces about 600 tons per week of 30 per cent. metal. The Ores used are from Batesville, Ark., and sufficient supply has been received to enable the furnace to run on this class of material through January. A small quantity of Spiegeleisen has been made heretofore in a few furnaces in the West, but merely as a matter of experiment. This is the first case, so far as our knowledge goes, of the manufacture of Spiegeleisen on a considerable scale in the Western States.

Philadelphia.

Office of The Iron Age, 220 South Fourth St., PHILADELPHIA, Pa., December 31, 1888.

Pig Iron.—The year 1888, although in many respects unsatisfactory to manufacturers, has been, on the whole, one of extraordinary development, and consumption, except for Rails, larger than at any time in the entire history of the country. The only really weak spot has been the Rail trade, but apart from that there is reason to believe that almost every consuming interest has been enlarged and strengthened to an unprecedented extent. Consequently the continuous large output of Pig metal has been absorbed without materially influencing prices, which at the close

of the year show a decline averaging about \$1 7/8 ton on Mill Irons, and \$2 on Foundry grades. The opening prices in January were \$20.50 @ \$21 for No. 1 Foundry and \$17 for Gray Forge, as against \$18 @ \$19 for No. 1, and \$18 for Gray Forge during the last week of December. The furnace output of Anthracite and Coke (omitting Charcoal) for the 12 months is estimated at about 5,970,496 tons, the weekly output on the first of each month having been as follows:

January 1.....	121,307	July 1.....	102,021
February 1.....	103,901	August 1.....	108,252
March 1.....	97,490	September 1.....	114,623
April 1.....	101,140	October 1.....	119,189
May 1.....	106,818	November 1.....	128,340
June 1.....	107,845	December 1.....	136,627

The fluctuations in prices were very light, considering the large amount of business that was done, the month of May having seen the lowest figures of the entire year. The Thomas Iron Company reduced their prices \$2 7/8 ton during that month, and still continue at the figures then announced—namely, \$16, \$17 and \$18, at tide, for the three grades. The weakest period was during the months of May, June and July. During August the demand showed signs of improvement, which become still more pronounced in September, and so continuing until about the middle of October, since which date the feeling has been less buoyant, prices gradually losing pretty nearly all that they gained. The record of the year, therefore, is not specially important, and has developed nothing calling for extended comment. The local market has not been interfered with very much by Southern Irons, although they are formidable competitors north and east, and to some extent at points within 100 or 150 miles south and west of Philadelphia. Western Irons are gradually working their way into the local foundries, and are now regarded as having a permanently established trade. Cornwall Red-Short Irons have monopolized an increasing amount of attention, and for awhile sold at the lowest figures on record—viz., \$14 7/8 ton, f.o.b. cars at furnace. Consumption of Cornwall Irons during 1888 is estimated to have been close on to 300,000 tons, with a steadily increasing demand. Prices are not quoted on these Irons at present, as they have a large amount of orders on their books, and are not in a position to accept outside business until some of these contracts are completed. Nominally quotations are \$16 at furnace, but no transactions of recent date have been reported. General consumption in and around Philadelphia is believed to keep pace with that at other points, which of course implies a very considerable growth. As regards the outlook during the coming year, the general idea is that consumption will be larger than ever. The Steel-Rail interest seems to be the only one that is in a doubtful position, and even that may soon feel the effects of the recent arrangement for avoiding disastrous competition among the railways. The general business of the country is in excellent condition. Locally, there probably was never a time in which the volume of business averaged larger than at present. Shipbuilding, locomotive, car and bridge building, engineering, machinery and all the diversified interests clustering around Philadelphia report an abundance of orders, so that there is every reason to expect a continued large consumption of Iron. The stove trade is the only one that seems to have been a little overdone, but even that, with a change to colder weather, may receive a new impulse and enable manufacturers and dealers to relieve themselves of somewhat inconvenient accumulations of stock. But taking the position as a whole, the feeling is very hopeful, and there is reason to believe that the volume of business will be in every respect equal

to, if not larger than, that of any previous year. Prices are not yet fully established, but are likely to be about the same as those ruling for some time past, viz.: \$16 at tide for Gray Forge, \$17 @ \$17.50 for No. 2 Foundry and \$18 @ \$19 for No. 1. The feeling is not so settled as could be desired, however, and much will depend on the demand during the next two or three weeks. If consumers take hold promptly, prices will soon become steady, but another month as dull and unsatisfactory as December has been would probably cause some parties to cut under, and so demoralize the entire market. There will be plenty of business before long. The question is, Can the enormous supply of Iron be taken without breaking prices?

Manufactured Iron.—Prices have kept very well in line with Pig Iron, the highest having been realized during January, and the lowest during May and June. The demand has been fairly uniform, and on the whole the year was tolerably satisfactory to manufacturers. Prices have been low, and the margin for profit small, but with full employment during the greater portion of the year, cost of production has been at a minimum, offsetting in some measure, the extremely low prices obtained for a large proportion of the product. One reason for the low prices has been the aggressive attitude of some of the large Steel companies. Steel Plates have been sold from Pittsburgh at much lower prices than local mills could accept, and business during the entire year has been more or less under the influence of quotations from that source. Consumption of Finished Iron was very large during the year, probably the largest on record. All departments have had a good run of business, and, so far as can be seen, the prospect for the coming year is equally favorable. There is no special run on any one department, but the demand is well distributed, car, locomotive, bridge and ship builders having plenty of orders, while the smaller industries are busier than they have been for some time. The Wrought-Iron Pipe mills have taken a great deal of material during the year, and expect to do equally well during 1889, as there is expected to be a heavy demand for Pipe. The capacity for production, however, has not only prevented any advance in prices on Finished Iron, but, on the contrary, has caused a shrinkage during the year, averaging about \$3 7/8 ton. In some extreme cases there may have been a difference from highest to lowest of probably \$5, but comparing the last week in December, 1887, with the last in 1888, the average decline will not be more than \$3 7/8 ton. Car builders have been the heaviest buyers of Bar Iron, and Wrought-Iron Pipe manufacturers have also taken a large amount of Skelp. The Plate mills have also been kept pretty fully employed, but it has been difficult to maintain prices because of Pittsburgh competition. The highest prices were during January—viz., Bars and Grooved Skelp, \$1.95, and Plates, \$2.15. During April and May prices began to droop, a decline of nearly two-tenths having been established before the middle of June. Prices continued weak during July, but in August symptoms of improvement developed, which during September resulted in an advance of about a tenth in Plates and Bars, and a tenth and a half in Skelp, which was fairly maintained until about the middle of October, when a drooping tendency again manifested itself. Since that date the feeling has been rather heavy, and while prices are nominally about a tenth above the lowest prices of the year there is too much reason for the belief that buyers will not come in unless liberal concessions are allowed on large orders. Meanwhile,

it's market, a waiting plenty of business to be done, but with some uncertainty in regard to prices, although they cannot under any circumstances be materially lower than they now are. Asking prices, 1.8¢ @ 1.9¢ for Bars, 1.85¢ @ 1.87½¢ for Skelp, and 2¢ @ 2.1¢ for both Plates and Angles.

Steel Rails.—The year just closed has been one of the most satisfactory ever experienced by Steel-Rail manufacturers. Prices opened in January at \$31.50, remained on that basis until June, when they reached \$30, remained at that figure during July, down to \$29 in August, \$28.50 in September, and to \$27.50 in November, with some transactions said to be at less than \$27. During December prices became firmer, with \$28 as a minimum, and so continue to this time. As an offset to the falling off in production, the demand for Steel in other forms has greatly increased, some of the mills disposing of from 25 to 30 % of their product in this way. The outlook for the incoming year is still uncertain, sales to date for 1889 delivery being less than 500,000 tons. Some of the works are closed for an indefinite period, and the chances do not appear to be very favorable for an early resumption, although if the railways settle their grievances things may improve sooner than at the moment seems probable.

Old Rails.—The scarcity of Old T Rails is shown by an examination of prices during the past 12 months. Commencing at \$22.75 in January and advancing to \$22 in February, they lost only 50¢ during March and April, partly regained it during May, selling down to \$21 during June, July and August, advancing steadily from that point to \$23 during September, and fluctuating between that figure and \$24 to the close of the year. Stocks are lighter than have been known for many years, and it is a remarkable coincidence that Old Iron Rails sell within \$4 or \$5 per ton of the price of New Steel Rails.

Mr. W. H. Blakey, formerly with W. H. Walbaum & Co., and Mr. Geo. D. McLellan, from the well-known house of James Watson, of Glasgow, have formed a partnership as Blakey & McLellan, and will do a general Iron business as agents for James Watson. The offices of the new firm will be in the Bullitt Building, Fourth below Walnut street.

Pittsburgh.

Office of *The Iron Age*, 77 Fourth Ave.,
PITTSBURGH, December 31, 1888.

In regard to the year just closed, there has probably never been in the history of Pittsburgh a larger volume of business, but owing to an active competition margins have been comparatively small, and there is a good deal of complaint in regard thereto, but in this respect Pittsburgh has been no exception. There have been very few failures among our manufacturers during the year just closed, and they were never perhaps in a more solid condition. As respects the new year, the outlook is generally regarded as encouraging; manufacturers expect that it will be fully equal to 1888, and they are hopeful that there will be an improvement in the matter of profit. Reports from the West and South, upon which Pittsburgh is dependent largely for a market for her manufactures, are generally of a favorable character, and these is no reason apparent at present why the expectations of our manufacturers should not be realized.

Pig Iron.—A break in the market just at the close of the year was not generally expected, but it has taken place; all grades of mill and foundry irons have gone off 25¢ to 50¢ per ton within the

past couple of weeks, and there is no assurance that they will not go lower. City furnacemen are held responsible for this decline; furnacemen in the Shenango and Mahoning valleys are generally well filled up, and so far as we can learn, they are refusing to meet the decline in this market. A valley furnaceman reports that nearly all the valley furnaces are sold ahead, that there is very little stock in first hands, and his view is that the cost of production is more likely to be increased than reduced, and that the action of furnacemen here, in making concessions in order to effect sales, was uncalled for. Quotations may fairly be given as follows:

Neutral Gray Forge.....	\$15.50 @	\$15.75, cash.
All Ore Mill.....	16.25 @	16.50, "
White and Mottled.....	14.50 @	15.00, "
No. 1 Foundry.....	17.50 @	17.75, "
No. 2 Foundry.....	16.75 @	17.00, "
No. 3 Foundry.....	16.00 @	16.25, "
No. 1 Charcoal Foundry.....	23.50 @	24.00, "
No. 2 Charcoal Foundry.....	21.50 @	22.00, "
Cold Blast Charcoal.....	25.00 @	28.00, "
Bessemer Iron.....	17.00 @	"

In regard to Bessemer, while it is offering freely at \$17, cash, there have been no sales that we can hear of reported below that price; there was a sale of 3000 tons reported for January, February and March at \$17, cash, and a broker has some 10,000 tons to sell in different lots, none of which is to be had under \$17, cash. But very few sales of Mill Iron reported during the past week, but good brands are to be had at \$15.50 @ \$15.75, cash, and there are but few buyers above \$15.50.

Muck Bar.—There is no improvement in the demand, and prices continue weak and drooping; we now quote at \$28.50, cash at which it is being offered, and this intimates that it might possibly be had at \$28, cash. A month or more ago it was difficult to obtain; now sellers greatly outnumber buyers.

Manganese.—Ferromanganese, 80 %, \$55 @ \$56 per ton, Spiegel, 20 %, \$28 @ \$28.50.

Manufactured Iron.—There are but few new orders coming forward just now, but an improved demand is looked for before the close of the month. Bars, \$1.80 @ \$1.85; Plates, \$2.20 @ \$2.25; No. 24 Sheet, \$2.85 @ 2.90; Skelp, \$1.70 to \$1.80 for Grooved and \$1.90 @ \$1.95 for Sheared. All 60 days, 2 % off for cash.

Nails.—There is no improvement in the Nail trade here, nor can be expected as long as buyers can do much better elsewhere. We continue to quote upon a basis of \$1.90 for 12d to 40d, 60 days, 2 % off for cash.

Wrought-Iron Pipe.—There is but little change in the situation. Business continues light as compared with what it was during the summer and fall, although all that can be expected at this particular time. It is worthy of mention that there is an increasing demand every winter apparently for Pipe; houses are being built, gas and oil well pipe lines being laid now, but of course nothing like there is during the summer. Prices continue irregular and are difficult to quote correctly. Discount on Black Butt-Welded Pipe in car lots, 52½ and 5 %; On Galvanized, do., 45 and 5 %; on Black Lap-Welded Pipe, 62½ and 5 %; on Galvanized, do., 52½ and 5 %; 2-inch Tubing, 13¢ per foot, net; 5½-inch Casing, 37½¢ per foot, net.

Old Rails.—We are advised of sales of some 4700 tons of American Tees, standard brands, at \$25 @ \$25.25, which may be regarded as the ruling prices. Sales Old Steel Rails at \$18.50 for short and \$20.50 for long lengths.

Billets, &c.—There is very little demand at present for Bessemer Steel Billets, and the market is easier. It may be quoted at \$28, cash. Nail Slabs, \$27.75 @ \$28; Domestic Bloom and Rail Ends, \$19 @ \$19.50, with but few offering, and until recently considerable inquiry.

Steel Rails.—Are still quoted in a regular way at \$28, cash, at mill. While Chicago has the advantage of cheaper transportation it is claimed that this is more than overcome here by labor, as it is said that wages are cheaper here than at Chicago.

Railway Track Supplies.—There has been no recent change in prices. Spikes \$2.10, 30 days; Splice Bars, \$1.80 @ \$1.85; Track Bolts, \$2.80 with Square and \$2.90 with Hexagon Nuts.

Old Material.—Demand continues light, but an improvement is expected before close of this month. No change in prices. No. 1 Wrought Scrap remains unchanged at \$21, net ton; Wrought Turnings, \$13 @ \$14; Car Axles, \$25 @ \$26; Cast Scrap, \$15.25 @ \$16, gross; Cast Borings, \$12 @ \$13; Old Wheels, \$19.50 @ \$20.

Cleveland.

CLEVELAND, December 31, 1888.

Iron Ore.—During the past week 20,600 tons of Ore were sent forward to furnaces, as against 14,600 tons for the same week last year. Furnaces in the Hocking Valley are filling out their Ore stocks, with a few all-rail shipments from Escanaba. The Ore is a non-Bessemer Hematite and costs the consumer not far from \$5.10 per ton delivered at the furnace. These shipments are explained by the fact that the buyers hesitated about increasing their Ore stocks until assured of sufficient orders to warrant such action. The demand came after the close of navigation and it became necessary to arrange for overland transportation. Many of the Ore companies will hold their annual meetings during the next two weeks and an approximate schedule of prices for 1889 will then be determined upon. Several furnacemen have already asked for quotations and active negotiations will begin within 12 or 15 days. Bessemer Ores are somewhat depressed because of the lack of activity in the Rail market.

Pig Iron.—Both buyers and sellers seem content to wait until after the holiday season before making any attempt to infuse life into the market. Nothing important in the way of sales has occurred during the week just closed. Furnacemen do not seem anxious to press their products upon the market, inasmuch as many of the furnaces are still running on old orders. The opinion that heavy orders for Mill and Foundry Iron will be placed in January seems universal. The Agricultural Implement interests will then make themselves felt and the tone of the market will, it is believed, be improved.

Manufactured Iron.—Although the mills are running on full time prices are becoming more favorable to buyers. Common Bar Iron has dropped to \$1.60 and Sheets are correspondingly depressed.

Old Rails.—Old American Rails are now selling at \$23.75 @ \$24. Turnings are selling for \$14 @ \$14.50.

Coke.—Although higher prices are expected, Coke can still be bought at \$1.25 per ton at the ovens. The market is active.

Cincinnati.

Office of *The Iron Age*, Fourth and Main Sts.,
CINCINNATI, December 31, 1888.

Pig Iron.—There has been but little change in the local market for Pig Iron during the week, but during the month a decided weakening has occurred, which has been manifested in a decline in prices. The prime cause for the reduction has been the increased production, and several furnaces have forced sales which have been used by buyers to magnify the tenderness of the market. The past week

has been devoted to the settlement of old scores rather than to the expansion of business, yet, while the volume of business has not been large and the majority of trades of small amounts, there have been one or two transactions of moment, one being the sale of over 10,000 tons Forge Iron for delivery during the first half of next year, at about \$14, cash, here. Prices of Forge and Foundry Iron, while exhibiting same easiness, are without quotable change.

Foundry.

Southern Coke, No. 1 (new classification)	\$16.25 @ \$16.75
Southern Coke, No. 2 (new classification)	15.50 @ 16.00
Southern Coke, No. 3 (new classification)	15.00 @ 15.25
Ohio Soft Stone Coal, No. 1	17.00 @ 17.50
Ohio Soft Stone Coal, No. 2	15.50 @ 16.00
Mahoning and Shenango Valley	18.00 @ 18.50
Hanging Rock Charcoal, No. 1	21.00 @ 22.50
Hanging Rock Charcoal, No. 2	19.00 @ 22.00
Tennessee and Alabama Charcoal, No. 1	18.50 @ 19.50
Tennessee and Alabama Charcoal, No. 2	17.50 @ 18.00

Forge.

Strong Neutral Coke	15.00 @ 15.25
Mottled Neutral Coke	14.00 @ 14.25
Gray Forge	14.50 @ 14.75

Car-Wheel and Malleable Irons.

Southern Car-Wheel	20.00 @ 25.00
Hanging Rock, Cold Blast	22.00 @ 25.00
Lake Superior Car-Wheel and Malleable	21.00 @ 22.00

Manufactured Iron.—There has been but little change in the temper of the market. Little effort has been made to effect sales and no disposition has been shown to make purchases of moment. Lower prices have been talked of in some quarters, but the general market has been steady.

Old Material.—The demand has been only moderate, but the offerings have not been pressing and prices have remained steady at \$19 @ \$19.50 per ton for Old Wheels and \$23 for Old Rails, cash, Cincinnati.

Nails.—There has been a quiet and easy market for round lots, and only a moderate demand for jobbing lots.

Chattanooga.

Office of *The Iron Age*, Carter and 9th Sts., CHATTANOOGA, December 31, 1888.

Pig Iron.—The demand has been about the same as before, and the shipments, perhaps, a little falling off in volume. Were it not for the large amount of orders that the furnaces have taken to be shipped soon after the beginning of the new year and during the first half of the year, the prospects might be called a little dull, but as it is, there are very few stacks but what are quite independent, especially for the first half of the year. We can hear of no sales at less figures than have ruled during the past two or three weeks, although there must have been some concessions, as a number of large round lots have been placed with some of the furnaces. The prospect is now that the new year will open with a very brisk demand, and a good trade for the entire year is anticipated from the fact that many large consumers, who have placed their orders, are now corresponding with a view of ascertaining prices for the coming year.

Louisville.

LOUISVILLE, KY., December 31, 1888.

Pig Iron.—There has been no change in the market, prices remaining the same as last week. Sales for immediate delivery have been few save for special grades of iron. There are a number of inquiries from parties desiring to make purchases running through 6 to 12 months. Their views, however, are very low, and most furnaces are not willing to meet them for such long deliveries, hoping that the first of the month will show a slight improve-

ment. One or two of the leading furnaces have already made sales running for such extended deliveries that buyers feel that the market can show no immediate improvement. It is hoped, however, that by the middle of January the present inquiries will result in sales whose tendency will be to help the market, as there is no reason why Iron should be selling so low at present. We quote as follows:

Southern Coke, No. 1 Foundry, new classification	\$15.50 @ \$16.00
Southern Coke, No. 2 Foundry, new classification	15.00 @ 15.50
Southern Coke, No. 3 Foundry, new classification	14.50 @ 15.00
Gray Forge	14.00 @ 14.50
White and Mottled, different grades	13.50 @ 14.00
Silver Gray, different grades	13.75 @ 14.50
Southern Charcoal, No. 1 Foundry	18.50 @ 17.00
No. 1 Mill	15.25 @ 15.75
Southern Car-Wheel, standard brands	22.50 @ 23.50
Southern Car-Wheel, other brands	18.50 @ 20.00
Hanging Rock Coke, No. 1 Foundry	16.00 @ 16.50
Hanging Rock Charcoal, No. 1 Foundry	20.00 @ 21.50
Hanging Rock, Cold Blast	21.25 @ 24.25

New York.

Office of *The Iron Age*, 66 and 68 Duane street, New York, January 2, 1889.

Foundry Pig.—The volume of business has naturally been very moderate, and no marked movement in either direction has taken place. On the whole, however, the tone is less confident than it was a month ago. We quote No. 1 Foundry, \$18 @ \$19, and No. 2 16.50 @ \$17.50.

Scotch Pig.—We quote: Coltness, \$20.50 @ \$21; Shotts, \$20.25 @ \$20.75; Langloan, \$20.25 @ \$20.50, and Dalmington, \$19.50 @ \$19.75.

Spiegeleisen.—We quote \$26.75 @ \$27 for 20 %, and \$54 for 80 % Ferro.

Plates.—We quote Iron Tank, 2¢ @ 2.2¢; Shell, 2.25¢ @ 2.4¢; Steel Tank and Ship Plate, 2.15¢ @ 2.25¢; Shell, 2.35¢ @ 2.5¢; Flange, 2.6¢ @ 2.75¢, and Fire-box, 3¼¢ @ 4¢.

Structural Iron.—We quote Sheared Plates, 2¢ @ 2.1¢; Universal Mill Plates, 2.1¢ @ 2.2¢; Angles, 2¢ @ 2.10¢; Tees, 2.5¢ @ 2.6¢, and Channels and Beams, 3.3¢ on dock for all sizes. Foreign Beams are quoted 2.55¢ @ 2.75¢.

Bar Iron.—We quote: Carload lots on dock, half extras, Common; 1.7¢ @ 1.75¢; Medium, 1.75¢ @ 1.8¢, and Refined, 1.8¢ @ 2¢.

Steel Rails.—Eastern mills have sold during the past week about 20,000 tons of Steel Rails, one block for Virginia delivery being a part of the business. Prices still continue somewhat uncertain, all of the sales noted above being at private terms. Reports from the West indicate a quiet week.

Old Rails.—No transactions are reported. Some buyers are in the market, but do not seem disposed to pay present prices, while holders are generally stiff. We quote Tees nominally, \$23.25 @ \$23.50, and Double Heads, \$24.

Spikes.—The market is dull, with Spikes at \$2.10 @ \$2.15 for large lots, delivered, and Angle Bars, 1.85¢ @ 1.9¢.

Financial.

The year 1889, it is agreed by common consent, opens auspiciously. No evil omens are discerned in the distance that excite apprehension, though ample field for statesmanship will open in settling the tariff question in its relations to the Treasury surplus, and the redundant issue of silver dollars will no less command attention. During the past few days holiday interruptions, the annual stock-taking, a temporary tightening of money market and other conditions inci-

dental to the closing season of the year tended to restrict business, but in all trade circles there is a confident tone, based on the conviction that a season of renewed activity is approaching. Stocks of merchandise have not accumulated to excess with rare exceptions, labor is well employed, and in nearly all branches of manufacturing there is a wholesome activity. The most noticeable factor just now is the apparent restoration of railroad freight tariffs to an equitable basis, with at least a reasonable promise of permanency. True, rivalries of agents, combinations among shippers and disagreements among speculative managers may bring a renewal of war, but restrictions are imposed under the new agreement that cannot well be disregarded. As regards the Interstate Commerce law, Senator Cullom says that if any legislation takes place in the direction of a repeal of the prohibition of railroad pools it must be by the next Congress, after a full investigation of the facts and circumstances.

The Stock Exchange markets were only moderately active. On Thursday apprehensions of tight money and a break in Cotton Oil Trust certificates were fully offset in their effects by the declaration of regular dividends on all the Vanderbilt properties, stockholders of Lake Shore receiving an extra 1 per cent., while New York Central promised to restore the 5 per cent. basis this year. Moreover, the T. C. C. & I. declared a dividend of 1½ per cent., the first since 1883. On Friday Lackawanna declared its regular dividend on the strength of a statement claimed to be the best in the history of the road. The Delaware and Hudson was credited with having earned 14 % in the year 1888, against 11½ % in 1887. On Monday the market was strong at the close, although money loaned during the last half hour at 10 %, the highest of the year. Reviewing the year, a comparative table of values shows that 40 active stocks have made important fluctuations. The average price of these 40 stocks on December 30, 1887, was 63½. The average price at the close of the market on Saturday last was 68½, showing that the general market is on a slightly higher basis than a year ago. Twenty of the 40 stocks were higher at the close of the year than at the opening, and one, Michigan Central, is unchanged.

The Western rate wars furnished the bears with a basis of operations throughout the year. The most important and favorable development was the success of the Reading bond deal abroad in June.

United States bonds were firm at the following quotations:

U. S. 4½s, 1891, registered	108½
U. S. 4½s, 1891, coupon	108½
U. S. 4s, 1897, registered	127½
U. S. 4s, 1897, coupon	128½
U. S. currency 6s, 1885	119

The total amount of bonds purchased to date under the circular of April 17th is \$101,705,500, of which \$51,396,650 were 4 % and 50,308,850 were 4½ %. The total cost of these bonds was \$120,244,090, of which \$66,010,877 was paid for the 4 % and \$54,233,213 for the 4½ %. The Treasury surplus on Saturday was stated at \$57,500,000. The recent scanty offerings of 4½ % on bonds attracted more attention, and the increased price named by the Treasurer, 108½, suggested the possibility of a change of policy. The amount of this class outstanding is estimated at \$183,000,000.

The weekly statement of the New York banks showed a decrease of \$1,095,000 in surplus reserve, which stands at \$6,281,350, against \$8,559,150 at the corresponding time last year, and \$12,271,350 in the first week of January, 1887, but this occasions no anxiety, as the local banks have large amounts available at interior points. In loans there was an expansion of \$1,297,000. Specie unexpectedly decreased \$1,246,000. In the money market

there was a marked easing of rates. Time funds continued quiet at about former quotations for two months, and $\frac{1}{2}$ % lower, at $\frac{1}{2}$ %, for 60 days to three months. Call loans ruled about 4 %. Commercial paper rates were a little easier. Money on call was active last week, on two occasions ranging 8 %, the highest of the year. Time loans were quoted $\frac{1}{2}$ @ 5 % for 30 @ 60 days; longer dates, 5 @ $\frac{1}{2}$ %. Commercial paper was in good demand, the supply limited. The disbursements of money in New York during the first week of the year on account of dividends and interest make an aggregate of \$65,000,000, promising easy money at an early date. Boston and Philadelphia each disbursed about \$10,000,000. Marketing the cotton crop weakened sterling, which is quoted \$4.85 $\frac{1}{2}$ @ \$4.89 $\frac{1}{2}$.

In the general markets most of the speculative commodities betray the same signs of weakness observable for some time past, but the closing days of the year brought more strength. In wheat there was more confidence, in prospect of better exports, and flour for export was ordered more freely at higher prices. The turn of the year was awaited with some interest. The grocery trade was pronounced to be in a decidedly favorable position. According to the Custom House report, the exports of specie were \$691,000, making a total since January 1 of \$46,208,804, against \$18,501,346 for the same time in 1887. The imports of specie were \$164,000, and since January 1 \$7,469,901, as compared with \$40,077,124 for 1887.

Spot cotton was fairly active at former quotations. Trade in dry goods was light.

The Committee of East-bound Freight Traffic decided that on January 10 the rates on articles of iron and steel manufacture, under head of special iron articles, should take fifth-class rates in carloads and sixth class in less than carloads, and scrap iron should also be governed by this rule.

The forthcoming report of the New York Chamber of Commerce for the fiscal year presents some interesting statistics relating to the foreign commerce of New York, as compared with the aggregate of all other ports of the United States. Total value of imports 1887-88: Port of New York, \$510,268,432; aggregate of all other ports, \$273,026,668. Total exports of domestic merchandise: Port of New York, \$325,789,244; aggregate of all other ports, \$391,268,364. Excess of foreign imports over domestic exports at the port of New York, \$184,498,188; same for all ports of the United States, New York included, \$66,237,492. A comparison of the commerce of the years 1887-88 and 1886-87 shows an increase at the port of New York of \$19,717,963; for all ports in the United States, \$20,992,328. Last year's foreign commerce for the port of New York exceeds that of any year since 1881 and for the whole country since the same year.

The number of mercantile failures in the United States during the year 1888 aggregated 10,587, which is 847 more than for 1887. The number in New York City was 529, against 432 in 1887. The clearings of 40 cities for the week ended December 29 showed an increase of 19.6 % compared with last year. Outside of New York the increase is 9.6 %. New York increased 25.4; Boston, 22.1; Philadelphia, 13.1; St. Louis, 35.7; New Orleans, 6.7; Baltimore, 0.4; Pittsburgh, 19.8; St. Paul, 26; Minneapolis, 27.2; Denver, 35.4. Chicago decreased 10.9.

The Niagara River Iron Company's extensive plant, at Ironton, on the Niagara River, below Tonawanda, which has been standing idle for the past 11 years is now about to be revived. The works have been leased by the bondholders, to parties interested in iron manufacture in Western Ohio.

The lessees will put the plant in order, and "blow in" as soon as possible for the manufacture of pig iron. They will probably employ a large number of men. The property represents an investment of over \$400,000.

Coal Market.

The Anthracite Coal trade is dull and uneventful. The chief anxiety among producers is to prevent undue accumulation and uphold prices. Meetings of Coal trade managers, held during the last days of the old year, had no practical result, further than a mutual understanding respecting the necessity of adhering to the policy pursued of late in regard to maintaining the relations of supply and demand. No changes were made. The statistics of production during the week ended December 22 show a falling off of 25 %, compared with the corresponding week in November, the total from all the mines being 618,534, which is about 60,000 less than for the previous week and 75,000 below that of the same week in 1887. Since January 1, 1888, the aggregate is 37,636,479, against 34,287,379 for the same time in 1887, an increase of about 3,350,000 tons. Quotations are: Hard White Ash, Lump, \$4.50; Broken, \$4.15; Egg, \$4.40; Stove, \$4.65; Chestnut, \$4.55; Free-Burning, f.o.b., Broken, \$3.95; Egg, \$4.30; Stove and Chestnut, \$4.65; Pea, \$2.75.

Bituminous Coal is more quiet—pool quotations, \$3.25, f.o.b. Cumberland shipped 68,700 tons; Clearfield, 60,800; Beech Creek, 40,000 tons. The Berwind-White Mining Company are supposed to be the largest "individual" producer of Coal in the United States. They are supposed to have mined and shipped during 1888 2,500,000 tons of Coal. Referring to the suit brought against the Pennsylvania Railroad Company by R. B. Wigton & Sons, for alleged discrimination, the Pittsburgh *Despatch* says: "Whether the Wigtons can prove to the satisfaction of Judge Allison's bench that their growing neighbor has been getting rebates of from 25¢ to 50¢ per ton is a problem with Coal men. If the Berwind company have been getting the rebates claimed, it means that Coal mined under the auspices of the pool is shipped at a \$2.25 or \$2.30 rate."

Contracts for supplying Philadelphia with Gas Coal during the year 1889 were awarded last week. The following were the successful bidders:

	Tons.	Price per ton.
Manor Gas Coal Co.	5,000	\$3.81
Penn Gas Coal Co.	57,720	3.82
Westmorland Coal Co.	57,720	3.82
Newburgh Orrel Coal and Coke Co.	15,000	3.76
James Boyce	15,000	3.76
Despard Coal Co.	10,000	3.76
J. & W. Wood	10,000	3.76
Chesapeake & Ohio (C. B. Orcott)	25,000	3.80

Total..... 195,440

The amount called for was 210,000 tons. The prices paid for 1888 were \$3.79, \$3.83 and \$3.84.

The Wheeling, Lake Erie and Pittsburgh Coal Company has been organized, with James M. Hain as president. Capital, \$1,000,000 in bonds and \$1,000,000 in stock. This company has bought all the valuable Coal lands along the Wheeling and Lake Erie extension, and will proceed at once to open the mines.

The Reading has begun construction of a three-mile link between its road and the Lehigh Valley tracks at Silverbrook, Pa. The branch will open up a new Coal field heretofore monopolized by Lehigh Valley.

At a meeting of the Coke workers of the Connellsville district on Saturday, it was decided to demand an advance of $\frac{1}{2}$ % at once. The advance is based on \$1.35 per ton for coke, which is 10¢ above the present selling price.

Imports.

The imports of Iron and Steel, Hardware, &c., at this port from December 21 to December 27, inclusive, and from January 1 to December 27, inclusive, were as follows:

	Dec. 21. to Dec. 27.		Jan. 1 to Dec. 27.	
	Tons.	Tons.	Tons.	Tons.
Pig Iron: G. W. Stetson & Co.	200	15,050		
Crocker Brothers	140	15,724		
Spiegel Eisen: Naylor & Co.	600	12,632		
J. A. Jansen	413	12,485

Kunhardt & Co.		41,652		

Metal Market.

Copper.—London to-day sends futures of Chili Bars and G. M. B. unaltered, £78, and Best Selected lower, £80. In our own market nothing to speak of occurred, and the quotation for Lake on the spot remains nominally 17½¢. From January 1 to December 18 the import of American Copper into Liverpool and Swansea was 23,677 tons Fine, against 15,561 tons the same time in 1887. The visible supply in England and France on January 1, 1889 was 104,035 tons, against 97,940 on December 1, 1888. The Chili charters in December were 2900 tons, against 3400 tons in November; the total supply for England and France during December was 11,400 tons, against 9750 in November, of which American, respectively, 2600 and 1900, and the deliveries in England and France in December were 5200 tons, against 5850 in November.

Tin.—On Thursday of last week the London quotation was £98. 5/ for spot Straits; on the 31st ult. it was £100. 2/6, and this morning it is £99. Futures had improved from £99. 5/ to £101, and they are now £99. 15/. In our own market a sale was made last week of 10 tons, prompt shipment, at 22.20¢, and of 10 tons, ditto, at 22.25¢, closing on Saturday at 22.05¢, spot, and 22½¢ March. Since then the nominal spot quotation is 22¢, the market closing dull and weak. **Tin Plates.**—We have again had a very quiet week, limited to a small jobbing demand for immediate wants. The business in futures has also been very light, owing to the firm position assumed by makers, who say that at the present prices of Steel Bars and Pig Tin they cannot afford to come down to buyers' views. One or the other must, however, give way soon, as the business will have to be put under way to meet spring requirements. Liverpool cables 13/ @ 13/3 for Cokes. We quote, large lines, 3/ box: Siemens-Martin Steel, Charcoal Finish, \$4.75 @ \$5.50; Coke Finish, \$4.65 @ \$4.70; Terns \$4.12½ @ \$4.25; Coke Tins, \$4.22½ @ \$4.30, and Wasters, \$4.12½ @ \$4.15.

Lead.—Some 400 tons Common Domestic were sold since our last report in the open market at 3.85¢, which is also the closing quotation; the market winds up quiet, but strong. At St. Louis and Chicago the quotation is 3.55¢ to 3.90¢. London stood £12. 17/ 6 with soft Spanish on the 31st ult. and is down now to £12. 15/, English Pig declining from £13. 2/6 to £13.

Spelter.—Absolutely nothing has transpired during the week under review; we quote Domestic, common brands, 5¢, and Silesian 5½¢, both nominally. In London Silesian wound up at £18. 2/6 on December 31; to-day there is a recovery to £18. 5/.

Antimony.—Remains firm at 13¢ Cookson and 11¢ Hallett, the latter being unaltered, £45, in London.

New York Metal Exchange.

The following sales are reported:

THURSDAY, December 27.	
100 tons Lead, May.....	3.95¢
FRIDAY, December 28.	
10 tons Tin, prompt shipment.....	22.20¢
10 tons Tin, prompt shipment.....	22.25¢
16 tons Lead, January.....	3.90¢
100 tons Lead, March.....	3.90¢
16 tons Lead, June.....	3.95¢
MONDAY, December 31.	
10 tons Tin, January.....	22.20¢
30 tons Lead, spot.....	3.90¢
30,000 lbs. Lake Copper, March.....	17.40¢
WEDNESDAY, January 2	
10 tons Tin, spot.....	22.00¢
10 tons Tin, February.....	22.15¢

British Iron and Metal Markets.

[Special Cable Dispatch to The Iron Age.]
LONDON, WEDNESDAY, Jan. 2, 1889.

A better feeling has developed in all branches of the Pig Iron market. Preliminary data from the annual reports of production, consumption, &c., make a favorable exhibit, and deliveries latterly to home consumers also impart some degree of encouragement. Most brands of Scotch Pig have undergone some advance, as have also Middlesboro' Pig and Hematites, the latter being again in brisk demand. Speculation in warrants has shown more animation, the good demand for makers' brands doubtless offsetting, in a measure, the large stock in public stores. Five furnaces have been banked down during the week, for various causes, but there is some movement now in the other direction. In the latter connection it is to be reported that the Glengarnock works are preparing to resume.

There have been no important developments in the Manufactured Iron branch. The general demand is good and prices are firm, with 2/6 advance quoted on Black Sheets. In the Steel trade business continues brisk. Liberal orders are being placed for shipbuilding and railway descriptions and for Billets, while an improved demand is noted for Wire Rods and Crop Ends. The Cockerill Company has booked an order for 3700 tons light Steel Rails for a Roumanian railroad at 154/, and another company has secured one for 24,000 tons for Melbourne. The Wigan Company is laying down a steel plant for the manufacture of Blooms.

Tin Plate makers report a good many inquiries since the Christmas holidays. The volume of business accomplished has been moderate, however, owing, doubtless, to a wide difference between buyers and sellers on prices.

No change is apparent in the demand for Copper. Consumers purchase in the same conservative manner as for some time past; outside speculation is light and the "syndicate" agents have not figured conspicuously in any movement. It is stated that the European holdings of the "syndicate" amount now to fully 110,000 tons. A new scheme is said to be under way involving the creation of an English company, with a capital of £3,000,000. The purpose of this company, according to current report, is the purchase of 80,000 tons of the French syndicate supply and the renewal of contracts with producers for their output for a series of years. Whether this is one of the periodical imaginary projects that come to the surface, or something of a more substantial character, is not clear at this time.

Block Tin has ruled stronger under the stimulus of higher price in the East and livelier speculation. The demand for Lead and Spelter has been more active.

Scotch Pig.—There has been a very fair business and the market is firm, with prices a shade higher on most brands.

No. 1 Coltness, f.o.b. Glasgow.....	51/
No. 1 Summerlee, " ".....	50/8
No. 1 Gartsherrie, " ".....	49/
No. 1 Langloan, " ".....	50/
No. 1 Carnbroe, " ".....	45/
No. 1 Shotts, " at Leith.....	50/
No. 1 Glengarnock, " Ardrossan.....	48/
No. 1 Dalmellington, " ".....	43/6
No. 1 Eglinton, " ".....	42/6

Steamer freights, Glasgow to New York, 4/, Liverpool to New York, 10/.

Cleveland Pig.—With a better general demand the market has shown greater firmness. No. 1 Middlesboro', G. M. B., 36/; No. 3 do., 33/9.

Bessemer Pig.—The market is quite strong and fairly active. West Coast brands, mixed numbers, 45/, f.o.b. shipping point.

Spiegeleisen.—Prices remain firm and the demand is fairly active. English 20 % quoted 80/, f.o.b. N. W. England shipping point.

Steel Rails.—Business has continued brisk and prices remain very firm. English sections quoted at £3. 19/6 @ £4, and light sections £4. 2/6 @ £4. 10/, f.o.b. at N. W. England shipping point.

Steel Blooms.—A moderate trade in these at previous prices. We quote £3. 18/6 for 7 x 7, f.o.b. at N. W. England shipping point.

Steel Billets.—There continues to be a good trade at firm prices. Bessemer, 2½ x 2½ inch, £4. 2/6, f.o.b. at N. W. England shipping point.

Steel Slabs.—Demand only fair and prices without important variation. Bessemer, £3. 18/6, f.o.b. at N. W. England shipping point.

Old Rails.—There is no change in the character of the demand, and prices show slight change. Tees quoted at £3. 5/ @ £3. 6/, and Double Heads, £3. 8/ @ £3. 10, c.i.f. New York.

Scrap Iron.—The market has remained quiet, with prices steady. Heavy Wrought quoted at £2. 2/6 @ £2. 5/, f.o.b.

Crop Ends.—A livelier market reported, with prices firm, but no higher. Bessemer quoted £2. 7/6 @ £2. 10/, f.o.b.

Tin Plate.—Makers firm at last week's prices, and the demand fairly active. We quote, f.o.b. Liverpool:

IC Charcoal, Allaway grade.....	15/3 @ 15/6
IC Bessemer steel, Coke finish.....	1/6 @ 13/9
IC Siemens " ".....	13/9 @ 14/
IC Coke, B. V. grade.....	13/3 @ 13/6
Charcoal Terne, Dean grade.....	12/3 @ 12/6

Manufactured Iron.—Prices very firm all through, and business satisfactory in volume. We quote, f.o.b. Liverpool:

	£	s.	d.	£	s.	d.	
Staff. Ord. Marked Bars.	@	8	2	6			
Common " ".....	@	5	12	6			
Staff. Bl'k Sheet, singles.....	@	7	12	6			
Welsh Bars (f.o.b. Wales).....	5	0	0	@	5	2	6

Tin.—The market has been more active and stronger, with £3 advance scored during the week. Straits quoted to-day at £98. 15/, spot, and £99. 10/ for three months' futures.

Copper.—No material change in the character of business, and only slight variation in prices. Chili Bars, £77. 5/, spot, and £78, three months' futures. Best Selected, £84.

Lead.—More business doing, but very little change in prices. To-day's quotation, £12. 15/ for Soft Spanish.

Spelter.—A good trade and prices very steady at £18. 2/6 @ £18. 5/ for ordinary Silesian.

A manufacturing firm in New York has sent to the Department of Agriculture specimens of a new fiber they are making from the stalk of the cotton plant. The samples received strongly resemble hemp, and seem to be adapted to all the uses that hemp is put to. A few fibers of it twisted together in the hand show remarkable tensile strength, although no exact comparative tests with other fibers have yet been made.

Hardware.

After a year which is generally regarded as prosperous and satisfactory, 1889 opens with a market steady and even in most lines and a condition of things generally which is thought to promise well for future business. Prices in most lines are low, and in some lower than they have ever been, so that manufacturers are disposed to complain of their narrow margins of profit. It is, however, hoped by many that in some lines there will be an improvement in price, and that at any rate in the present condition of business through the country and the increasing export demand for American Hardware, there will be a satisfactory trade.

Cut Nails.

The situation has not undergone any material change except that an increasing number of Eastern manufacturers are discouraged by the long-continued depression, and show a growing indifference as sellers. The output is therefore being curtailed more and more through natural causes. It is estimated that the Cut Nail mills east of the Allegheny Mountains made about 2,250,000 kegs of Cut Nails in 1888 against 2,727,734 kegs in 1887. We continue to quote carload lots on dock \$1.80 @ \$1.90.

Wire Nails.

The irregular condition of the Wire Nail market, to which we referred in our last issue, has continued and has developed some very low prices. The competition between the manufacturers is very animated and most of them are desirous of securing orders even at figures which are probably below the cost of the production. A good many buyers have already placed their orders, covering considerable quantities of Nails, but at this writing the tone of the market is apparently unchanged, it not having developed strength or showed a reaction from the low prices prevailing. The price for carload lots, f.o.b. factory, is \$2.25 to \$2.30, but it is intimated that these prices are shaded in special cases. Price from store may be named as \$2.40 to \$2.50 for small lots.

Our Pittsburgh correspondent telegraphs that Carnegie, Phipps & Co., of Pittsburgh, have leased the plant of the Hartman Steel Company, Limited, Beaver Falls, Pa. The plant will be operated by that firm under the name of Carnegie, Phipps & Co., Limited, Beaver Falls Mills. Secretary Wightman, of the Hartman Company, has resigned. The changes noted were to take effect on the 1st inst.

Miscellaneous Prices.

The following discount sheet has been sent out by the Stanley Rule and Level Company, New York, and New Britain Conn., under date January 1, 1889. It applies to the company's illustrated catalogue of January 1, 1888, to which two extra pages, 48½ and 50½, have recently been added and sent out to the Hardware trade. In addition to the discounts named below a discount for cash of 10 per cent. is allowed if the account is paid within 30 days.

The Clothes Wringer Association met last week and a new list was adopted, to take effect January 1. This revision of the list was made necessary because since the former one had been adopted certain inequalities were developed on account of the varying cost of the goods, and the list now offered to the trade is designed to represent the market satisfactorily at the present cost of manufacture. It was agreed by the manufacturers that a uniform list should be printed for similar goods, a uniform discount having also been agreed upon. The foregoing is the list of the Bailey Wringing Machine Company, Woonsocket, R. I., which gives the new prices, and from which the discount is \$3 per dozen, instead of \$2.50, as from the former list, their being also a discount of 2 per cent. for cash in 10 days.

The Putnam Nail Company, Neponset, Mass., have adopted the following new list on their Putnam Horse Shoe Nails. It went into effect January 1, and is subject to a discount of 15 per cent., and 1 per cent. additional for cash in ten days.

No. 12.	10.	9.	8.	7.	6.
18c.	18c.	19c.	20c.	21c.	23c.
No. 5.	4.	3.	2.	1.	
26c.	50c.	1.00	2.00	3.00	

The following announcement in regard to the prices of Coes' Wrenches is made January 1 by J. C. McCarty & Co., 97 Chambers street, New York, and John H. Graham & Co., 113 Chambers street, New York:

We are instructed by the Coes Wrench Company to quote the following prices—viz., L. Coes & Co.'s Knife Handle Wrench, as well as A. G. Coes & Co.'s make, 55 per cent. discount from list. A special discount of 10 per cent. will be allowed on specified orders for 50 dozen for immediate shipment. Mechanics' Wrenches will continue to rate at 10 per cent. less than the Genuine, and are subject to the same quantity schedule. Terms, 90 days, or 3 per cent. cash, ten days. Parties having purchased the quantity will be entitled to the extra discount on subsequent orders during the balance of the season ending June 30, 1889.

The market for Manila and Sisal Rope remains practically as at our last report, the supply of the raw material being exceedingly limited and the prices firmly maintained. Some small holders who bought in anticipation of an advance are offering Rope at some concessions, but the demand is limited, most of the heavy buyers having anticipated their wants and others buying now only what they are compelled to.

The Tack market shows no important change, and there is some unevenness. A good deal of complaint is made on account of the extent to which light-weight goods are put on the market and some low quotations are to be explained in this way. There is animated competition between many of the manufacturers, resulting in the sending out of very low prices, which are conceded to yield little if any profit. Some of the well-known and conservative houses, however, like A. Field & Sons, American Tack Co., and Dunbar, Hobart & Whidden, refuse to meet the low prices that are current.

The manufacturers of Heavy Hammers and Sledges have been conferring with reference to an advance in prices and the market is regarded as firmer.

The Wire Cloth market is without material change, the best brands having been held pretty firmly, although at a slight decline from last season's prices. Some brands not so well or favorably known have been offered at lower figures. The jobbers have pretty generally placed their contracts, and it rests with them in good part to determine which will prevail next season. The outlook is that there will be a good demand for this line of goods, and the opinion is expressed that the market will be somewhat firmer when the time of delivery is reached. Referring to the quality of Wire Cloth, a manufacturer says:

It should remain with the manufacturers rather than the trade what the quality will be. If the manufacturer allows the trade to make the price we do not think they can reduce the quality fast enough to keep pace with their prices. The time has come when manufacturers must keep up the standard of quality or they must sell their goods at a proportionate reduction in price.

C. J. Kimball & Son, Bennington, N. H., show in their list the line of Drawing Knives, Cutlery and Screw Drivers, of which they are manufacturers. We are advised that their prices are as follows:

Drawing Knives, discount,	10 and 5 per cent.
Cutlery,	20 to 25 "
Screw Drivers,	20 to 25 "

Trade.

From Louisville, Ky., we have the following advices under date December 29:

The Hardware Trade of Louisville, Ky., has experienced the usual holiday lull. All salesmen have been in for a week, and are now busily preparing fresh samples for long trips. The past fall's business has been about the largest in the history of our city, and very satisfactory, on the whole, which status has stimulated the dealers to renewed energy. Low prices from manufacturers have caused the jobbers to purchase heavily, and they are distributing the goods into new territory in order to prevent overcrowded stocks, but there is no doubt that dealers, as well as manufacturers, are running on too close a margin, but they feel in a measure safe, as the general condition of the country is prosperous.

The anomaly continues of an enormous and strong consumptive demand on the one hand, and continued low prices and breaks from the factories on the other; this proves what a wonderful country we have in the South and West, which is fast being opened up to trade by new lines and extensions of the railroads. Prices generally have remained steady during the week, but some further concessions are looked for from the mills if Pig Iron does not stiffen up soon. This prime factor is watched by all classes of business, and is looked on as the barometer of trade.

Tendencies in Trade.

From a well-known wholesale hardware house in Ohio we have received the following interesting communication which relates to the question which has been discussed at some length by manufacturers and retailers as to the present tendency of trade as regards direct dealings between the manufacturers and the retail trade. We take especial pleasure in laying this communication before our readers as it is a clear statement of the question as seen from the jobbers' standpoint:

We have read with much interest the correspondence appearing in your paper during the last few months bearing upon the practice of the retail trade of the country in placing their orders. We are gratified to notice that the communications from retail dealers in our own immediate vicinity seem to express almost unanimously the opinion that their interests are best served by giving their business to a jobber, which we believe to be the proper view of the matter. We should like to submit three propositions as expressing our opinions and make a few remarks upon each:

First, The jobber is an essential to the retail dealer.

2d. The jobbers are compelled to submit to unfair competition in many instances; and

3d. The retail dealer can purchase his stock as a whole to better advantage from the jobber than by distributing his order to a number of manufacturers.

We must preface anything we say with the qualification that it applies only to ourselves and our practices, as we are not sufficiently familiar with the methods of our brother jobbers to speak for them, nor indeed have we any right to.

Our first proposition seems so plain that we hardly think it necessary to remark upon it further than to say that it is proven by the correspondence already published from both retail dealers and manufacturers.

The second proposition requires some explanation. In it we refer particularly to two matters: The competition on the part of manufacturers who labor under the delusion that they can market their goods direct to the trade at a price as low as they are willing or able to make to the jobber. These manufacturers, as a rule, are only short lived, but, unfortunately, for each one that dies another is born. From them the retailer usually secures the class of goods commonly known as "shopkeepers." The other unfair competitors are the manufacturers who desire to sell to the jobber,

and after having fully stocked him to go out and sell to his customers. We find this class of manufacturers offering to some retail dealers their quantity prices, and at the same time saying to them that they will make them the same price for such goods as they may require. They make sales in some instances, but in the majority of cases the only effect is to make a price at which the jobbers must sell. This practice is a growing evil, and the natural result is that buyers who are entitled to the lowest prices that can be made by jobbers are enjoying no better prices than those made to dealers who buy only a fraction of the quantities that they do. It is an accepted law of trade that the quantity should, to an extent, govern the price, and it is not right that dealers who buy one-twelfth of a gross should be entitled to as low prices as those who purchase in lots of one gross at a time.

Our third proposition is a broad statement which we must substantiate by facts. It is universally acknowledged that competition among jobbers is very keen, and it must therefore follow that prices are as low as they can afford to make, paying their expenses and securing a reasonable profit for themselves. We believe them to be lower, taking a miscellaneous invoice of, say, \$500, than the same goods can be bought for at the factories in the same quantities; we believe them to be as low as the same goods can be bought for at the factories in quantities, say, six times as great. We believe it so firmly that we are willing to substantiate the statement to any one who cares to try the experiment.

If our statement of the case is correct, then the truth of our third proposition is apparent, for the items of freight and express charges from 25 to 30 different factories would be found to add at least 5 per cent. to the cost of the goods.

In sending his orders to the jobber the dealer has the advantages of receiving his goods promptly; of receiving them in one lot at a minimum cost for freight; of conducting his business with a comparatively small stock, thus avoiding over-stocks and consequent financial embarrassment. The proper assortment of a retail stock in styles and quantities is just as essential a feature to success as in buying at lowest possible prices. We contend that the two objects can best be accomplished by judicious purchases from the jobber, and think that a little reflection and experimenting on the part of some of our correspondents who now think otherwise may prove to them that they are wrong.

For ourselves, we feel that our reputation with those who are now dealing with us is sufficiently established for fair dealing and low prices to warrant us in referring to them for the truth of whatever we have stated. We feel that we have a mission in the Hardware world, and are entitled to a living from it, and shall continue to use all honest endeavors to obtain it.

Referring to the manner of marketing their goods, a manufacturer in Minnesota writes as follows:

The jobbers were not inclined to take hold of our line very heartily, and wanted all the profits, so we concluded to introduce our goods at least to the retail trade. We are willing to sell to jobbers, but make no special effort to do so. We are inclined to think trade direct between the manufacturer and retailer is increasing, though we should prefer to deal with the jobber alone, as being less troublesome. One reason for manufacturers' inclination to deal directly with the retailer probably is that jobbers cut and make all sorts of prices, so that the retailer will not buy at all, because he has bought cheaper at some time, or has heard of those who have.

The following communication is from a well-known manufacturer "who has visited both the jobber and the retailer,"

and relates to the same question as seen from another point of view:

We think there is an increased tendency on the part of retail Hardwaremen to purchase direct from manufacturers, more especially of goods that are bulky and expensive to carry in stock. Each year finds more manufacturers on the road selling their products direct to the retail dealer or the consumer. The jobber has been arbitrary in the sale of certain makes of goods to the exclusion of all others, and has forced other manufacturers to go direct to the smaller trade. Over-production, and only a home market, compels all manufacturers to "hustle" for whatever trade they can get, either large or small. No matter how good an article a manufacturer has he can't get it recognized by a jobber until he has created a demand for it in the retail trade, then, if a demand is created, the jobber is willing to take hold and sell oftentimes at the manufacturers' prices, and want an extra per cent. or commission for so doing. This is one reason why manufacturers want to sell direct, for he not only saves commissions, extra per cents., &c., but he gains a recognition from the retail trade he wouldn't get through a jobber.

Items.

The Lawrence Curry Comb Company, 204 to 210 East Forty-third street, New York, are issuing their 1889 catalogue, which represents the large and important line of Curry Combs which they are manufacturing, including their most recent additions. Their Upright and Angular Boring Machines are also illustrated, attention being called to the advantages possessed by them. In regard to their Curry Combs, they call special attention to those which are made of steel.

J. W. McDonald, Cheboygan, Mich., issues a circular describing McDonald's Patent Improved Saw Tool for use in setting Cross-Cut Saws. He refers to the favor with which this tool has been received by the trade and users of saws, as evidenced by the rapidly increasing demand. He states that it has been much improved since last season and alludes to it as especially practical and an efficient device for the purpose. Full description is given with directions for its use.

E. C. Stearns & Co., Syracuse, N. Y., issue a neat card leaflet of unique design, in which their Stuart's Window Screen Frame is represented on the first page, a detailed statement of the extent to which the manufacture of this line has reached being given within.

As will be observed by the announcement of C. F. Guyon & Co., 99 Reade St., New York, in their advertisement on page 84 they are carrying a complete line of Bronzed Iron and Bronze Metal goods, which are referred to as entirely new productions and of exceptional quality. The detailed information in regard to this new departure will be of interest. They advise us that they will shortly publish a new catalogue embracing this entire line, which will also include all the new goods made by their several factories since the date of their last catalogue.

The E. C. Meacham Arms Company, St. Louis, Mo., under date December 21, issue their price current No. 395, which is occupied principally in the display of Breech-Loaders, Winchester Repeating Arms and Revolvers being also represented. The last page is devoted to Skates. The circular is accompanied by a key to the quotations which are given in cipher.

George N. Pierce & Company, Buffalo, N. Y., have issued their 1889 Catalogue, which represents their full line of goods, including Refrigerators in both pine and hard wood, Bird Cages, japanned and brass, and Tricycles, of which a large assortment is made for the use of girls and misses. It is to be noticed that several new patterns have recently been added in different departments, and a very complete line of goods is thus offered to the trade. The business was established in 1865, since which time it has been growing to its present dimensions.

The Freeman Wire Company, St. Louis, Mo., report a large demand for the season, and attribute it to the unusually mild weather. They refer to the past month as having been a busy one in all their departments.

For more than half a century Logan, Gregg & Co., Pittsburgh, Pa., have given their employees an annual banquet, and on the 29th ult. the 56th of these entertainments was given. Heretofore they have been held at the house of some member of the firm, but with the increase in the number of employees it has been found that no ordinary residence would comfortably accommodate them all, and on this occasion the families of the employees were also invited. The banquet was accordingly given in the Cyclorama dining hall and reception room, part of the entertainment of the evening being the viewing of the battle of Gettysburg. After the banquet, the excellence of which is referred to, there were other exercises, which are referred to as follows by the *Pittsburgh Post*:

First came the historian, Mr. Bruce Kountz, collector and assistant bookkeeper, who told of all that had happened during the year that had passed. He wound up in a blaze of glory with a description of stock taking, which occurs in December, and the close of which they were celebrating. He had been ably assisted in collecting data by the secretary, Miss Fanny Barndollar, the firm's efficient typewriter.

James H. Bissell, the colored gentleman who occupies the position of order clerk in the store, was the orator of the occasion, and sustained his part nobly. His subject was "Hardware Stores." The first establishment of the kind, he claimed, must have been at Jerusalem when Solomon built the temple. He said, however, that they never flourished luxuriantly in China, because these people had their own strange devices for putting houses together. Some one asked Mr. Bissell if he had ever heard where George Washington got his little hatchet. The sable orator promptly replied that the records showed the hatchet was purchased from Logan, Gregg & Co.

No small part of the entertainment was contributed by Mr. S. H. Lloyd, the bookkeeper, who had charge of the music. At the election which followed he was re-elected musician, and Miss Barndollar was again made secretary. Samuel Davis, bill clerk, was elected historian, and besides Mr. Bissell, who was unanimously re-elected, George McKenzie was chosen as next year's orator.

The following notice is issued to the trade under date of December 31, 1888:

The partnership heretofore existing between the undersigned as Merchant & Co., at 517 Arch street, Philadelphia, Pa., 9 Burling Slip, New York, N. Y., 202 Lake street, Chicago, Ill., 1 Whittington avenue, London, England, having this day expired by limitation, Barthold Bernheim now retiring, the business of Merchant & Co. will hereafter be conducted by Clarke Merchant and Henry W. Merchant, and the affairs of the late firm will be settled by them.

A Nelson, formerly conducting business under the style Salem Nail Company, 295 Pearl street, New York, has recently died, and the business will be carried on by O. Nelson at the same location.

C. R. Denckla, of the Heaton & Denckla Hardware Company, Philadelphia, Pa., a well-known Hardware merchant, of that city, died on the 18th ult.

We have received from the Chicago branch of the Kilmer Mfg. Company, of Newburg, N. Y., one of their calendars for 1889. It is handsomely lithographed in colors, and is intended to be hung on the wall, being bound with a metal strip at the top and bottom and backed with muslin. A table printed on the calendar shows the annual growth of the company's business since 1876, in which year they made 120,000 bale ties. The number has increased rapidly from year to year, until their production for 1888 is put at 59,739,000 ties. An accompanying circular gives a history of the operations of the establish-

ment, which has now grown to very large proportions. It is interesting to note that previous to embarking in this business the members of the firm were farmers in Schoharie County, N. Y., with little or no experience in manufacturing. Their bale ties have a very wide use for baling hay, straw, &c., and they also make ornamental fencing.

The Stanley Rule and Level Company claim that the vexed question whether eight hours is a day's work can be settled sooner by a careful selection of tools with which to do the work than by waiting for legislation on the subject. Their full-page advertisement in another part of this paper offers plenty of illustrations in support of this theory.

W. D. Gold, 1920 South Twelfth street, Philadelphia, Pa., is calling attention to his Smoothing and Polishing Iron Combined. The illustrations given of this article indicate its special features and utility.

The Red Jacket Pump Company, Daventry, Iowa, issue a striking colored lithograph, calling attention to their Red Jacket Adjustable Force Pump and the Lafferty Patent Chain Pumps, with illustrations showing the special features and uses of these goods. The catalogue of the company gives a detailed description of their manufactures, with directions for their use.

The 1889 catalogue of the Moore Mfg. and Foundry Company, of Milwaukee, Wis., illustrates in good style their line of Hangers, Vises, Tackle Blocks, Hay Fork Pulleys, Differential Pulley Blocks, Hand Hoists, &c. In connection with a reference to the removal of their business from Chicago to Milwaukee last July they state that their new plant has been erected with a special view to the manufacture of the lines of specialties shown in their catalogue, calling attention to their factory as well equipped for making light and medium Gray Iron Castings, with ample facilities for japanning and forging and for light machine work.

The Rockford Bit Company, Kokomo, Ind., issue a large-paged pamphlet describing their Wood-Boring Tools, including a large variety of Bits, together with Molding, Carving and Dovetailing Cutters, &c., Dado Heads, Hollow Augers and other Tools.

The St. Nicholas Mfg. Company, H. B. Owsley and H. Owsley, proprietors, 784-794 Madison street, Chicago, Ill., issue a catalogue representing the interesting line of Hand Sleighs, Desks, Rocking Horses, Express Wagons, Perambulators, Velocipedes, &c., which they manufacture.

E. Blair, Bucyrus, Ohio, issues striking and entertaining colored lithographs, in which the pictorial part is utilized to call attention to his line of Hog Rings and Rings. In a circular to the jobbing trade he states that this year he will have no agents, but solicits orders by mail.

The National Horse Nail Company, Vergennes, Vt., have issued their attractive calendar for 1889. In connection with the pictorial display they give full-sized cuts of the different sizes of Horse Nails, with both short and regular heads.

The Weir Plow Company, Monmouth, Ill., have issued a new catalogue very tastefully printed with exceptionally fine illustrations, in which they represent their line of Plows, Cultivators, Harrows and other Agricultural Implements and Machines. Among the new goods we observe the Weir Tongueless Riding or Walking Three-Wheeled Gang Plow. The company also send out a smaller pamphlet, describing some of their leading Plows, Harrows, &c., with blank pages for mem-

orandum. The company have branch houses at Kansas City, Mo., Dallas, Tex., and Council Bluffs, Iowa.

S. L. Allen & Co., 127 and 129 Catherine street, Philadelphia, Pa., have issued their 1889 Implement catalogue, describing the Planet Junior and Fire Fly Farm and Garden Implements, of which full descriptions are given, with abundant illustrations showing their use.

C. F. Guyon & Co., 99 Reade street, New York, are calling attention to their Nonpareil Sidewalk Ice Chisels, which they refer to as manufactured from the best English Steel. This Ice Chisel is of a heavy pattern and handled, and they allude especially to the low prices at which it is offered

Traveling Men's Association.

The Northwestern Traveling Men's Association held its thirteenth annual meeting in Washington Hall, National Union Building, Chicago, on the 28th ult. The attendance was unusually large, and nearly every State north of the Ohio River was represented. J. C. Miller presided and C. H. Hinman acted as secretary. The session was opened by the address of the president. In the course of his remarks he referred to the record of the association. During the past year the membership had decreased 30, which was due to the unusually large death rate. The number of deaths for the past year was 35, against 25 for the year previous. He recommended that the association change its mode of assessment. Instead of assessing whenever a death occurred, he thought it would be better to fix upon a regular period, say every 60 days. In conclusion, he hoped the members would bear in mind that all differences between the members at this meeting were simply differences as to the mode of helping the association and advancing its interests.

The report of Secretary and Treasurer Hinman followed the executive's address. According to his report \$177,000 had been collected in 21 assessments of \$2 each, and one expense assessment of \$1. Of this money \$155,000 was paid out to 31 widows and heirs of deceased members, and \$9000 to expense, leaving a balance of \$12,000, of which \$2000 belonged to the expense fund and \$10,000 to the mortuary fund. The average age of the members of the association was 40.17 years. The membership last year was 3909, of which number 171 had been admitted since the opening of the year. The number of deaths was 35, and delinquents dropped from the roll numbered 175, leaving 3870 members in the association at present.

C. H. Crossette, B. C. Prentice and M. A. Scovell, composing the Financial Committee, stated that they had gone over the books of the secretary and treasurer from December 24, 1887, to December 24, 1888, and that they were correct. The discussion of proposed amendments to the constitution occupied the remainder of the morning's session. The principal speech was that of T. S. Quincy, who advocated an amendment to the constitution to place the association on a graded assessment basis, to assess members according to their age. He also favored the payment of a commission to members for all applications for membership which they forwarded. The afternoon session convened at two o'clock. A discussion in regard to the election of officers was the first matter of interest after the meeting was called to order. The vote was then taken by ballot, the result to be announced by the Election Committee at the evening session.

A motion to present President J. C. Miller with \$1000 for the able manner in which he has fulfilled the duties of his office caused a spirited discussion. Some opposed paying anything, on the ground that it was unlawful, and that it would cause a scramble for the office if a monetary consideration was given. Others wanted the sum reduced to \$500. When it came to a vote, however, the \$500 party prevailed, and that sum was ordered paid. At the evening session the result of the election was announced as follows: J. C. Miller, president; C. H. Hinman, secretary and treasurer; W. M. Haskell, O. D. Frary, George Reed, D. K. Clink and F. F. Haigh, directors; vice-presidents—Illinois, W. H. Cribben; Wisconsin, John Throne; Indiana, J. B. Heywood; Ohio, Henry Rindskoff; Kentucky, N. M. Uri; Minnesota, D. R. Hevener; Michigan, Thomas Macleod; Iowa, C. M. Hinsdale; Missouri, M. C. Wetmore; Dakota, J. R. Robertson; New York, C. B. Howe; Colorado, William M. Gamble; Nebraska, M. A. Newmark; Kansas, D. E. Good; California, John Newberry; Montana, W. G. Paine. But one of the ten proposed amendments to the constitution was

adopted, and that was the amendment of Section 2 in Article V, which now reads:

The Board of Directors may order an assessment of not over \$1 upon each member of the association for expenses, when needed.

A number of lively speeches were indulged in by enthusiastic members, relative to improving on the gathering next year. The general opinion seemed to be that the business of the association could be much more expeditiously disposed of, and much more satisfactorily, if the annual meeting were changed to a delegate body. It was agreed that an amendment to the constitution making such a change would be offered at the next meeting. The association then adjourned to meet in Chicago, December 27, 1889.

Business Rules.

We have the pleasure of laying before our readers the following rules and regulations which have been adopted by a well-known wholesale Hardware house, by whom they are issued in the form of a convenient and well printed pamphlet. It will be observed that they are carefully compiled, and enter into a good many details which will doubtless be suggestive:

RULES AND REGULATIONS GOVERNING THE HARDWARE BUSINESS OF DUDLEY BROTHERS & LIPSCOMB, NASHVILLE, TENN.

BOOKKEEPERS.—ARTICLE I.

Section 1. Bookkeepers shall balance cash every day, and keep a book for that purpose, showing each day's balance, and they shall be prepared at any time to show that the cash on hand equals the balance the books call for. If there is a shortage they are liable for the amount of said shortage.

Sec. 2. Bookkeepers shall be liable for all counterfeit money that comes into the house, except what comes through the front cash drawer or city sales.

Sec. 3. Bookkeepers shall be liable for money received for by them and not credited to the payer; and they shall be liable for any other mistakes that may occur through their negligence.

Sec. 4. Bookkeepers shall be required to have an expense book from each and every traveling salesman before making settlement with him.

Sec. 5. Said expense book shall be filled out as provided for in Art. XIX, Secs. 7 and 8.

Sec. 6. Bookkeepers settling with traveling salesmen without the necessary collection and expense books, filled out as provided for in Art. XIX, Secs. 7 and 8, shall be guilty of a violation of rules as much so as the traveling salesman.

Sec. 7. Bookkeepers shall not be liable for money accepted by traveling salesmen, to be paid to other parties, except as provided for in Art. IV, Sec. 2.

Sec. 8. Bookkeepers shall be required to keep the collection and expense books of the traveling salesmen on file, and these books shall be the bookkeepers' sole and positive authority for all the entries made on the traveling accounts of the salesmen.

Sec. 9. Bookkeepers shall furnish traveling salesmen with statements, as provided for in Art. XIX, Sec. 11.

Sec. 10. Bookkeepers shall furnish the other employees of the house with information, as provided for in Art. VIII, Sec. 16.

Sec. 11. Bookkeepers shall pay employees their salary, as provided for in Art. VIII, Sec. 20.

Sec. 12. Bookkeepers shall not all leave the office at the same time. During business hours there shall always be at least one of them in the office.

BILL CLERK.—ARTICLE II.

Section 1. Bill clerks, in making charges on the country sales books, shall say who sold the bill, and whether it is an order given to a traveling salesman or if it is a bill sold in the house. If it is an order from the customer by mail, bill clerks shall say order by mail.

Sec. 2. In making charges on the city sales books the bill clerk shall give the salesman's name, and give post-office address of all new customers. If the order come by telephone, bill clerks must say so, and give name of the person who telephoned the order.

Sec. 3. Every charge offered to the bill clerk for entry on the sales books shall show who called the goods, who checked them, who packed them, and by whose authority the order is filled. No order or bill shall be entered on the sales books without this.

Sec. 4. If the bill clerk charges a man or firm merely "to merchandise," without giving the items, the bill clerk is security for the payment of the bill.

Sec. 5. It is the duty of the bill clerk to ask for the necessary information, and if such information is withheld or delayed the bill clerk shall not enter the bill.

Sec. 6. The failure of the bill clerks to adhere to these requirements shall make them liable for any loss that may ensue.

CITY BILLS.—ARTICLE III.

Section 1. City bills shall be marked "O K" by the person making the purchase, at the time the purchase is made, and said bill shall then be put on the city bill file.

Sec. 2. No bill shall be put on said file upon which an alteration or deduction is made, but when the bill needs correction a corrected bill shall be obtained, marked "O K," and the old bill shall be destroyed, and the corrected bill put on said file.

COLLECTIONS.—ARTICLE IV.

Section 1. If a traveling salesman collect money on the road and enter said collection in his collection and expense book, and said collection be not credited to the payer, said collection shall be charged to the bookkeeper making the settlement with said traveling salesman; but if said collection does not appear in said traveling salesman's collection and expense book, said collection shall be charged to the traveling salesman.

Sec. 2. Money accepted by traveling salesmen from their customers, to be paid to other parties must be entered in their collection and expense book, with full instructions as to whom and for whom said money is to be paid.

CONVERSATIONS.—ARTICLE V.

Section 1. Conversations with partners or employees in the house or over the telephone, except upon business, shall not exceed five minutes. Conversations with bookkeepers or bill clerks, except on business, interferes materially with their work and shall not be allowed.

CREDIT CLERKS.—ARTICLE VI.

Section 1. The credit clerk shall keep a true record of all goods returned, and shall enter them on his credit book, giving the date they came in.

Sec. 2. If the goods are returned without authority they are to go on the credit book in a separate place from the authorized credits, and remain as a memorandum until the credit clerk is authorized to enter them for credit.

Sec. 3. When goods are handed to an employee of the house, other than the credit clerk, it shall be the duty of the person receiving such goods to report them at once to the credit clerk.

CUSTOMERS.—ARTICLE VII.

Section 1. Customers shall be treated courteously and with careful and patient attention. Short answers or "smart Alex" replies shall not be made.

Sec. 2. Customers presenting receipts for money not credited to them shall be credited with the amount the receipt calls for, and said amount shall be charged to the person who signed the receipt.

Sec. 3. All orders or bills sold to new customers on credit shall be marked "O K" by a member of the firm or by one of the bookkeepers.

EMPLOYEES.—ARTICLE VIII.

Section 1. Employees shall bear in mind that time misspent by them, or work done to no purpose, is an actual cash loss to the firm. They shall, therefore, be required to work steadily and systematically during business hours.

Sec. 2. Employees shall be required to keep the firm's interests always in view, and to work to that end.

Sec. 3. If any person employed by the firm show a disposition to shirk his general or specified duty, or to consume his time merely with a view of acquiring a nominal right to draw his salary, he shall be declared worthless to the firm and shall be discharged without notice.

Sec. 4. Employees shall be provided with tablets to be used for figuring, writing dray tickets and such like purposes.

Sec. 5. Any and all persons shall be forbidden to use bill heads or other stationery except for legitimate purposes, and any person mutilating order books, cash books, sales books or stationery shall be charged with the same.

Sec. 6. Employees shall bear in mind that they shall complete any order given them to get up, and when the porters are otherwise employed the orders shall not be delayed by waiting for the porters to get out the rough articles.

Sec. 7. Each employee shall feel an interest in the general welfare of the firm, as provided for in Section 2 of this article, and shall not willingly see a loss sustained by the firm, or an article damaged, merely because it is not in the section of stock assigned to him.

Sec. 8. Employees shall have goods for their own use at cost and carriage, but goods sold to friends, or bought by employees for their friends, must be charged regular.

Sec. 9. Employees shall bear in mind that postage stamps are the same as money, and that

it is proper for them to bear the expense of their personal correspondence.

Sec. 10. Mr. — shall have charge of the entire stock, and he shall be held responsible for the proper care and management of the stock.

Sec. 11. It is the duty of the said — to assign each employee a certain section of the stock, and each employee will be required to keep his section in good order and condition.

Sec. 12. The failure of an employee to keep his section of stock in good order and condition shall be at once reported by said — to the firm, and, upon conviction, the employee thus reported shall be dealt with as provided in Section 3 of this article.

Sec. 13. The failure of said — to report the failure of an employee to keep his section in good order and condition shall make said — equally liable with the employee.

Sec. 14. All goods taken out of their place and not sold shall be put back by the person who took them out.

Sec. 15. No goods or broken packages shall be left on the running board.

Sec. 16. None of the employees except the bookkeepers shall be allowed behind the railing in the rear office, but they shall ask the bookkeepers for any information they (the employees) may need in relation to the business.

Sec. 17. Employees shall be forbidden to take out of stock any tool, implement or merchandise to be used in the store or loaned out.

Sec. 18. Any employee using merchandise, implement or tool in violation of Sec. 17 of this article shall be charged with what he uses at regular prices.

Sec. 19. If any employee, receiving goods to be credited to a customer, fails to deliver same to the credit clerk, the said employee shall be charged with said goods when customer claims credit for them.

Sec. 20. Employees shall not overdraw their salary, but they shall have the privilege of drawing their money through the month as their convenience suggests. They are requested, however, to make as few demands as possible on the bookkeepers.

Sec. 21. Employees shall not buy goods for their own use and have them charged to the firm.

Sec. 22. Employees will be required to select their wearing apparel with a reasonable regard for the duties they have to perform, so as to avoid changing their dress during business hours.

MAIL.—ARTICLE IX.

Section 1. No mail shall be left or opened in the front office.

Sec. 2. It shall be the duty of the person bringing the mail from the post office, or receiving it from the postman, to take it to the rear office at the time and in the condition he receives it, and it shall remain in the rear office, untouched, until it is opened by some one authorized to do so.

MISTAKES.—ARTICLE X.

Section 1. Mistakes reported by mail or otherwise shall be traced to the person who made them, and said person shall correct the mistakes and report them to the bookkeeper.

Sec. 2. If a loss is caused by the mistake said loss shall be charged to the party who made the mistake.

ORDER AND DECORUM.—ARTICLE XI.

Section 1. Order and decorum shall be maintained at all times.

Sec. 2. No boisterous talking, laughing or improper language shall be tolerated at any time.

PACKING. ARTICLE XII.

Section 1. Mr. — shall be furnished with packing tickets, printed so as to show who got out the goods, who they were called by, who they were handled by, who packed them and who shipped them. Said tickets shall contain printed instructions to the purchaser to return said ticket to the firm in all cases where the goods do not check with his invoice.

Sec. 2. It shall be the duty of the person getting up an order to see that a ticket, filled out as specified in Sec. 1 of this article, is placed in the box.

PARTNERS.—ARTICLE XIII.

Section 1. The rules of the house, as far as applicable, shall govern the partners as well as the employees.

PORTERS.—ARTICLE XIV.

Porters shall not be allowed to have company at dinner time, and shall conduct themselves as required by Sec. 2 of Art. XI.

RECEIVING CLERKS.—ARTICLE XV.

Section 1. Receiving clerks shall keep a true record of all goods that come into the house, and shall keep a book for that purpose, known as the receiving book.

Sec. 2. Said Receiving book shall show when the goods came in, what railroad, steamboat or wagon they came by, and the amount of the freight bill.

Sec. 3. Receiving clerks shall check up the invoices on receipt of the goods, and report any shortage, breakage or irregularity as soon as it is detected.

Sec. 4. When there is an invoice that cannot be checked, the receiving clerk shall report the fact at once, and get instructions in relation to said invoice.

Sec. 5. Receiving clerks shall see that the rate of freight charged in the freight bill agrees with the rate in the bill of lading, and shall mark each completed freight bill O K, and attach said completed freight bill to the bill of lading that goes with it.

SALESMEN.—ARTICLE XVI.

Section 1. Salesmen extending credit without authority shall be responsible for the amount.

Sec. 2. The salesmen can avoid the responsibility of trusting customers whose credit is unknown to them by referring such cases to a member of the firm or to the bookkeepers.

Sec. 3. It shall be the duty of the salesmen to give the necessary information to the bill clerk, as required by Art. II, Secs. 1, 3 and 5.

Sec. 4. Salesmen shall furnish the bookkeepers with such information in regard to their customers as the bookkeepers may deem necessary.

Sec. 5. If a salesman hear a report, or come into possession of any facts that will probably affect the credit or solvency of his customer, it shall be the duty of the salesman to advise the bookkeeper at once of such rumor or facts.

SHIPPING.—ARTICLE XVII.

Section 1. There shall be a book known as the shipping book, and it shall be the duty of the man who handles the goods in the bill to enter on said shipping book the buyer's name and his shipping directions, and his calls at other houses, if any; and to state on said book the number of cases and packages, giving their weights, and to give a description of such articles as are not packed in boxes or put in packages—in other words, the man who handles the order must enter it on the shipping book in such manner that the bill of lading can be made from the shipping book, and not from memory or from "the pile of goods."

Sec. 2. If the goods go by wagon the wagoner must sign said shipping book the same as he would sign the wagon receipt book.

Sec. 3. It shall be the duty of any person receiving one or more packages to be shipped with our goods to enter said packages on said shipping book.

Sec. 4. Said shipping book shall state who the package or packages came from, and shall show that they were packed with our goods.

SHIPPING CLERK.—ARTICLE XVIII.

Section 1. Shipping clerks shall send a bill of lading along with the invoice of each shipment.

Sec. 2. When shipping a number of articles tied together, or made into a bundle, shipping clerk shall state the number of articles in the bundle.

TRAVELING SALESMEN.—ARTICLE XIX.

Section 1. Traveling salesmen shall be furnished with order blanks, and shall write only one order on each blank. All orders shall contain full shipping directions, and terms of sale. The orders shall be written plainly and explicitly, and give price of each article.

Sec. 2. Nothing shall be written on the paper containing the order that does not refer exclusively to the order; and no one shall be bound to enter a credit written at the bottom of an order.

Sec. 3. Traveling salesmen shall be furnished with printed blanks to make reports on their customers, and shall be required to send in a report on every new customer they sell. The blanks for this purpose shall be printed in a manner that will leave no doubt as to what is required of the traveling salesman.

Sec. 4. All traveling salesman shall use due diligence to obtain information that will enable them to fill out the statements and questions printed on the blanks, and shall write on the back of the report any other information he can obtain, together with his own opinion of the purchaser's means, character, habits and business capacity.

Sec. 5. All that the traveling salesman has to say in relation to the purchaser's credit or history shall be written either in the face or on the back of the report, and not in his letter to the firm or on the order.

Sec. 6. The traveling salesman's failure to send a report with an order from a new man to be filled on credit shall be taken as evidence that the salesman can find no reason for recommending said new customer for credit, and the order shall not be filled, except upon the salesman's guarantee.

Sec. 7. Traveling salesmen shall be furnished with blank books in which to enter all collections and disbursements while on the road, and they shall be required to send said books to the house at the end of each week; said books

shall say where to reach the salesman by letter.

Sec. 8. All discounts, rebates or allowances of any kind made by the traveling salesman while on the road shall be entered in said books.

Sec. 9. Traveling salesmen passing customers who owe bills that are due shall be required to report failure to collect as promptly as they would a collection, and to report reasons given or promises made.

Sec. 10. Traveling salesmen shall keep the house advised as to the propriety of bringing suit against or of refusing to sell delinquent debtors.

Sec. 11. Traveling salesmen wanting statements of their customers' accounts shall hand the bookkeeper a list giving names of such customers, and write on said list when the statements will be called for. List shall be handed to the bookkeeper in time for him to have them ready at the date they will be called for.

Sec. 12. All traveling salesmen, when not on the road, shall assist in the general work of the house, the same as other employees.

Sec. 13. All traveling salesmen bringing in orders shall copy them on the regular order blanks, and shall, with the proper assistance, get said orders up.

Sec. 14. All traveling salesmen, no matter upon what basis, shall be subject to the rules of the house.

ARTICLE XX.

Section 1. The foregoing rules have been drafted in good faith and due consideration for the rights and privileges of the employees. Therefore a rigid observance of said rules is expected and shall be enforced.

Sargent & Co.,

New York and New Haven, Conn., have issued their discount sheet No. 2 under date January 1, 1889, which applies to their 1888 catalogue. We print below the portion which refers to goods of their own manufacture, which will be interesting as showing the extent of their line, and also their carefully revised quotations. In connection with this discount sheet it is announced that the old cash discount is discontinued and that the goods will now be invoiced at *net prompt cash rates*, which are the equivalent of their former invoice discounts and the cash discount combined. Their invoices will, therefore, in future be subject to no cash discount as heretofore, and it is stated that if payment is not received within 30 days from date they will draw at sight for the amount of the account. The trade will note with unusual interest this change, the 10 per cent. cash discount having been given for many years, so that its discontinuance is an important new departure, which will doubtless receive the approval of the trade.

Their list of Door Knobs, Locks, Escutcheons, &c., is also issued, the discount for which is 55, 10 and 2 per cent. The following are the discounts on the goods contained in the first 858 pages of their catalogue, and, as noted above, the prices given are net:

	Dis. per cent.
Door Bells: Nos. 34 to 15, 143 to 145, 153 1/2 to 115, 243 1/2 to 245, 203 1/2 to 206, 203 1/2 to 215, 213 1/2 to 215, 210 3/4 to 215, 223 1/2 to 225, 223 1/2 to 225.....	60&10

WEST INDIES.

PORT OF SPAIN, TRINIDAD, November 23, 1888.—*Asphaltum*.—Our market has been moderately active and steady at \$14.04 per ton boiled, and \$6.84 crude, free on board, inclusive of export duty. There were shipped since Jan. 1, 46,397 tons, against 39,055 last year, and 34,677 in 1886. *Exchange*, \$4.80 @ \$4.86 for 90 days' sight drafts on London.—*E. P. Masson*.

CHILI.

VALPARAISO, October 26, 1888.—*Copper*.—At slightly easier rates, owing to a higher exchange, there were sold during the fortnight altogether 22,068 quintals at \$28.35 @ \$29.10, \$28.50 equaling £76. 12/4, with 27/6 steam freight. Nearly all 1888 shipments have been disposed of. *Nitrate*.—A large business has been done in December and January shipments, sales aggregating 783,000 quintals, 95 % at \$2.80, and 280,000 96 % at \$2.80 @ \$2.97, \$2.85 equaling 9/4. The total export in September amounted to 1,579,597 quintals, and there remained loading on the 1st inst., 2,348,016 quintals. Nitrate shipments during the first 9 months:

	1886.	1887.	1888.
	Quintals.	Quintals.	Quintals.
To North of Europe.....	4,269,416	7,243,336	8,539,507
To the Mediterranean.....	112,712	182,938	103,334
To the United States on the Atlantic.....	1,134,017	1,249,500	2,144,724
To the United States on the Pacific.....	237,369	164,296	113,438
Totals.....	5,753,514	8,840,070	10,901,003

During the fortnight 35,700 tons were chartered for Europe, and 2350 for the United States. *Coal* has been looking up again in view of light shipments this way. Newcastle advanced from 32/ to 37/6. *Exchange* has been tending upward. We quote, 90 days' sight on London, 27 1/2 d.—*Weber & Co.*

EAST INDIES

PENANG, November 13, 1888.—*Tin*.—Receipts during the fortnight reached 12,000 piculs, of which Europeans took 5200, and Chinese 6000, prices meanwhile declining from \$38.10 per picul to \$37.62. From January 1 to November 4, there were shipped to England 118,147 piculs; to the Continent, 338, and to America, 8158. *Exchange*.—Four months' bank, 3 1/2 @ 3/0. —*Schmidt, Kustermann & Co.*

SINGAPORE, November 20, 1888.—*Tin*.—Since our report of the 6th inst. Tin touched \$37.50 per picul, but is now firmer for ready metal at \$38. Supplies are not very large at the moment, but there is every appearance of large arrivals in December and January. Following have been the shipments to America during the first 10 months: This year 47,518 piculs from Singapore and Penang; in 1887, 68,730; in

1886, 59,121; in 1885, 23,863; in 1884, 55,279, and in 1883, 99,164. *Gum Copal*.—There has been a moderate business done at \$12 down to \$9.20, according to quality. *Gum Damar*.—A small lot of inferior Palambang has been taken by Continental buyers at \$20.50 per picul. *Tonnage*.—Is more plentiful, but rates are firmer at 60/ for weight. New York via Canal. —Steamers are filling up in China, and nothing can be engaged at present. Via Cape.—The "Flora P. Spofford" continues her loading. For Boston.—The "Penobscot" loads for charterers' account. *Exchange*.—Six months' credits, 3 1/2. —*Gillfillan, Wood & Co.*

MANILA, December 24, 1888.—*Hemp*.—Quotations are altogether nominal at \$15.15-16 per picul, against \$8.50 in 1887, equaling per ton, cost and freight, £54. 10/ against £30. 10/. There cleared for the United States since last cable 3000 bales, against none last year; since January 1 241,000 bales, against 246,000; and there remain loading for do. 25,000, against 11,000; cleared for England since January 1 334,000 bales, against 225,000; loading, 7000, against none; cleared for all other ports, 68,000, against 46,000; receipts at all ports since last cable, 9000, against 9000; since January 1, 642,000 bales, against 527,000 in 1887, and 395,000 in 1886. *Freight*, \$7.50, against \$5.50. *Exchange*, 3/8, against 3/8.—*Ker & Co., per cable direct to their agent, Mr. Charles Nordhaus, 89 Water street, New York.*

RUSSIA.

ST. PETERSBURG, December 23, 1888.—*Petroleum*.—The authorities of Batoum have refused to sanction Rothschild's scheme to lay pipes through that town to convey Petroleum from the wells directly to the ship's side. Their objection to the plan is that it would do injury to small traders.—*Per cable direct.*

SWEDEN.

STOCKHOLM, December 18, 1888.—*Iron Ore*.—Considerable agitation is going on in Central Sweden against Gellivara Iron Ore, which the owners of other mines in Sweden want to be saddled with a prohibitive export duty, because they are afraid that it will supersede abroad all other Swedish Iron Ore. As the Lulea-Ofoten Railroad Company intend to build blast furnaces and rolling mills for the purpose of utilizing Gellivara and Luossavara Ores on the spot, the mine owners of Central Sweden demand that the erection of such works be simply prohibited, and a bill will be introduced to that effect during the coming session of Parliament, they being afraid that the present make of Swedish Iron will become unsaleable abroad in competition with Lulea. Meanwhile, Fred Krupp, of Essen, has also resolved to import next summer large amounts of Gellivara Ore, the experiments made with the same at Essen having given the most encouraging results.—*Dagbladet.*

SPAIN

BILBAO, December 15, 1888.—*Metals*.—Spanish exportation during the first nine months as under:

	1886.	1887.	1888.

The falling off in the Iron branch and Quicksilver deserves attention.—*Bilbao Maritimo y Comercial.*

The extensive sheet iron mills of George W. Johnson, at Newcastle, Pa., have been remodeled, and additional ground and building added to it.

A supplement has been issued to the rate sheet of the Queen and Crescent route on pig iron. The principal change is that the rate from Rockwood and Dayton has been made \$5.78 to Atchinson, Kansas City, Leavenworth and St. Joseph, and from Chattanooga, Rising Fawn and the Birmingham district \$5.64 to all the points named.

The Servia, which sailed on Saturday for Europe, carried quite a party of iron and steel makers, among them being C. W. McKinney, general manager, and A. Scranton, superintendent, of the Scranton Steel Company, and Messrs. Gayley and Lauder, of Pittsburgh.

The Champion Corn Husker.

A simple but efficient method of husking corn by machinery is illustrated herewith. This device is the invention of A. Steiner, a practical Illinois farmer, who perfected the machine after many years of experiment, in the hope of avoiding the drudgery of husking corn by hand.

*The Champion Corn Husker.*

One of the principal claims of the inventor is that the Champion Corn Husker will handle corn either wet or dry, so that its operations are not dependent upon the condition of the weather. The husking can therefore be done in the field, or after the corn has been shocked, or when it has been dumped near the crib, so that this

the face, the handle is raised, the knife moves down and cuts the cob, and at the same time two plungers force the ear down imbedding the teeth of the four fingers in the husk, after which the two arms drop down, the husk is cut from the cob and the four arms separating tear the husk apart and the clean ear of corn drops down. The machine ad-

justs itself to the size of any ear. It is strongly made of steel and malleable iron, is not easily put out of order, and can be operated by a boy. Another feature of the machine is that it saves the husks intact, so that they can be gathered and sold for mercantile uses. It is sold by the Champion Corn Husker Company, 347 Wabash avenue, Chicago.

The Kitchen Jewel.

The accompanying illustration represents this article, which is manufactured by the T. B. Harkins Foundry Company, Bristol, Pa. From the illustration given herewith it will be seen that it is intended to be placed in the stove hole, thus bringing the cooking utensil which is placed in it close to the heat without affecting the fire. Its utility is thus obvious and the manufacturers make the point that it is also a great coal saver, as small cooking utensils can be put in

*Champion Corn Husker for Use in the Field.*

work can be done at odd times or when other work about the farm is not possible. One of the illustrations shows the full machine, while the other represents it bolted to a wagon body for use in the field. It is composed of a three-sided metal frame. Extending across the bottom are four fingers with teeth on them and two arms. On the inside of the front piece is a V-shaped knife standing upright. In operating the machine the ear of corn is laid in from the top, the end of the cob projecting through the slot in

this receptacle, thus making it unnecessary to have a large fire. It is made in four sizes, Nos. 6, 7, 8 and 9.

Minnesota has a board of prison inspectors who have just completed a tour through the States from California to the Atlantic Coast, and will prepare a report. Their account respecting institutions in New York is not in the least flattering. At

Elmira there were 500 men who learn stone cutting and recut the blocks until they are reduced to sand. They also manufacture electrical instruments of brass with great care, only to destroy them, melt the material and begin again. The only prison visited that pays its expenses is at Detroit, which has the public account system.

Benedict's Reservoir Mucilage Brush.

Mr. A. L. Benedict, of New Canaan, Conn., is introducing to the trade a novel mucilage brush which will be found very convenient for desk use. It combines the principles of an oil can with a bristle brush, and presents the appearance indicated by the cut shown herewith, reminding one very much of the oilers used in connection with the sewing machines of common use. The end of the tube has been ingeniously fitted with a brush, while inside of the bristles is a tube leading down to the mucilage supply. When the reservoir is inverted and the bottom pressed

*Benedict's Reservoir Mucilage Brush.*

by the thumb the mucilage is forced into the brush, and more or less can be supplied at will. The device has the advantage of keeping the mucilage away from the air, so that it does not become thick by evaporation, nor waste. The brush is self-righting and never tips over; accordingly, the article is always neat, ready and reliable. The reservoir is easily refilled. Mr. Benedict is offering these articles in zinc and brass, and also handsomely nickle-plate, and, we understand, has in contemplation still other styles embodying the same general principles of construction, but more ornamental in character.

Large shipments of firearms and warlike munitions are being made from New York to Hayti for both of the contending fac-

*The Kitchen Jewel.*

tions and the Haytian minister is authority for the statement that \$4,000,000 borrowed in Holland by the President of the Dominican Republic is intended for the purchase of a war steamer for the Northern party.

Cars for the transportation of fruit are made that have wicks running their entire length with tanks beneath holding oil enough to burn for ten days.

Automatic Link Snatch Block.

The accompanying illustration represents a new snatch block, patented December 11, 1888, by Thomas Laughlin & Sons, Portland, Me., by whom it is put on the market. It is intended to obviate the difficulties of the old style link which cannot be opened or closed without turning the hook in one position, which is often inconvenient. In this block the link is kept in position by a hard rubber spring under it, and will instantly return to position when pulled out to unlock the hook. When the hook is unlocked it is only necessary to press it against the link, which instantly locks it, so that it remains locked whether there is a hold on it or not. The

Automatic Link Snatch Block.

simplicity and effectiveness of this arrangement are alluded to and the point is made by the manufacturers that it is impossible to shake the link open, making the block exceedingly secure and satisfactory. The ironwork is referred to as heavy and the sheaves as large and wide in the score as any other make, the quality of the workmanship being also referred to.

Safety Stove-Pipe Holder.

In the cut here shown we present a general view of what is known to the trade as the Safety Stove-Pipe Holder, patented and manufactured by Messrs. Welsh & Kurtis, of Springfield, Ohio. The device consists of a pressed collar, constructed of the best charcoal tin, and is provided with spring fingers attached in such a manner as to expand and grip the interior of a flue hole. In placing the collar in position it is first slid back on the stove pipe until the bent loops or ends of the fingers spring over the end of the pipe, which is set in such a way as to enter the flue far enough to just clear the brickwork, with the mouth of the pipe even with the inside smoke chamber of the chimney. When the fingers have been contracted, the pipe, with holder and collar in position, is inserted in the flue until the collar comes in contact with the wall, when the fingers expand and grip the inner sides of the smoke flue. The fingers are so constructed that they act irrespective of the regularity of the interior surface of the flue, and hold the pipe in either a horizontal or an upright position. The makers state that this device has been indorsed by the fire insurance

companies for the reason that its use prevents the dropping of sparks, ashes or soot upon the floor, and the liability of the pipe falling down is avoided. The pipe is prevented from entering the flue so far that it comes in contact with the back of the chimney, and it also holds the collar firmly in place against the wall, which

Safety Stove-Pipe Holder.

tends to keep the air from entering the flue between the collar and the chimney. The makers claim for this device that it is easily adjusted in place upon the pipe, that it can be adapted to fit any flue wherever the pipe can be inserted in a flue hole, and that it will hold the pipe in the center of the flue, leaving an air space around the pipe, thus greatly reducing the danger from fire.

Improved Rain-Water Cut-Off.

In the cut shown herewith, we present a view of a rain-water cut-off, a patent for which has recently been granted to W. C. Bayless and J. C. Nichols, of Massy Creek, Jefferson County, Tenn. In the engraving a portion of the side of the cut-off is broken away, exposing the interior, and indicating the general arrangement of parts. The cut-off is claimed to be self-cleaning—that is, the waste water does not pass over the strainers, but finds an outlet above them. The use of reverse strainers makes the device compact, while the construction is simple and durable. Just below the first strainer is a

Rain Water Cut-Off.

turn-back which throws the water on to the highest part of the lower strainer, thus utilizing all the straining surface. When the lever shown in the cut is pushed down into the cut-off the water is turned into the cistern, but when the lever is pulled out the water is discharged at the waste spout. The device is well made in all its parts and so arranged as to give very satisfactory results. We understand that the patent covering the main features of construction is in the market.

Patent Wooden Handle for Tea and Coffee Pots.

John Tobin, of Nos. 125-129 New Jersey Railroad avenue, Newark, N. J., has recently introduced to the trade, in connection with his manufactures of tin-

ware, a very serviceable wooden handle, a general view of which is shown in the accompanying illustration. As will be seen from a careful inspection of the cut,

Patent Wooden Handle for Tea and Coffee Pots.

the handle is composed of three parts, two being of metal and one of wood. Holes in the wooden piece allow the two parts composed of metal to be inserted and screwed together, as indicated at the point where the handle is broken away to show the construction. By this arrangement a handle is provided which is at once simple and durable. The shorter rod screws into the head of the longer one in such a way as to make it impossible, after the handle is attached to the pot, to get out of order or come apart. The strain upon the wooden portion is not confined to one end only, rendering the wood liable to fracture, but is distributed along its entire length. Mr. Tobin is employing these handles upon fluted teapots with spun copper bottom, and upon planished round tea and coffee pots with very satisfactory results.

CURRENT HARDWARE PRICES.

JANUARY 2, 1889.

Note.—The quotations given below represent the Current Hardware Prices which prevail in the market at large. They are not given as manufacturers prices, and manufacturers should not be held responsible for them. In cases where goods are quoted at lower figures than the manufacturers name, it is not stated that the manufacturers are selling at the prices quoted, but simply that the goods are being sold, perhaps by the manufacturers, perhaps by the jobbers, at the figures named.

THE IRON AGE

THURSDAY, JANUARY 10, 1889.

Pea Coal for Elevated Railroad Locomotives.

Commenting on the recent attempt to use pea coal on the elevated railroad locomotives in New York, the *National Car and Locomotive Builder* says:

The locomotives used on the elevated railroads of New York have always burned a good quality of egg anthracite coal, and the small engines have never had much margin of steaming capacity for the heavy work they are required to do. Knowing this from intimate acquaintance with the performance of the engines, we were very much surprised lately to hear that it was the intention of the officers of the road to begin burning pea coal in the fire-boxes of the engines. A single engine was tried first, and with a great deal of favoring she was kept running, and this very meager measure of success was deemed sufficient

elevated railroads. Slack coal entails slow combustion per foot of grate area and the use of a thin fire. Frequent starting from stations is fatal to the use of a thin fire, for the strong exhaust tears holes in the fire, consequently service like what has to be performed on the elevated railroads is the least adapted for the use of the inferior fuel. Considerations of this kind ought to prevent the officers of any railroad operating trains that stop frequently from trying experiments with fine coal, and the elevated railroads of New York ought to be the last to try anything of the kind, for when everything is done to favor the engines there is too small margin for bad weather and the numerous other exigencies that are ever arising to impair the regularity of trains. Moreover, the Elevated Railroad Company, of New York, have no right to try experiments which are calculated to derange the regularity of trains, causing delay to the public and incurring

must be thrown back 11 years, and the credit of the first construction awarded to Galileo.

Stay Bolt Threading and Tapping Machine.

Messrs. Nicholson & Waterman, of Providence, R. I., a short time since designed and built a simple form of stay bolt threading and tapping machine specially intended as a railroad shop tool. The engravings which we give of it in this issue explain its principal features.

The large number of stay bolts used in a locomotive boiler, the importance of having them fit and the difficulty in getting uniformity especially when following taps has made the need of this machine apparent. The principle of operation consists in running dies at a slow rate of speed, well supplied with oil and in getting the

STAY BOLT THREADING AND TAPPING MACHINE, BUILT BY NICHOLSON & WATERMAN, PROVIDENCE, R. I.

excuse for supplying that kind of fuel to a dozen or more of the engines as a preliminary to putting the whole equipment on pea coal. But the experiment on a large scale, which put each engine on her own merits, soon demonstrated what burning fine coal in small fire-boxes really meant. For the day it was tried the train service on the Third avenue line was very seriously crippled. The engines lost time so badly for want of steam that intervals as long as 30 minutes occurred between trains, which entailed a vast amount of inconvenience upon the people of New York City who are dependent upon these roads for prompt and regular transit.

Any one who is at all familiar with the combustion of anthracite coal, and has reflected on the conditions necessary to its use, must have been aware that it could not be successfully burned on the limited grate area found in the elevated railroad locomotives. We do not believe that there is a single locomotive in the country burning pea coal pulling passenger trains that stop and start frequently, even in fire-boxes like the Wooten, that are specially designed for small coal, and it was pure insanity to pretend that it could be done in small fire-boxes of engines doing the hard work performed by the locomotives on the

unusual risks of accident. At some times of the day the train service is very much behind the demands for accommodation, and the attempt to save a few dollars at the expense of making intolerable blanks between trains is simply trifling with the needs and rights of a vast multitude of people.

M. Govi, an Italian savant, has presented a paper to the French Academy of Sciences, in which he claims for Galileo the distinction of having discovered the microscope, as well as the telescope. He has found a book printed in 1610, according to which Galileo had already directed his tube fitted with lenses to the observation of small near objects. The philosopher himself stated, shortly after this date, that he had been able to observe through a lens the movements of minute animals and their organs of sense. In a letter, written in 1614 to a Signor Tarde, he states that he has with his microscope "seen and observed flies as large as sheep, and how their bodies were covered with hairs, and they had sharp claws." The date usually assigned to the discovery of the microscope is 1621, and the invention is attributed to Cornelius Drebbel, a Dutchman; but according to M. Govi the date

greatest economy by multiplying the number of dies at work. By slow speed the best service is obtained from the die, and ample time is allowed for testing and adjusting whatever change in size may come from wear. A great difficulty experienced by locomotive boiler builders arises from the rapid wear of the taps used in threading for stay bolts, and the consequent change in size. As usually equipped the threading machinery must get several days ahead of boiler work and the change in size of tap becomes very difficult to follow. The Nicholson & Waterman machines now in operation seem to have entirely overcome these difficulties.

In detail, the machine consists of a bed, at one end of which is placed a short shaft having two pulleys and a bronze pinion communicating motion to a large gear, which in turn drives through pairs of bevel gears a number of upright spindles. There are six of these and they are all duplicates of one another. An enlarged view of one of these spindles with its bevel gear G attached is shown in Fig. 2. The top of each spindle C is made to receive the hardened head-holder D, which is made to suit the size of the head of the bolt. The under side of the head of the spindle is cupped to secure a tight joint under wear

and prevent the oil from leaking through. A sleeve, A, holds the spindle and is adjusted in line and held in place by screws, E, and pins. To the bottom of the spindle is securely keyed the larger of the bevel gears. This gear is of cast-iron, and its driver of bronze. All the teeth are cut in order to secure the most perfect and smooth feed. Projecting from the top of the bed and on either side of each spindle are two rods used to guide the die holder. They are fastened at their upper ends by set screws and holes through the oil tank. The tap is shaped to form a holder for oil, which is fed upon the work from pet cocks over each die. The oil runs into a tank under the machine from which it is pumped into the upper feed tank by a rotary pump driven from the countershaft. An overflow pipe prevents the upper tank from getting too full. The die holders slide loosely upon the rods, and the operation of the machine consists in placing the head of a stay bolt in the socket D, which is constantly in motion and pressing the die on the end of bolt. The die once started feeds itself along until it reaches the socket D, where, continuing to feed, it draws the head of bolt out and the oper-

Stay Bolt Threading and Tapping Machine.
—Fig. 2.—Detail of Bolt Spindle.

ation removes it from the tap. The form of die used is the round split solid die adjusted by set screws.

The machine is changed into a nut tapper by substituting for the die holders receivers adapted to nut blanks. The head of the tap is inserted in D, and remains there until drawn out by the tap being full of nuts. The height of the machine admits of stay bolts being threaded of single or multiple lengths.

The question of brakes for locomotive engine trucks is a live one, in view of the attempted introduction of large eight-wheel locomotives for fast passenger service, having 40,000 pounds and over upon their trucks. In the present designs of such engines, this is an unbraked weight, and gives rise to excessive strains on the draw bars of the first few cars of the train, and also increases the length of both the service and the emergency stops.

Electricity and Artesian Wells.—The discharge of water from artesian wells has for many years been employed as a motive power in France. In the city of Tours there is an artesian well which drives a hydraulic wheel 7 m. in diameter and works the machinery of a silk factory. At Grenelle the heat of the water issuing from a deep well is utilized in warming buildings. A project is now before a Commission of the Municipal Council of Paris having for its aim the utilization of the power obtainable from the new artesian well in the Place Hébert, at La Chapelle. There are now three important artesian wells in the Paris basin, that of Grenelle being the oldest, and that at Passy the most productive. The new La Chapelle well is particularly adapted for the experiment of producing motive power.

Besides these there are a number of private artesian wells in Paris belonging to manufacturers. The La Chapelle well was finished in March last, having been begun 24 years ago. It reaches a depth of 720 m., and the water, left to itself, rises to a height of 35 m. above the mouth. It furnishes 6000 c. m. of water in 24 hours. The proposal is to utilize the power furnished by the well in generating and distributing electricity for lighting and motive purposes. One object mentioned is the lighting of the park of the Buttes Chaumont, which is situated near the well. Before now electricity has been generated in this manner. At Ponce de Leon, in Florida, there is a hotel having a powerful artesian well which drives a turbine-wheel and dynamo, thus generating the current necessary to light the building and its grounds. At Yankton, in Dakota, there is a flowing well which drives the dynamos of an electric light company. The well is 600 feet deep, and the water on issuing from it is conducted to a reservoir placed 30 feet above the turbine which actuates the dynamos.

THE CHICAGO IRON TRADE.

ITS HISTORY IN 1888.

The year which has just closed was one of peculiar experiences to members of the iron trade. It was a period of vacillation from oppressive quietude to very great activity and of fluctuations in price often bewildering to buyers and sellers by the abrupt changes made. Disturbing influences were numerous and potent, some of a general character and others local in their nature. Principal among these stood the unsatisfactory condition of the railroads, usually the source of the greater part of the demand for iron and steel. The scanty crops of 1887, and the paralleling of old road by new ones in that year decreased the net earnings of the Western railroad companies so heavily in 1888 that they were forced to economize in every way, in purchasing even necessary supplies, while new railroad enterprises halted, with a depressing effect on manufacturers dependent to a great extent on the demand from that source. Early in the year, however, a noticeable activity prevailed among carbuilders who were called upon to equip the new lines of road built in 1887, but such a demand naturally exhausted itself in a few months. The freight war in the Northwest, which involved a number of the most important railroad systems in the country, decreasing their earnings and curtailing their purchasing power; the Chicago, Burlington and Quincy engineers' strike, which lasted for many weeks and affected an important section of the West; legislation hostile to railroads in some of the Western States, which was brought upon them through their own acts, yet was both directly and indirectly injurious to railroad investments; wars between great East and West through lines, which resulted in the establishment of unremunerative rates on freight and passenger service—all had their effect in decreasing the consumption of iron and steel and reducing prices. The builders of Chicago suffered to some extent from the effect of the great 8-hour strike in 1887, of which capitalists feared a repetition in some degree in 1888 and were chary about beginning new enterprises. Hence, the local architectural iron works found their capacity but partly engaged during the building season, decreasing the consumption of iron quite noticeably. The dispute over the annual adjustment of rolling-mill wages scheduled in July was expected to prove a very serious matter, but it was a veritable blessing in disguise, as the

stoppage of the Western mills for a month relieved the market of a plethora of finished iron, while their unlooked-for resumption started a sudden demand for raw material which advanced the price of pig iron and old rails and sustained the market in good shape for at least a quarter of the year. Tariff agitation in Congress and the Presidential election had their effect on business in the Northwest in common with other parts of the country. The last two months of the year were unproductive of disquieting influences, but, on the contrary, witnessed a condition of affairs which if continued will lead to much better business and possibly a restoration of activity. The closing in of winter was so gradual that no crops were injured by frost except in a very small section of the extreme Northwest, while the crop of corn garnered in the great corn-growing belt was never equaled in any former season, thus assuring prosperity to farmers and business to the railroads. Already the influence of the excellent crops has been felt in the demand for cars, and car-builders are again finding their order books filling up, some of them, in fact, now running to their full capacity. Managers of railroads are now more hopeful of their ability to sustain rates, in view of the traffic passing over their lines, though in some cases it appears that they are somewhat too sanguine, as they are advancing their tariffs above what shippers regard as a reasonable charge and they may be obliged to modify them. A slight downward tendency at present exists in the prices of many forms of iron and steel, but it is felt to be due to the season rather than any confirmed impulse in trade, and everywhere a feeling of confidence in the future is manifested. It would be a piece of unwisdom to suppose that 1889 will be wholly free from demoralizing influences, but a very careful survey of the situation discloses no domestic element of disturbance now threatening the prosperity of the country.

Pig Iron.

The course of the market for Pig Iron disclosed a number of new things and reaffirmed some old ones, among which may be enumerated the following:

1. The threatened inundation of iron from the South failed to materialize. New furnaces in that section were put in blast so gradually that their product was absorbed without seriously affecting prices. It is reported on very good authority that quite a number of the leading Southern companies now have contracts on their books covering 50 per cent of this year's product.

2. In defiance of previous experience, the steel-rail trade does not always rule the iron trade generally. Prices of pig iron and of other iron advanced quite independently of steel rails in August, September and October.

3. When the demand improves prices advance without regard to stocks in maker's hands. Pig iron seems to be as sensitive to trade influences as the needle is to the magnetic current. The impulse in one direction or another sways it almost instantly without regard to statistics of stocks.

4. Declarations by makers that cost cannot be forced any lower do not check a downward tendency in prices. Supply and demand regulate prices in the main when they are not artificially affected by combinations, and protests by individual makers against a further decline, because actual cost has been reached, are without influence on the market.

5. Chicago prices during the past year were largely independent of the influences existing in other markets. Bessemer pig iron sold at as low a price as anywhere in the country, and coke foundry pig iron as low as, if not lower, than in any other Northern market. The course of

prices of leading varieties of iron during the year is shown in the following table of monthly averages, terms cash, f.o.b. Chicago:

Months.	Lake Superior Charcoal.	Lake Superior Coke No. 1.	Am. Scotch (Backband) No. 1.	Southern Coke No. 2 (From October No. 1).
January.....	\$22.00	\$19.50	\$20.50	\$19.50
February.....	21.50	19.25	20.50	19.00
March.....	21.00	18.50	20.25	18.50
April.....	20.50	18.50	20.00	18.00
May.....	20.00	18.00	19.50	17.50
June.....	19.50	17.50	19.00	17.50
July.....	18.50	17.00	18.25	16.50
August.....	19.00	17.00	18.25	17.00
September.....	19.50	17.50	18.75	17.75
October.....	19.75	18.00	20.00	17.75
November.....	20.00	18.00	20.00	17.50
December.....	20.00	17.50	19.50	17.00

The lowest reported sale in Coke Iron for the year occurred in July, when a quantity of Lake Superior Mill and of Southern Mill brought \$14, cash. The lowest reported sale of Bessemer Pig Iron was at \$16.60, cash, f.o.b. Chicago. Ordinarily, the price of Bessemer Pig Iron is about the same as of Lake Superior Coke. An event which attracted some attention at the time was the sale in July of 600 tons of Lake Superior Charcoal Pig Iron for export to England to be used in the manufacture of Malleable Castings.

Finished Iron.

Prices of Bars, Plates, Sheets and Angles fluctuated remarkably. In the summer months Bars and Sheets were unduly depressed, touching prices from which a rapid recovery was effected. Contracts for mill lots of Common Bars were placed in August as low as 1.50¢, half extras, f.o.b. Chicago, while No. 27 Sheet Iron, Common Black, was sold at 2.80¢ in May and June. In the last four months of the year, Bar Iron has ruled very steadily at about 1.70¢ @ 1.75¢, with some sales at 1.80¢. An excited condition of the Sheet-Iron trade prevailed from July to October, arising from the failure of the Aurora (Ind.) mill, which had taken a large number of contracts at low prices that had to be transferred to other mills already well supplied with work, and also caused by a heavier demand for Light Sheets from several classes of consumers than had been anticipated when season contracts were placed in June and July. The stoppage of many mills in July, as above referred to, also had its effect in stiffening the views of manufacturers. The course of prices during the year on mill lots of Common Bar Iron, Angles, and No. 27 Sheet Iron, is indicated in the following table of monthly averages, f.o.b. Chicago:

Months.	Common Bars.	Angles.	No. 27 Sheets.
January.....	1.75¢	2.35¢	3.05¢
February.....	1.72	2.35	3.00
March.....	1.70	2.30	3.00
April.....	1.70	2.25	2.95
May.....	1.62½	2.25	2.85
June.....	1.60	2.20	2.85
July.....	1.60	2.15	2.90
August.....	1.65	2.25	2.95
September.....	1.75	2.30	3.15
October.....	1.75	2.30	3.10
November.....	1.72½	2.17½	3.10
December.....	1.72½	2.15	3.05

Steel Rails.

Chicago being the Steel Rail City, the slack demand for this class of railroad material was severely felt in 1888. The mills ran but for a part of the year, and one of the North Chicago Rolling Mill Company's Rail mills was diverted to the manufacture of beams. The production of steel rails by the Chicago mills was nevertheless quite large, amounting to 419,850 gross tons in the year. An event of some importance in the tech-

nical history of 1888 was the successful introduction of the use of oil for fuel in these works, a regular supply being assured by the completion of a pipe line from the Lima (Ohio) oil field to Chicago. The course of the local steel rail trade during the year is well indicated by the following table of monthly prices:

Jan....	\$35.00	May....	\$32.50	Sept....	\$30.00
Feb....	34.50	June....	32.00	Oct....	29.00
March..	33.50	July....	31.50	Nov....	29.00
April..	33.00	Aug....	30.50	Dec....	30.00

The lowest steel rail contract known to have been taken in Chicago during the extreme depression of October and November netted the mill probably \$27.50. The present price is \$30, and it seems very probable that it can be sustained if not advanced.

Old Material.

The price of old iron rails declined in sympathy with the finished product until July, when the unexpected starting of the Western mills precipitated a demand which so hardened prices that a very material advance was made in August. This caused considerable speculation in old rails and led to very active trading, limited only by the short supply and the speedy absorption of visible stocks for consumption. Other old material sympathized. The advance was not held, however, and prices are now lower, but not so low as in May and June, in the depth of the depression. The course of prices was as follows in the leading classes of old iron by months:

Months.	Rails.	No. 1 Forge.	No. 1 Mill.	Cast.
January.....	\$21.00	\$21.00	\$18.00	\$18.00
February.....	22.00	21.00	16.00	16.00
March.....	21.00	20.50	15.50	16.00
April.....	20.50	19.50	14.00	15.00
May.....	20.00	18.50	13.50	14.00
June.....	18.00	17.50	12.50	13.00
July.....	19.00	16.50	12.00	12.00
August.....	23.00	17.00	13.50	13.50
September.....	25.00	19.50	15.50	14.00
October.....	24.00	20.50	16.00	14.50
November.....	23.00	20.50	15.50	14.50
December.....	22.50	20.50	15.50	13.50

In the above table old rails are quoted per gross ton, and the other classes of iron per ton of 2000 pounds.

Merchant Steel.

Prices were sustained, with but slight variation, from the beginning of the year to nearly the close of October, on all the leading and higher-priced grades of Steel. The only episodes worthy of note in that entire period were the contracts for season's supplies by manufacturing consumers, which made the market more active at some times than at others. In October, however, a change occurred in the situation, and a break was made in the price of Open-Hearth Spring Steel, which had been steadily held at 2.90¢. Through the competition of several prominent manufacturers the price was cut to 2.50¢ @ 2.60¢, and large orders were taken at 2.35¢ @ 2.40¢. Machinery Steel suffered in sympathy, Open-Hearth dropping to 2.40¢, although some manufacturers resisted the decline and maintained their quotations steadily at 2.75¢ @ 3¢. The prices of leading qualities of Steel which were maintained throughout the whole year are as follows: Tool Steel, 8.50¢ @ 9.50¢; Specials, 13¢ @ 25¢; Crucible Sheet Steel, 7¢ @ 10¢. At the close of the year the prices of other qualities which had suffered fluctuations as above described were as follows: Crucible Spring, 3.75¢; Open-Hearth Spring, 2.50¢; Open-Hearth Machinery, 2.40¢ @ 2.75¢.

Barb Wire.

The year opened most auspiciously for the manufacturers of Barb Wire. They had succeeded in controlling the trade by refusing to sell large quantities for future

delivery, and when the usual demand for the spring appeared, they at once realized the benefit of their policy through the advance in prices which took place naturally, and not through any artificial means. The effect of this continued to be felt for almost the entire first half of the year. Foreseeing the depression which would ensue from the usual midsummer dullness, the leading manufacturers endeavored to secure a general decrease of production in July and August, but this plan was not properly supported, and predictions were quite freely made that in consequence of the large unmarketed production prices would be ruinously low before the close of the year. An attempt was made in September and October to avert this by the organization of the manufacturers into a pool, but this scheme met with no greater success than previous efforts of the kind, and competition proceeded unrestricted. In November and December large contracts were made for the sale of Barb Wire to the merchants, some of them understood to run up to May. The prices realized are said to be the lowest made in the history of the trade, the year closing with the manufacturers asking 2.75¢ for large lots of Painted. Manufacturers' prices for Painted during the year have ranged about as follows:

Jan....	3.25¢	May....	3.05¢	Sept....	2.80¢
Feb....	3.10	June....	3	Oct....	2.75
Mar....	3.15	July....	3	Nov....	2.75
April... 3.12½		Aug....	2.90	Dec....	2.75

Nails.

In both Steel-Cut and Wire Nails the trade of the past year was unsatisfactory as to price, though in volume it was nearly up to the average for Cut Nails, while Wire Nails scored a handsome increase over previous years. Efforts were made by the manufacturers to work the price of Nails up to a remunerative basis through combinations. The Cut-Nail manufacturers did not succeed in their plans in this respect until nearly the close of the year, when they perfected an organization which has thus far shown decided strength and which will be of great benefit to them if its details are faithfully carried out. The Wire-Nail manufacturers effected a combination in August, but it was disrupted in December just about the time that stocks bought by jobbers at low prices were being exhausted and manufacturers could reasonably expect to reap the fruit of their new arrangement. Very heavy sales were then made to jobbers at lower prices than prevailed before the combination was formed, and the activity prevails up to this time. A disturbing influence in the Western nail trade was the freight war which prevailed in March and April between railroads running to Missouri River points and was the direct cause of inducing the jobbers of that section to stock up heavily on both cut and wire nails, which they were unable to dispose of for several months following, thus depressing prices in an important part of the country for a very considerable period. At present the cut nail trade is in very good condition, prices are being firmly sustained at the rate fixed by the manufacturers' association, and the possibilities are strongly in favor of small advance in the manufacture. The course of manufacturers' prices at Chicago for large lots of steel cut and wire nails was as follows during the year:

Months.	Steel.	Wire.
January.....	\$2.05	\$2.70
February.....	2.05	2.60
March.....	2.15	2.65
April.....	2.05	2.70
May.....	1.95	2.60
June.....	1.85	2.50
July.....	1.85	2.35
August.....	1.90	2.45
September.....	1.85	2.55
October.....	1.90	2.55
November.....	1.80	2.55
December.....	1.90	2.40

The Flat Top Coke Trust.

It has been a continual mystery to Connellsville coke producers, says the Pittsburgh *Times*, why coke made in the Flat Top region of Virginia and West Virginia usually commands higher prices in the Southern and Western markets. Flat Top coke has never sold for less than \$1.75 per ton, and when Connellsville coke was quoted at from 90 cents to \$1 per ton the Flat Top coke still continued in the market at \$1.75 to \$2. To solve this mystery a member of the Coke Producers' Association went down to Flat Top, and this is his report:

The Flat Top coke is in the hands of a trust, and there is absolutely no competition between producers. The 14 coal and coke companies now operating in the region are working on leased property owned by two land companies. Formerly the field was operated under leases made by the Southwest Virginia Improvement Company, the Bluestone Coal Company, the Flat Top Coal Company, Crane Creek Coal Company, &c. Last month these companies became absorbed into one organization, under the title of the Flat Top Land Trust, with the following officers: President, E. W. Clark; vice-president, S. F. Taylor; secretary and treasurer, C. M. Clark; general manager, C. H. Duhring. This company propose to move their offices to Pittsburgh and enter into competition with the Connellsville field. They own 10,000 acres in Tazewell County, Va.; 50,000 acres in Mercer County, W. Va.; 65,000 acres in McDowell County, W. Va., and over 100,000 acres in Wyoming County, W. Va., in which no leases have yet been made. The other company is the Crozer Land Company, who control 12,000 acres on Lower Elkhorn. These companies now employ a mine inspector to see that no coal is unnecessarily lost, and by a recent provision require that all lessees of their property build 100 coke ovens. The Pocahontas Coal Company sell the entire product of the Flat Top coal field. In 1887 their shipments were 1,025,880 tons; for 1888 they were about 1,250,000, and expect in 1889 to ship fully 2,000,000 tons. From 50 to 60 cars of coke now leave the region daily, but when the new ovens are completed in May, the trust expect to go into the market with fully 1000 cars per week, or about one-sixth of the Connellsville output. They claim that an analysis of their coke shows 3 per cent. more carbon or heat molecules than does the Connellsville article, and they will eventually drive the latter from the Southern market.

The Mining Engineers.—The fifty-third meeting of the Institute of Mining Engineers will be held in this city, beginning Tuesday evening, February 19, with an open session, to be followed on Wednesday by an excursion to the Spiral Weld Tube Works and the Edison Laboratory, at East Orange, N. J. At the latter place a special session will be held, devoted to the discussion of the applications of electricity in mining, R. P. Rothwell, editor of the *Engineering and Mining Journal*, having special charge of the programme of this session. The evening will be given over to papers and discussions connected with iron and steel; members intending to present papers on these subjects being asked to correspond with Charles Kirchhoff, Jr., editor of *The Iron Age*; the secretary, Dr. R. W. Raymond, requesting that members notify him of their intention to take part in the discussions. Thursday is set aside for sessions, there being a subscription dinner in the evening. Friday is to be devoted to local excursions, and the evening to a social reception, while on Saturday an opportunity will be given to visit the different works in this vicinity.

The *Tariff League Bulletin* was issued for the first time last week as the *American Economist*, "the idea being to broaden its scope, and the ultimate aim to establish it firmly as the leading weekly journal advocating the American system of economies." It is the purpose of the American Protective Tariff League to strengthen the *American Economist* in many respects during the present year.

The Durant-Kane Automatic Engine and Boiler.

Messrs. Thos. Kane & Co., 137 and 139 Wabash avenue, Chicago, Ill., are putting on the market a compact power outfit, of which we annex an engraving. It embraces several features of interest, the most noteworthy feature being its special adaptation to the use of oil as fuel.

The boiler is what is known as the Durant porcupine, the general design of which is not unknown. It consists of a main central upright column, with welded ends, and with a fire tube in the center. Arms with smaller pipes radiate from it. The steam is run through a superheater before going to the engine. A drain pipe

connection rod. The connection rod is of steel, with brass boxes. The main valve is of the rocking type, and balanced. The motion of the valve is obtained by an intermediate rocker-arm which brings all the work and strain in a straight line with the center of the crank shaft. By the use of the rock shaft the motion is short, enabling the engine to run at a high rate of speed without strain or jar. The piston is hollow and has snap packing rings which are turned larger than the diameter of the cylinder, then split and sprung together and turned the same diameter as the cylinder, making a perfect fit at once. They are self-adjusting, tight, yet free in their action. The piston rod and cross-head pin are steel. All wearing parts of this engine are made adjustable to wear.

AUTOMATIC ENGINE AND BOILER, BUILT BY THOS. KANE & CO., CHICAGO, ILL.

returns any water carried into the superheater to the base of the boiler. The pipes are of the best quality charcoal lap-welded wrought iron type, tested to 400 pounds hydraulic pressure. An exhaust steam heater is used to heat the feed water. A pump is employed for feeding.

Ordinary kerosene of from 110 to 150 test is used, though cheaper grades can be satisfactorily burned. Crude petroleum also is available, the burners being fitted for either. The oil is drawn from a tank and passes to a trap near the boiler, from which it cannot escape unless drawn out by some pressure; it then passes through a strainer and is conveyed to an atomizer, where it is atomized by a jet of superheated steam.

The engine is a double crank vertical engine. There are two bearings for the crank shaft which are cast solid with the frame, and are long and large in diameter. The cross-head slides are also cast solid with the frame. The crank is of steel, and is balanced against one-half of coun-

The engine is made in sizes ranging from 2 to 12 horse-power. The outfit is adapted also for marine use, in which its compactness and the convenience of operating readily commend it. We understand that for more than a year a plant of 150 16 candle-power lights has been run by one of these outfits, the engine used being a 6 x 6 cylinder, run at a speed of 508 revolutions, cutting off at 1-6 stroke and belted direct to the dynamo.

Early Coal-Burning Locomotives.—The *National Car and Locomotive Builder*, says Mr. William Buchanan, superintendent of the motive power of the New York Central Railroad, who is the inventor of one of the most successful soft-coal burning fire-boxes ever applied to a locomotive, is particularly well acquainted with all the experiments made in this country and in Europe by railroad men and other inventors who have labored to produce a furnace perfectly adapted for the economi-

cal combustion of bituminous coal. The old Hudson River Railroad Company, with which Mr. Buchanan was connected, applied to their locomotives many of the so-called improvements designed for the purpose of burning soft coal properly. Among other devices, the combustion chamber was tried in numerous forms. It was tried from 1 foot to 5 feet long. Large flues and flues as small as 1½ inches were tried with it. Brick arches were applied in various forms to protect the chamber, and various methods were adopted to mix air with the gases in the combustion chamber, and nothing that skill directed by zealous intelligence could do to make the device a success was spared. But it all availed nothing. It was found that the plain fire-box did as well as the fire-box with a combustion chamber, and most of the engines did better when the combustion chamber was abolished and flues put in place of it. Mr. Buchanan applied a brick arch to one of the engines as early as 1857; but he used common fire-brick and the arch did not stand well.

The State of the Navy.

The year 1889 will be an important one in the history of the new navy of the United States. The trials and experiments of the great cruisers Baltimore, Chicago and Charleston, to say nothing of the gunboat Yorktown and the dynamite cruiser Vesuvius, will keep the public at large more cognizant of the developments in the naval establishment than did the announcement in the year past regarding the progress of the work on these new vessels. During the year 1888 the great shipbuilding yards of Cramp & Son, at Philadelphia, the Union Iron Works, of San Francisco, and the Columbia Iron Works, of Baltimore, have been rushing to completion the work of construction on the war vessels in their charge. On April 28 the Cramps successfully launched the dynamite cruiser Vesuvius and the gunboat Yorktown; on the last Thursday in July the Charleston was slipped from the ways of the Union Iron Works, and in September following the powerful cruiser Baltimore was added to the list of vessels launched by the Cramps, of Philadelphia. In the Government yards at Norfolk and Brooklyn the work of construction has been, with a few exceptions, uninterrupted on the new battle ships Texas and Maine, and in those private yards throughout the country where contracts for war vessels have been awarded the work is being rapidly pushed ahead. The association of old wooden craft and battered hulks with all pertaining to our navy has been so common with a large class of people that to them the rapid changes made of late in the type of vessels and style of armament are wholly incomprehensible. That the navy of the United States is making rapid strides toward the front rank of armed forces on the sea is undeniable, and if Congress will but exhibit the same spirit of liberality shown in its appropriations of the last four sessions the supremacy of the navy will result in a comparatively short space of time.

It may not be without interest here to again present a list of the vessels of the new navy. The list has been published at different times, but will well bear repetition. The unarmored vessels, with their armament, tonnage and power are detailed in Table I.

In the list of armored vessels we have the vessels mentioned in Table II.

To compare the vessels of the new navy, as given in the above, with those of other countries, it may be interesting to know that of the 19-knot war ships of 3000 tons and upward Great Britain has 10, the United States, 8; France, 5; Spain, 3;

Japan, 2, and Russia, 1. In this summary the position of the United States is second, and considering the short growth of the new navy, the above standard is very high.

During the past year the fastest, largest and most powerful protected cruisers yet laid down are the Blake and the Blenheim, of the English service. The displacement of these vessels is 9000 tons each, the indicated horse-power, 20,000; trial speed, 22 knots, with a continuous sea speed of 20 knots. These vessels have heavy, protective decks, ranging from 4 to 6 inches in maximum thickness. The Piemonte, of the Italian navy, is the fastest cruiser built during the year just past. Sir William Armstrong & Co. were the builders, and she was bought from the Armstrongs by the Italians. Her displacement is about 2500 tons, and it is expected, with

could be driven through 15½ inches of iron if propelled by this description of powder. As it is, a projectile from the 6-inch breech-loading rifle, when propelled by the regulation American powder, pierces 12 inches of iron. Experiments are in process to obtain a higher grade of powder, and when found the efficiency of the guns will be proportionally increased by its use.

Connellsville Coke Wages.

After holding numerous meetings the coke-workers in the Connellsville region have prepared a joint scale of wages, similar in many respects to the scale now in effect between the H. C. Frick Coke Company and their employees. Like the Frick

Table I.—Unarmored Vessels.

Name.	Condition.	Guns.	Tonnage	Horse-Power or speed.
Dolphin.....	In commission..	1 6-inch rifle.....	1,485	2,240

Armored cruiser.....	Not commenced.....	7,500

21.47 knots per hour, and what with the terrible destructive powers possessed by her three 16-inch dynamite guns she will be one of the most formidable vessels in the navy.

The advance in the type of guns has been one of the most marked features of our naval development. The guns now in course of construction for the new vessels are the designs of an ordnance board composed of navy officers. These guns have attained remarkable success, and the velocity obtained compares favorably with the best results of those of Armstrong's and Krupp's build. The principal developments during the year in the department of ordnance have been in improved powder and projectiles. The greatest improvement in the manufacture of gunpowder has been made in France and Germany, whereby, in case of the former, initial velocities of 2400 and 2600 foot-seconds have been obtained. Such an increase in velocity increases the energy of the projectile. In the case of the new 6-inch breech-loading rifles a projectile

drift mines, \$1.89; roadmen, horsebackmen, and timbermen in drift mines, \$1.89; in shafts and slopes, \$1.99; inside laborers, \$1.53; trappers, per day, 71½ cents; rope-riders, per turn, \$1.89; leveling, per oven, 9½ cents; yard laborers, \$1.36; car-forkers, 20-ton cars, 92 cents; 40-ton cars, \$1.12; dumpers and tippelmen, \$1.53; firemen, \$1.73.

Under the Frick scale, at the same basis, wages are as follows: Mining room coal, 90 cents; heading coal, \$1.05; wet heading coal, \$1.12½; cagers, \$1.95; drivers, shafts and slopes, \$1.95; in drifts, \$1.85; roadmen, horsebackmen and timbermen in shafts and slopes, \$1.95; in drifts, \$1.85; inside laborers, \$1.50; trappers, 70 cents; rope-riders, \$1.85; dumpers and tippelmen, \$1.50; firemen, \$1.70; coke drawers, 53 cents; leveling, 9½ cents; yard laborers, \$1.35; car-forkers, 40-ton cars, \$1.10; 20-ton cars, 90 cents.

A comparison of the two scales shows that the minimum wages under the joint scale are slightly in advance of those under the Frick scale for all classes of labor

except miners, roadmen, horsebackmen and timbermen. As compared with the scale recently adopted by the Amalgamated Association, there is an advance over all classes of work except mining room coal, mining in wet headings, trappers, forgers and yard laborers. Under the last-named scale the minimum wages are as follows: Mining room coal, 95 cents; heading coal, \$1.12; wet heading, \$1.20; cagers, \$1.95; drivers in shafts and slopes, \$1.95; in drift mines, \$1.85; inside laborers, \$1.50; trappers, 80 cents; rope-riders, \$1.85; dumpers and tippemen, \$1.65; roadmen, timbermen and horsebackmen, \$1.95; firemen, \$1.70; coke drawers, 54 cents; levelers, 94 cents; yard laborers, \$1.40; car-forkers, 95 cents and \$1.15.

For every advance of 10 cents in the selling price of coke, wages under the new scale will advance 4 cents for miners, cagers, drivers, roadmen, horsebackmen, timbermen and rope-riders. For inside and yard laborers, dumpers and tippemen the advance is 3 cents. The advance for coke-drawers and trappers is 1½ cents, car-forkers, 2 cents, and firemen 3½ cents. Under the Frick scale the advance is 2½ cents per 100 bushels on mining, 1½ cents on drawing, and 2 per cent. on all other labor for every advance of 10 cents in the selling price of coke. The Amalgamated

Waterous Engine Works, of Brantford, Ontario, the largest exporters of engines of the dominion. The South Park Bridge and Bolt Works is also an important manufactory, making specialties of railroad work and architectural iron forgings. Its president, Joseph W. Morgan, was of the Hall & Morgan Iron Works, of Wilmington, Del. He built Memorial Hall, at the Centennial Exhibition, and numerous bridges over the Schuylkill and other rivers were constructed under his personal supervision. He invented the Morgan nut lock and bolts for railroad work.

Slab Truck for Rolling Mills.

Messrs. Riehle Bros., proprietors of the Philadelphia Scale and Testing Machine Works, 413 Market street, Philadelphia, Pa., are adding to their already extensive assortment of products articles suitable for rolling mills, steel works and blast furnaces. The annexed illustration represents the Riehle slab truck. This truck was designed and constructed by them for the Carbon Iron Company, Pittsburgh, Pa., and it is offered with confidence to rolling mill managers and superintendents. It is built in a substantial manner and is well adapted for the rough use to which it

are to attempt anything like a general introduction of manual training in the schools in the near future, we must first teach the teachers. To do this our normal schools must be prepared in equipment and instructing force for the demands which will be made upon them. Some of them are already anticipating this demand, and are putting into operation, in a moderate, tentative way, a system of industrial training for their scholars who are to be the future teachers of our schools. The ability to do this should be placed in the hands of all our normal schools as fast as they are ready to carry the system into practical effect. It is a great mistake to suppose that this will require large buildings and expensive outfits. All that is desirable in this direction cannot be accomplished in a single year, and it is therefore recommended that reasonable appropriations for this specific purpose be made to each and all of our normal schools if it should be deemed wise to begin such training at once."

Under the new agreement adopted by the general managers of the Western Freight Association roads December 20, 1888, and which the presidents, at their meeting in New York a day or two later, pledged

SLAB TRUCK FOR ROLLING MILLS, MADE BY RIEHLE BROS., PHILADELPHIA, PA.

scale provides for an advance of 5 per cent. in the wages of miners and drawers, and 4 per cent. for all other employees for each advance of 10 per cent. in the market price of furnace coke.

The new joint scale has been placed in the hands of a scale committee, which has been granted discretionary powers in the matter of regulating the restrictions under which the scale can be signed, but will not be allowed to sign it unless it is found that it will be agreed to by a majority of the operators. The Scale Committee mentioned above have made several requests of the operators that a day be appointed for a conference in order to discuss the new scale. So far the operators have refused to grant these requests, and as yet no conference has been held. The new scale is not looked on with favor by the operators, and several have stated that they will not grant any advance in wages until there has been a further advance in the price of coke. From present appearances this will not take place for some time yet.

Manufacturing in St. Paul.—There has been a large investment in manufactories of various kinds in St. Paul during the year. At South Park the railroad shops of the Chicago, St. Paul & Kansas City line are located. They occupy an area of 8 or 10 acres and have cost over a quarter of a million dollars. Fully \$50,000 of that outlay was made in 1888. Also at South Park are the Holland & Thompson brass works and the Waterous Steam Fire Engine Works. The latter is a very substantial concern and a branch of the

will be subjected. The wheels are furnished with friction rollers to give easy motion and light running service, and a swivel-caster forms the guide or fifth wheel. The dimensions of the truck are: Extreme length, 11 feet; width, 34 inches; height, 27½ inches; weight, 600 pounds. Size of platform, 5 feet x 2 feet 6 inches; gauge of wheels, 22 inches; diameter of wheels, 24 inches; tread of wheels, 3 inches; size of axles, 1½ inches; length of hub, 4 inches. Messrs. Riehle Bros. also make a tire truck, originally designed and constructed for the Standard Steel Works, Lewiston, Pa. They also manufacture pig-iron trucks and turn-tables for blast furnaces.

Manual Training in Pennsylvania.—Industrial manual training is a subject treated at some length by Governor Beaver, of Pennsylvania, in his message just delivered. He says: "It may be doubted whether or not the Legislature has power, under the Constitution, to provide for the training of tradesmen in any particular calling. There can, however, be no special or class legislation in that kind of training which educates the eye and the hand of every boy and girl in the commonwealth, so that they can be applied to the practical demands of life when their school days are over. The education of the hand, so that it can be applied dexterously to the practical work which comes to every man in solving the problem of life, is just as important as the knowledge of arithmetic which is applied in so many different ways by those who become acquainted with its rudiments in our public schools. If we

themselves to have firmly maintained for sixty days, all lines were given liberty to meet the contract rates on steel rails until the chairman of the association was notified that the contracts had expired, no line, however, being authorized to make the rate on rails less than \$3 per ton, Chicago to the Missouri river, after January 31, 1889, when the full tariff should go into effect. The restored rates took effect January 1, except where they were affected by existing contracts.

The iron manufacturers of Mahoning and Shenango valleys held a conference with the freight agents of the various iron carrying lines in Pittsburgh on Saturday. They entered a protest against the new freight rates which went into effect January 1. They claimed and attempted to prove that the new rates would almost, if not entirely, shut them out of the Chicago and other Western markets. The new rates are on a basis of 25 cents per 100 between New York and Chicago, East and West. The old rate was 5 cents less. Pittsburgh manufacturers were called upon to make a statement in support of the stand taken by their brethren of the valleys, but they were not inclined to give many valuable points. The railroad men took the matter under consideration, but did not hold out any encouragement that the change demanded would be made.

Colored covers are gaining converts among the technical press, the last to follow the prevailing fashion being the *Engineering and Mining Journal* and the *Age of Steel*.

THE METALS IN 1888.

Tin.

The extremes of value in both directions were even greater last year than they had been in 1887, which had inaugurated the great speculative advance. While the French syndicate had two strings to its bow, Copper and Tin, and thought fit to maintain the latter at the high figure to which it had been raised, a sullen and monotonous state of affairs prevailed. The onslaughts by the bear operators, however persistent and justified by the general position of the metal, did not succeed in bringing down the price. In this manner the first four months of the year were featureless, consumers limiting their operations to the filling of immediate requirements, while producers made the greatest efforts to market their output as fast as possible while the high range lasted.

The year opened in London at £167, closing the month of January at £170, while our own market, opening at 37½¢, wound up at 36.90¢. In February London receded from £170 to £166, and New York from 36.80¢ to 36.25¢. In March and April London kept steady at £166 till the close of the latter, when a sudden break occurred to £111, New York following suit, and dropping from 36.80¢ to 24¢. A further rapid decline took place in May to £79. 12/6 on the 10th of that month, followed by a recovery to £87, closing the month at £85. 15/; in this city meanwhile the metal gave way to 21¢, staying there during a fortnight, and then suddenly going off to 19½¢, which closed the month.

The fact is that toward the close of April the statistical position of the metal had become precarious enough, the visible supply in Europe and America being 23,995 tons on May 1, against 11,832 on May 1, 1887. During the 12 months ending April 30 the Straits had shipped to London 23,479 tons, as compared with 12,685 the previous 12 months; to this country 8115, against 5880; Australia to London, 6900, against 6019, and to the United States, 825, against 1250, the total being 33,319, against 25,784. Simultaneously the deliveries in London, Holland and the United States were 30,108 tons, against 34,119. During the three preceding years they had been respectively 33,046, 34,739 and 35,968. While the shipments had increased 28%, the deliveries showed a falling off of 12%. With a visible supply of 11,832 tons, the price of tin was £102. 15/ on May 1, 1887; it was £94. 10/ on May 1, 1888, with a visible supply of 12,186 tons. When the French syndicate perceived that at the high price of £166 in London, and 36½¢ here, consumption fell off at a fearful rate, and that it would be better policy to get out of Tin and concentrate its attention more exclusively on Copper, it first made some considerable sales in London at £180 for near forward delivery, and then declared its resolution of not putting in a bid at the Batavia Billiton sale of April 25. This gave the signal for a break, but the syndicate covered the sales made at £180—alluded to above—at £105, and still made a handsome thing of this transaction. Subsequently, it is true, the market, as we have shown, went as low as £79. 12/6, which was altogether too great a drop, as the speedy rebound proved. Of the actual stock of the syndicate, nevertheless, comparatively little seems to have been sold during the interval, it being estimated at the time that its holdings in England and Holland still aggregated some 16,000 tons on June 1. The syndicate evidently waited for a higher ruling and greater steadiness later on, in order to realize gradually, and this purpose appears to have been carried out.

While this great change occurred in April and May, the invisible supply—i. e., the holdings in the hands of dealers and consumers—had run very low. Even at the lower range, between £79. 12/6 and £87, comparatively little had changed hands to go into actual consumption, because of the general demoralization still pervading the trade. Speculation was ready, however, to turn over a fresh leaf now that a basis of values had been reached affording good opportunities for handling the metal in a moderate bull campaign. This appeared all the more plausible as it became pretty certain dealers and consumers would thenceforward take courage once more and replenish the exhausted supplies.

Thenceforward, during the latter half of the year, under this legitimate demand, moderate though it after all may have been for other reasons, Tin values worked themselves gradually up again to £100 and over, and a steadier trade resulted, in spite of the fact that the statistics improved on the whole very slowly.

Midsummer dullness in trade and a lingering hesitation on the part of consumers to take hold still caused irregularity and weakness the latter part of June. Opening at £85. 15/, the closing quotation was £75. 2/6, while in New York the price fell from 19.20¢ to 17¢. In July this feeling made room for a more hopeful one, the price advancing from £76. 5/ to £89. 7/6, and from 17.50¢ to 20.10¢. The upward tendency made some further headway during August, there being an improvement from £88. 15/ to £97. 12/6, and from 19.60¢ to 22¢. September developed the greater buoyancy still further, an advance taking place from £96 to £108. 17/6, and here from 21.95¢ to 23.70¢.

The advance over £103, as is usually the case, became too tempting for operators for a fall, and the speculative interest taken in the metal gradually increased in volume, leading to continual, but at no time violent, fluctuations. Thus in October the opening figure was \$103. 10/, and the one at the close \$102; here the price gave way from 23.20¢ to 23¢. November witnessed a decline from £102. 2/6 to £101. 5/, and from 22.90¢ to 22.15¢. Opening at £100. 10/ December 1, London finished the year at £100. 2/6, while New York gave way from 22½¢ to 22¢ at the close.

Lead.

Last year has been one of the dullest on record, so far as actual consumption of Lead is concerned, while, from a speculative point of view, it has been the most active and excited in the New York market. There has been disappointment both about the spring and fall trade. The spring was late and consumption fell off about one-third. The building trade was not as active as had been expected, there being a partial reaction both in real estate and the extent of building in and near great cities. It was hoped the fall would still make amends, but these hopes were not realized, business in Lead for consumptive purposes remaining dragging in the extreme to the close of the year. The White Lead industry did not work evenly and satisfactorily, and the attempt to mend its irregularities through a combination proved in its essential purposes a failure. While the elements of absorption were thus hampered and curtailed, production was known to be on the increase. Everything thus conspired to render speculation for a rise difficult and precarious as to the ultimate results. If the metal had been left to shape its own course under the circumstances, it is probable that most of the time the price in New York would have been nearer 34¢ than 44¢, yet the chief operators from the very outset of the year had marked the same out for a big bull campaign and persevered in it in spite of the well-

meant warnings of the trade papers in the branch. The result of this large speculation for a rise in Lead, in which the West largely participated, blinded by deceptive local considerations, could hardly be different from what it has been. The wonder is that the collapse did not come sooner. Operations even extended to London, in order to thus make an impression on our market and less for the purpose of drawing Lead from there, for which there was hardly any necessity, there being plenty on this side. Although it had not been an easy matter to start speculation in Lead futures on our Metal Exchange properly, the thing fully succeeded this time, and during a month or two any amount of dealings occurred there, the more so as the regular consumers on the spot and in neighboring cities could not be coaxed into anticipating requirements at the artificially enhanced ruling, their trade being too dull, and the prices not in keeping with the real position of the metal, either in our midst or out West. While this was the case on this side repeated attempts were made to create a Lead syndicate of producers in Europe, but they all failed, as it was found impossible to get the Spanish producers to bind themselves by a compact of the kind, their interests and those of others on the Continent and in England being too wide apart. This alleged scheme of a strong syndicate over there only added from time to time fresh fuel to the agitation kept up here by the main manipulators, and confirmed the latter in their dangerous game. In London the year opened at £15. 15/ with Soft Spanish and closed at £12. 17/6.

Spelter.

Spelter has at times during the year developed considerable buoyancy and strength on both sides of the Atlantic, proving as a general thing that consumption is able to cope fully with production. This was shown in Europe during the early part of the year in particular; it became manifest on this side in the fall. In Europe the International Syndicate has thus been able to engineer a gradual advance, from which it later on receded, when it was found that consumption was

receiving a check. Our own Domestic Spelter has at no time been very active; still it has moved off into consumption steadily, and at one time, in the fall, became so scarce out West that it advanced several dollars per ton, and the metal followed suit slowly till later on the dull season set in, and prices settled down to the former level.

It has been demonstrated that in piping natural gas in pipes of one size considerable of the pressure is lost, about eight pounds per mile; but by using the telescope system, smaller pipe at the well and gradually increasing the size toward the point of consumption, that the loss of pressure is reduced to about three pounds per mile.

The notorious steamship Haytian Republic is owned principally by Augustus Hemenway, a wealthy citizen of Boston.

The English Merchandise Marks Act.

The Merchandise Marks act came into operation on the 1st of January last, and a good many complaints have been made as to the manner in which it is administered. Hence the account of its working in the Report of the Commissioners of Customs just issued is of unusual interest. The report covers only three months of this year, but in that period 2152 consignments were detained for the directions of the commissioners in London and Liverpool, and 1739 at the other ports, besides those which came by the parcels post. These consignments included 110,000 cases and packages, and the goods contained in them were of almost every conceivable description. The act was passed chiefly for the purpose of preventing not merely the forging of trade marks, but the importations of foreign made goods which are so marked as falsely to indicate that they are English. It is obvious, says the *London Daily News*, that goods which have English words on them thereby convey a suggestion of English or American manufacture. A Swiss does not put "Fast" or "Slow" on the regulator of his watch, nor does a German print "Tobacco" on his pouches, nor "Gold," "Silver," "Stamps," on the divisions of his purse. Still, as these are not "trade descriptions" in the language of the act, the commissioners have not excluded such articles. The rule laid down—a rule which seems to be perfectly fair and workable—is that goods made abroad must not only not bear marks or words which suggest that they are of British manufacture, but, if they have English names on them, must also show the country in which they are made. Thus, if German goods bear such a name as "John Brown," it is required that the words "made in Germany" shall be added. The commissioners refused to accept the words "made abroad" as sufficient; nor was the addition of the word "Germany" alone regarded as enough to qualify such a legend as "John Brown," "London and Berlin." They have in such cases justly required a statement which shall leave no doubt about the actual country in which the goods are made.

Worked in this sense the operation of the act is simply to prevent fraud. It is clear that German goods stamped with English names are meant to be sold as English. It is more difficult to deal with American goods, since there are manufacturing towns in the United States of the same names as our own. In these cases the almost arbitrary signs by which the Americans indicate the names of their States give no sufficient warning of American origin. Few Englishmen know that "Pa." means Pennsylvania, or "Me." Maine, or "O." Ohio. The commissioners therefore suggest that after such abbreviations the letters "U. S. A." should be used. Swiss watches sometimes have the words "Sterling silver" on the case. This is a clear suggestion of English origin, and it is now required that a distinct statement of Swiss manufacture should accompany these words. A question which arose about Swedish iron was settled by the intimation that in no case would it be admitted if it bore the name "Lancashire" alone, but "Lancash-Swedish" was accepted as sufficient. English inscriptions on the packages containing goods—such, for example, as "Hose, White Cotton, size 10," are also to pass. The act, therefore, cannot be said to be worked oppressively. Among the seizures, chiefly at Southampton, have been eggs, fruit and butter, with English descriptions. In the majority of cases these articles have been admitted on the illegal marks being destroyed, or sufficiently qualified. On the other hand, there is one kind of fraud which the act does

not meet. The commissioners, for instance, have admitted glass buttons which were described as "jet." Probably, if the buttons had been called "Whitby jet" they would have seized them. It is an obvious defect in the law that the custom house should be obliged to wink at such deceptions. The commissioners and their staff of officers deserve, however, the thanks of the whole manufacturing community for the zeal and discretion with which they have administered the Merchandise Marks act.

Combined Punch and Shear.

The firm of Wais & Roos, of No. 7 East Seventhstreet, Cincinnati, Ohio, are bringing out a new punch and shear designed more especially for the use of stove and range manufacturers. The reader will be enabled to form a very clear idea of its general appearance from a careful examination of the cut shown herewith. This machine is provided with a punch measur-

COMBINED PUNCH AND SHEAR. WAIS & ROOS, CINCINNATI, OHIO.

ing 3 feet in length by $\frac{1}{4}$ inch in width, while the blades of the shearing attachment measure 9 inches. In operating the machine the clearance hole is first punched, after which the sheet is brought under the shear. The throat of the shear has a depth of 24 inches in the clear, so that a 48-inch sheet may be readily cut from center to the outside. In cutting range fronts all drawing of sheets is avoided, and the blanks of door holes may be employed for the doors, a feature, the makers claim, which will be found of great value. It is also claimed that the machine is very economical of labor and performs its work with much greater accuracy than can be secured by the use of hammer and chisel. The machine can be run with either hand or steam power, and may also be used as an ordinary punching machine by the substitution of an ordinary punch for the shear rest. The statement is made that the machine will cut a sheet $\frac{1}{4}$ inch thick and a plate or bar $\frac{1}{2}$ inch thick. It is made in two sizes, No. 1 being for steam or hand power, while No. 2 is for hand-power only.

The Samoans have lost five high chiefs and about 60 men in battle, the German Consul sympathizing with the rebels, whose

king was sent off in captivity on board a German steamer. A correspondent at the Islands says "the trouble seems to have been originally fomented by a Hamburg trading company, in whose behalf the German Consul has acted in a high-handed way, and, if reports are true, in violation of the agreement of neutrality between the United States, England and Germany."

NEW PUBLICATIONS.

METALLIC ALLOYS. Translated from the German of A. Krupp and Andreas Wildberger, by Wm. T. Brannt. Size 5 x 8 inches; 428 pages. Published by Henry Carey Baird & Co. Price \$2.50.

It becomes apparent from the above that the work has been translated from the German, but we find it stated that extensive additions have been made by the translator and editor. In any event, however, it will be welcomed by a large class of readers, since there is no other recent book in the English language on metallic

alloys which combines with practical usefulness a sufficiently popular character for those who have not made metallurgy and its kindred arts objects of special study.

The book opens with an interesting account of the physical and chemical relations and special properties of metals, and then takes up the properties and preparation of alloys in general; first among them the copper alloys. Under this head a good deal of space is given up to brass, its manufacture, and method of casting red brass, white metal, imitation gold alloys, bronzes, gun and bell metal and speculum metal. Under nickel alloys we find some interesting matter on German silver, a special chapter being devoted to its manufacture on a large scale. Various other alloys, such as those of aluminium and copper, Britannia metal, tin, lead, cadmium and bismuth alloys are then considered, and also those of silver and gold and platinum. Alloys of mercury and other metals, or amalgams, form an interesting chapter by themselves. The concluding portion of the book refers to various kinds of solder. The special additions which have been made to the book are embodied in an appendix, which is devoted to the coloring of alloys.

THE WEEK.

The storage capacity, the daily consumption and the day's supply of water in several leading cities is computed by the *Engineering News* as follows:

	Storage.	Daily use.	Day's supply.
Philadelphia . .	373	88.50	4.2
New York.....	18,325	110.00	166.6
Brooklyn.....	1,180	46.27	25.5
Baltimore.....	933	34.00	29.2
Pittsburgh.....	120	30.00	4.0
Rochester.....	65	7.20	9.1
Albany.....	216	9.00	24.0
Jersey City.....	237	16.50	14.4

Secretary Whitney invites proposals for the construction of the \$550,000 dry dock at the League Island Navy Yard.

The bridge between Covington and Cincinnati has been turned over by the Contractors to the Chesapeake and Ohio Railroad Company, who expect to run trains through to Newport News this week.

A tow of loaded barges passed Newburgh on the 3d inst., an extraordinary event for this season of the year.

Abnormal prices in the United States, the effect of speculation, have checked shipments of wheat from the United States, until now, according to London estimates, the supplies received in the United Kingdom from this source during 1888 were reduced about one-half compared with the previous year. Eastern Europe has made good the American deficiency, and especially Russia. There was an increase of 15,000,000 cwt. from Russia, which sent four times as much as in the corresponding 11 months of 1887. The British wheat supply has thus been shifted in a large measure, Russia profiting at the expense of the United States. The British consumer is complainant in the reflection that, regardless of harvests in one part of the world or another, and of consequent market fluctuations, the price of the loaf has remained the same within a fraction that it was when the United States exported most abundantly. "On his part," we are told, "he has provided himself with the best equipment for annihilating space and distance. Whether the corn fields which for the time have caught his preference be in India, Bessarabia, Tennessee, Winnipeg or Chili, makes little or no difference to him. He is prepared with means of transport which minimize the topographical dissimilarities." Steamships have brought together the ends of the earth and made the whole world kin.

The Nicaragua Canal bill passed the House by a vote of 157 to 34, after being materially amended as it came from the Senate. In its present shape it is claimed the United States assumes no pecuniary responsibility for the acts of the company.

Prominent dry goods houses in this city protest against the Battery site being selected for the appraiser's stores, rather than rebuild the structure now in use, but the Chamber of Commerce hesitates in its recommendations.

Railroads opening the Northwest have been among the most important of the extensions made during the past year. Especially to be mentioned is the new line opened up by the St. Paul, Minneapolis and Manitoba Railroad to the Pacific Coast, the new line to Winnipeg and the Northwest territory established by the Northern Pacific and the new route to the East by way of the St. Paul, Minneapolis and Sault Ste. Marie Railroad. It is the intention of the latter to establish through train service between St. Paul, Boston and Canadian cities during the coming season.

Ocean penny postage is pronounced feasible. A member of the British Parliament says that last year 12,000,000 of letters and 2,500,000 pounds weight of newspapers,

&c., were sent to America, for which the steamship companies received less than \$500,000, while the English Post Office received more than \$900,000 for stamps.

The inadequacy of wharfage facilities on the East River front and special privileges given to certain corporations, to the exclusion of shipping which from a remote period has shared in their use, has prompted business men to organize the East River Water Front Protective Association, to prevent encroachments and the granting of monopolies. From West Twenty-third street, North River, to the foot of Grand street, East River, there are 130 piers, and about 100 of these are already shedded. Twenty of the remainder have been set apart for special commercial purposes—canal boats, &c.—leaving about ten piers for the use of the public. Philadelphia, Baltimore and Boston are, it is urged, offering special inducements for the commerce of New York, and it is argued that the shortsighted policy of the Dock Department, of leasing the wharfage facilities of this city almost exclusively to corporations, cannot but militate against the interests of New York City.

The State Capitol building of Missouri, remodeled at a cost of \$213,000, has a dome 138 feet above the roof, which is semi-mansard, slated, with cornice and ornaments of galvanized iron, also stairways of iron.

Governor Hill recommends the compulsory investigation of fires, for the prevention of incendiarism. It is believed that it is possible to reduce the fire loss at least one-half, or \$50,000,000 a year, in the United States, and in like proportion \$7,500,000 in the State of New York.

The report of Colonel O. M. Poe on the commerce of the St. Mary's Falls Canal during the season of 1888 shows that there was a decrease of 1552 in the number of vessels of all kinds which passed through the canal, but there was an increase of 233,061 tons in the registered tonnage, indicating an increase of 37 per cent. in the average size of the vessels used, a condition said by the report to be decidedly favorable to the canal. The amount of freight transported during the year was 916,776 tons greater than last year, and gratification is expressed at this increase, as it was expected no material increase would be shown because of the completion of three new lines of railroad which compete with the canal. The value of the commerce shows an increase of only a little more than \$3,000,000, and the report ascribes this to the decrease in shipments of grain, manufactured iron and copper.

Lord Salisbury, in the British Parliament, refers to the enormous offensive powers of foreign countries and the necessity for a defense of the mercantile ports.

The New York Legislature will be asked for \$1,000,000 for the improvement of the canals. Larger locks are demanded.

The superb fire-proof building just finished on Park avenue for the German Friendship Club cost over \$500,000. Among the various improvements is ventilating machinery, by which 60,000 cubic feet of either cold, mixed or hot air can be distributed through the building in a single minute or concentrated at will in one room.

Judge Lawrence, of the Supreme Court, decides that the electric wires in this city must come down, despite the protests of those who represent that underground wires are not feasible. He sees "no reason for interposing the strong arm of the court to arrest the progress of a great public work, the speedy completion of which is desirable for the safety and convenience of the people." The struggle over the wires

is further complicated by a suit brought by the United States Illuminating Company against the subway commissioners for \$250,000 damages for alleged unwarrantable interference with their business and unjust discrimination.

A company just formed in Brussels announce their intention to build a railroad 250 miles long to connect the head of navigation on the lower Congo with Stanley Pool and the 6000 miles of navigable waterways above it. The expectation is to stimulate traffic between the Upper Congo and the markets of Europe.

St. Paul claims to have expended \$30,000,000 in building operations during the past year, and to have a population of 200,000. There are 1101 manufacturing establishments in the city, which last year turned out products valued in the aggregate at \$44,388,330, an increase of \$5,622,020 over the previous year.

The old "Q." engineers found that they were boycotted, their former employers having turned on their tormenters, making it extremely difficult for them to ply their vocation. It is understood that the difficulty, which has cost the company millions of dollars, has at last been compromised by an agreement, not only recognizing the engineers as members of the craft, but giving them a preference as vacancies may occur in the positions they formerly held.

On the 30th day of September, 1888, the total funded debt of the State of New York was \$6,965,354.87, classified as follows:

Indian annuities (general fund)....	\$122,694.87
Canal debt.....	6,142,660.00
Niagara reservation bonds.....	700,000.00

Total.....\$6,965,355.87
Aggregate sinking fund.....4,076,298.39

Total debt unprovided for, but not yet due.....\$2,889,065.48

The tax rate for the current fiscal year is 2.62 mills, which, on the present assessed valuation, will yield \$9,089,303.86.

Warden Durston, of the Auburn State prison, has filed with the superintendent of State prisons his balance sheet complete to January 1, showing that under the State account system of prison labor the Auburn prison has deposited in the State treasury \$69,378.29 more than it has received from the treasury for carrying on the various industries.

A large machine for packing the snow in the streets and flattening out snow-drifts has been tested and proved a success at Negaunee, Mich. It consists of two rollers on a heavy shaft. The rollers are a little over 6 feet in diameter, and are about that in length, the width of the machine being 10 or 12 feet. The rollers consist of heavy iron castings covered with hardwood lagging. Scrapers behind keep the snow from sticking to the rollers.

The steel and iron steamship *Montana*, built in England one year ago, was sunk by a collision, near Baltimore, on Saturday, during a fog. The disaster is similar to that which recently befell the West Indies steamer *Atlas*, in New York harbor. The *Montana* cost over \$300,000, and had six bulkheads.

The Minister of Guatemala to the United States speaks of the monopoly held by the Panama Railroad as among the chief obstacles to traffic between the United States, Central and South America. Short credits, high freights and careless packing of merchandise are also serious impediments.

E. L. Corthell, the engineer, who assisted Captain Eads in some of his engineering enterprises, is now in New Orleans inquiring into the feasibility of the bridge

proposed to be built over the Mississippi, immediately above the city, so as to allow all the railroads from Texas to come directly into New Orleans without ferrying.

The so-called electric sugar-refining process has suddenly come to grief, the alleged new discovery being pronounced fraudulent, and shares that recently sold for \$415 are now offered at nominal prices. English investors are said to hold 3000 out of the 10,000 shares of stock issued. The company established an expensive refinery at the India docks in Brooklyn. They were to put in such machinery as ordered by Henry C. Friend, the inventor, now deceased, and when he had convinced them by demonstration that his process would do what he claimed for it, the secret was to be revealed to them and to become theirs in consideration of a large sum of money, variously estimated at \$100,000 to \$500,000, the money meanwhile to be on deposit with a trust institution in this city. It is now charged that the buildings contained little of value, that Friend and his successors had refined sugar brought into the refinery in large boxes, under the guise of machinery, and so treated as to alter its appearance and character somewhat, deceiving those who were invited to make the examination. The president and secretary, urged by indignant stockholders, broke into the secret apartment of the refinery, but, aside from machinery for crushing raw sugar, found no electrical apparatus or other novel contrivance.

A "flour trust," the Northwestern millers declare, has not been formed, but it is admitted that at least 250 mills ceased operations January 1, in conformity to resolutions adopted at a convention recently held in Milwaukee to the effect that the output of flour should be curtailed one-half. Mills scattered through the wheat belt representing a daily output of 75,000 barrels of flour are running at half their capacity or are closed entirely. The trouble is largely due to the artificial advance of last September, which forced cash winter wheat at St. Louis to \$1.15 and spring wheat at Chicago to something like \$2 in one day, cutting off shipments to Europe and reducing the domestic consumption. The shut-down will continue, it is said, until the flouring business is re-established on a paying basis. The decline in wheat since the Milwaukee meeting is about 8 cents per bushel, but is still too high for export, either as wheat or flour.

The Minnesota State Board of Prison Inspectors, after a careful examination of the principal prisons and reformatories of the United States, has made a report favoring a return to the contract system that was abolished by the Legislature of 1887. They recommend that the entire management of the institutions be as far removed as possible from the uncertainty of politics. "Labor is indispensable to the convict and to the reformatory," says the report. "It must be productive, creating something which must necessarily go into the world's market on the same footing as any other product of labor."

Advices from Seoul to December 6 represent that China has made a demand that the Korean king be deposed, and that Korea shall acknowledge to all the powers that she is a dependency of China. The Korean diplomats at Washington are much agitated by the news. Russia is supposed to have a hand in the business.

The obscure hamlet of Campbell Hall at once becomes an important railroad center as a consequence of building the Poughkeepsie bridge. It is in Orange County, nearly 30 miles back from the Hudson River, and has been designated as the terminus of the Poughkeepsie Bridge

connecting railroad in that direction in a straight line between the bridge and the coal and iron fields of Pennsylvania.

Massachusetts savings banks contain \$315,185,070, an increase of over \$12,000,000 during the past year. and those in Maine have nearly \$41,000,000.

Reports from European consuls show that emigration to America, especially from Scandinavian countries, has been greatly stimulated during the year by fears of an exclusion act applicable to white people as well as to Mongolians. Designing agents improved their opportunity.

The iron foundry firm, Handren & Robbins, of this city, are converting the merchant steamer Madrid into a warship for the Haytian navy, by protecting her sides with a heavy lining of iron plates and oak, cutting holes in her iron bulwarks for guns, &c. It is generally understood that she was purchased for Hippolyte, and will obtain, perhaps from France, a number of heavy guns. An editor facetiously remarks that if the guns are fired the crew hope to swim ashore before the ship sinks from the effects of the recoil.

It is now stated on the authority of a Sheffield paper that English capitalists are about to submit definite proposals for a gigantic salt trust, to comprise all manufacturers in England, the United States and Canada, the agreement to hold good for ten years, with promised dividends at the rate of 25 per cent. per annum.

Work is to be begun in the spring on a dam 48 feet high across the Klamath River, which is to afford water-power for a number of new saw mills not far from the California and Oregon line, in Shasta County. An Eastern syndicate, in which General Alger, of Michigan, is interested, is behind the scheme, and the capital is said to be \$10,000,000.

Disston Hall, in Philadelphia, so called because the Messrs. Disston, the well-known manufacturers of that city, were the largest contributors, was formerly opened on the 6th inst.

Senator Stanford, of California, says that the free sugar under the Hawaiian treaty retarded the growth of the beet sugar industry on the Pacific Coast, but that improved machinery brought from Germany has given an impetus to it, which now promises to make it the most important industry on the Pacific Coast.

The boom in ocean freights originated in the petroleum trade about three months ago. The demand for tonnage has increased until at present rates received by owners and agents are almost doubled. It is stated that sailing vessels adapted for cargoes of grain, which were valued in June last at \$30,000, can now be sold for \$40,000 and \$50,000. Petroleum ships, whose best selling prices before the boom got under headway were \$10,000 and \$12,000, are now quoted at \$20,000 and \$25,000. One effect is to stimulate ship-building everywhere, particularly in England.

A steel boat with air-tight compartments has been ordered by the Union Ferry Company for the Hamilton Avenue Line.

California last year produced 17,000,000 gallons of wine, an increase of 1,000,000 gallons over the previous year. Of the total at least 4,000,000 gallons will be distilled, producing about 600,000 gallons of brandy. The balance of 13,000,000 gallons will consist of dry and sweet wines. During the past year over 7,000,000 gallons have been exported, including 400,000 gallons to foreign countries.

A suit begun in the United States District Court, at St. Paul, on behalf of the Government, against the Northern Pacific Rail-

road Company involves over \$5,000,000, which is said to be the value of timber unlawfully cut by the company in parts of Idaho, Washington Territory, Montana and Minnesota.

The Keely bubble, the Panama Canal bubble and the Electric sugar bubble, if not myths are memorable.

The Lehigh Valley Railroad are building five piers at their new terminal in Jersey City each 600 feet long, covered with corrugated sheet iron.

The Dominion Government has granted another order permitting roads in Manitoba to cross the Southwestern branches of the Canadian Pacific Railway, indicating that Manitoba has gained a decided victory in its long struggle for the exercise of this right.

Four of the seven men who originally founded the Knights of Labor have addressed a circular to the organization at large, declaring that the officers now in power have departed from the principles transmitted to them and inviting communications from "all who believe in the principles formerly promulgated—to wit, secrecy, obedience, mutual assistance, and the placing of industry on a scientific basis." This is understood to be a blow aimed at Powderly.

In a single day quite recently nine large steamers, comprising 22,775 registered tonnage, cleared from New York for ports in the United Kingdom.

The value of the cotton goods made in the South was \$21,000,000 in 1880, and nearly \$50,000,000 for 1888. In 1880 there were 40 cotton-seed oil mills in the South. Now there are 160, with about \$12,000,000 invested. The value of the South's agricultural products for 1888 was about \$800,000,000, against \$571,000,000 in 1879. The value of the South's live stock is now \$570,000,000, while in 1879 it was \$391,400,000. The production of grain rose from 431,074,630 bushels in 1880 to 626,305,000 bushels in 1887, an increase of nearly 200,000,000 bushels.

The business of the New York State canals, during the season of 1888, shows the effects of a decreased export trade and sharp railroad competition. The total tonnage was 4,942,948, a decrease of 610,857 tons compared with the previous year.

An Englishman, who formerly resided in San Francisco, has extensive works a few miles from Valparaiso, in Chili, from which there have been turned out lately half a dozen locomotives for the State railways at a cost of about \$21,000 each in gold. The steel used is imported from England and the pig iron for castings from Scotland, while the wood-working machinery was made in the United States.

C. T. Yerkes, President of the Cable Railways in Chicago, says that the cable will supersede everything else as the motive power for street railways, that it is much superior to electricity, and can be operated at a far less expense than electric roads, in a short time more than compensating for the difference in the cost of construction. Chicago will soon have a cable line 27 miles long.

The building records of New York City show that, exclusive of alterations, the expenditures during the past year for new constructions amounted to \$46,900,000, as compared with over \$67,000,000 in 1887. The number of buildings erected was 3073, against 4374 in 1887, and of the total 25 ranged in cost from \$1,000,000 to \$450,000. The most expensive building in progress is the new publishing house of the Methodist Book Concern, at Fifth avenue and Twentieth street, which will cost \$500,000.

MANUFACTURING.

Iron and Steel.

The Clinton Rolling Mill, on the South Side, Pittsburgh, formerly operated by Graff, Bennett & Co., but which for some months has been operated by the assignees of that firm, was closed down for an indefinite period on Saturday, the 5th inst. The Clinton blast furnace was also operated by the assignees, and the pig iron made by it was worked into muck bar in the rolling mill. The furnace produced about 50 tons of pig iron per day. It will also be blown out during the present week indefinitely. James M. Bailey, who is one of the assignees, when questioned as to the cause of the shut down, refused to give any reason therefor, but it is understood that the plant has not been making any money since it was put in operation. The Millvale Rolling Mill, also operated by Graff, Bennett & Co. previous to their failure, has been idle for months, and from present indications will remain in that condition for some time to come.

The Detroit Spiral Tube Company have been organized at Detroit, Mich., with a capital stock of \$100,000, to manufacture metallic tubes, tanks, reservoirs, and pressed sheet and plate metal work.

No. 3 furnace of the Pennsylvania Steel Company, at Steelton, Pa., which is undergoing repairs at present, will be ready for blast in a few days.

From a recent issue of the Akron, Ohio, *Beacon* we take the following information regarding operations at the plant of the Akron Iron Company, of that city: "The Akron Iron Company now employ 400 hands—300 in the rolling mill and 100 in the shafting department—an increase of about 25 over 1887. The aggregate output of the works is 1000 tons per month, and the present business outlook indicates that the products of the mill will be increased 33 per cent. Several thousand dollars have been expended the past year in improving the plant. The most important betterment is the erection of three upright tubular boilers—two of 150 horse-power each and one of 215 horse-power—of the celebrated Hazleton make, which were placed in position under the supervision of S. E. Keller, directing engineer. These boilers are so constructed that each becomes a stack for the furnaces, and the waste heat of the furnaces is utilized in generating the steam for running the engines and machinery of the mill. These boilers displace the old plant, which has done service for many years, and will save several thousand dollars annually in the cost of fuel. In the shafting department the company have added 25 tons of new machinery. A 250 horse-power engine, milling machinery, a lathe and a straightener are betterments greatly enlarging the capacity of the shafting works. During the year a frame building 36 x 150 feet in diameter has been built to the shafting department. The opening of a branch store in Boston, Mass., for the handling of the product of the polished shafting works has been decided upon, and will be established soon."

The Linden Steel Company, Limited, of Pittsburgh, have entered into an arrangement with Ripley & Bronson, of St. Louis, by the terms of which the last named firm will have the exclusive sale in the West and South of the steel plates made by the Linden Company.

On the 1st inst. the Bellaire Nail Works, of Bellaire, Ohio, declared a cash dividend of 5 per cent. out of the earnings of the past six months.

The Beaver Valley Mfg. Company, Limited, manufacturers of steel and malleable iron castings, have commenced the erec-

tion of a Swedish heating furnace as an experiment. If it proves successful the company will probably erect additional furnaces.

The Victoria Iron Furnace and Mines, located at Goshen, Va., on the line of the Chesapeake and Ohio Railroad, with a capacity of 200 tons of iron daily, owned by an English syndicate, have been leased by the attorneys of the company to Chamberlain, Wheeler & Co., of Columbus, Ohio. The plant will be put in operation at once.

The extensive foundry of the Reading Foundry Company, in Reading, Pa., where large iron pipe for gas and water mains for many of the large cities is made, closed down for an indefinite period, throwing 160 men out of employment. Dull trade is given as the cause for closing the works.

The Trumbull Iron Company, Girard, Ohio, has commenced work on another addition to the puddling department of their mill, and a number of new puddling furnaces will be erected. When completed they will have 27 puddling furnaces in operation. An addition will also be built to the boiler-house.

The Canton Steel Roofing Company, Canton, Ohio, have nearly completed an addition to their shops 90 x 75 feet and two stories high, making the size of the entire buildings 90 x 200 feet. The offices of the company will be located in the new structure.

The employees of the iron mill of Carnegie, Phipps & Co., Limited, at Beaver Falls, recently operated by the Hartman Steel Company, Limited, have been notified that a brief shut down will be made in order to change the machinery. As soon as the proposed changes are made a new system will be adopted by the company which will reduce the force very considerably. All the employees who do not wish to work under the new system have been notified that they will be paid off in full by applying at the office. The workmen claim that the change will result in a reduction of wages, but this is denied by the firm, who say the men will make as much as before.

It is reliably reported that the Wellston Furnace Company, of Wellston, Ohio, composed of J. C. Clutts and L. J. Morgan, of that place, and Hyde, Forsyth & Co., pig iron merchants, of Chicago, have purchased the Wellston Furnace with 13 acres of ground for \$36,000. Work has already been commenced at repairing the stock. This furnace was formerly operated under lease by King, Gilbert & Warner, of Columbus, who surrendered the lease some months since.

The Booth Iron Mixture Company have been organized at Baltimore, Md., with a capital stock of \$125,000, to manufacture, sell and use compounds for improving the quality of steel in any form while in process of being manufactured.

The rolling mill and nail factory of the E. & G. Brooke Iron Company, Limited, at Birdsboro, Pa., which has been closed down for several weeks undergoing repairs, resumed operations again last week.

No. 1 Furnace of the Andover Iron Company, at Phillipsburg, N. J., produced in one week last month 800 gross tons of gray forge pig iron on a fuel consumption of 1.11 tons per gross ton of iron made. The fuel mixture consisted of three-fourths anthracite coal and one-fourth coke.

The entire plant of the Wheeling Steel Works, at Wheeling, W. Va., closed down on the 1st inst. for an indefinite period for the purpose of making repairs and taking stock. The plant was in operation 21

days last month, during which time 8822 net tons of steel were produced.

The entire plant of the Scranton Steel Company, at Scranton, Pa., has been closed down.

The Canton Steel Works, at Canton, Ohio, have been bought by Pittsburgh parties for \$200,000. The new firm is to be known as the Bolton Iron and Steel Company.

Machinery.

The Kilby Mfg. Company, of Cleveland, Ohio, are running night and day on heavy work for paper mills and cable roads. One digester for paper stock is made of leaf bronze, 7 feet in diameter, 22 feet long and weighs 30,000 pounds. It is cast in five sections. The cable road work goes to the Pacific coast, and one order will make 65 carloads.

The Acme Machinery Company, Cleveland, are building a two-story brick machine shop, 50x120 feet; also a separate L 32x40 feet, to connect the new shop with the present one. The L is to be three stories high. The lower story will be used for offices and toolroom, and the second story for stock room, and the upper story for drafting-room. The company started in business four years ago, to manufacture the Acme bolt and screw cutter, employing six hands. At present they employ 54 outside the foundry.

The Webster, Camp & Lane Machine Company, manufacturers of engines, hoisting drums, &c., at Akron, Ohio, are at present giving employment to 140 men. The product of the plant for the year just closed aggregates \$175,000, an increase of 15 per cent. over the previous year. During the year 1888 the firm made 70 engines, ranging from 15 horse-power to 300 horse-power, and 55 hoisting drums, from 4 feet to 10 feet in diameter. The firm recently received an order for three hoisting drums, each 11 feet in diameter, with a capacity of 1500 feet of cable and weighing over 100 tons, an automatic engine of 300 horse-power, a complete plant of boilers, with stack and fixtures, also "skips," "sheaves" and wire rope, all to be used in connection with the hoisting machinery. The above order also includes three hoisting drums, each 10 feet in diameter, 1500 feet of cable, and a 300 horse-power automatic engine. The firm is at work upon two engines for the Union Strawboard Company, at Anderson, Ind. The engines are each 300 horse-power, with cylinders 28x48 inches in size, and both will propel an enormous belt wheel 20 feet in diameter, weighing 45 tons.

Messrs. Riehl Bros., proprietors of the Philadelphia Scale and Testing Machine Works, Ninth and Master streets, report the following recent orders: One 100,000-pound vertical testing machine, sold to the Union Switch and Signal Company, Pittsburgh, Pa.; one 100,000-pound U. S. standard cement testing machine, Rock Island Arsenal, U. S. A.; Rock Island, Ill.; one 2000-pound U. S. standard cement testing machine, to the U. S. Quartermaster Department, Fort Riley, Kan.; one 4000-pound screw-power testing machine to the Nebraska State University, Lincoln, Neb.; one marble molding and countersinking machine, to Baterson, See & Eisele, New York; one ditto to R. Forsyth, Thousand Island Granite and Marble Works, Montreal, Canada; one coal hopper scale, Manufacturers' Club, Philadelphia; one 10-ton wagon scale, with platform, 22 feet long, Messrs. Haines & Thomas, Malvern, Pa.; one 6-ton scale, W. A. Levering, Atlantic Heights, N. J.; 1 ton of the U. S. standard testing weights, Woodstock Iron Company, Anniston, Ala.; 1 ton ditto, to the State Line and Sullivan Rail-

road, Bernice, Pa.; one 50-ton self-adjusting track scale with rocking bearings, E. P. Allis, Milwaukee, Wis.; one 5000-pound foundry tester, Rogers, Brown & Co., Cincinnati, Ohio; one 5000-pound transverse testing machine, United States Rolling Stock Company, Hegewisch, Ill.; one furnace charging scale, Merion Iron Company, Conshohocken, Pa.; two Clarke patented ventilating fans, McNeely & Co., Philadelphia; one ditto, Rathbun Company, Deseronto, Canada. Orders coming in freely and the outlook never better.

Ranken & Fritch Foundry and Machine Company say they are well filled up with orders, so much so that they are running a night and a day force. They are particularly busy on the following class of work: Corliss piston and slide valve engines, plate glass machinery, steam and hydraulic elevators, mining machinery, &c. They will ship during the present month between 40 and 50 carloads of machinery to different parts of the United States and Mexico.

Shultz Belting Company are running full time, and judging from the number of orders already received the present month will be a very busy one. Their trade is not confined to any particular locality, but wherever belting is used, throughout the United States and Mexico.

A Chicago office has just been opened by the Saginaw Mfg. Company, of Saginaw City, Mich. This firm manufacture the well known Gilbert universal wood split pulley.

The works of the Parish Mfg. Company, of Chicago, manufacturers of saw mill machinery, steam engines and power transmitting machinery—have been removed to Ashland, Wis.

The Smith-Hill Foundry and Machine Company, of Quincy, Ill., have issued a new catalogue, dated 1889, and devoted to their engines, pumps, heaters, boilers and other manufactures. It is profusely illustrated and gives comprehensive descriptions, price lists and tables of dimensions.

The Watertown (New York) Mfg. Company having agreed to remove their plant to Dayton, and claiming to employ 600 men, \$50,000 bonus required has been subscribed for their encouragement.

At East Liverpool, Ohio, January 3, the foundry, machine shop and pattern room of A. J. Boyce were totally destroyed by fire.

The Marr Construction Company, located in the Bissell Block, Pittsburgh, have received through their New York agents a large contract for lighting the streets of a town in the interior of Brazil, South America. The contract calls for 1500 lights of 32-candle power. The Westinghouse system will be used and two engineers will be sent from Pittsburgh to superintend the erection of the plant and remain on the ground until it is in good working order. 35 miles of working cable wire will be used, which has already been shipped to Rio Janeiro by the Standard Underground Cable Company, of 708 Penn avenue, in that city.

The Lewis Foundry and Machine Company, Limited, of Pittsburgh, are now engaged in the erection of a 12-inch merchant train, together with the engine and rolls, for the Horseshoe Machine Company, of Anniston, Ala., besides various other contracts in different sections of the country.

The Aetna Machine Company, of Warren, Ohio, have received a contract from the American Wire Nail Company, of Covington, Ky., for the building of a 600-horse-power engine, complete with boilers, heaters, pumps, &c. The new engine is

to drive the new rod and nail mill which the latter company are now building at Anderson, Ind.

Hardware.

The McCosh Iron and Steel Company, Burlington, Iowa, having decided to add wire drawing to their business, are having put in a 50-block mill and a new 250 horse-power engine. The latter will be furnished by the Murray Iron Works, also of Burlington.

The LePage Company, in order to meet the increasing demand for the improved process glues manufactured by them, have been compelled to increase their manufacturing capacity, and instead of again enlarging their present works at Fort Point have bought out and consolidated the Dole Fertilizer Company and Red Star Mfg. Company, of Boston, having factories at Spectacle Island, in Boston harbor, for the manufacture of fertilizers, desiccated fish, poultry food, &c. To these works they are now adding a new glue plant, in which they can produce as much glue as in their present works, thus doubling their capacity in this branch, while in the manufacture of fertilizers, &c., they find use for all their waste material, which will afford them a much better margin of profit than could be realized by selling it to outside parties. The company have chartered the steam lighter Jesse James, which will ply between the works at Spectacle Island and Gloucester and the company's storehouse at Comey's wharf, Boston. They have also secured commodious offices at No. 50 Central street, Boston, where the general business of the company will be transacted. The new management will be: President and general manager, Wm. N. LePage; vice-president, S. Henry Hooper; treasurer, Guy Wilkinson; secretary, C. M. Martin.

On Saturday, the 5th inst., the employees of Hussey, Binns & Co., Limited, the well-known shovel manufacturers, at Pittsburgh, presented their manager, F. B. Newton, with an elegant gold watch and chain. The gift was presented to Mr. Newton by the employees as a slight token of the esteem in which he is held.

During the year 1888 the Lenz Wire Nail Company, of Belleville, Ill., erected a new wire nail plant, which has been in successful operation since April last.

The Missouri Refrigerator Mfg. Company, St. Louis, with a capital stock of \$10,500, has filed notice of incorporation. Thos. A. Walker, J. J. Simmons and Otto Brinkmeyer own the stock in equal parts.

The Lima Lock Mfg. Company, recently organized at Lima, Ohio, commenced operations at that place on the 2d inst. The company have rented buildings temporarily and will erect their own works early in the spring months.

Miscellaneous.

The Juniata Limestone Company, with a capital stock of \$25,000, was organized at Hollidaysburg, Pa., on the 29th ult. The officers are: J. King McLanahan, Hollidaysburg, president; Lovell Baldrige, Hollidaysburg, secretary and treasurer; directors, John Manning and Thomas B. Lewis, Hollidaysburg, and C. A. Woods and John Bingaman, Altoona. The chief offices of the company will be located at Hollidaysburg. The quarries are on the Williamsburg Railroad, about 18 miles distant.

The St. Charles Car Company, of St. Louis, contemplate an increase of their capital stock to \$1,000,000, in order to extend their manufacturing facilities.

The Ohio Falls Car Company, of Jeffersonville, Ind., built last year 2150 cars, of which 157 were for passenger service. It

is expected that the output for this year will be more than double the output of last year, as the larger portion of the past year was taken up in making extensions and improvements in the shops.

The new Edison Electric Company will erect works in East Orange, N. J., with offices in leading cities and States, with a paid up capital of \$1,000,000.

The American Steel Barge Company, of Buffalo, capital, \$500,000, has filed a certificate of incorporation.

Among recently authorized corporations in Illinois are the following: H. W. Trowbridge & Co., Chicago; capital, \$100,000; to manufacture structural and ornamental metal work; incorporators, H. W. Trowbridge, Byron A. Baldwin and George C. Fry. The Northwestern Expanded Metal Company, Chicago; capital, \$100,000; to manufacture metals; incorporators, Oscar Bradford, Alfred Russell and William M. Ramsey. East Chicago Foundry Company, Chicago; capital, \$250,000; incorporators, Edward L. Lumb, Sohas Burns and Thomas E. Dixon. The Calumet Iron and Steel Company have filed a certificate for the increase of their capital from \$2,000,000 to \$2,200,000.

The United States army, according to the last report of the Major-General commanding, was divided as follows:

	Officers.	Enlisted men.
Generals.....	9
General staff.....	574	1,971
Ten regiments of cavalry...	427	6,842
Five regiments of artillery.	283	2,437
Twenty-five regiments of infantry.....	885	10,563
Indian scouts.....	197
Detachments, recruiting parties, &c.....	2,539
Total.....	2,188	24,549

The electric subways built in many parts of New York City at a heavy expense are declared by President Lynch, of the United States Illuminating Company, to be useless. He affirms "that the only cable placed in the subways was made by a well-known manufacturer, and they have never been able to pass a current through it. Whether it is a defect in the cable or a defect in the construction of the subway remains yet to be proved." Mr. Lynch contends that building a tunnel, with wires strung overhead is the only practicable way of placing wires underground.

The manufacturers in some parts of the country claim advantages in items of cost over their competitors located at other points. It is stated on the basis of investigations made by Secretary D. M. Thomas that the cost of manufacturing stoves does not necessarily vary 2½ per cent. in the different parts of the country now having a stove industry. Such advantages as one point possesses are offset by other advantages in favor of a competing point. Into such a comparison the cost of distribution does not enter. Nor does the question of natural markets come up for consideration.

Assistant Secretary Maynard has informed the Collector of Customs at Erie, Pa., that prepaed or crushed asbestos, such as is generally used in the manufacture of asbestos cement, asbestos mica, asbestos sope steam packing, &c., is dutiable at the rate of 25 per cent ad valorem under the special provision for "asbestos manufactured," and that under no circumstances can asbestos be classified under the provision of the free list for "paper stock."

The Dominion debt increased last year \$11,326,000, and now amounts to \$284,500,000.

The Iron Age

New York, Thursday, January 10, 1889.

The Cut in Beams.

On Monday the members of the Beam Association held a meeting in this city in which it was decided to reduce the price of beams and channels from 3.8 cents to 2.8 cents, a cut of half a cent a pound. The considerations which led to so radical a reduction in price were numerous. For some time past the trade has been discussing the probability of the withdrawal of one of the leading firms of the association. The principal partner in the concern has expressed himself publicly and privately as an opponent of trade combinations, and has acted in accordance with that opinion in two cases where a concern with which he is identified was a member of an association the purpose of which was to establish prices. This was widely known in the trade, and the question was freely discussed whether a withdrawal from the beam combination would follow.

It is stated that one concern, making between 40 and 45 per cent. of the whole quantity of beams produced by the members of the association, and which was annually paying considerable sums of money for exceeding its allotment, made a claim for a larger percentage. It is understood that while this claim was resisted vigorously in some quarters, it was finally partly acknowledged to be valid. It appears that a year since a similar demand was waived, but that the business of the past 12 months has substantially proven its justice. Other elements of discord or disagreement, which always crop up at gatherings of this kind, were eliminated.

There are seven members in the association—the Passaic Rolling Mill Company, of Paterson, N. J.; Cooper, Hewitt & Co., of Trenton, N. J.; A. & P. Roberts & Co., Pencoyd, Pa.; Phoenix Iron Company, Phoenixville, Pa.; Pottsville Iron and Steel Company, Pottsville, Pa.; Jones & Laughlins and Carnegie, Phipps & Co., of Pittsburgh. Outside of the combination there are the Allentown Rolling Mill Company, of Allentown, Pa., making only small beams; the Columbia Iron and Steel Company, of Uniontown, Pa.; and the North Chicago Rolling Mill Company, of Chicago, Ill. The product of the mills in the association is estimated at about 75,000 tons during 1888, which is somewhat less than it has been in the previous year. It is believed that the outside mills may have turned out 10,000 tons in 1888, while at least 5000 tons were imported. It is the competition from these two sources, and the danger that in the present condition of other lines others may enter the business, which has probably led to the putting down of the price to which we have alluded. The market in Boston and its vicinity has been almost entirely in the hands of foreign makers, and some large lots have gone into this city, and other

Atlantic, Gulf and Pacific ports. With a growing output at home, and the constant cutting of prices by outside mills, the maintenance of the 3.8-cent rate has been wisely held to be untenable.

Since the steel rail trade has been cut to pieces, and other departments of the iron industry have become unremunerative, manufacturers in other branches have looked longingly upon the alleged enormous profits of the beam makers. They have probably only been deterred from entering it by the knowledge that it requires a working capital out of all ordinary proportion to the tonnage of product, and that it takes long and costly experience to become successful in the business. These facts afforded the makers a protection against new rivals which no other branch of the iron and steel trades can well boast of, but it was evidently recognized that it would not prove adequate at a time when margins all around had been cut down to the narrowest limits. The members of the association all have the advantage that they produce, besides beams and channels, other forms of structural iron and steel, and some of them are closely allied to bridge concerns or are themselves bridge builders. It is this, too, which gives them advantages over those who might be inclined to enter into the manufacture of beams. On the whole the step taken by the beam association will be recognized as being judicious. It is certain to discourage any further accessions to the numbers of producers and is likely to stop any attempts to build new works with the object of forcing the association, after a brief fight, to take in the newcomer. The fact that none of the mills outside of the combination have been allowed to enter it indicates that the association feels secure in its position.

The Rights of Shippers.

At the late meeting of the Boston Business Men's Association some resolutions of general interest were adopted. These were: 1. That common carriers should deliver the goods and quantity received for, or pay for same without litigation; 2. That all merchandise should be delivered to the consignee on payment of the freight charges as specified in the bill of lading, and, 3. That "owner's risk" should be eliminated from the classification except as regarding perishable goods. These three resolutions are sound in principle, commercially just, and their practical application should be insisted upon by business public opinion.

Our bills of lading are hedged about with every known device of language for avoiding payment of losses. Unquestionably many of these stipulations are only fair to the carriers, such as releasing them from liability for damages caused by the act of God; but others work hardships to the patrons of the railroads. One of these is the burden thrown upon the shipper to find out what particular road of a line may have lost his case of hardware, because his bill of lading says that particular road only is responsible. In England the road issuing the bill of lading is responsible to destination, the theory being that it is in a better position to find the offending part of the line and arrange a settlement than is the shipper. But this is not so in the

United States. Again, part of a shipment may go astray and perhaps not be found for months. How long should the shipper wait before expecting payment? Abroad the time allowed to find the goods is limited by law, and after that time they are considered lost and must be paid for. In America it is not legislation so much as public opinion expressed through business associations that we need.

Something of the same reasoning applies also to the resolution requiring delivery of goods on tender of the exact charges specified in the bill of lading. It is a common source of annoyance to merchants to find that they often cannot obtain their goods without payment of a sum considerably in excess of the rate agreed upon and distinctly stated in the bill of lading. The delivery agent can only say that somebody has made a mistake, that he cannot rectify it, and that the only way is for the shipper to pay the additional amount and put in a claim for it. This latter means a delay of months, or even years. There seems no good excuse for it. The delivering road in collecting the charges acts as agent for all the roads in the line, and surely should be trusted to fulfill the contract rate of the whole line. That somebody made a mistake is not a sufficient reason for overcharging the customer. If anybody should be out of pocket during the investigation and settlement of the error it should certainly be the railroad who made the mistake or its agent, and not the innocent consignee. It is not disputed that the rate is a contract and is binding, only the carrier takes it upon himself not to live up to it. In the States of Texas and Arkansas there are laws compelling the acceptance of the bill of lading charges, and upon all the honestly managed railroads an effort is made to pay such overcharges promptly, but the point made by the Boston association is that they should not have occurred in the first place.

On the third resolution it may be said that "owner's risk" is primarily an insurance. The charge for it should be enough to cover this insurance and perhaps something more to discourage doubtful packing and the like. Practically in a great many cases the charges at carrier's risk are double the rates at owner's risk and far beyond any insurance premium. Then many goods are taken only at owner's risk, no option being offered. This is of doubtful legality. In some articles, like liquids, the clause is intended to shield the carrier from the chances of leakage. In general it may be said that the courts have upheld any stipulations of the bill of lading which released the carrier from losses which might have happened to the goods had they remained in owner's warehouse. To all this there is one great exception—negligence in any way upon the part of the railroad or its employees. This would be an important exception to all shippers but for the unfortunate fact that such negligence can only be proved through the railroad people, while the burden of showing such carelessness in handling or stowing in the cars rests upon the owner, who finds such proofs well nigh impossible to obtain. The matter of thus shifting all risk upon the shipper has been carried too far. The subject needs a careful study and the tariffs a thorough revision. Then, too, we need a change in the burden of proof. Every carrier should be held liable for this damage,

unless he can affirmatively show that the loss arose from the nature of the article and not from his own negligence.

Cost Formulas.

It scarcely needs argument at the present time to convince manufacturers that an adequate system of cost accounts is one of the most essential parts of their business management. There are very few establishments indeed that do not have some plan or other for computing the cost of their manufactured product. Modern manufacturers are not satisfied to know at the end of the year that they have made or lost money, but must have for guidance during the year's business such reports of their operations as will show that they are either making or losing upon their daily transactions. While manufacturers at large, including members of the stove industry, are fully convinced that cost accounts upon some adequate basis are essential, it still remains that there is no uniformity of plan among them. The advantages of uniformity in matters of this kind, particularly where men are seeking trade under the same conditions and in the same territory, and where they occasionally come together for conference and comparison of results, is of the greatest importance.

A committee was appointed some time since by the president of the National Association of Stove Manufacturers to give the question of uniform cost accounts in the stove business careful attention. The idea in view was to formulate such a plan as would be acceptable to the majority of those in the trade and to urge the adoption of the plan in preference to others, not only on account of the advantages which it might possess in itself, but more particularly because uniformity in such calculations would be a great advantage to the trade at large as well as to individual manufacturers. The committee appointed for this purpose consisted of the following gentleman: Lazard Kahn, of Hamilton, Ohio, chairman; Francis Kernan, Jr., Utica, N. Y.; J. W. Van Cleve, St. Louis; Frank A. McGee, Boston, and W. H. Phahler, of Philadelphia. Secretary D. M. Thomas has worked with great energy the past few months in furthering the special work of this committee, and has drawn largely upon his special experience as an accountant. A very complete formula has been prepared which has been subjected to the scrutiny and criticisms of a large number in the trade, and last week the committee met in Chicago, and in a three-day session gave the final revision to the work. The formula will be issued to the trade, we are informed, without delay. It provides a plan by which costs can be accurately determined on individual articles as manufacturing operations progress, and provides also for proper distribution of general expenses. This formula is to be submitted to the National Association at its next annual convention for discussion and adoption. Whatever comes of the committee's work, there will be at least this good accomplished: the attention of manufacturers will be directed more carefully than ever before to the question of cost, and the influence of this alone will be of great benefit.

Late Events in Hayti.

During the nine years of President Salomon's administration Hayti probably flourished more than it had ever done. The finances improved, monetary affairs were placed on a solid footing, attempts at revolution were suppressed and peace was maintained between the blacks and mulattoes. During the last three years of his administration the value of coffee, of which the Haytians produce in ordinary years 50,000,000 pounds, rose considerably, and stayed there most of the time, spreading prosperity throughout the island. This happy change enabled the people to extend their business relations with foreign countries, the largest share falling to American trade. Last year, after General Salomon's death in exile at Paris, several ambitious generals strove, each for himself, to obtain the presidency or dictatorship from competitors under the cloak of a provisional Government. No decisive encounters between the contending revolutionary leaders have as yet taken place, but both now in the field have been marshalling their forces and importing arms and ammunition. The southern faction has blockaded, and, to a moderate extent, shelled, northern ports, on which occasion the steamer Haytian Republic, under the American flag, was seized, but later was surrendered to the peremptory demands of our Government backed by a naval force. How long anarchy is going to last in Hayti there is no means of judging; it is to be hoped in the interest of the people at large that either the one or the other of the two factions may soon prevail, so that the coffee crop may be gathered and shipped and be converted into provisions, which are getting very scarce on the Haytian coast.

Hayti, the western third of the island of St. Domingo or French portion, covers an area of 28,000 sq. km., and, as per census of 1887, was then inhabited by 960,000 blacks and mulattoes. During the Salomon régime the public indebtedness had been reduced to \$4,320,000 foreign debt, and \$9,180,000 home debt, together \$13,500,000. The income was \$6,412,957 in 1885-86, covering an outlay equal in amount. The expenditure for 1887-88 was estimated not to exceed \$4,066,236. The army was reduced to 6828 men, rank and file. The navy consists of two war steamers, one of which is armored and mounts four guns. Hayti's postal service in 1886 was attended to by 31 post offices, handling 233,872 letters and postal cards, 7520 registered letters and 181,520 newspapers and sample packages. The receipts were 69,200 francs, and the expenses 137,125 francs.

Hayti imported in 1887 \$6,854,597 worth of merchandise, exporting \$10,185,366 worth of products. Of the latter there was coffee, 49,811,781 pounds; logwood, 227,595,803 pounds; cocoa, 3,634,860 pounds, the remainder consisting of hides and skins, fustic, lignum vite, honey, cotton seed, tortoise shell, mahogany, wax, old copper, orange peel, &c. Together with planters and export merchants, the Government during the Salomon régime strove to improve the quality of coffee by establishing cleaning mills, &c., in the suburbs of leading ports. Formerly small stones and pieces of lime were often found mixed with the coffee, but now this rarely

happens, and, as a consequence, it brings higher prices.

American trade with Hayti for 1887 and 1888 shows the following figures:

Fiscal year.	Import.	Domestic export to Hayti.
1888	\$2,918,820	\$4,322,653
1887	1,752,537	3,059,318

Increase..... \$1,166,283 \$1,263,335

Increase in total trade, 50 per cent.

The vessels that entered at leading ports in 1887 were:

	Ves-	Ton-	Ves-	Ton-
	sels.	nage.	sels.	nage.
Cape Hayti.....	236	239,357	163	180,651
Port-au-Prince.....	227	246,014	146	225,754
Gonaïves.....	134	111,244	83	100,116
Aux Cayes.....	99	94,636	71	87,777
Totals.....	726	691,150	463	594,298

American trade with Hayti is carried on chiefly from New York, and has at all times been paying the commission firms engaged in it well, so far as occasional bad debts would permit, especially in revolutionary times. It was in an unusually flourishing condition when the present troubles broke out.

The Wire and Allied Trades.

The wire trade in its different branches has been conspicuous lately for a very unsatisfactory state of affairs. The great barb-wire industry with its enormous consumption has suffered for months past from a cut-throat competition in which values based on cost have been lost sight of. Prices have been lower than ever before in the history of the trade. In wire nails a period of low prices followed the brief sway of a combination which has now gone to pieces, with little prospect of an early renewal, and has left the trade with great uncertainty as to values. In market wire manufacturers have been forced to be content with very small returns considering the magnitude of the business done, the only branch in which profits have been adequate being in wire rope.

It is stated, and there seems to be some grounds for this assertion, that one of the causes for the condition of affairs alluded to is the contest for supremacy on the part of the larger concerns which control wire-rod mills. The unit of capacity is about 2500 to 3000 tons a month with a modern wire-rod mill. Though a moderate quantity with a steel mill, it is a very large amount when viewed from the standpoint of a maker of barb wire, of wire nails or of market wire. A concern possessing one or more rod mills, and at the same time producing the articles named ready for the consumer, must naturally follow a somewhat different policy in marketing goods than a small mill. It will often make sacrifices to keep up tonnage to secure at least a part of the advantages which steady employment confers. To this general tendency comes an additional incentive in the case of wire works with rod mills in the West. With prices of billets ranging, as they have done for some time past, at \$28 to \$29, a rod mill can produce wire rods at a small profit at about \$40, the reports of cost made by a number of leading mills last year showing figures ranging between \$8.54 and \$9.95 per ton. Now, domestic wire rods have sold in the open market west of the Allegheny Mountains considerably over

\$40 during the past six months, so that the concerns owning rod mills could readily place barb wire or wire nails on the market at cost or even less, based on the market price of wire rods, and yet make a fair return on the capital invested on the entire plant. The policy of accepting a moderate return on the entire tonnage of finished product has been openly avowed in one conspicuous instance. However much individuals may differ on the expediency of such a course, its adoption even in isolated cases by influential concerns is important enough to force it into prominence with the trade. We are far from believing that there exists an irresistible tendency toward throwing the control of a large industry like the wire trade into the hands of a few corporations or firms. But it is unquestionably true that in times of depression the makers who are able to secure a profit on what is raw material to smaller rivals have a very decided advantage. In the case of the wire trade the Eastern mills dependent upon foreign rods are under a particularly severe strain.

Pig Iron Production in 1888.

From our monthly blast furnace reports we have compiled an estimate of the production of anthracite and coke pig iron. While we cannot claim for it absolute accuracy, it is sufficiently close to deserve consideration, since the number of the furnaces from which we have no official data can be counted on one's fingers. We may repeat in this connection that we have followed the general principle, in compiling our monthly blast furnace returns, of being guided entirely by actual product. When a furnace has run over a long period, six months or more, with fair regularity, we accept the weekly product as the normal average. When a gradual increase has taken place we adopt the average of the last two or three months. When there has been a notable falling off, indicating that the furnace is not working up to standard, we modify the figure accordingly.

Our returns from the anthracite furnaces show the following for the second half of 1888:

Production of Anthracite Furnaces, Second Half 1888.

New York.....	72,699	gross tons.
New Jersey.....	42,578	" "
Pennsylvania:		
Lehigh Valley.....	252,523	" "
Schuylkill Valley.....	157,776	" "
Upper Susquehanna Valley.....	76,180	" "
Lebanon Valley.....	174,357	" "
Lower Susquehanna Valley.....	122,190	" "
Total.....	898,803	" "

Our grouping of districts differs somewhat from that adopted by Mr. James M. Swank, secretary of the American Iron and Steel Association.

We estimate the production of coke pig as follows:

Coke Pig Production, Second Half 1888.

New York.....	29,770	gross tons.
Pennsylvania:		
Pittsburgh District.....	405,102	" "
Shenango Valley.....	238,960	" "
Juniata and Conemaugh Valley.....	148,276	" "
Youghiogbeny Valley.....	37,969	" "
Miscellaneous.....	30,047	" "
Maryland.....	3,000	" "
West Virginia.....	45,478	" "

Ohio:		
Mahoning Valley.....	198,581	gross tons.
Central and Northern.....	235,368	" "
Hocking Valley.....	40,767	" "
Hanging Rock.....	40,103	" "
Indiana.....	7,291	" "
Illinois.....	254,974	" "
Wisconsin.....	23,317	" "
Missouri.....	13,739	" "
Colorado.....	10,000	" "
The South:		
Virginia.....	91,442	" "
Kentucky.....	34,486	" "
Alabama.....	209,721	" "
Tennessee.....	110,821	" "
Georgia.....	13,954	" "
Total.....	2,313,216	" "

The make of anthracite pig during the first six months of 1888 was, officially, 886,126 gross tons, so that the total for the year reached 1,784,429 gross tons. The coke pig produced for the first half was 1,885,539 gross tons, so that the total for the year is estimated at 4,198,755 tons, which carries the aggregate of anthracite and coke iron to 5,983,184 gross tons. Add at least 530,000 gross tons for charcoal iron, and we reach the unprecedented total of over 6,500,000 gross tons as the 1888 product of the United States.

The European cables report foreign securities firmer, under the growing belief that the peace of the Continent is secure. Nevertheless, the burden assumed by the several leading powers in warlike preparations is enormous. A London correspondent says: "Every nation in Europe has paid most dearly for the privilege of quiet. Since 1872, when the last elaborate computation of the armies of Europe was made, the tax-payers of the Continent have expended \$7,500,000,000 on preparations for a war that has not come, or nearly twice what we at home expended on our four years of civil war. A big struggle 10 years ago, with results of such a sweeping character that a partial disarmament could have followed, would have been infinitely cheaper and better for Europe than this long nightmare of dread and ruinous preparation. Since 1872 Germany and France have both more than doubled the actual war strength of their armies, and the total war strength of the seven Continental powers, counting the Balkan States as one, has risen from 6,142,000 to 10,480,000. If we add to this host of trained fighters on a war footing the classes of partially trained men in the second and final reserves we get an imposing total of 28,000,000 soldiers, all liable to be drawn into the next European war, and now more or less withdrawn from peaceful vocations, at a total annual public cost of \$600,000,000."

Cotton has long since ceased to be the product of the negro, as remarked by the New Orleans Times-Democrat. When the war ceased nine-tenths of it was raised by the colored race; to-day three-fifths come from white farms. The white States and white districts have become the cotton centers of the South. The negro parishes of Carroll, Tensas and Madison, the finest country in the world, where the yield is greatest and the staple the finest, produce far smaller crops than they bore 30 years ago, while the white counties of Texas have increased their production four and fivefold. This fact attracted the particular attention of Professor Hillgard, who prepared the census report on cotton, and he notes the singular coincidence that the bulk of the crop of Mississippi is raised in the hills, where the yield per acre is small, instead of in the bottoms, where every condition is favorable. The fact did not seem to strike him that the true reason lay in the fact that in the hills the cotton was raised by the whites; in the bottoms by the negroes.

The Blast Furnaces

January 1, 1889.

The year opens with the largest current output in the history of iron making in the United States. Taking the anthracite and coke furnaces together, the returns for the charcoal furnaces not being complete as yet, we are producing at the rate of 142,452 gross tons per week, or over 7,000,000 tons annually, not counting charcoal iron, with an additional 500,000 gross tons. We may state, however, that excepting in the South the reports from different parts of the country show that the climax has been reached. A number of furnaces are ready for work, but will not get in with the present outlook for prices.

On the first of the year the position of the anthracite furnaces was as follows:

Anthracite Furnaces January 1, 1889.

Location of furnaces.	Total number of stacks.	Number in blast.	Capacity per week.	Number out of blast.	Capacity per week.
New York.....	24	12	3,828	12	3,442
New Jersey.....	13	5	2,143	8	2,362
Spiegel.....	3	3	264	0	0
Pennsylvania:					
Lehigh Valley.....	44	27	10,036	17	5,413
Spiegel.....	1	1	55	0	0
Schuylkill Valley.....	38	23	7,900	15	3,679
U. Susquehanna Valley.....	17	10	3,069	7	1,606
Lebanon Valley.....	16	14	6,752	2	988
L. Susquehanna Valley.....	22	12	4,679	10	2,266
Total.....	178	107	38,726	71	19,986

For a year past our records show the following:

	Furnaces in blast.	Capacity per week.
January 1, 1889.....	107	38,726
December 1, 1888.....	99	34,879
November 1.....	95	33,645
October 1.....	95	33,728
September 1.....	92	33,541
August 1.....	93	36,397
July 1.....	92	32,478
June 1.....	99	32,418
May 1.....	96	31,006
April 1.....	94	30,496
March 1.....	98	28,598
February 1.....	97	29,969
January 1.....	118	38,206
December 1, 1887.....	122	39,487
November 1.....	124	40,028
October 1.....	123	39,440
September 1.....	125	38,338
August 1.....	129	37,990
July 1.....	138	40,742

It will be observed that there has again been a notable increase in the number and in the capacity of anthracite furnaces in blast. In New York, Charlotte and the second Port Henry are producing, the latter having gone into blast on the 13th of December. In New Jersey, Andover has added heavily to the product of the State, its good record having been alluded to in a recent issue of The Iron Age. In the Lehigh Valley the Allentown Iron Works are running two furnaces; Glendon added the second stack during December, but, on the other hand, Bethlehem reduced the number of its plant in operation by one furnace, leaving only four running. The Thomas Iron Company put out its No. 6 Hokendauqua furnace for repairs, the probability being that it will not be again blown during this winter, as No. 5 was started very successfully to take its place. No. 7 is out for repairs, but it is not likely that it will resume during the next few months. In the Schuylkill Valley, Chester, which we group with this district, produced nearly the whole of the month; Marion went in on the 10th; Montgomery ran the greater part of the month, but, on the other hand, Norristown blew out. Warwick closed the year with the largest six months' product ever attained by that

phenomenal furnace. No changes have taken place in the Upper Susquehanna Valley. Among the furnaces which we group under the Lebanon Valley it may be noticed that the Lebanon Valley resumed on the 20th of last month, and that the second Bird [Coleman, which is now out for repairs, will blow in on or about February 1. There are few districts in the country where the furnaces are more constantly employed in good or bad times than those of this favored region. Robeson closed the year with an excellent record, considering the fact that in an 18 x 20 furnace it is using exclusively Cornwall ore, which fluctuates from 8 to 43 per cent. in silica. In the Lower Susquehanna Valley no changes of any consequence have taken place. A number of our correspondents report to us that their furnaces are ready for work, but that under the existing market conditions they see no encouragement what ever in resuming the manufacture of iron.

The coke furnaces opened the year with the following status:

Coke Furnaces January 1, 1889.

Location of furnaces.	Total number of stacks.	Number in blast.	Capacity per week.	Number out of blast.	Capacity per week.
New York.....	3	1	1,118	2	2,000
Pennsylvania:					
Pittsburgh district.....	19	19	20,000	0	0
Spiegel.....	1	1	420	0	0
Shenango Valley.....	19	16	11,270	3	1,740
Junata and Conemaugh Valley.....	18	11	5,691	7	2,490
Spiegel.....	1	0	0	1	430
Youghl. Valley.....	5	4	1,605	1	600
Miscellaneous.....	4	4	2,080	0	0
Maryland.....	2	1	250	1	120
West Virginia.....	6	3	2,440	3	538
Ohio:					
Mahoning Valley.....	14	11	9,380	3	2,374
Central and Northern.....	18	11	7,958	7	4,448
Hocking Valley.....	14	8	2,899	6	1,340
Hanging Rock.....	13	7	1,730	6	1,045
Indiana.....	2	2	388	0	0
Illinois.....	12	10	11,485	2	1,525
Spiegel.....	1	1	725	0	0
Wisconsin.....	4	3	1,680	1	700
Missouri.....	6	1	568	5	2,120
Colorado.....	1	1	490	0	0
The South:					
Virginia.....	11	8	3,887	3	2,117
Kentucky.....	4	4	1,320	0	0
Alabama.....	21	18	10,360	3	1,300
Tennessee.....	11	11	5,262	0	0
Georgia.....	2	1	501	1	200
Total.....	211	157	108,726	55	25,827

As compared with previous months, these figures stand as follows:

	No. of furnaces.	Capacity per week.
January 1, 1889.....	157	108,726
December 1.....	151	101,748
November 1, 1888.....	146	94,685
October 1.....	137	85,461
September 1.....	133	81,082
August 1.....	122	74,855
July 1.....	121	69,543
June 1.....	128	75,427
May 1.....	120	75,815
April 1.....	128	70,644
March 1.....	128	68,662
February 1.....	136	73,912
January 1.....	143	83,101
December 1, 1887.....	144	88,435
November 1.....	151	90,459
October 1.....	152	89,123

In the Shenango Valley both Stewart furnaces are now at work, leaving only three in the entire district out of blast. Rosena has, during the past month, eclipsed its former record, rising to the position of one of the heaviest producers in the valley. There is nothing of special interest to report among the other Pennsylvania furnaces. In West Virginia, Irondale is out of blast, to resume on February 1. In the Mahoning Valley, Hannah stopped work on December 7.

Grace is still out, but otherwise the product of the district continues heavy. Among the furnaces grouped under Central and Northern Ohio we may note that the lining of one of the Cherry Valley furnaces fell in lately, causing a blow-out. Steubenville stopped work during Decem-

ber in order to make repairs. In the Hocking Valley production is heavier now than it has been for some time past. One of the new Floodwood furnaces is doing good work, its product being about 120 tons a day. In the Hanging Rock region no changes of any consequence have taken place. In Illinois one of the Chicago furnaces has blown in on spiegel, while in Wisconsin Mayville lost a week during the month by being banked. In Missouri one of the Missouri furnaces is still the only one at work, but the St. Louis Ore and Steel Company will start one of theirs about the 20th of this month. In the South there have been no changes of any consequence. The second DeBardeleben, No. 2 Sheffield and Birmingham, and the Trussville furnaces are expected to go into operation at an early date. The first named is waiting for the completion of additional boiler plant and the fifth engine. In Tennessee every one of the furnaces entered the year in full operation.

Washington News.

(From Our Regular Correspondent.)

WASHINGTON, D. C., January 8, 1889.

On next Monday week under the order of the Senate a vote should be taken on the substitute for the House tariff bill. The managers of the Senate measure are pushing their labors with the utmost possible expedition, and are still confident of taking a vote on the day fixed, although they are experiencing considerable opposition from some of their own members. Every point of objection and disagreement among the Republicans has been removed, except on the sugar provisions. The sugar Senators, like Stanford, Plumb and Cullom, are opposed to the 50 per cent. cut of the duty and substitute in part of bounty to producers, but will agree to 25 per cent. reduction pure and simple. They claim that while the theory of a bounty was proposed as early as in the report of Secretary Hamilton, it was suggested as a stimulus to certain home manufactures or productions as against foreign competition, but not for the purpose of cutting down duties at one end and putting on bounties at the other. Hamilton himself, in mentioning the subject of bounties as one of the methods of fostering industries, spoke of its convenience to fraud. The Western Senators, as a rule, oppose the bounty system as contrary to the prevailing views of the people of their section on the tariff legislation. In their arguments before the Committee on Finance, they pointed out the important fact that tariff revision in the West meant adjustment of duties to the actual necessities of protection of home industries and labor, and not to foster monopoly or unnecessarily sustain taxation.

The committee and the opponents of the sugar scheme of the Senate substitute have not yet come to an understanding. It is not improbable, however, that they will patch up some sort of a modification before they get through. Senator Aldrich said to-day: "The 21st of the present month is the time fixed for a vote, and we will take a vote on that day, but what kind of a vote we cannot say. It would be impossible just now to tell how the matter will end, as there are still disputed points undisposed of. We are confident, however, of reconciling everything and coming forward with united front when the bill is put upon its passage."

The metal schedule will go through without a change except in the amendments favored by the committee, as the increase of the tin plate duty from 1 to 2½ cents a pound and other points favorable

to the metallurgical industries. The Republican managers are specially anxious to get the bill over to the House in order to give the Committee on Ways and Means an opportunity to take a definite position on the subject for political purposes. The committee are ready to take it up at any time, but it is more doubtful than ever whether they will venture to permit a vote to be taken.

There is now little doubt as to an extra session. During the recent visit of Senator Hiscock to Indianapolis to submit the agreement of the big four as to the placing of Warner Miller and Thomas C. Platt officially, the President elect took advantage of his presence to ask a number of questions as to the outlook for the passage of a tariff bill. The Senator's prominence as a member of the sub-committee charged with the preparation of the Senate substitute and his familiarity with the subject enabled him to explain the situation very satisfactorily. The President expressed his desire to have something done not only to relieve the surplus, but to adjust duties to the conditions of trade and the needs of industry. The President elect also mentioned the necessity of disposing of the question without unnecessary delay, and seemed to intimate that unless some concurrent action were reached before the close of the present Congress it should be taken up promptly by an extra session of the next. General Harrison, in the matter of an extra session, has intimated to several Senators that he will defer largely to the views of Senators and Representatives. The candidates for the Speakership are generally in favor of an extra session, as they wish to close up the contest by bringing it to a speedy battle for the presiding office of the popular branch of Congress. The Eastern candidate, Reed, still holds the field for his section. The attempt to cause a diversion against Reed in the East by putting up Cabot Lodge, of Massachusetts, who was at once opposed by his own delegation, and Tom Bayne, of Pennsylvania, who said the use of his name was unauthorized, and that he was not and would not be a candidate, has failed. It has leaked out, however, that Mr. Reed cannot hold his Eastern strength after the first ballot in caucus, owing to an opposition from Maine through the friends of Mr. Blaine.

In the West the strength will be divided among McKinley, of Ohio; Cannon, of Illinois; Henderson, of Iowa, and Burrows, of Michigan. Developments within the past few days indicate a very decided change in the situation. The first indications were that Cannon would lead off in the number of votes, with McKinley, Henderson and Burrows following. But latterly certain contingent arrangements have been made which put Burrows in an excellent position to carry off the prize. The Eastern men when they break from Reed will go for him, and the Southern Republican vote, which will doubtless decide the day, is strongly for Burrows as matters now stand.

The election of Burrows would make the four rival candidates chairmen of the leading committees, according to their strength. Cannon at the head of Appropriations, Reed or McKinley at the head of Ways and Means, and the one left at the head of Elections, and Henderson in the chairmanship of Military Affairs. From all present indications, the Fifty-first Congress will be in session within six weeks and will remain so until July or August, on the tariff question and admission of the new States.

The activity of the candidates for the Speakership indicates what they think of the outlook. They are working over the field very effectually and bringing to their aid all the outside senatorial and political assistance they can muster.

Judging from a conversation with Mr. Blaine, that gentleman will take a quiet but active interest in the Speakership, and his friends are rallying about him to a degree which indicates that his residence in Washington will not be without its influence and significance, whether he take the premiership or not.

The Scottish Pig Iron Industry.

A writer in the *Iron and Steel Trades Journal* reviews the condition and progress in the Scotch iron trade in an interesting manner. Without attempting to vouch for the accuracy of the data given, we submit below the greater part of this communication:

Fifteen to twenty years ago Great Britain supplied over one-half of the pig iron consumed in the world, and of that large proportion Scotland produced the lion's share. Middlesboro' and the West Coast were then in their infancy. America 20 years ago produced about 1,500,000 tons, now she produces 7,000,000; Germany produced 1,000,000, now she produces 3,500,000; and the other countries have all greatly increased their output. This enormous increase finds its way into consumption, and therefore Britain could not now meet one-half of the demand of the world. In Scotland the consumption has increased to a greater extent than the production, and we find that now, if she consumed only her own production, she would have almost no pig iron to spare for export—not more than 100,000 tons. And while other countries in developing their iron resources have adopted their most economical methods, the Scottish ironmasters have not been standing still. In Middlesboro', with great beds of ironstone near their furnaces, it is supposed, indeed generally acknowledged, that in normal times iron can be produced in that district so as to supply consumers under 31/ to 33/6 per ton and leave a reasonable manufacturing profit. These figures may be slightly affected by the gradual consumption of the ores nearest the furnaces, entailing a heavier transit on the rest; also by the importation of large quantities of Bilbao ore; but they need not be materially altered. In examining how Scotland compares with these figures, it will be useful and instructive to examine the improvements and changes made during the last 15 or 20 years in her methods of production. While these changes may not, in all cases, have improved the quality of the products, they have certainly reduced the cost of manufacture. The first improvement consisted in raising the height of the blast furnaces from 45 or 50 to 60 or 80 feet, and resulted in a reduction of the consumption of coal to the extent of 5 to 12 cwt. per ton of iron made, thus reducing the cost from 1/3 to 3/ per ton of pig iron. The second improvement consisted in covering over the top of the blast furnaces, taking off the gases, and utilizing them for raising steam and heating the air to be used in the blast furnace.

The following advantages have accrued from this change: 1, the small coal formerly used for these purposes, amounting to from 7 to 14 cwt. per ton of pig iron made, is not now required; 2, the expense of firing is saved; 3, the air being more uniformly heated by the gas, the tear and wear of the heater pipes is not so great as formerly; and, 4, which is the greatest advantage, the air is more highly heated, as well as maintained at a more uniform temperature, thereby producing more iron and with a less consumption of coal. The saving under these heads will be from 2/ to 3/6 per ton of iron with coal and slack at their present values. At several works in Scotland the improved fire-brick stoves for heating the air have

displaced the ordinary pipe heater, and the result has been a further saving of 8 to 4 cwt. of coal per ton of iron. The third change—and here our remarks are not of general application—consists in putting into the furnace from 30 to 40 per cent. of cinder (tap and mill) from the malleable iron works, using this material to that extent in place of calcined ironstone or iron ore. This has reduced the cost of the pig iron to the extent of from 5/ to 6/ per ton.

The fourth improvement, which is perhaps the one of greatest interest, consists in depriving the gases before they are used for raising steam, &c., of their tar and ammonia. The result of this has been to secure tar and ammonia to the value of over 3/ per ton of coal put into the blast furnace, less about 1/ per ton for plant and expenses (see *Journal of Gas Lighting* of February 5, 1884). As somewhere about 2 tons of coal are used in the manufacture of 1 ton of pig iron, the saving thus effected will be about 5/ per ton. The gases after being so treated are said to be quite as useful for raising steam and heat as before.

The fifth improvement is the manufacture of coke from slack coal, obtaining from it in the process oil or tar and ammonia. In England these processes are now being successfully conducted, and the profit resulting is said to be very considerable. In one of the Ayrshire iron works a large plant to make coke and to secure the tar and ammonia has just been started. In one iron works in Scotland coke from gas works was lately used in the blast furnace, and is said to give fair results, the cost of producing iron being further considerably reduced. It is to be noted that the average make of the blast furnaces in Scotland has been increased 1500 tons per furnace per annum over the last 20 years. Another important change to note is the large quantity of Spanish ore now imported, at prices that 20 years ago would not have been thought possible.

It is suggested, in order to cheapen the process of iron making, that the ironmaster should sell or use for other purposes the large quantity of gas not required and allowed to go to waste. So far, then, as the cost of Scottish pig iron is concerned—i. e., pig iron made where no cinder is used—it is clear that in the working of the blast furnace alone a saving is being effected of about 10/ to 13/ per ton as compared with what could be done 20 years ago, and that a much larger saving is effected when iron is made from a mixture of iron ores and malleable iron works cinder. If our Scottish ironmasters but persevere on the lines they now are on they should be able to make pig iron much more cheaply than they are even now doing, and so produce a pig like Middlesboro' at a cost not much in excess of the cost of Middlesboro' f. o. b. Tees, and thus enable the Scottish masters to put their iron into consumption instead of into the public stores. In these remarks we have adopted as a basis the figures which prevailed for some time before the present unsettled state of labor increased the cost of production, but as this element exists in both the North of England and Scottish markets, the comparison itself remains unaffected.

Fifteen to twenty years ago 48/ to 50/ was considered a fair and safe price for Scottish G. M. B. warrants. Taking the above improvements into account, these figures represent now 36/ to 39/, less 3/ for the difference of storing expenses and the proportion of No. 1 iron necessary for warrant making, which gives foundry iron at 33/ to 36/, prices under which Middlesboro' foundry irons cannot at the present time be supplied to consumers here, taking into account the transit from Middlesboro' of 4/8 to 7/ per ton, according to the position of the Scottish works.

The question naturally arises, if the above be correct, How is it that the Scottish G. M. B. does not go more into consumption? To this there are three replies. First, consumers tempted by the formerly cheaper price of Middlesboro', had got into the habit of using it, and in many cases preferring it, while their foremen and workmen have become accustomed to the properties of the Middlesboro' iron; they are, therefore, naturally indisposed to change again to Scottish until they see a probability of a permanent supply at equal or more advantageous prices than Middlesboro' iron. Second, the iron is now going more into consumption here, and many consumers have recently begun to use Scottish instead of Middlesboro' iron, but the chief cause is that the Scottish G. M. B. iron, when put into store, is transferred into mere speculative counters, and the price is forced up or down, according to the "transactions of operators," without regard to the demands of trade, and without the slightest regard to its intrinsic value as an article of consumption. So long as the speculative public are prepared for merely speculative purposes to pay a price so much above its value as an article of consumption, so long will our G. M. B. iron be put into store, and the iron of other districts be put into consumption.

Naturally (unless some iron famine comes, which, with the present colossal power of production the world over, seems almost impossible) this will have an end some time. The speculative public, though large, is not unlimited, and its purse is not exhaustless. At the moment it requires, in one shape or another, over £2,000,000 to finance the stock of warrants. With interest, storage and other expenses, the speculative public pay £150,000 yearly, and, as the stocks go on daily increasing, the burden becomes daily greater. It is clear that until Scottish iron does go into consumption to the extent of its make the trade is not only in a false position, but the longer this is delayed the more serious will be the consequences. Banks and financing houses advance within a few shillings of the market price, and so assist in perpetuating the evil, but when the last feather is laid upon the camel's back, and the intrinsic value as an article of consumption has to be taken as the standard of its worth, instead of the purely speculative value, operators, banks and financiers may make some unpleasant experiences.

Practical Electricity, a Boston journal, says that files can be recut by cleaning them and placing them in acidulated water between two plates of carbon and closing the circuit so as to form a real voltaic cell. The hydrogen liberated clings to the points of the teeth of the file, protecting them from further action, but the cutting action proceeds freely over the remainder of the file. This process speedily brings back the teeth of an old file to the original shape and dimensions and does not merely sharpen them but practically recuts the file, without necessitating either softening or retempering the metal.

The work of lighting Hoosac tunnel has been completed, after a year's labor, 40 miles of lead-covered cables have been laid in wooden conduits in trenches on each side of the tracks. The power is supplied from two 125 horse-power boilers and a 125 horse-power engine, three dynamos each of 650 16-candle-light capacity, and two direct current machines.

The Pennsylvania Railway system is said to have added 13,000 cars to its rolling stock equipment this year, and yet has an insufficiency for its traffic.

TRADE REPORT.

Philadelphia.

Office of *The Iron Age*, 220 South Fourth St.,
PHILADELPHIA, Pa., January 8, 1889.

There is not much business to report so far in the new year, although matters appear to be developing favorably and the feeling is generally of a hopeful character. Some disappointment is felt at the tardiness in placing orders by many large consumers, but this is in some measure due to the uncertainty in prices. The feeling is unsettled and in some instances rather weak, although there is no quotable change in prices. A few low-priced lots have been taken off the market, so that the pressure to realize is not unusual, notwithstanding the fact that everybody stands ready to accept business at quoted rates. The impression is that things will get into shape by the end of the month, and that further weakness can only be of short duration. The amount of goods turned out in this great manufacturing city during 1888 is believed to be the largest in its history. The Baldwin locomotive Works turned out 737 locomotives during the year, 272 Consolidations, 275 Moguls and 10-wheelers, and 190 American and miscellaneous. They are still running full time, and have a large amount of work on hand for spring and summer delivery, besides a considerable amount of foreign work. Prospects are said to be very favorable, as they are receiving inquiries from roads that are likely to be large buyers in the near future. Prices are low, however, and as in other branches margins are said to be very close.

Pig Iron.—The market remains in a very dull and apathetic condition, with occasional offerings at prices somewhat less than ordinary quotations. But it cannot be said that there is any general weakness, as desirable brands command the old figures, say \$16 for Gray Forge, \$17.50 for No. 2 Foundry, and \$18.50 @ \$19 for No. 1, tidewater deliveries. The demand is not large, but up to this time has been sufficient to prevent inconvenient accumulations, or the necessity for lower figures. The future remains somewhat uncertain, although many of the leading concerns profess full confidence in the ultimate outcome. It is claimed that with the resumption of work, now becoming general, there must be an increasing demand for Pig metal, and that at the longest, two or three weeks more will bring a great deal of business into the market, and that with demand in proportion to consumption prices will soon resume a stronger tone. Comparatively little Iron has been used within the past two or three weeks, and as prices have not been greatly affected by the suspension of work, it is not unreasonable to expect that they will at least remain steady, now that resumption is beginning. This is the theory, at all events, and there is nothing definite in sight to lead to a contrary opinion. There is, of course, an accumulation of stocks at some of the furnaces, and there is a very large productive capacity in operation, and it may prove to be in excess of consumptive requirements; in which case prices must suffer eventually, but the chances are at least equal, if not slightly in favor of the more hopeful theory. Much will depend on the outcome of events during the next 30 to 60 days, which at the moment appear to be developing very favorably. Several important undertakings are in process of negotiation, which, if carried out, will throw a great deal of business into the market at once. Some of these are said to be virtually decided upon, so that it should cause no surprise

to see heavy buying almost immediately. As regards actual purchases of Pig Iron, we cannot find that any large orders have been placed so far, excepting some 10,000 tons of Southern Iron to Pipe foundries at about \$15, ex-ship, Philadelphia. As a matter of fact, all classes of buyers are moving slowly, taking small lots at current rates until they can see a little further ahead. Large orders could be had by sacrificing 50¢ to \$1 ½ ton, but for the present sellers—for the same reasons as buyers—prefer to keep things moving at current quotations, waiting for more light before deciding on their course.

Foreign Iron.—There is some little inquiry, but prices bid are so far from asking rates that there is but little probability of business being closed. Bessemer is nominally \$20, c.i.f. duty paid, and 20 % Spiegeleisen, \$27.

Blooms.—A fair demand for Steel, but prices are irregular, and for large lots probably somewhat easier. Ordinary quotations about as follows: Steel Nail Slabs, \$28.50 @ \$29, at mill; Billets, from \$32 to \$36, according to analysis; Charcoal Blooms, \$52 @ \$54; Run-out Anthracite, \$42 @ \$44; Scrap Blooms, \$32.50 @ \$34 ½ "bloom" ton of 2464 lb.

Muck Bars.—There is very little business to report, although there are free sellers at from \$28.50 to \$29, at mill. Buyers show no interest in the market at present.

Bar Iron.—Business has been very dull during the past four or five weeks, although prices have been fairly maintained in the majority of cases. Some of the mills that were in need of orders to start the new year with quoted as low as 1.75¢ for a good quality of Iron, but with prospects of a larger business, due to more inquiry from the best class of buyers, prices are a little firmer, 1.8¢ being an inside quotation, with 1.85¢ to 1.9¢ asked by those supposed to make a superior quality of Iron. The outlook is improving and there is a better feeling all around, based, as stated, on a better inquiry from large buyers. Skelp is dull and easier at from 1.82½¢ to 1.85¢ asked. Sales some days ago were made at 1.80¢ for 1000 tons of Grooved, which would likely be accepted again for a desirable order.

Plate and Tank Iron.—There is no improvement to report in this branch of the Iron trade. Some of the mills are quite busy, others are looking for orders, which at present are not to be found in quantity. Prices are weak, due very largely to the continuous competition from the West, particularly in Steel Plates. Quotations are nominally as quoted during December, but good-sized orders if offered would be taken at concessions of half a tenth, perhaps a tenth, if quantity, delivery, &c., made the order a desirable one. Asking prices as follows: 2¢ @ 2.1¢ for Ordinary Plates and Tank plates, 2.1¢ @ 2.2¢ for Universal Plates; Shell, 2.4¢ @ 2.5¢; Flange, 3.5¢; Fire-Box, 4¢; Steel Plates, Tank and Ship Plate, 2.25¢ @ 2.3¢; Shell, 2.7¢; Flange, 3¢ @ 3½¢; Fire-Box, 3½¢ @ 4½¢.

Structural Iron.—There is more inquiry for shapes, and prospects are said to be improving, especially for bridge work. A few fair-sized orders have been placed, but nothing important as yet. Beam manufacturers have reduced prices to 2.8¢ for Eastern deliveries as against 3.3¢, which has been the quotation for a long time. The encroachments made by the Steel companies have been so great that it was thought desirable to make ¼¢ lb reduction, and, in addition to that, there is a desire to start in on a low basis of prices, so as to give the building trade every possible encouragement for spring operations. Quotations are about as follows: Bridge Plate, 2¢ @ 2.1¢; Angles, 2¢ to 2.1¢; Tees, 2.4¢ to 2.6¢; Beams and Channels, 2.8¢ for Iron or Steel.

Sheet Iron.—Business is very dull at present, and only small lots are called for. On large orders special quotations would be made, but for small lots prices of best makes are as follows:

Best Refined, Nos. 26, 27 and 28.....	3½¢ @ 3½¢
Best Refined, Nos. 18 to 25.....	3 @ 3½¢
Common, ¼¢ less than the above.	
Best Bloom Sheets, Nos. 26 to 28.....	4½¢ @ 4½¢
Best Bloom Sheets, Nos. 22 to 25.....	4 @ 4½¢
Best Bloom Sheets, Nos. 16 to 21.....	3½¢ @ 3½¢
Blue Annealed.....	2.8 @ 3
Best Bloom, Galvanized, discount.....	.62½¢
Common discount.....	.67½¢

Merchant Steel.—Orders have come in quite freely, and in some instances a decided increase of business is noted. Prices are unchanged—viz.: Tool Steel, 8½¢; Machinery, 2.6¢; Crucible Spring, 4½¢; Crucible Machinery, 5¢; Best Sheet Steel, 10¢; Ordinary Sheet, 8¢.

Steel Rails.—The demand is still very slow, and inquiries from large buyers are not coming in at present. Prices are steady, however, \$28 at mill being a firm quotation. Sales are reported at about that figure, but only small lots are called for.

Old Rails.—There are sellers of T's for shipment at \$23.75 @ \$24, but buyers are not bidding over \$23, although spot lots would probably command 50¢ to 75¢ more. Sales at \$24.50, delivered at mills in the interior, with a fair demand at from \$24 to \$24.50.

Scrap Iron.—There is a fair movement in the interior, but not much doing in seaboard lots. Cargoes for shipment are offered at \$20.75 @ \$21, with buyers at \$20 @ \$20.50. General quotations are about as follows: \$21.50 @ \$22 for carload lots, delivered, or for choice \$22.50; No. 2 do., \$14 @ \$15; Turnings, \$13 @ \$14; Old Steel Rails, \$20 @ \$21; Cast Scrap, \$15 @ \$16; do. Borings, \$9 @ \$10; Old Fish Plates, \$25 @ \$26; Old Car-Wheels, \$17 @ \$18, Philadelphia, or its equivalent.

Wrought Iron Pipe.—There is more inquiry, and business is looking rather more hopeful. A good deal of cutting has been done during the past two or three weeks, but efforts are now made to maintain discounts, which are nominally as follows: Black Butt-Welded, 52½ ¢; Galvanized do., 42½ ¢; Black Lap-Welded, 62½ ¢; Galvanized do., 52½ ¢; Boiler Tubes, 60 ¢.

Nails.—There is no improvement to note in this department, and prices are very irregular, although standard brands are held at \$1.90 @ \$2. Outside lots are quoted at low prices for carload lots, but quality cannot be considered satisfactory.

Chicago.

Office of *The Iron Age*, 95 and 97 Washington street, CHICAGO, January 7, 1889.

Nothing has occurred in this market during the past week worthy of special mention or having sufficient significance to determine what the course of prices is likely to be for any length of time. An exception might be made in the case of Scrap Iron, as No. 1 Wrought has been offered at \$19.50 without takers, and a 50 ton lot is understood to have been sold at about \$18.50 by one city dealer to another; but these low prices may possibly indicate only the extreme dullness now prevailing, and not such a decided decline in the value of material as is here apparent. In Pig Iron and Old Rails transactions have been very limited. Bar Iron is in better demand than almost anything else in the list, and sellers are looking forward to a very good month's business for January at old prices. Plates are quiet, and dealers are making concessions to induce purchases. Nails and Barb Wire are without change. The wholesale Hard-

ware trade is quiet, most houses having their travelers at home receiving instructions for the new campaign about to be opened.

Louisville.

LOUISVILLE, KY., January 7, 1889.

Pig Iron.—The tendency of the market has been downward, and sales have been made at prices that we did not believe possible a short time ago. The trouble does not lay so much among buyers as among the representatives of outside furnaces. The present prices were not asked nor expected, but were brought about by one furnace's representative shading the market, followed by others, until the buyer became demoralized and did not know what to expect. At present the market has got into such a rut that many think it would be best for the bottom to be knocked clear out, so the reaction could come as soon as possible. There has been considerable selling during the week, and an active demand has sprung up, which will result in the placing of orders for long delivery if furnaces are willing to meet the views of buyers in this respect. We quote as follows:

Southern Coke, No. 1 Foundry, new classification.....	\$15.50 @ \$16.00
Southern Coke, No. 2 Foundry, new classification.....	15.00 @ 15.50
Southern Coke, No. 3 Foundry, new classification.....	14.50 @ 15.00
Gray Forge.....	14.00 @ 14.50
White and Mottled, different grades.....	13.50 @ 14.00
Silver Gray, different grades.....	13.75 @ 14.50
Southern Charcoal, No. 1 Foundry.....	16.50 @ 17.00
" " No. 1 Mill.....	15.25 @ 15.75
Southern Car-Wheel, standard brands.....	22.50 @ 23.50
Southern Car-Wheel, other brands.....	18.50 @ 20.00
Hanging Rock Coke, No. 1 Foundry.....	16.00 @ 16.50
Hanging Rock Charcoal, No. 1 Foundry.....	20.00 @ 21.50
Hanging Rock, Cold Blast.....	21.25 @ 22.25

Cleveland.

CLEVELAND, January 7, 1889.

Iron Ore.—Buyers and sellers are not very far apart regarding prices for Ore for 1889. It is confidently believed that actual sales will occur by the middle of the month. Certain furnacemen have asked the mine owners for prices on big blocks of Bessemer Ores, and asking prices will be established immediately after the yearly meetings of the score or more of mining companies. The existing low quotations for Rails account for the prognostications made in certain quarters that Ore quotations for 1889 will fall below those of the past year. To this assertion is now added the claim that the furnaces are stocked with Ore sufficient in amount to carry them along until the middle of the year. Lake freights will certainly be no higher than last year, and from present indications will fall from 5 to 10 % below. Considering all features of the situation, it is believed that Ore prices will not vary more than 15¢ or 20¢ per ton from those of last year. About 25,000 tons of Ore were shipped to the furnaces during the past week, and the amount of unsold Ore on the docks at all Lake Erie ports has been cut down to about 82,000 tons, as against 600,000 tons at a corresponding period last year.

Pig Iron.—The demand shows little improvement and is probably not quite as active as it was last week. Special grades of Iron have sold with considerable freedom, but standard Irons are dull. Lake Superior Charcoal Iron seems an exception to the general rule, and negotiations for fairly large orders of this grade are reported. Prices remain practically unchanged on account of the absence of stock piles. Furnacemen are careful about granting concessions for fear of affecting the tone of the whole market, which is reasonably sure to improve before Feb-

ruary. The following are cash quotations:

Nos. 1 to 6 Lake Superior Charcoal.....	\$20.50 @ \$21.50
No. 1 Strong Foundry, Bessemer quality, per ton.....	18.20 @ 19.00
No. 1 Strong Foundry, per ton.....	18.00 @ 18.50
No. 2 Strong Foundry, per ton.....	17.00 @ 17.50
No. 1 American Scotch, per ton.....	18.25 @ 18.70
No. 2 American Scotch, per ton.....	17.20 @ 17.70
No. 1 Soft Silvery, per ton.....	18.50 @ 19.00
Mahoning and Shenango Valley Neutral Mill Irons, per ton.....	16.00 @ 16.50
Mahoning and Shenango Valley Red Short Mills, per ton.....	17.00 @ 17.50

Scrap Iron.—Car-Wheels have sold freely during the week, but Rails are still in scant demand, the price for Old Americans remaining at \$24 @ \$24.50, with a few scattering sales at the latter figure.

Manufactured Iron.—The sale of 2000 tons of Bar Iron is reported to have occurred during the first week in January, the consideration being 1.65¢. The demand at present, however, is weak, and there are few sales, even at 1.60¢. Sheets and Plates are also weak.

Cincinnati.

Office of *The Iron Age*, Fourth and Main Sts. CINCINNATI, January 7, 1889.

Pig Iron.—A weak tone has prevailed during the week for Pig Iron, and lower prices have been accepted. The period of prosperity enjoyed by the furnaces for a brief time has stimulated the old plants long idle and also multiplied new stacks in the South, until now the output of Pig is too great to be readily absorbed by the consumptive trade, although the wants of the country have increased materially during the past few months. Evidence of supplies beyond immediate wants, however, has given buyers courage to hold out for lower prices, and, with increased pressure to sell, the apparent overproduction is increased beyond the actual facts. There is but little doubt that purchases made within a short time, but for long delivery, will prove profitable to buyers; but, for the time being, the market is weak, if not demoralized, and buyers are naturally induced to make only such purchases as they may require for current wants. The result is that but few large transactions have been made during the week, the largest reported being for 2000 tons No. 2 Foundry Iron, and even that has been in course of consumption over a week. The following are the approximate prices current here at the close for cash, f. o. b.:

Foundry.	
Southern Coke, No. 1 (new classification).....	\$15.75 @ \$16.25
Southern Coke, No. 2 (new classification).....	15.00 @ 15.50
Southern Coke, No. 3 (new classification).....	14.25 @ 14.75
Ohio Soft Stone Coal, No. 1.....	16.50 @ 17.00
Ohio Soft Stone Coal, No. 2.....	15.50 @ 16.00
Mahoning and Shenango Valley.....	17.00 @ 18.00
Hanging Rock Charcoal, No. 1.....	21.00 @ 22.00
Hanging Rock Charcoal, No. 2.....	19.00 @ 22.00
Tennessee and Alabama Charcoal, No. 1.....	18.00 @ 18.50
Tennessee and Alabama Charcoal, No. 2.....	17.00 @ 18.00
Forge.	
Strong Neutral Coke.....	14.00 @ 14.25
Mottled Neutral Coke.....	13.00 @ 13.25
Gray Forge.....	13.25 @ 13.75

Car-Wheel and Malleable Irons.	
Southern Car-Wheel.....	20.00 @ 25.00
Hanging Rock, Cold Blast.....	22.00 @ 25.00
Lake Superior Car-Wheel and Malleable.....	21.00 @ 22.00

Manufactured Iron.—An easier tone has prevailed, in sympathy with Pig Iron, and some mills are reported to have cut rates, but the majority adhere to old quotations, with a moderate volume of business.

Old Material.—The market has been without animation and easier in tone; the offerings have increased some, but there has been no marked pressure to sell. Old Rails are quotable at \$22.50 per ton, and Old Wheels are saleable at \$19.50, spot cash.

Nails.—The demand has not increased, and an easy time has prevailed; 12 @ 40d sell at \$1.90 @ \$1.95 per keg, with 10¢ rebate in carload lots at the mills; 50 @ 60d 25¢, 10d 10¢, 8 @ 9d 25¢, 6 @ 7d 40¢, 8d \$1, and 2d \$1.50 per keg more. Steel Nails sell at \$1.90 @ \$1.95, and Steel Wire Nails at \$2.60 @ \$2.65 per keg.

Pittsburgh.

Office of *The Iron Age*, 77 Fourth Ave., PITTSBURGH, January 8, 1889.

The outlook for the new year is generally regarded with favor. It is generally believed that 1889, so far as it relates to the great interests represented by *The Iron Age*, will be fully equal to that of 1888, and in some respects there is reason to believe it will show an improvement.

The decision of the Supreme Court of the State in regard to the Allegheny Heating Company vs. Allegheny City, is regarded as a victory for the natural gas companies, deciding as it does that the courts cannot interfere in regard to the charges for natural gas, that that is a matter which must be adjudicated between the parties in interest. In other words, if the gas consumer is dissatisfied with the price demanded by the gas company his remedy is to go back to coal, which but very few of them care to do, and the gas companies are aware of this. The Philadelphia Gas Company recently issued a circular to large consumers to economize in the use of the gas, intimating that a very large percentage was wasted. Jones & Laughlins are putting down a gas line of their own, and it is probable that other large consumers will do likewise.

Pig Iron.—Market dull, but there will no doubt be an improvement before the close of the present year. The recent break, which was generally unlooked for, has unsettled the market; buyers are disposed to hold off in anticipation of a further decline, while furnacemen are refusing to make any further concessions. Furnacemen can see no way by which cost of production can be reduced. There is but comparatively little Iron offering here by furnaces at a distance. We quote prices as follows:

Neutral Gray Forge.....	\$15.25 @ \$15.50, cash.
White and Mottled.....	14.50 @ 15.00, "
All Ore Mill.....	16.00 @ 16.25, "
No. 1 Foundry.....	17.50 @ 17.75, "
No. 2 Foundry.....	16.75 @ 17.00, "
No. 2 Charcoal Foundry.....	21.50 @ 22.00, "
Cold Blast Charcoal.....	25.00 @ 26.00, "
Bessemer Iron.....	17.00 @ .., "

Good brands of Gray Forge are offering freely at \$15.50, cash, although some furnacemen are refusing to sell at that price. So far as we can learn there have been no sales of standard brands of Bessemer below \$17, cash, at which price it is freely offered.

Muck Bar.—Continues very dull, and prices are weak, in sympathy with Pig iron; it is offering freely at \$28.50, cash, and it is rumored that sales have been made as low as \$28, cash. One mill, running almost entirely on Muck, has shut down for the time.

Spiegel Eisen.—Spiegel 20 % is still quoted at \$28 @ \$28.50. Sales 150 tons Ferromanganese 80 % at \$54.50 @ \$55.

Manufactured Iron.—The demand for all kinds of Merchant Iron continues light, but it is expected that there will be an improvement before the close of the present month. Prices are still quoted on a basis of \$1.75 @ \$1.80 for Bars, 60 days, 2 % off for cash. Skelp Iron is quoted at \$1.70 @ \$1.75 for Grooved and \$1.90 @ \$1.95 for Sheared.

Nails.—There is no improvement to note in the Nail trade here. Pittsburgh manufacturers still refuse to sell below \$1.90 for 12d to 40d, 60 days, 2 % off for cash, while in the Wheeling district the card is 10¢ per keg less, or \$1.80, 60 days, 2 % off. Some of the factories in the

Wheeling district have large contracts for future delivery, but the Pittsburgh factories are doing nothing, or next to it.

Wrought-Iron Pipe.—The Wrought-Iron Pipe trade continues devoid of animation, although all, possibly, that can be expected at this time and under existing circumstances; prices continue irregular; it is difficult to give reliable quotations, as it is an open market. Discounts may be given as follows: On Black Butt-Welded Pipe, 52½ and 5%; On Galvanized do., 45 and 5%; on Black Lap-Welded, 62½ and 5%; on Galvanized do., 52½ and 5%; 2-inch Tubing, 13¢ per foot, net; 5½-inch Casing, 37½¢.

Old Rails.—There is less inquiry, and the market is weaker. We quote at \$24.50 @ \$25, with a sale of 1000 tons reported at \$24.50. The continued mild weather is an element of weakness to the market, as the work of lifting has not yet been stopped, as it was expected it would have been before this, and then the fact that there is so little difference between the cost of new Steel and the price of Old Iron Rails that there are more being taken up than there otherwise would have been. It is an easy matter for railroads having Old Iron Rails to replace them with new Steel Rails when the former are worth within \$3 as much as the latter.

Steel Rails.—We are advised of some small sales at \$28, cash, at mill, at which price the market is steady for lots of from 1000 to 5000 tons. When it comes to larger blocks it is probable that the price quoted would be discounted somewhat.

Billets, &c.—There is not much inquiry at present for Bessemer Steel Billets, and they are quoted weak at \$28.50, cash. Nail Slabs are quoted at \$27.75 @ \$28; Domestic Bloom and Rail Ends, \$19 @ \$19.50.

Railway Track Supplies.—There is not much inquiry at present, but there may be an improvement in the demand before long. No change in prices. Spikes, \$2.10, 30 days; Splice Bars, \$1.80 @ \$1.85; Track Bolts, \$2.80 with Square and \$2.90 with Hexagon Nuts.

Old Material.—There is no improvement in demand, and no important change in prices. Sales No. 1 Wrought Scrap at \$21 @ \$21.25, net ton; Wrought Turnings, \$14 @ \$15; Car Axles, \$25 @ \$26; Cast Scrap, \$15.50 @ \$16, gross; Cast Borings, \$12 @ \$13; Car-Wheels, \$20; Old Steel Rails, short pieces, \$18.50; long lengths, \$20.50.

Chattanooga.

Office of *The Iron Age*, Carter and 9th Sts., CHATTANOOGA, January 7, 1889.

Pig Iron.—The new year, so far, has not developed anything new, and matters are running along about as they have been doing the past few weeks. One of the most unfavorable signs at present is the continued accumulation of stocks at some of the furnaces. While some of the furnaces are keeping their yards entirely bare, others are piling up Iron, chiefly because they are not getting the price they ask, and are putting it away. Of course the condition of prices in the future will much depend upon the action of these parties. If they have the backbone, fortified with plenty of money, to hold their output, there will not be much change in prices in the near future, and should there be the active demand for consumption that everybody seems to expect, the Iron will be quickly absorbed without disturbing the market. Sales or shipments that are now being made (without reference to previous contracts) are now realizing from 50¢ to \$1 less per ton than, say, two or three months ago, and upon these prices the market is quite active, with sales in round lots of 500 to 2000 tons; two sales, aggregating 1200 tons, of Nos. 1 and 2

Foundry, to go to Denver, were made a few days ago at private terms. Southern foundries have commenced sending in their orders quite freely, and a good demand is looked for from that quarter.

Detroit.

WILLIAM F. JARVIS & Co., under date of January 7, 1889, report as follows: The active demand which was so confidently expected on the opening of the new year has not been fully realized. While sellers are not trying to force sales, the fact of one sale of 10,000 tons of Southern Gray Forge for delivery running through 1889 having been made at a very low figure has given buyers the impression that prices on Coke Irons will not advance, as has been generally predicted, and that a lower level is likely to be reached. Considerable inquiry for Lake Superior Charcoal is being made, and some orders for round lots have been taken for delivery during the next three or four months. While the market is not buoyant, yet on most grades prices are still held firm, and we quote as follows:

Lake Superior Charcoal, all numbers.....	\$20.00 @ \$20.50
Lake Superior Coke, all ore.....	19.75 @ 20.25
Lake Superior Coke, cinder mixed.....	18.00 @ 18.50
Standard Ohio Black Band.....	19.75 @ 20.25
Southern No. 1.....	17.75 @ 18.25
Southern Gray Forge.....	15.25 @ 16.25
Southern Silvery.....	17.00 @ 17.50
Jackson County (Ohio) Silvery.....	18.50 @ 19.00
Old Wheels.....	20.25 @ 20.75

Coal Market.

The Anthracite Coal trade is very dull, and producers appear to be fully alive to the situation threatening their interests, from the fact that restriction at the mines is now severely enforced to prevent accumulation and uphold prices. For the week ended December 29 the total production was only 474,382 tons, not one-half as much as was sent to tidewater during some weeks in the autumn months. Compared with the preceding week the decrease is 144,000 tons, and compared with the corresponding week last year the decrease is 104,000 tons. The aggregate for 1888 to the 29th ult. is 38,111,923 tons, against 34,866,870 for the same time in 1887—increase about 4,300,000 tons. The *Philadelphia Ledger* says: "There is very little inquiry at present for Coal, excepting from the iron furnacemen in the Schuylkill and Lehigh valleys, some of whom are clamorous for the Furnace sizes, and have been compelled to use Broken Coal to mix with Lump and Steamboat. While lump Coal is in urgent request, owing to the large number of iron furnaces now in blast, yet that size commands only \$2.10 per ton at the mines from the furnacemen, while other consumers are asked to pay \$2.75 per ton. The contracts for supplying the iron furnaces are filled almost entirely by the larger producing companies, who are enabled to sell their Coal at that figure because their railroads get the haul on Iron Ore, Limestone, &c., and Pig Iron to and from the furnaces. Recently, some individual mine operators have been reported as refusing to fill orders for Lump Coal at \$2.10, preferring to rebreak their large Coal into the domestic sizes, which are said to yield a better return, but we are informed that an individual has been furnishing Lump Coal to the Phoenix Iron Company at \$2 at the mines, which is unusually low. The Traction Company of Philadelphia, closed a contract for 10,000 tons of Pea at, it is stated, \$2.80 per ton. New York quotations are unchanged. Individuals outside cut prices an average of about 25 per cent.

The Bituminous Coal market is dull and fully supplied. Another meeting of the Seaboard Association was held to discuss plans with reference to the Coal

pool to go into operation March 1, but the adhesion of the Beach Creek Company was not received. Cumberland shipped last week 81,000 tons and Clearfield 51,000 tons.

Barges and canal boats in the future, when traversing other than inland waters, must take out from the Custom House of the port in which they are owned regular official Government papers of registration. The decision of the Treasury affects all railroad barges traversing Long Island Sound, and causes much feeling.

New York.

Office of *The Iron Age*, 66 and 68 Duane street, NEW YORK, January 9, 1889.

Foundry Pig.—The week has been very uneventful, no announcement of opening prices having yet been made. Reports from consumers vary widely. Some foundries are rushed with work, others have little or nothing to do. Bids have been asked for the Iron for a lot of 4000 tons of castings for a purpose which has not yet been revealed. There is considerable complaint of cutting, on the part chiefly of Southern producers, \$17 for No. 1 and \$16.25 for No. 2 being named as having been done. It is asserted, however, that this is for unknown brands and for irregular grades. We quote standard Northern No. 1 Foundry \$18 @ \$19, and No. 2 \$16.50 @ 17.

Scotch Pig.—Except for the fact that a 150-ton lot of Scotch Iron, sent on consignment, is somewhat eagerly seeking a purchaser, there has been nothing of interest. We quote: Coltness, \$20.50 @ \$21; Shotts, \$20.25 @ \$20.75; Langloan, \$20.25 @ \$20.50, Summerlee, \$20.50, asked, and Dalmellington, \$19.50 @ \$19.75.

Spiegel Eisen.—The market is difficult to quote, the prices abroad differing widely according to the condition of the business of each individual maker. Scarcity of Manganiferous Ore and a good European demand are stated to be the causes of higher asking prices. The only sale of any consequence reported is a lot of 1000 tons of 80%, at private terms. We quote nominally \$28 @ \$29 for English 20%; \$33 @ \$34 for 30%, and \$55 @ \$55.50 for 80% Ferromanganese.

Plates.—We quote Iron Tank, 2¢ @ 2.2¢; Shell, 2.25¢ @ 2.4¢; Steel Tank and Ship Plate, 2.15¢ @ 2.25¢; Shell, 2.35¢ @ 2.5¢; Flange, 2.6¢ @ 2.75¢, and Fire-box, 3¼¢ @ 4¢.

Structural Iron.—The great event of the week has been the reduction in the combination price of Beams and Channels from 3.3¢ to 2.8¢, delivered. We discuss the subject editorially. We quote Sheared Plates, 2¢ @ 2.1¢; Universal Mill Plates, 2.1¢ @ 2.2¢; Angles, 2¢ @ 2.10¢; Tees, 2.5¢ @ 2.6¢, and Channels and beams, 3.3¢ on dock for all sizes.

Bar Iron.—We quote: Carload lots on dock, half extras, Common; 1.7¢ @ 1.75¢; Medium, 1.75¢ @ 1.8¢, and Refined, 1.8¢ @ 2¢.

Steel Rails.—There have been only a few small sales at private terms, for Southern delivery. The market is dull, with nominal quotations at \$28 at Eastern mill. It is stated that the cutting of this price is disguised by the guaranteeing on the part of the mills of exceptionally low freight rates, on which they must finally adjust differences.

Merchant Steel.—The market continues weak, with a very moderate volume of business. We quote Tire Steel 2.05¢ @ 2.15¢ delivered, 60 days flat, for ½" and heavier. Spring Steel, 2.25¢ @ 2.50¢; Machinery, 2.15¢ @ 2.25¢, and Shafting Steel, base sizes, 2.2¢ @ 2.25¢.

Wire Rods.—Some business has been done between \$41 and \$41.25, and \$41.50 @ \$42 is now asked. Low sellers abroad are out of the market, and some of them have turned to other forms of Steel, which they claim pays them better than Rods even at present prices.

Old Rails.—In the absence of business we continue to quote, nominally, \$23 @ \$23.50 for Tees.

Track Material.—We quote Spikes weak at \$2.10 @ \$2.15, and Angle Bars, 1.85¢ @ 1.9¢, delivered.

G. W. Stetson & Co., 69 Wall street, this city, and Edmund D. Smith, & Co., of 222 and 224 South Third street, Philadelphia, have been appointed exclusive sales agents of the Pig Iron produced by the DeBardeleben Coal and Iron Company, of Bessemer, Ala. A feature in the manufacture of this Iron is that the furnaces have six Pig beds, so that each cast is allowed to cool naturally, thus avoiding the chilling tendency from artificial cooling.

Metal Market.

Copper.—Since our last week's report London suddenly improved with Chili Bars on the spot to £78. 10/, an advance of 25/, but has since dropped back to £77. 15/, futures remaining £78 for both Chili Bars and good merchantable, and the latter being called £77. 15/ against £77. 5/ a week ago; sales 520 tons. Best selected gave way from £80 to £79. 10/. The market is wholly inactive here at nominally 16½@17½¢ spot; for near futures, 17½@17½¢ is asked and 17¢ bid. The syndicate was estimated to hold 110,000 tons of Copper in Europe on the 1st instant. The Lake Copper production last year is figured at nearly 86,000,000 lb Fine against 75,471,800 the previous year, and 79,890,798 lb in 1886.

Tin.—Has been looking up again in London after the first bad effect of unfavorable statistics was overcome. The visible supply in Europe and America on the 1st inst. was 13,878 tons, against 12,478 on December 1, 1888, and 18,094 on January 1, 1888. From £97. 17/6 London rose last week to £98. 15/ this morning, and futures from £98. 12/6 to £99. 10/. Sales 500 tons. The only sales which transpired in this market were 10 tons spot, at 22¢, and 10 tons February at 22.15¢. Spot closes to-day at 21½¢ @ 22¢. As per cable direct from Gilfillan, Wood & Co., Singapore, to Mr. Charles Nordhaus, East India agent, 89 Water street, New York, the shipments of Tin from the Straits Settlements to the United States in December last were 1200 tons, against 600 the previous year; to England, 2090 and 1500 respectively; total last year this way, 3850, against 4250 in 1887, and 18,900 against 17,280, to England. Thus the aggregate shipments run up 22,750 tons in 1888, as compared with 21,000 tons in 1887; increase, 1250 tons, which certainly is less of an increase than might have been expected, and may therefore be looked upon as a favorable statement.

Tin Plates.—Though not more active, Tin Plates have been held with greater firmness in view of a Birmingham meeting of makers to come off to-morrow. We quote at the close, large lines, 3 box: Siemens-Martin Steel, Charcoal Finish, \$4.75 @ \$5.50; Coke Finish, \$4.65 @ \$4.70; Terns, \$4.12½ @ \$4.25; Coke Tins, \$4.22½ @ \$4.30; and Wasters, \$4.12½ @ \$4.15. Liverpool is unaltered, 13/3 Coke. The total exports from England to this country during the first 11 months of last year have been 271,037 tons, against 247,042 in 1887 and 242,130 in 1886, as per Board of Trade returns.

Lead.—On the 3d inst. 830 tons of Common Domestic Lead were sold at auction at 3.85½¢ and 3.86¢ to a dealer who

thought perhaps he could make a good thing of it till the money was due, to-morrow, but the market soon after weakened again and 200 tons were sold at private sale in the open market at 3.90¢ @ 3.85¢, the latter figure now being bid and no more. The Western markets are 3.55¢. In London, meanwhile, Soft Spanish has been steady at £13. 2/6, while English Pig improved from £13 to £13. 5/.

Spelter.—Has been featureless and dull at 5¢ for Domestic, and 5.90¢ @ 6¢ for Silesian, the latter rising in London from £18. 5/ to £18. 12/6, because of the prospects of a renewal of the International Syndicate agreement in Europe for three years and a half, to date from July 1 next.

Antimony.—With a moderately active demand, there is no change since our last; we quote Cookson 13¢, and Hallett 11¢, the latter remaining £45 in London.

Financial.

Financially, the most important event of the week was the adjourned meeting of the bankers and railroad presidents in this city, to devise a plan for the prevention of rate wars in future and to bring the roads represented into permanent adjustment with one another upon a remunerative basis. The presidents renewed their determination to maintain rates, and in furtherance of this object a committee was appointed to prepare the necessary papers, also to confer with the Interstate Commerce Commission as to the legalities of any plan that might be proposed. The committee, to report on Thursday (to-day), are: President Charles Francis Adams, Union Pacific; Vice-President Frank S. Bond, St. Paul, and President William B. Strong, Atchison. One of the bankers who attended the conference said: "The work is already done so far as the prevention of rate wars is concerned. You will hear of no more rate wars. Before the term of the present preliminary agreement expires the formal plan will be put into operation."

For the first week in the new year trade has been good, considering the adverse weather conditions, and indications generally are of a hopeful character. The weekly compilation of bank clearances in all the leading cities shows a gain of 14.3 % in the volume of business compared with the corresponding week in 1888, and this notwithstanding the quietness in most of the speculative markets. In New York City the increase was 18.8 %, and outside of New York 7 %. Special activity is noticed in San Francisco, Minneapolis, Denver and Kansas City. The larger Atlantic cities all show moderate gains, while there is a decrease at New Orleans, Galveston and Norfolk. In New York among dry goods jobbers the week has been one of readjusting and preparation, with a firm market, an increasing number of buyers present, and in prints and some descriptions of woolen goods there is a slight advance. Grocery jobbers notice an uncertain feeling, but coffee started the year with a boom, but afterward sold off; sugars tend steadily downward; teas hold a strong position. Cotton advanced ¼¢ @ ½¢ lb, but shows reaction on large port arrivals. Provisions are irregular under speculative influences, with increased exports, comprising heavy shipments of lard and bacon. Flour fails to find an outlet to any extent on export demands. A feature in wheat was the taking of 48,000 bushels at Baltimore for Antwerp. Corn is going out in large quantities. About 3,500,000 bushels are under contract at Baltimore. A well-known grain exporter, who returned from a six months' absence on the other side, said the English markets can get along without our wheat for

three months more, and by that time the wheat exporting countries south of the equator will be in the world's market with a new crop, so that there is some new source of supply to draw from the year around, instead of six months between crops north of the equator, when Europe was dependent upon America, as formerly. At Washington there is talk about a permanent tariff commission, to avoid injury to business interests arising from continued agitation in Congress.

The Stock Exchange markets were variable, and showed little improvement. Much stress was laid upon the conference of the presidents of the roads and leading bankers, noted above, in expectation that there would be a full explanation of the trouble which led to the cuts by the Missouri Pacific and Rock Island last week, and that additional measures would be adopted looking to a closer adherence to the rate schedules in future.

The weekly statement of the associated banks showed an increase of \$1,051,750 in surplus reserve, which now amounts to \$7,333,100, against \$10,826,725 at the corresponding time last year and \$14,786,675 in the second week of January, 1887. The comparison is still unfavorable, but this fact is without significance in the present state of the money market. In loans there was an important expansion of \$3,538,500. Specie increased \$511,200, and the further effect of the flow of currency from the interior was seen in the increase of \$2,691,000 in legal tenders. The feature of the statement was the increase of \$8,601,800 in deposits, which is accounted for by the large corporation payments for interest, dividends, &c., during the week. Money has been gradually growing easier, and is now about normal. Quotations for time loans on prime security were 4 @ 4½ %, 60 to 90 days, and longer dates 5 @ 5½ %. Commercial paper is less active, and in very moderate supply.

The imports of merchandise at this port during the week were much larger than for the corresponding week in several previous years, the total valuation being nearly \$12,000,000, of which \$3,370,000 represents dry goods.

According to the custom house report the exports of specie from this port last week were \$412,000 and the imports were \$63,000.

The Sugar Trust and all other trusts received a severe blow on Wednesday in the decision of Justice Barrett, of the Supreme Court, declaring that the North River Sugar Refining Company, one of the principal parties in the combination, had forfeited its charter.

British Iron and Metal Markets.

[Special Cable Dispatch to The Iron Age.]

LONDON, WEDNESDAY, January 9, 1889.

There have been no new developments in the market for Block Tin, and the movements of prices are attributed mainly to the drift of sentiment as swayed by statistical exhibits and reports as regarding the movement from the East. Large shipments last month increased the visible supply about 1000 tons, and encouraged "shorts," but the natural effect of this was partially offset by good control of spot supplies by a comparatively few firms. Speculation is confined within a narrow circle, for the most part, and consumers' purchases are gauged almost wholly by imperative wants.

A demand for cash Chili Bar Copper warrants to cover sales of futures that

matured the early portion of the month led to an advance in the same to £78. 10/, futures meanwhile remaining stationary at £78. Since these wants were covered the price has shown a weaker tendency. Speculation is still of a contracted character. Purchases for consumption are restricted to absolute need, as manufacturers have not the confidence in the stability of prices to stock up anyway liberally in view of the statistical position. The syndicate has reduced its buying price for "good Merchant brands" 5/.

In the Tin Plate market the situation has not changed. Makers are inclined to firmness in view of the condition of the market for Bars, and for Block Tin, but the demand is hesitant and buyers' views are low. There is a general inclination to await the quarterly meeting before accepting orders of any considerable volume. The stock at British shipping ports is estimated at 308,000 boxes, against 208,000 a year ago.

Transactions in Pig Iron warrants have been moderate and reflect some lack of confidence in an important advance in prices with the stocks as large as at the present time. The rate charged for carrying also tends to check outside buying to no little extent. Makers' brands have had fairly active sale, but at rather lower prices. Middlesboro' Pig and Hematites are lower, however, and not as firm as last week.

In the Steel trade business continues brisk for the most part, and prices are very firm throughout. Makers ask 2/6 advance on Billets, Wire Rods and Crop Ends.

Scotch Pig.—A fairly active business, but at somewhat irregular prices.

No. 1 Coltness, f.o.b. Glasgow	51/
No. 1 Summerlee, " "	50/
No. 1 Gartsherrie, " "	49/
No. 1 Langloan, " "	50/
No. 1 Carnbroe, " "	44 7/8
No. 1 Shotts, " at Leith	49 7/8
No. 1 Glengarnock, " Ardrossan	48/
No. 1 Dalmeilington, " "	43 7/8
No. 1 Eglinton, " "	42/

Steamer freights, Glasgow to New York, 4/, Liverpool to New York, 10/.

Cleveland Pig.—Trade has been rather slow, but prices have not varied materially. No. 1 Middlesboro', G. M. B., 36/; No. 3 do., 33/9.

Bessemer Pig.—The demand has fallen off and prices are not as firm. West Coast brands, mixed numbers, 45/, f.o.b. shipping point.

Spiegeleisen.—There continues to be a fairly active demand and prices are firmly held. English 20 % quoted 80/, f.o.b. N. W. England shipping point.

Steel Rails.—The demand continues active and the market strong, without, however, any positive change in prices. Heavy sections quoted at £3. 19/6 @ £4, and light sections £4. 2/6 @ £4. 10/, f.o.b. at N. W. England shipping point.

Steel Blooms.—For these the demand is moderately active and the market firm. We quote £3. 18/6 for 7 x 7, f.o.b. at N. W. England shipping point.

Steel Billets.—Demand active and the market strong, with 2/6 advance, asked Bessemer, 2 1/2 x 2 1/2 inch, £4. 5/, f.o.b. at N. W. England shipping point.

Steel Slabs.—There is a good business at firm prices. Bessemer, £3. 18/6, f.o.b. at N. W. England shipping point.

Old Rails.—The market has remained quiet, and former prices are named.

Tees quoted at £3. 5/ @ £3. 6/, and Double Heads, £3. 8/ @ £3. 10/ c.i.f. New York.

Scrap Iron.—But little doing and prices unchanged. Heavy Wrought quoted at £2. 2/6 @ £2. 5/, f.o.b.

Crop Ends.—Supply on offer is moderate and held at higher prices. Bessemer quoted £2. 10/ @ £2. 12/6, f.o.b.

Tin Plate.—The market has been quiet pending the quarterly meeting. We quote, f.o.b. Liverpool:

IC Charcoal, Allaway grade	15/3 @ 15/6
IC Bessemer steel, Coke finish	12/6 @ 13/9
IC Siemens	13/3 @ 14/
IC Coke, B. V. grade	13/3 @ 13/6
Charcoal Terne, Dean grade	12/ @ 12/6

Manufactured Iron.—There is a good trade in all branches at steady prices. We quote, f.o.b. Liverpool:

Staff. Ord. Marked Bars	£ s. d. @ 8 2 6
Common	£ s. d. @ 5 12 6
Staff. Blk Sheet, singles	£ s. d. @ 7 12 6
Welsh Bars (f.o.b. Wales)	£ s. d. @ 5 2 6

Tin.—The market moderately active. Straits quoted at £99. 5/, spot, and £99. 15/ for three months' futures.

Copper.—Speculation livelier in cash Chili Bars. Otherwise the market quiet. Chili Bars, £77. 15/, spot, and £78, three months' futures. Best Selected, £79. 10/.

Lead.—A fairly active demand and the market firmer. To-day's quotation, £13 for Soft Spanish.

Spelter.—The market firmer with demand good. Quoted at £18. 10/ for ordinary Silesian.

CHILI.

VALPARAISO, November 9, 1888.—**Copper.**—In spite of the favorable cable advices from England holders have been compelled by the rise in exchange to lower prices. The amount offered has not been large, as nearly the entire output of the year is now disposed of, sales thus being limited to 17,210 quintals at \$28 for Urmeneta, and \$28.30 for Lota, \$27.65 equaling £76. 14/ per ton, with 27/6 steam freight. **Nitrate.**—Some 587,000 quintals, mostly December-January shipment, have been sold at sustained figures, for the most part at \$2.95 for 95 %, which equals 9/6 1/2, with 32/6 freight. Little has been done for the United States, the limits being too low. The October shipments reached 79,000 tons for Europe, and 7000 for the United States, while there were loading on the 1st inst. 112,000 and 3500 tons respectively, the fortnight's charters being 25,000 and 2000. Coal continues improving; Newcastle, September sail, has been paid 41/, and Australian, January sail, 38/. **Exchange, bank drafts, 90 days' sight, are quoted 2 1/2 d.—Weber & Co.**

EAST INDIES

MANILA, December 31, 1888.—**Hemp.**—Our market is quiet at \$15 per picul, against \$9.75 last year, equaling £51. 15/ per ton, cost and freight, against £34. 7/6. The clearances for the United States since last cable have been 3000 bales, against none last year; since January 1, 241,000, against 246,000; there remain loading 25,000, against 12,000; cleared for England since January 1, 348,000, against 225,000; loading for do., 7000, against 3000; cleared for all other countries, 71,000, against 46,000. Receipts at all ports since January 1, 654,000 bales, against 527,000 and 398,000. **Freight, £7.50, against \$5.50. Exchange, 3/8 1/2, against 3/8.—Ker & Co., per cable direct to their agent, Mr. Charles Nordhaus, 89 Water street, New York**

COLOMBO, Ceylon, November 20, 1888.—**Plumbago.**—A moderate amount of trade has been transacted at sustained figures, which may be quoted at the close as follows, in rupees per ton:

Large Lumps, 145 @ 170; Ordinary Lumps, 125 @ 160; Chips, 80 @ 95, and Dust, 40 @ 65. There have been shipped since October 1 to England, 11,419 cwt.; to Hamburg, 851; to Antwerp, 609; to Australia, 38, and to the United States, 5389; together, 18,236 cwt., against 41,778 last year, 36,012 in 1886, and 26,874 in 1885. **Coir Yarn, Nos. 1 to 4, may be quoted 7 to 12 rupees per cwt. Exchange.**—We quote six months' sight credits, 1/5 1-16.—**Volkart Brothers, through their agent, John W. Greene, 82 Wall street, New York.**

SPAIN

BILBAO, December 18, 1888.—**Iron Ore.**—The market has become livelier; a good many sales for immediate shipment have been made, but by far the greater dealings have been in lots for forward delivery next year. The number of steamers ready to take cargo has increased, and at the Oreonera and Galdames drops extraordinary efforts have been made to push off as much Ore as could be got out of the mines. Prices have meanwhile been steady at 8/ @ 8/6 Campanil and 6/10 @ 7/3 Rubios. Total shipments since January 1 sum up 3,460,545 tons, against 4,089,861 in 1887. **Pig Iron.**—None but 300 tons have gone coastwise.—**Bilbao Maritimo y Comercial.**

SWEDEN.

STOCKHOLM, December 27, 1888.—**Iron Ore.**—The Swedish-Norwegian Railway Company now engaged in finishing the construction of the Lulea-Ofoten Railroad have just made a proposal to the Swedish Government to sell the latter the said railroad, to be delivered to the Government free of cost 20 years hence, the Government guaranteeing 4 % per annum interest during the interval jointly with Norway on an amount of £1,500,000. The Swedish Government engages not to levy an export duty on Iron Ore. The road to be finished by the company without further delay; 42 km. of it are on Norwegian soil, hence Norway has to be consulted in the matter and participate in it. The Iron Ore can stand a freight of 6/ per ton, and contracts have already been made to deliver 650,000 tons, which may be indefinitely increased as soon as the railroad is completed. Sweden is given the option; if it declines, a syndicate of powerful English bankers stands ready to buy the road.—**Dagbladet.**

BELGIUM.

BRUSSELS, December 29, 1888.—**Iron.**—The Belgian market remains steady, most works are fully booked for months to come. Cockerill has offered 3700 tons of Steel Rails to Roumania at 119 francs per ton, delivered at Galatz. Krupp came next with 122 francs, and Denain & Ougée with 124.25. A Liege firm has received an order for Corrugated Galvanized Roofing for the La Plata stores at Buenos Ayres, for which tenders were submitted from England, but too dear. The actual consumption of Pig Iron in Belgium in October was 78,064 tons. Cockerill received an order for four steamers to navigate the Volga, in Russia. There has been some dispute about the amount of Steel Rails consumed in and exported from Belgium in 1887; it now appears that the consumption has been 30,000 tons and the export 78,000.—**Moniteur des Interets Matériels.**

GERMANY.

HAMBURG, December 29, 1888.—**Iron.**—The year closes with an increased animation and strength in Pig Iron of all kinds, prices tending steadily upward, on the one hand in consequence of improved statistics, and on the other because the demand is getting brisker. The latter is especially the case with Spiegel, of which the domestic Steel works require additional supplies, because their business flourishes. Thus Spiegel has gradually risen from 53 to 56 marks per ton. Siegen still sells Forge Pig at 49.50, Rhenish-Westphalia at 51.50 No. 1. While both Foundry and Thomas are lively, Bessemer drags. English is 45/. The rolling mills have booked orders enough, but do not enhance their selling prices. Great preparations are being made by them to turn out any amount of Beams in order to meet the growing demand for the same; new machinery is in course of construction and additional works are about to be started, so that after a while overproduction is likely to take place. Boiler Plates remain as active as ever; not so Thin Sheets. The Wire Branch is slightly looking up. Machine shops, foundries and car works are all doing well. Upper Silesia also reports favorably in every respect. We quote Steel Rails 110 @ 120 marks, ditto for Mines, 115. **Metals.**—Lead is weaker at 13.13 marks; German Spelter steady at 18 @ 19, and Lake Copper 79 @ 80 marks per 50 kg.—**Borsenhalle.**

A new coal road now building will connect the Lehigh region, at Slatington, with the Poughkeepsie Bridge, and be 125 miles in length.

Hardware.

There has thus far been little movement in trade, manufacturers and merchants devoting their energies to the closing of last year's business and completing the arrangements for the coming season. In a good many lines manufacturers are well supplied with orders, the shipment of which will soon commence, but most manufacturers are desirous of securing business and have fair stocks on hand. The market shows but little change in its tone, prices not being especially strong, but steady.

Wire Nails.

The Wire Nail market is in an unsatisfactory condition, being characterized by a good deal of irregularity, manufacturers of Nails not agreeing upon the terms at which they are to be offered. Several of the mills are holding car lots at \$2.30, f.o.b. mill, and show a disposition to refuse to meet prices which have been and still are made by others. The market thus presents some indications of increased firmness, but buyers have been disposed to avail themselves of present offerings only to a limited extent, the impression prevailing that, under the stress of continued competition or the necessity for some of the mills to market stocks, prices may recede from their present unprofitably low point. Prices from store are also somewhat uneven, \$2.50 to \$2.60 being in some instances asked.

Cut Nails.

The New York market is very quiet, the volume of business being light. The tone, however, is reported to be a trifle better. We continue to quote carload lots on dock \$1.80 to \$1.90.

A meeting of the Western makers is being held at Wheeling to-day.

Miscellaneous Prices.

The following are the prices of the Auburn Mfg. Company, Auburn, N. Y., on Scythes, Hay and Straw Knives, Grass Hooks and Corn Knives:

Scythes, Solid Steel.

Grain.....dis 40&10 %
Grass (sharpened and boxed):
Honor Bright, per dozen, \$10.....dis 50 %
Acme, per dozen, \$9.50.....dis 50 %
Our Best, per dozen, \$9.50.....dis 50 %
Our Clipper, per dozen, \$9.....dis 50 %
Mowers' Choice, per dozen, \$9.25.....dis 50 %
Favorite, per dozen, \$8.50.....dis 50 %
Honest Dutchman, per dozen, \$8.50.....dis 50 %
Bush and Bramble, strawed, per dozen, \$8.22, dis 50 %

Hay Knives.

Common Point, list \$15 to \$16, dis.....50 %
Spar Point, list \$15 to \$16, dis.....50 %

Straw Knives for Cutting Boxes.

Polished Blade, list, \$15.....dis 40 %
Painted Blade, list, \$14.....dis 40 %

Grass Hooks (Sharpened and Boxed).

No. 2. No. 3. No. 4.
\$2.00. \$2.25. \$2.50.

Corn Knives.

Western Pattern, all steel.....per dozen \$2.00
Crescent, bent handles, shipped and boxed, per dozen 3.50

The following are the prices of the National Self-Heating Sad Iron, manufactured by the National Self-Heating Sad Iron Company, St. Louis, Mo., the list as given being subject to a discount of 30 per cent. on orders for one dozen Irons or more:

Per dozen.
7 and 8 pound Family Irons.....\$57.00
12-pound Tailors' Irons.....66.00
20-pound Tailors' Irons.....78.00

A description of this article is given on page 71.

The Moore & Barnes Mfg. Co., 103 Chambers street, New York, have recently purchased the Barlow patents on Door

Springs, Door Checks and Door Stop and Holder, and are now manufacturing the goods, which they intend to designate hereafter by the name of Phoenix. These goods are listed as follows, the discount being 50 per cent.:

Phoenix Hook Door Spring and Duplex Door Check.

For Hook Door Springs:	Japanned. Per doz.	Nickel plated Per doz.
No. 1, with strength sufficient for most doors..	\$4.00	\$8.00
No. 2, for very large heavy doors.....	5.00	9.00
No. 0, Screen Spring and for very light doors..	2.25	4.25

Duplex Door Check. Per doz.

Japanned.....	\$4.00
Nickel.....	6.00

Phoenix Door Stop and Holder.

No. 1, for general use, to go on the floor, Japanned.....	\$4.00
No. 2, for baseboard or side wall, Japan'd	4.00
Either of the above, Nickel-Plated....	6.00
No. 3, for very heavy doors, or for doors that swing over an inch above the floor, Japanned.....	4.50
No. 3, Nickel-Plated.....	9.00
Barlow's door fixtures, complete, per set.	.70

They are also making a Reinforced Sash Chain, which they allude to as having great strength. It is sold from the following list, which is subject to a discount of 50 and 10 per cent.:

	Per foot.	For sash of
Bronze Metal Chain, No. 1 list..	12c.	175 lbs.
Bronze Metal Chain, No. 2 list..	10c.	100 lbs.
Copper Alloyed Chain, No. 1 list	10c.	150 lbs.
Copper Alloyed Chain, No. 2 list	8c.	85 lbs.
Copper Alloyed Chain, No. 3 list	6c.	25 lbs.
Steel Metal Chain, No. 1 list...	8c.	100 lbs.
Steel Metal Chain, No. 2 list....	6c.	50 lbs.
Steel Coppered Chain, No. 1 list.	9c.	100 lbs.
Steel Coppered Chain, No. 2 list.	7c.	50 lbs.

They also are offering the Phoenix Window Cleaners and Floor Scrapers, the discount on which is 40 per cent.:

Phoenix Window Cleaners.

8-inch, per dozen.....	\$2.60
10-inch, per dozen.....	3.00
12-inch, per dozen.....	3.40
14-inch, per dozen.....	3.75
16-inch, per dozen.....	4.25
18-inch, per dozen.....	4.75

Phoenix Floor Scrubbers.

12-inch, per dozen.....	\$4.50
14-inch, per dozen.....	5.00
16-inch, per dozen.....	5.50

Their line of Vises, Bench Anvils, File Cards and Plumbers' Specialties are illustrated in separate circulars.

The manufacturers of Tackle Blocks have been conferring and have reached conclusions which are regarded as satisfactory and tending to regularity in quotations.

The manufacturers of Heavy Hammers and Sledges have been in session and have formed an organization, with Fayette R. Plumb as president. No change has been made in list prices, but an advance of about 10 per cent. was made, to go into effect at once. This action and the understanding which exists between the manufacturers is regarded as putting this line of goods in a more satisfactory condition than it has occupied for some time.

A slight advance in Shot has been made, as noted in our Current Hardware Prices.

The following are the prices of the Empire Sash Cord Fastener, described on page 6, which is manufactured by the Empire Portable Forge Company, Cohoes, N. Y., the list as given being subject to a discount of from 55 to 60 per cent., f.o.b. Cohoes, N. Y., 30 days, or 2 per cent. discount for cash in 10 days.

No. 1, for ¾-inch Auger Hole, per gross.	\$1.00
No. 2, for 1-inch Auger Hole, per gross.	1.25

Trade Topics.

A leading Western jobbing house who have been handling a well-known English Tape Measure, having a number of them returned on account of inaccuracy, reported the matter to the importing house from whom they were purchased. The Tapes in question were from ¼ inch to nearly 1 inch short. The importing house desired their return that they might be replaced with Tapes of the proper length, but on referring the matter to the manufacturer in England they received the following reply:

We have examined them (the Tapes) carefully. They are short respectively 3-10, 7-10 and 8-10 inch. They are of good average quality and we can find no fault with them. They want no repairing and are as good as the day they were made. We have often explained that we cannot be responsible for the contraction complained of. All woven Tapes are liable to it, and your friends might as well return every one.

In view of these facts it will be well for the trade to scrutinize closely the accuracy of such Tapes as they are handling, and also to recognize the inaccuracy which is considered by the English manufacturer as reasonably to be expected in the goods. The inaccuracy will, however, be generally regarded as introducing an element of uncertainty in measures which might result in considerable confusion unless carefully guarded against.

A New Hampshire manufacturer making a line of Cutlery and Tools writes as follows with reference to the relative advantages of selling to jobbers and retailers:

We sell to retail trade to some extent, but less than formerly. At the outset we found it the very best way to introduce our goods into the market and thus create a call for them by the jobbers. As a general rule we believe the best and cheapest way to distribute goods (in our line) to the consumer is for the manufacturer to sell to jobber and he to retailer. We notice that a great many goods are being sold through agencies, but we much prefer to sell to the jobber who buys his goods and pays for them and carries his own stock. It has never been our ambition to "beat the world" in the matter of prices, but we design to make first-class goods and guarantee to every customer the worth of his money.

From Louisville, Ky., we have the following report under date January 7:

For the past week the Hardware trade of Louisville, Ky., has been fairly up to expectations, and quite satisfactory in every way. Continued low prices rule, but the amount of goods going into consumption shows what good crops and an open winter will do for the trade. When there is such a good demand, it is a mystery to the jobbers why some of their number should sell Nails at extreme low prices as reported; in fact, far below what they could be bought to-day at in large lots from the factories; this has demoralizing effects on the buyers, yet the heavy trade goes on.

The mills have nearly finished delivering their low-priced Nails, and the trade expects them to hold firm and perhaps advance a little at the next meeting, which might be justified by the demand, but hardly by comparison with other lines of manufacture.

Wire Nails are decidedly off, so is Barb Wire, and it will be hard for either to recover for some time.

Bar Iron is in steady demand, and considerable Hoop Iron has been placed, principally on account of the tremendous crop of Kentucky whiskies being made. The largest cooperage establishment in the Southwest, Chess & Wymond, in this city, have contracted for their entire capacity of barrels for the year. The cooperage required alone for the Kentucky whisky crop will take about 50,000 barrels.

Items.

The Lufkin Rule Company, Cleveland, Ohio, have discontinued their agency in Chicago with H. H. & C. L. Munger, and hereafter their goods will be shipped and billed direct, and at the same time they will equalize on their freights with Chicago. They will be represented during this year by S. A. Haines & Co. 90 Chambers street, New York. The Southern States

will be covered by D. A. Goodrich, and the Western and Northwestern States by S. A. Haines and J. C. Hollis.

The Rogers & Hamilton Company, Waterbury, Conn., have an exceedingly attractive calendar, brilliantly printed in colors. The fact that it gives the name of the company in only an unobtrusive manner and does not allude to the goods of their manufacture, will doubtless be appreciated by those who receive it, while at the same time it will be none the less a reminder of their products, which will make it serve its purpose efficiently.

The LePage Company, Boston and Gloucester, Mass., make the following announcement under this date:

We have contracted with Tower & Lyon to represent us as salaried agents to the trade throughout the Middle, Western and Southern States, together with such export and Canadian business as they may obtain. Tower & Lyon will have the exclusive control of all business in this territory for our account. We solicit for them the courtesies of the trade.

Referring to the above, Tower & Lyon state that they have consented to make a change in their Glue connection, their Mr. Tower having been connected with the Liquid Fish Glue business since its commencement, when Mr. LePage invented the several processes prior to organizing the Russia Cement Company, and it is intimated that to Mr. Tower is largely due the putting up of this Glue in tin packages for convenient handling by the trade. Reference is also made to the quality of the Glue made by the LePage Company, and the agents offer their personal guarantee that the Glue will be clear in color, perfectly preserved and entirely satisfactory.

The changes which are constantly taking place in the Hardware trade in the interesting additions that are made to the line of goods offered are indicated in the extra pages which have recently been issued by W. Bingham & Co., Cleveland, Ohio, for insertion in their catalogue of May, 1886. These pages, which are fully illustrated, represent a large variety of goods, including many novelties, together with some leading lines. The enterprise of the house is also shown in these additions to their assortment of Hardware.

The Ames Sword Company, Chicopee, Mass., supply the trade with their patent Perfection Padlock and Key Holder, mounted in attractive form, a dozen of the goods being attached to a handsomely printed card of suitable design, which makes an effective display when appropriately hung in the store. These articles consist of a miniature Padlock and Chain for holding keys.

Gille & Van Peyma, Kansas City, Mo., agents and dealers in Iron and Steel, Carriage and Heavy Hardware, Blacksmiths' Tools, Springs, Axles, Wheels, Wagon and Carriage Woodwork, &c., issue a very convenient and creditable price list and catalogue. It is a neatly printed volume of 300 pages, with some blank pages inserted at the close for memoranda, &c. Illustrations and list prices are given, with the intimation that net prices and discounts will be quoted on application. They also call attention to the fact that they manufacture a line of Wagon Material and Hardwood Lumber which they are in a position to offer on advantageous terms. In their introductory circular to the trade they make the point that no business can be successful without a liberal mail order trade, which they solicit, stating that they will always bill goods at as low prices as they believe they can be bought in any market, with difference of freight added.

The John W. Ealy Company, 278 and 280 Broadway, New York, have issued their twenty-second volume of Ealy's Blue

Book, bearing date January, 1889. It contains a classified list of names with financial worth and pay ratings of merchants, manufacturers and dealers throughout the United States and Canada in the special lines of trade mentioned, it being devoted especially to the Metal, Hardware and related trades, with an extension, however, into other lines, making each issue more complete and satisfactory than its predecessor. In the book under review, a modification has been made by which, by means of a special mark, dealers in Hardware, Stoves, Guns or Sporting Goods are specially designated, so that the names of such merchants can readily be recognized.

The Athol Machine Company, Athol, Mass., issue an illustrated catalogue and price list representing the Visco, Meat Choppers and other specialties of their manufacture, and also the Tools of the Standard Tool Company, with whom it is stated that they have made arrangements for the exclusive sale of their goods. This price list, representing as it does both lines, is designed to supersede all previous catalogues issued by the company, and they direct special attention to the several new Tools and specialties which are illustrated in it.

Henry Seymour Cutlery Company, Holyoke, Mass., have issued a new catalogue in which they call attention to the fact that their business has been established 50 years, the first page of the elegantly printed pamphlet containing the dates 1839-1889. Wiebusch & Hilger, Limited, are mentioned as sole agents, 84 and 86 Chambers street, New York. The list shows the company's well-known line of Shears, Scissors and Sheep Shears, the list prices being given. They also issue an effective hanger for the office or store, calling attention to their line of goods and the half-century in which they have been on the market.

Among the novelties put on the English market is a new Padlock called the Swivel, the object of which is to simplify the operation of locking. The swivel is reversible, so that the shackle can be opened from either side. A further advantage in the new Lock is that, owing to their being no open space by the shackle, moisture is effectually excluded. Another English manufacturer is putting up Sash Cord in boxes, which have a broken hole in front, through which the end of the cord passes. This system is referred to as largely adopted by other English manufacturers, and is said to be far preferable to the old method of doing up the goods in hanks.

L. W. Ferdinand & Co., Boston, Mass., issue a circular devoted to Galvanized-Iron Goods and Lanterns, in which they illustrate Water Pails, Garbage Cans, Coal Hods, &c., and Tubular and Station Lanterns.

Thomas Laughlin & Son, Portland, Me., send out in convenient form price list of Tackle Blocks and Iron and Lignum Vitæ Sheaves, with illustrations, among which is one of their Automatic Link Snatch Block, which we described in our last issue.

Announcement is made by Francis J. P. Tompkins, 116 Chambers street, New York, under date January 1, that he has formed a copartnership with Walter Adams, and that hereafter the business will be conducted under the firm name of Tompkins & Adams. The advertisement of the new house will be observed on page 43, calling attention to the lines in which they are specially interested.

C. F. Guyon & Co., 99 Reade street, New York, have been appointed sole agents for the sale of the Imperial Spring Adjusting Window Screens with patent fly attach-

ment. This article is manufactured by C. J. Shirreff & Co., Morristown, N. Y., and is alluded to as a novelty embodying many original features which will secure for it the attention of the trade.

L. M. Blue, Marysville, Ohio, representing the Van Wagoner & Williams Company, will leave for the West this week, and his many friends among the large trade may anticipate the pleasure of seeing him in due time.

Albert L. Brockway, who has been for 19 years a traveling salesman for Sargent & Co., and is thus widely known to the trade, has resigned his position, and is going, we understand, to Kansas to devote himself to his personal interests there. He issues a graceful circular letter to his friends announcing this change and referring pleasantly to his relations with Sargent & Co., and commending his successor to the attention and patronage of his customers.

Carlin & Fulton, 309 West German street, Baltimore, Md., were obliged by the requirements of their business to remove from their old location, where they had been for so many years, to their present more commodious quarters, where they carry an especially complete stock of General Hardware. One floor is devoted to the storage of Buck Thorn and the Iowa Barb Wire, Iron, Steel and Wire Nails, Horseshoes and Chains of all kinds. On the other floors are stored Agricultural Goods, Mechanics' Tools, Building Hardware, Cutlery and Guns. The entire second floor is one large sample-room, where the goods are displayed in a most attractive and convenient manner. The offices are on the first floor, and with the advantages of three hydraulic elevators, speaking tubes, electric bells and other modern appliances their business can now be transacted with greater comfort both to themselves and their customers.

The catalogue of the Phoenix Wire Works, Detroit, Mich., illustrates the extensive variety of Wire Goods, Crestings, &c., made by them. They are about moving into new and more commodious quarters, corner Fourth and Porter streets, Detroit, Mich., and will make a specialty of Wire Cloth, Riddles and Casting Brushes. They report a very satisfactory trade in their specialties.

The Western File Company, Beaver Falls, Pa., issue a very convenient calendar of moderate size, but with the dates clearly printed so as to make it suitable for desk or office use. In calling attention to their Files and Rasps, they emphasize their new Horse Rasp, Western, 1888.

One of the most elegant and artistic catalogues is that issued by Plumb, Burdick & Barnard, Buffalo, N. Y. In it are given price lists of Bolts, Coach Screws, &c., with illustrations, together with reproductions of their labels, which are accurate both in color and size. The paper is of very fine quality, and the different colors which are used in printing the catalogue, and the taste with which it is gotten up, make it a very attractive addition to trade literature. It is certainly very creditable to the manufacturers, and to Matthews, Northrup & Co., Buffalo, by whom it was printed.

C. M. McClung & Co., Knoxville, Tenn., issue a price current of seasonable goods for the spring trade. It relates to Plows, Hoes, Hames, Chains, Horse Collars, Double Sheaves, Plow Stocks, Feed Cutters, Mattocks, &c. It is well printed in attractive form.

McIntosh, Huntington & Co., Cleveland, Ohio, gave a banquet to their employees at the Cate Windsor on the evening of January 3. It was attended, we are advised, by more than 100 gentlemen

connected with the house, including 90 men employed in the store and 14 traveling salesmen. After supper Mr. McIntosh, the senior member of the firm, made a short opening address which was filled with happy hits. He was followed by Mr. Hord with a speech of welcome, which was responded to by A. B. Cotton on behalf of the employees. The next half hour was devoted to impromptu speeches, which were interspersed with music. The remainder of the evening was devoted to social enjoyment.

The A. F. Sharpleigh Hardware Company, St. Louis, Mo., issue a new page for their catalogue, describing the Detroit Sure-Grip Tackle Block. We are advised that the company carry a full line of these goods and are doing a large business in them.

An illustrated catalogue and price list of Carriage Hardware has been issued by the E. D. Clapp Mfg. Company, Auburn, N. Y., bearing date 1889. It is elegantly printed, appropriately illustrated, and shows a number of additions since their last catalogue was published.

The Standard Fibre Ware Company, Mankato, Minn., issue an eight-page circular describing their Standard Fibre-Ware and illustrating the different goods of their manufacture, such as Water, Dairy and other Pails, Slop Jars, Coolers, Cuspidors, &c. Their general agencies are at 67 Washington street, Chicago, Ill., and 109 California street, San Francisco, Cal.

The T. B. Harkins Foundry Company, Bristol, Pa., are about putting on the market a full set of round cast Washers, from $\frac{1}{4}$ to 2-inch. The neatness and smoothness of the castings are especially referred to, and the size of each Washer will be cast on it. They are also prepared to make special sizes and shapes to order.

The multiplicity of catalogues and price lists issued has led to the organization of a new company, the object of which is to supply in one volume catalogues issued by several different manufacturers who make the same line of Machinery or tools. This company is the American Catalogue Company, Minneapolis, Minn. This arrangement of putting the catalogues suitably classified in different volumes is referred to as advantageous for those who use, as well as those who issue, catalogues.

Announcement is made under date Cincinnati, January 1, that the firm of Kruse & Bahlmann has been dissolved, and that their business will be continued by the Kruse & Bahlmann Hardware Company, at 11, 15 and 17 West Pearl street. The officers of the company are as follows: Louis Kruse, president; Herman Bahlmann, vice-president; Louis Kruse, Jr., and Felix Bahlmann, general managers; Chas. Kruse, treasurer; Geo. W. Klein-schmidt, secretary.

M. Kunkel & Co., 114 South Franklin street, Chicago, dealers in Cabinet Hardware, sold their business on the 1st inst. to F. A. Rauch & Co., who will continue at the same location. The new firm will be composed of F. A. Rauch, formerly traveling salesman for M. Kunkel & Co., and Geo. L. Lamping, formerly with A. Rauch, furniture manufacturer, of Chicago.

Bennett & Shirk, 112 and 114 Lake street, Chicago, have in press a new catalogue of the North Star Refrigerators manufactured by the Indiana Mfg. Company, of Peru, Ind., and of which they are the selling managers. It will be ready for distribution to the trade in a few days.

The A. Treadway & Sons Hardware Company, incorporated under the laws of Iowa, succeeded on the 1st inst. to the firm of Andrew Treadway & Sons, dealers in general Shelf and Heavy Hardware, at Dubuque, Iowa. The original firm began

business in 1853. The officers of the new company are as follows: A. Treadway, president; A. W. Treadway, vice-president; H. E. Treadway, secretary; John Treadway, treasurer.

The firm of Park, Crancer & Co., of Leavenworth, Kan., dissolved on the 1st inst. by limitation, J. W. Park retiring from the firm. The business will be conducted by J. W. Crancer, E. W. Crancer and J. T. Johnson, under the firm name of J. W. Crancer & Co., who will carry one of the most complete stocks of Shelf and Heavy Hardware, Tin Plate and Tinner's Supplies in the State.

The Enterprise Mfg. Company, of Akron, Ohio, and St. Paul, Minn., are now said to be the largest exclusive Fishing Tackle manufacturers in the United States. Their Eastern depot is located at Akron, and a branch factory has recently been put in operation at North St. Paul. In the latter establishment they manufacture the Eagle brand Horse Sweat Pad with the following improvements: 1. An elastic Buckle Spring, easily adjusted to large or small collars. 2. Granulated cork filling in place of hair. 3. Medicament applied to cork, deer, goat or cattle Hair Pads. The company were the first manufacturers in America to make Rubber Insects and phantom Minnows, and they have met with great success in introducing these goods to the trade. They manufacture many specialties, which are well known under the name of Pflueger's Patented Anglers' supplies. They have just issued a very handsome catalogue devoted to their artificial fish baits, covering both luminous and non-luminous goods, and embracing Trolling Spoons, American Spinners, hard and soft rubber and phantom Minnows, Frogs, Crawfish, Grasshoppers, Dobsons, Insects, and every variety and pattern of bass, salmon and trout Flies, together with Line-Spreaders, Minnow Gangs, Hooks to gut and gimp, furnished Lines, Floats, Sinkers, &c. The catalogue comprises 44 pages and is finely illustrated. A supplement is in course of preparation to cover recent improvements and additions to this large list of goods.

German Competition in England.

English manufacturers of Hardware and Metal Goods generally are complaining of increased competition with Germany. The extent to which this competition has interfered with their trade in foreign markets has frequently been alluded to, but recently the English manufacturers have been more seriously embarrassed by the placing of German goods in their home markets. For some time past the Wire manufacturers of England have suffered severely, and while the German Wire is referred to as less even in gauge and in other respects less satisfactory, it is offered at so much lower a price that considerable quantities have been sold both in England and to the Colonial trade. Until a comparatively recent time a combination existed in Germany between the manufacturers which prevented them from pursuing an aggressive policy, but this combination was dissolved some time ago, and the Wire is finding its way in considerable quantities into the English markets. It is reported that German Wire has been offered in Birmingham at figures which are 15 per cent. below the ruling prices. Referring to this condition of things the *Ironmonger* remarks:

Naturally enough the Wire-drawers of the Midlands are greatly dissatisfied at this state of affairs, but we are sorry to say we do not gather from our correspondent's remarks that they are making vigorous efforts to oust their foreign competitors from the market. We are convinced that this is quite within the bounds of possibility, if our manufacturers only go into the question with an intention to win. No doubt the Germans have a little advantage in labor, but they are clearly at a marked disadvantage in point of carriage and freight, even

allowing for the fact that they get very thorough low rates from the railway companies. Where they excel, probably, is in their manufacturing processes, and it is there that we ought to be able to beat them handsomely. We hope, therefore, that some of our Wire manufacturers will investigate the reasons for the German successes, and then reform their own methods of production with the earnest resolution to run the foreigners out of our own market—to say the least.

The same journal refers to German competition in Hollow-Ware, remarking that in this branch of business the English manufacturers appear to have arrived at the conclusion that their Continental rivals had somehow or other got ahead of them, and then adds:

Having made this self-condemnatory admission, our manufacturers set about the discovery of an adequate remedy. Like the traditional drunkard, they "took a hair of the dog that bit them," or, in other words, resorted to the means by the use of which their competitors had stolen a march upon them. They went into the matter with most commendable vigor, engaged Continental chemists, adopted Continental processes, introduced Continental fine gauges of iron or steel, and spent money freely in their determination not to be beaten. In the result all this expenditure of time, trouble and money is beginning to produce its legitimate effect. The evil results of some years of lethargy and over-confidence cannot be overcome all at once, but the foreign competition is being fairly met at home and abroad, and there are plenty of indications that at no distant date continued perseverance and enterprise will give us the reversion of the markets which we ought never to have lost. We congratulate the Wolverhampton enamellers upon their pluck and fighting qualities. We hope they will "go on and prosper," and we heartily commend their spirited example to the Wire and all other manufacturers who are affected by the bugbear of foreign competition. If they resolutely resolve to beat their rivals they also can do so with certainty and ultimate considerable profits.

Method of Displaying Cutlery.

A representative of one of the leading papers of Chicago recently interviewed a State street cutlery dealer and learned a great many things relative to the variety of pocket knives occasionally carried in stock. In the course of conversation the dealer said: "You see this show case. Well, in this case I have 1300 styles of knives." "You don't mean 1300 patterns, but 1300 styles, counting variations in sizes?" said the reporter. "Yes, but I have at least 800 patterns. See that ball outside," he added, pointing to a ball about a foot in diameter hanging in a glass case in front of the store. "In that ball there are 300 knives, no two alike. By the way, that ball was the best investment I ever made. I wanted something to stick knives in, and I asked several workmen to get me up a ball like that. I had a good deal of difficulty in getting a man to take hold. Finally I found one who would make it, and he said there was only one way in which it could be done, and that was to make a ball as nearly round as possible, and then cut and miter and fit small pieces of cork and glue them to the surface. He was several days at the job, and when he had finished I had a perfectly round ball with a soft surface to stick knife blades in, and a bill of \$90 to pay. But that ball has increased my trade at least 25 per cent."

Imports of Hardware, &c.

St. Louis as a Hardware Center.

St. Louis has many advantages as a point of distribution in a commercial sense, and in no particular line is it more prominent than in the Hardware trade. Its location is especially favorable. Situated on the Mississippi River, the city occupies a very desirable position for the handling of the trade of the Mississippi Valley, and has waterways to the North, South and West. The Mississippi River gives it a competitive rate to St. Paul and Minneapolis, equal to Chicago, and an opening to the great Northwest. Railroad facilities are of the highest order. The freight rate to Kansas City and Omaha is 95 per cent. of the Chicago rate, and the transcontinental rate, which went into effect January 1st, 1889, gives St. Louis a rate 95 per cent. of Chicago, and Chicago 90 per cent. of New York. The rapid development of the Mississippi Valley tends to greatly enhance the value of St. Louis as a distributing center, and her unrivaled position for handling the large and increasing trade of the South and Southwest leaves her without a rival in that section.

The Jobbing Trade.

The regular Hardware jobbing trade is divided among six houses—namely, A. F. Shapleigh Hardware Company, Caruth & Byrnes Hardware Company, Hilger Hardware Company, St. Louis Hardware and Cutlery Company, Witte Hardware Company and Simmons Hardware Company.

These are strictly jobbing houses. They carry full lines of Hardware and such desirable specialties as may appear from time to time on the market.

A. F. Shapleigh Hardware Company is the oldest Hardware house west of the Mississippi River, having been founded in 1843. They confine themselves almost exclusively to Hardware, and claim to have the finest and best assorted stock of Shelf Hardware in the West. They have an excellent reputation for low prices and fair dealing, the result of which is that their mail order trade is very large. They carry a large and varied assortment of General Hardware on the quality of which they lay emphasis. They are sole proprietors of the well-known brand of Diamond Edge Axes and Edged Tools, and they inform us they have a large and increasing trade for the goods. They handle large quantities of Witherby's Chisels and Drawing Knives, Ohio Tool Company's Bench and Fancy Planes. They carry a full stock of Nicholson's and Diamond Edge Files, and are agents for a complete line of Russell & Erwin Mfg. Company's Locks and Bronze Goods. They are also St. Louis agents for Reading Hardware Company's Japanned, American Bronzed and Geneva Bronzed Goods. They carry a full line of the Lanes, Laurence and Kidder Barn Door Hangers and Track; Stanley Works' line of Butts; Wm. Wilcox Mfg. Company's, Yale & Towne Mfg. Company's and Miller Lock Company's Padlocks; Eagle Lock Company's full line of Cabinet Locks; Russell & Erwin Mfg. Company's Screws of all kinds; Henry Seymour Cutlery Company's and Diamond Edge Shears, and Burgen & Balls' and Wood & Payne's Sheep Shears are always in stock. Their

assortment of Pocket Knives and Cutlery is exceptionally large, and comprises the best patterns of Rodgers' and Wostenholm's make, and also a large line of cheaper imported grades, together with a full stock of American goods. They have a complete line of Chas. Parker Co.'s and Enterprise Mfg. Company's Coffee Mills, Hale's, Peck, Stow & Wilcox Company's and Enterprise Mfg. Company's Meat Cutters; Lawrence Curry Comb Company's, W. E. T. Fitch's and W. P. Kellogg's Curry Combs, and the best makes of Horse, Shoe and Scrubbing Brushes. Their line of Novelty, Universal and Eureka Clothes Wringers is very complete. They are sole agents in the Southwest for the United States Oil and Gas Stove Company's Grand Oil Heater, and Cook Stoves. They carry a complete line of John Chatillon's Sons Spring Balances and Butcher Scales and Enterprise Mfg. Company's Sad Irons, and are agents for the well-known Centennial Refrigerators, and also Boys' Wagons and Sleds of all kinds. They have in stock a large supply of R. E. Deitz's well-known Tubular Lanterns and Street Lamps, and a large variety of other makes. Their stock of Brass Fire Sets, and Irons and Fenders is also large and varied. They handle the Northwestern, Globe, Putnam, Triumph, and Mound City Horse Nails and Burden's Horse and Mule Shoes. Their Saddlery Hardware Department comprises Horse Collars of all varieties, Rein Snaps, Bands, Traces, Butts, Spurs, &c. They deal largely in Ames', Rowland's Chisholm's and other lines of Shovels and Scoops, and are city agents for the well-known Iowa Farming Tool Company's line of Agricultural Tools. They also carry a full line of the "Prize" and other Grain Cradles, and Wadsworth's Scythes, Philadelphia and other Lawn Mowers, all kinds of Garden and Railroad Barrows, Cyclone Churns, Vaughn's Post Hole Auger and Eureka Diggers. Henry Distons & Sons' Hand and Cross-Cut Saws, E. C. Atkins & Co.'s Cross-Cut Saws, Stanley Rule and Level Company's Carpenters' Tools, Rules, &c., Acme Skates and Union Hardware Company's Skates. They deal extensively in Wheeling Steel Nails, and Standard Wire Nails, and are city agents for Freeman Wire Company's product. They are represented by a corps of efficient salesmen in every State and Territory from Minnesota to the Gulf and from Indiana to the Pacific Coast up into British Columbia.

Caruth & Byrnes Hardware Company carry a full line of General Hardware and deal largely in Geneva Tool Company's Forks, Handled Planters' and Cotton Hoes, Lane and Yale's, Scovill's and Sandusky Tool Company's Planters' Eye Hoes, Seymour Mfg. Company's Cradles and Snaths, Auburn Mfg. Company's Grain and Grass Scythes, Philadelphia Lawn Mowers, Lawrence Curry Comb Company's and W. P. Kellogg's Curry Combs and Hunt's Axes and Edge Tools. They have a large trade in their own "Extra" brand of Clipper Axes and Hatchets and Powell Tool Company's Canada and Western pattern Broad Axes. They carry a large stock of Wagon, Trace and Coil Chains, one and two loop Hames, Wagon and Single Trees; also, Newhouse and Hawley & Norton's Game Traps. Their stock is well kept up in Scale Beams, Burden's Horse and Mule Shoes, Steel and Wire Nails, Sweet's Mfg. Company's Toe Calks, Northwestern, Essex and Anchor Horse Shoe Nails. Also, a full line of New American File Company's, Nicholson File Company's and Henry Distons & Sons' Files, Fayette R. Plumb's and D. Maydole & Co.'s Hammers, H. Diston & Son's Saws, Ohio Tool Company's and Bailey's and Stanley Rule and Level Company's Planes, United States Screw Company's Screws, Charles Parker Company's Coffee Mills, Brauford Lock Company's Locks

and Knobs, and Mallory-Wheeler Company's Padlocks. They carry a very complete line of Barney & Berry Skates, St. Louis Stamping Company's Granite and Stamped Ware, and Novelty and Eureka Clothes Wringers, and in addition have a complete line of Sargent's Shelf Hardware, Rogers', Wostenholm's and best brands of American, English and German Pocket Knives, Razors, &c., Bridgeport Knife Company's Table Cutlery, English and Belgium Double-Barrel Muzzle and Breech Loading Shot Guns, and a complete assortment of Sporting Goods. They are St. Louis agents for Cambria Iron Company's patent Link Barbed Fence Wire.

Hilger Hardware Company was established in 1866, and have a large trade in general Hardware. They carry an extensive line of H. Distons & Sons', Saws, Nicholson's and Smith's Files, Branford Locks and Knobs, and Hunt's and Lippincott's Axes. They have an extensive trade in the Daisy brand of Axes, which is manufactured especially for them. Their line of Peck, Stow & Wilcox Company's Goods is particularly complete, and they also deal largely in Russell & Erwin Mfg. Company's Screws. They find a large market for the special brands of Leader Shovels, Hatchets, &c., which they handle. They inform us that their trade has increased largely during the past year, and prospects for the coming year are particularly encouraging.

St. Louis Hardware and Cutlery Company, is, comparatively speaking, a young house, but in the short time they have been in business they have built up a large and desirable trade, which speaks well for the industry and enterprise of those connected with the concern. They carry a full line of Shelf Hardware, and all the standard makes of Saws, Files, Locks and Knobs, Hinges, Hangers, Screws, Axes and Hatchets, &c. They make a specialty of Cutlery and have an exceptionally fine assortment of the same, both imported and domestic, and make a point of handling only first-class goods.

Witte Hardware Company was organized in 1880 and succeeded F. A. Witte & Co., whose business dates back to 1849, at which time they conducted a retail store. Gradually their business grew with the city and its increasing trade until they reached their present position. Their new catalogue, which has just been issued, and which is to a great extent in the hands of their customers, is a work that was favorably commented on in these columns not long since, and they are daily in receipt of letters from their customers speaking of it in high praise. The book is divided into seven distinct departments, and comprises every article handled by a first-class jobbing house, the most prominent manufacturers being represented therein. They have a large number of reliable and well-posted traveling men in Illinois, Missouri, Kansas, Arkansas, Nebraska, Kentucky, Tennessee, Colorado and Texas. They invite dealers who have not been customers to send them a trial order, which will secure them a copy of the catalogue above mentioned.

Simmons Hardware Company, Incorporated, have a capital of \$1,000,000, with a surplus of \$250,000. This company occupy three connected buildings on Washington avenue, two five and one six stories. They have a frontage of 200 feet and a depth of 150 feet, and extend 10 feet under the sidewalk on three sides. They have also a six-story warehouse one block distant from main stores, 68 x 102 feet, with steam connection between them. In addition to the above, they have a one-story warehouse for Nails, Horseshoes, &c., 75 x 150 feet, with printing department and carpenter shop attached. The superficial area is 252,302 square feet.

They have on their roll 89 salesmen, and cover all States and Territories with the exception of Pennsylvania and the States north and east of it, and Delaware, Virginia, North and South Carolina. They issue one of the most complete catalogues in the trade, 8000 volumes of the last edition being printed and distributed, each volume containing 1636 pages and 7138 illustrations. Their first catalogue of these dimensions was issued in 1879. Since then they have placed two others in the hands of the trade, one in 1883 and the other in 1886. These volumes were so comprehensive and the undertaking of such magnitude that the impression prevailed that the manufacturers whose goods were represented largely contributed toward the expense of getting them up. This is true in a small degree, as referring to their first catalogue. Many manufacturers then volunteered to bear part of the expense, regarding the matter in the light of an advertisement. The total amount received from this source was scarcely one-tenth of the cost of this issue. In the two other catalogues the firm refused to accept any contributions from the manufacturers, believing the principle wrong and antagonistic to independent buying. They carry a very extensive and complete stock in Hardware and Cutlery, Stamped Ware, House-Furnishing Goods, &c. In these lines are embraced such standard makes as H. Disston & Sons' Saws, Files, &c., Oliver Ames & Sons' and Wm. Chisholm & Sons' Shovels and Spades, Douglass Axe Company's Axes, Tools, &c., Hubbard & Co.'s Axes, Hoes, &c., Enterprise Mfg. Company's Specialties, Eagle Lock Company's Locks, &c., Norwalk Lock Company's Japanned and Bronze Locks, Russell & Erwin Mfg. Company's Bronze Locks, Yale & Towne Mfg. Company's Locks, Niles Patent Locks, Fayette R. Plumb's Hammers, Geo. Wostenholm's Pocket Knives and all standard brands of American Pocket and Table Cutlery. Among the articles they control are the following: Lightning Nail Pullers, Climax Farming Tools, Sublett's Eye and Handle Hoes, Keen Clipper Lawn Mowers, Maynard's Shovels and Spades, Corey's Axle Pulleys, Perfection Gasoline Stoves, Siberia Refrigerators and the well-known "Keen Kutter" Axes, Hatchets, Adzes, Mattocks, Picks, Augers, Bits, Files, Chisels, Draw Knives, Plane Irons, Saws, Cutlery, Scythes, Brush Hooks, Hay Knives and Sheep Shears. This house has practically no season, the area covered being so large. Commencing at the Gulf of Mexico or California, they follow up the season to Minnesota, Dakota, &c. They are large buyers, and often purchase the entire product of a manufacturer, which gives them decided advantages as regards prices over some of their competitors, whose capital will not allow them to operate quite so extensively. The perfection of the business system of this house, as well as the ability and enterprise of its management, is generally acknowledged, its position being conceded as one of the most extensive, complete and well directed mercantile establishments in the country.

Make the Store Attractive.

The wide-awake merchant will keep his store as attractive as the nature of his business or the surrounding circumstances will allow; his stock will be displayed to the very best advantage, and will at all times be as fresh and new as possible. He will also see that a portion of his stock is not here one day and there next, and thus causing the waste of precious time in locating a certain article, for which a customer has to make inquiry. There will be a place for everything and everything will be in its place. The counters, too, will be varnished and kept well dusted.

A few revolving seats, ranged alongside each counter, will add both to the appearance of the store and the comfort of the customers. The man who is alive to the interests of his business, says a writer in a recent issue of the *Grocers' and Cannery's Gazette*, will also be extremely particular about the way in which his window is dressed. In whatever line of goods the live man deals, he will see to it that his shop front is dressed to the best advantage. He will also see that there is no laxity of "elbow grease" on the part of him whose duty it is to polish the windows in the store front. Also that every employee, as well as the proprietor, presents a clean and respectable appearance, and that everything resembling either loudness in dress, or vulgarity in speech or demeanor, is strictly eschewed.

Banquet to James M. Horton.

The wholesale Hardware house of Horton, Gilmore, McWilliams & Co., successors to William Blair & Co., Chicago, closed the first year of their existence on the 31st ult. To fittingly commemorate the event, and, at the same time, to show their appreciation of the many excellent qualities of their chief, the salesmen and clerks concluded to give a banquet in honor of James M. Horton, president of the company. It came off at the Grand Pacific Hotel on the evening of the 2d inst. The arrangements were perfected by a committee composed of John R. Black, chairman; Walter G. Barker, Robert H. Nott, Fred. V. Chislett and Geo. C. Noyes, who performed their duties to the entire satisfaction of their business associates and invited guests. Some 75 gentlemen participated in the banquet, but that number by no means embraces the whole of the employees, as a number of them were unable to be present. The tables were arranged in the form of a horseshoe, and were beautifully decorated with flowers, ferns and smilax. The trade-marks of the firm, "Black Diamond" and "Our Mascotte," in appropriate floral settings, occupied a conspicuous position. The menu, which was quite elaborate, was printed in book form, bound in heavy white beveled-edged cardboard, fastened with pink ribbon. While the various courses were being served an orchestra discoursed choice musical selections. No wines were served at this banquet. The post-prandial exercises were opened by Chairman Black, who congratulated his associates upon the very satisfactory manner in which the details of the banquet had been arranged, and called upon Robert H. Nott, as the oldest salesman connected with the house, to elucidate the purpose of the gathering. In a very felicitous speech Mr. Nott voiced the sentiment of the employees of the company toward Mr. Horton, assuring him of their high appreciation of his un-failing courtesy, uniform good temper and thorough fairness toward all of them. He closed with the presentation of an enormous bouquet of the choicest flowers. Mr. Horton responded with evident emotion, but soon regained control of his feelings, and in a speech of considerable length and remarkable power thanked his employees for their kindly manifestations of regard and even affection. He expressed his earnest appreciation of the efforts which all of them had made during the year to push forward the business of the house, dwelt upon the relations which should exist between employer and employed, referred to his own experience in business in working up from an apprenticeship to the head of a great firm, and urged his hearers to remember and apply in the discharge of their duties the Golden Rule, to do unto others as they would have done unto themselves. He alluded to the co-operation of his associates in the company, paid a graceful

tribute to the old house of William Blair & Co., from whom the new house had sprung, like Minerva from the brain of Jupiter, full grown, and called upon his employees to take for their motto "Whatsoever man hath done in this line we will do," closing his speech with an acknowledgment of the favor and the overruling power of Providence, without whose aid no earthly good can be accomplished. David McWilliams, treasurer of the company, was called upon and made a most pleasing impression by his well-chosen remarks. He referred to the fact that although he was an old resident of Illinois his connection with this company was his first venture in business in Chicago. He predicted a period of general prosperity for the business interests of the country this year, based largely on the excellent condition of the agricultural community. Messrs. F. V. Chislett, Joseph Brown, Walter G. Barker, M. M. Levison, Rose, Berry, Gilmore, Noyes, Gregory, Klobber, Higgins, Fuller and a large number of others made short addresses. A quartette composed of employees favored the company with a song. At a late hour the assemblage dispersed, feeling, in the words of one of their number, that the banquet had certainly been "net list—no discount."

Exports.

PER BRIG ALICE, DEC. 26, 1888, FOR PORT NATAL, SOUTH AFRICA.

By H. W. Peabody & Co.—10 cases Edge Tools.
By Leaycraft & Co.—1 Stove, 10 Ranges.
By Marcial & Co.—6 cases Carriage Ware, 14 Pumps.
By R. W. Forbes & Son.—2 dozen Clocks.
By M. Berliner.—5 packages Carriage Ware, 36 pieces Stoves.
By W. H. Crossman & Bro.—48 dozen Hatchets, 3750 pounds Sash Weights, 235 pounds Sash Cord, 21½ dozen Washstands, ½ dozen Corn Shellers, 3 dozen Washboards, 9 dozen Pails, 2 cases Carpenters' Tools, 12 dozen Wrenches, 5 cases Hardware, 3 Oil Stoves, 7 cases Hardware, 1 case Carpenters' Tools.

PER BARK CECILE, DEC. 31, 1888, FOR PORT NATAL, SOUTH AFRICA.

By Corner Bros. & Co.—3 cases Machinery, 2 cases Agricultural Implements, 189 cases Agricultural Implements, 1 case Hardware.
By H. W. Peabody & Co.—3 cases Lampware, 4 cases Carriage-ware, 8 cases Hardware, 2 packages Lampware, 13 cases Agricultural Implements, 46 cases Hardware.
By W. H. Crossman & Bro.—¼ dozen Hoes, 9-12 dozen Shellers, 1½ dozen Stuffers, 96 Plows, 2½ dozen Plows, 2 dozen Store Trucks, 104 Plows.

Mayor Grant, of New York, speaks in his message of another measure of still greater consequence as affecting the interests of this city when he says: "It is now generally conceded that in order to make provisions for our commerce it is essential that the city acquire title to all the water front. The rights of private owners should, therefore, be acquired with as little delay as practicable. The attainment of this object is greatly simplified by a recent decision of the Court of Appeals."

The official inspector of the work on the new aqueduct startled the Fasset Senate investigating committee on Monday by stating that there were hundreds of places where the masonry was only one brick thick and in scores of places the backing consisted only of empty barrels. The sum of \$1,000,000 will be required to make good the defects.

Mayor Chapin, of Brooklyn, says in his message to the Board of Aldermen that in all plans for the future it is proper to bear in mind the probable early need of using the city's credit to pay for its part of the construction of a second East River bridge.

A bridge, to cost \$750,000, across the Allegheny River, is proposed by the Pennsylvania Railroad Company, to avoid hauling freight trains through the city.

Economy Eave-Trough Hanger.

By means of the engravings shown herewith, we are enabled to present for the consideration of our readers some

struction, and is stated to give very satisfactory results in operation.

The same company are also introducing to the trade a very simple device for fastening conductor-pipe in place. This

inserted a nail or other suitable tool for twisting the wire and drawing it firmly about the conductor-pipe. When the operation is completed, the pipe fastener presents the appearance represented in the lower part of Fig. 3. This is a very simple means of holding conductor-pipe in place, and possesses the merit of being quickly applied.

Economy Eave Trough Hanger.—Fig. 1.—Showing Manner of Attaching Hanger to Roof.

views of the Economy Eave-Trough Hanger, manufactured by the Freeport Hardware Mfg. Company, of Freeport, Ill. In Fig. 1 is shown a general view of the hanger as it appears in position to receive the eave-trough, while Fig. 2 shows the trough placed in the hanger. In putting the device in position, the first step is to wind the wire hanger around the trough, making a connection by means of the hook above the middle of the trough. Then the rod is straightened up from this point, and bent over on to the roof to accommodate the fall of the trough. A nail is driven as near to the edge of the shingles as the cornice will permit, and then the wire is wound once around the nail at 5 in the engravings. The operation is completed by driving another nail in the eye at 6. The manufacturers state that troughs put up in this manner will remain firmly in place, because the wire clinches the trough tightly and runs up perpendicular from the middle of it to the edge of the roof, making it impossible for the trough to hang crooked. An additional means of keeping the trough rigid is provided in the shape of a lower brace, shown at 7 in the engravings, which is fastened to the cornice by means of the eye shown in Fig. 1. It is obvious, however, from an inspection of this construction that the form of hanger here employed is practically limited to the general style of cornice indicated in Fig. 1 of the illustrations. These hangers are made of galvanized wire, and, therefore, will not rust.

consists of a piece of bent wire in the form of a circle, one of the articles being shown suspended from a nail in Fig. 3

to the trade a form of stamped damper for smoke and hot-air pipes, which is claimed to possess many interesting features. This damper, a general view of which is shown

Baile's Improved Damper.

Robert Baile, of 749 South Nineteenth street, Philadelphia, is introducing

Baile's Improved Damper.

Fig. 3.—Method of Using Conductor Pipe Fastener.

of the accompanying illustrations. The piece of wire is slipped around the con-

in the accompanying illustration, is made in one piece, and the stamping, crimping and the forming of the four lugs designed to hold the handle in place are performed by one operation. The handle is made of wire with a tapering shank, which is designed to hold the handle in any desired position. There are no nuts or threads employed in the construction of the device, and it is claimed to be simple and durable. It is easily placed in position in the pipe and is convenient to operate. The manufacturer claims that this damper can be made at a much reduced price, as compared with other devices intended for the same purpose, and that it possesses the merit of being light and efficient.

Fig. 2.—Eave Trough Placed in Hanger.

The only tools needed in putting up the Economy eave-trough Hanger are a hammer and a few nails. It is simple of con-

ductor-pipe and nailed to the building by means of the two eyes, clearly indicated in the cut. In the eye in front of the pipe is

The Electric street railway, to be built in Fulton street, New York, is progressing slowly. The street is broken and the details of construction are lying around in great confusion. The delay is probably caused by the proverbial wire pulling with which New Yorkers are so well acquainted.

John W. Wagner, of Mansfield, Ohio, announces that he has associated his son in business with him, the firm hereafter to be Wagner & Son.

National Self-Heating Sad Iron.

The illustration given below represents a sad iron as now made by the National Self-Heating Sad Iron Company, 109 N. Sixth street, St. Louis, Mo. The gasoline is contained in a tank below the handle which is filled by removing brass screw

from the fact that its diameter is 5 inches. It is pointed out that it can often be used in place of a colander, coarse strainer, ladle, spoon, &c., thus saving time and labor in handling and washing different utensils. It is made in two patterns, one of which is shown in the cut, the other being made with a single piece of perfor-

ton, on the 16th of January, the programme including the discussion of a paper presented by W. B. Sherman at the last meeting, entitled, "What is the Safe Ratio of Pumping Capacity to Maximum Consumption?" The discussion is to be followed by a series of brief papers, to consist of a short statement of some personal experience or observations.

The National Self-Heating Sad Iron.

cap in front of handle. Recent improvements have been made in the burner, which, as now made, is referred to as odorless and not requiring air-pressure to force gasoline to the generator. It is stated that one filling will burn five hours. The advantages claimed are that the heat is under perfect control and can be regulated according to the material to be ironed; that it saves the fuel used in the ordinary method of heating irons and the labor involved in going from the stove to the ironing table; that one iron does the work and is continually hot; that it is simple, durable, and clean, and that the handle remains cool and requires no holder.

Perfection Skimmer.

This article, which is represented in the accompanying illustration, is put on the market by the Hamblin & Russell Mfg. Company, Worcester, Mass. From the engraving it will be seen that the skimmer has a drainer attachment by which solid

Perfection Skimmer.

substances, such as peas, beans, preserves, boiled eggs, fried potatoes, &c., can be quickly and thoroughly separated from the liquid in which they are cooked without danger of spilling them on the stove, table or floor. The size and general dimensions of the skimmer and drainer may be inferred

from the fact that its diameter is 5 inches. It is pointed out that it can often be used in place of a colander, coarse strainer, ladle, spoon, &c., thus saving time and labor in handling and washing different utensils. It is made in two patterns, one of which is shown in the cut, the other being made with a single piece of perfor-

The Daisy Wagon Wrench and Common-Sense Jack.

The accompanying illustration represents a new wagon wrench and a new jack which have just been put on the market by the patentees and manufacturers, Fred. A. Wegner & Co., 184 Lake street, Chicago. The wrench and jack are shown separately and as used in connection with a buggy or wagon wheel. The Daisy wrench is made of steel and rubber, the socket being so constructed as to fit the burr and washer. The ends are sprung into place on the spokes of the wheel, and the wheel, washer and burr then move together. If the wheel

The Daisy Wagon Wrench and Common-Sense Jack.

is revolved too rapidly and drops off the axle, the burr and washer are still held in place in the hub. It is described as exceedingly simple, doing its work perfectly, and is sold at a very low price. The ends of the wrench are covered with rubber, so that they will not scratch the spokes, making it possible to use the wrench for the finest carriages. The common-sense buggy and wagon jack is also of very simple construction, as shown in the illustration, and is also sold at a very low price.

The New England Water Works Association has issued a circular announcing that the adjourned meeting of the Association will be held at Young's Hotel, Bos-

ton, on the 16th of January, the programme including the discussion of a paper presented by W. B. Sherman at the last meeting, entitled, "What is the Safe Ratio of Pumping Capacity to Maximum Consumption?" The discussion is to be followed by a series of brief papers, to consist of a short statement of some personal experience or observations.

Improved Tubular Lantern.

In the cut presented herewith we show a general view of an improved lantern which has recently been patented by Messrs. T. Phillips & Co., of Orillia, Canada, and is being manufactured by E. T. Wright & Co., of Hamilton, Ontario. The special feature of construction to which the makers direct attention is the hinge made of brass, and so arranged that the

Improved Tubular Lantern.

entire upper portion of the lantern may be tilted to one side. This gives free access to the wick and burner, allowing them to be easily cleaned or replaced without interfering with the chimney. By a careful inspection of the engraving the advantage of this form of construction will be readily apparent. The top is also thrown back for the purpose of lighting the lantern. All the parts are carefully made and put together, and the makers feel confident

The Electric Street Railway, in Boston, being built under the Bentley-Knight and Sprague patents, is nearly completed. It will be ready for operation in time to test the feasibility of those systems amidst the ice and snow of the Boston climate, which is particularly bad for subways, owing to the rapid variations in temperature, which give rise to large quantities of slush and sleet, the two evils against which electric railways will have to contend.

Stove-Pipe Machine.

Messrs. William Horn & Co., Keokuk, Iowa, have brought out a stove-pipe machine, the general construction of which is indicated in the accompanying illustration. The motive power is applied by means of a foot treadle something after the style of those employed in certain forms of roofing machines. The treadle is located in front of the machine, which is designed to be placed upon the right-hand end of the work-bench, or it may be set upon legs, as most convenient. It is shown in the latter form in the cut. The clamping device is worked by means of a smaller treadle, shown just below and at right angles to the larger one, and is held in place by a series of ratchets, clearly indicated in the cut. The rivet bar and frame are suspended from the mandrel by means of balance springs, and can be brought down when needed by means of the foot treadle. This is usually done just before the drop of the hammer. The cylinder, or frame, is attached to the mandrel bar, and may be constructed of any size desired. After the stove-pipe has been cut and formed in the usual manner it is slipped over the mandrel and is then clamped up by means of the clamping device which is operated by the

Stove-Pipe Machine.

smaller foot treadle already described. The pipe is firmly held in position until the riveting is completed, when it is released and readily slips off, making every joint true to size. The hammer is raised automatically by a spring and brought down to its work by the foot treadle. It is held up by a catch or trigger when operated by foot power, but when run by steam power a friction pulley and trigger are employed. The rivet bar indicated at the front of the machine is kept in a raised position by means of a spring not shown in the cut. In operating the machine the first step is to swing out the mandrel, which is hinged at the left and secured in place by a key-plate at the right. The rivets are then put in position by the mandrel and the sheet of which the pipe is made clamped in place. The mandrel is then swung into position and secured, when the pipe is formed as described. The rivet bar, operated by a crank, is then turned and brought down upon the pipe, the holes in the bar corresponding with the rivets in the mandrel and constituting a multiplex rivet set. When in this position the hammer is brought down, drawing the rivets through the lap of the pipe. The bar is then raised to its original position, as shown in the cut, and the flat surface

brought down, when a blow of the hammer heads the rivets and completes the operation.

Clark's New Improved Anti-Friction Caster

Geo. P. Clark, Windsor Locks, Conn., manufacturer of trunk and furniture casters, has recently put on the market a new

to wheat and corn. On January 1, 1888, it had 1459 farms, and December 1 these were carrying 2051 mortgages. The assessed value of the land was \$596,542, and the face value of the mortgages was \$1,091,929. The total assessed value, undoubtedly below the true value, of the real and personal property of the county subject to taxation was, December 31, 1887, \$1,290,390, so that if the county

Clark's New Improved Anti-Friction Caster.

line, one of which is shown in the accompanying illustration, which indicates its special features. Set firmly in the frame of the caster over the wheel and under top plate is an anti-friction roller. The top plate is adjusted so that all weight may come directly on the roller, and not on the center pivot. As a result of this construction it is claimed that heavy trucks or furniture mounted on these casters move with much less friction, and can consequently be handled with less exertion than is required where ordinary casters are used. Two styles of these casters are manufactured, one being fitted with plain iron wheels and the other with the Clark noiseless rubber tired wheels, which, by the way, we are advised, have superseded iron wheels in many mills and warehouses on account of their noiselessness and the fact that they do away with the tearing and splintering of floors. While these casters are particularly well suited to mill and warehouse trucking, they are referred to as admirably adapted for all purposes for which casters are used, as on heavy show-cases, heavy refrigerators, sideboards, pianos, &c. By this addition it will be seen that Mr. Clark's exceptionally complete line of casters is further enlarged, and this new caster is regarded as meeting the requirements of the trade for such an article.

One of the trade correspondents of the *London Engineer* reports that one large furnace has been set on to make aluminium pig iron, and the product is giving great satisfaction to the stove-grate casters and others for fine ware, who require a fluid metal free from the chance of blow-holes, which this new alloy accomplishes, and it is very fine grained, so gives a beautiful polished surface.

Speaking of the burden of farm mortgages, a Western paper cites as an illustration Phelps County, in Nebraska, one of the smaller counties of the State, devoted

paid its mortgage debts in the East, four-fifths of all its land, houses, horses, cattle and live stock would go to meet the debt.

The Detachable Empire Sash Cord Fastener.

The accompanying illustration represents this article. It is manufactured by the Empire Portable Forge Company, Cohoes, N. Y. Fig. 1 shows the fastener as applied to the sash cord, and Fig. 2 represents it as attached to the window sash. It is explained that the sharp rib extending over the top of the fastener

Fig. 1.

Fig. 2.

The Empire Sash Cord Fastener.

through the center is by the weight of the sash caused to sink in the frame, and is thus held firmly in place. The manufacturers allude to the following advantages in the use of this simple device: That it costs less than 1½ cents per sash; that it requires no nails or screws; that it can be put in or taken out very quickly; that it prevents the knot from fraying out and getting between the sash and the frame; that there is no liability of its splitting the sash, and that it prevents the cord from running back into the weight pocket.

CURRENT HARDWARE PRICES.

JANUARY 9, 1889.

Note.—The quotations given below represent the Current Hardware Prices which prevail in the market at large. They are not given as manufacturers' prices, and manufacturers should not be held responsible for them. In cases where goods are quoted at lower figures than the manufacturers' name, it is not stated that the manufacturers are selling at the prices quoted, but simply that the goods are being sold, perhaps by the manufacturers, perhaps by the jobbers, at the figures named.

THE IRON AGE

THURSDAY, JANUARY 17, 1889.

Turning and Boring Lathe for 6-Inch Breech-Loading Rifle Hoops.

On January 5, 1888, the Government received proposals for furnishing ten lathes to be especially designed for both turning and boring the steel hoops used in the construction of breech-loading guns. The firm of Israel H. Johnson, Jr. & Co., of Philadelphia, received a contract for five of these lathes, the aggregate price being \$23,298. The accompanying drawings represent side and end elevations and a plan

independent feed-rings, levers and cam frictions for lateral and cross-feeds, which are driven by bevel pinions mounted on long sleeves sliding on steel splined lead screw and supported in a sliding bracket. This gives the reverse motion to the carriage feeds and also locks the lead screw nut, thereby preventing both the nut and frictions being thrown in operation at the same time. When cutting screws the hand-wheel in the apron can be disengaged instantly. Three grades of feed, without changing gears, are obtained by means of

ing bar of suitable diameter. The tail-stock is moved on the bed by a rack and pinion, and is provided with a screw and releasing nut for power feed for boring.

In the drawings it will be noticed that the tail-stock is fed by a screw operated by gearing placed at the back end of the bed. This subjected the feed-screw to a compression strain, which, it was thought, in case of heavy work, might produce more or less deflection of the screw. For this reason the builders, after having been granted the contract, asked permission to

Side Elevation.

Plan.

TURNING AND BORING LATHE FOR 6-INCH BREECH-LOADING RIFLE HOOPS, BUILT BY ISRAEL H. JOHNSON, JR. & CO., PHILADELPHIA, PA.

view of the plans as adopted. The lathes have been constructed in accordance with these plans, with a single important exception, the reason for which will be explained further on.

The general dimensions of the lathe are: length 22 feet, bed 45 inches wide on top, distance between centers 13 feet, swing 50 inches over the ways of the bed and 38 inches over the carriage, weight 34,000 pounds. The cone has five changes for a 4-inch belt, the largest section being 30 inches in diameter. It is back-gearred 10 to 1 and triple-gearred 57 to 1, giving fifteen changes of speed. These gears are all engaged and disengaged by moving eccentric boxes. The front bearing of the spindle is 8 inches in diameter and 12 inches long; the back bearing is 5½ inches in diameter and 8½ inches long. The apron is provided with

compound or cone feed gears and pin on the head. The feeds can be changed from screw-cutting to turning without changing the gears. The bearings of the carriage are 5 feet long, and are gibbed to the bed the entire length. A clamp holds the carriage to the bed when the cross-feed is in use. The compound tool rest is formed with double slots for two or four tool posts, for clamping tools as desired. The carriage has power cross-feed and power feed to the compound rest top slide for turning angles; it also has a side rest for turning work the full swing of the lathe. All the dovetail slides are fitted with taper gibs and adjusting screws for taking up all wear. The tail-stock is made with a dovetail set-over, and gibbed to the bed. It is also arranged with a removable cap to permit the spindle to be replaced by a bor-

change the arrangement of this screw by operating it from the opposite end of bed, as the tail-stock would then be pulled against the work, instead of pushed, and, as the screw would only be acted upon by tension, the anticipated trouble could not occur. The suggestion was, of course, agreed to, and the lathes are being constructed with that change. The thrust bearing for this screw is at the inner end of the head.

The material of which each of the principal parts of the lathe is made is indicated on the drawings.

The annual meeting of the American Society of Civil Engineers was opened on Wednesday and will be continued this (Thursday) evening.

THE LAKE ORE TRADE.

Outlook for the Coming Season.

Peculiar interest attaches at the present time to the Lake Superior iron-ore trade. In the face of adverse influences affecting the production of iron and steel, the demand for the raw material, iron ore, has recently been heavier on the Lake Superior mines than at any previous time since they were first developed. The consumption of Lake Superior ore approximated 6,000,000 tons in 1888, as against a fraction over 4,000,000 tons in any preceding year. This increased consumption occurred, notwithstanding a falling off in the production of steel rails, of bar iron and of many other kinds of iron and steel in 1888 as compared with 1887. It was quite as unexpected to those directly engaged in the trade as it has been to others. When the year 1888 opened with such discouraging prospects for the steel-rail makers the producers of Lake Superior iron ore felt that they had lost their mainstay, as so large a part of their product had for years gone into steel rails. To make the outlook still more discouraging, a heavy stock of unsold ore had been carried over at the Lake Erie receiving ports from the season of 1887, in consequence of the slack demand from the furnaces during the memorable coke strike of that year, and, of course, it was an incubus until sold and forwarded for consumption. And, further, large consumers of ore deferred making contracts for their season's supply until May and June, so that the mine owners were without their usual guide as to the probable requirements of the year, and in numerous cases arranged to curtail their production. But by midsummer the stocks at lower lake ports had melted away and increased shipments were necessitated from the mines, advancing in quantity from week to week until the aggregate shipments of the previous active year were overtaken and passed. The navigation season of 1888 closed with smaller stocks of unsold ore at Lake Erie ports than had been the case for several years, while some belated consumers in Central Ohio, who had deferred buying ore until it was impossible to ship by lake, were obliged to have it forwarded by all-rail from the mines to their furnaces.

Special circumstances, of course, contributed to bring about this remarkable state of affairs. Prominent among them are the increased production of steel for miscellaneous purposes, and the newly developed market for Lake Superior ore east of the Alleghenies. While steel rails will for years continue to be the largest single interest absorbing iron ore, the use of steel for miscellaneous purposes is so rapidly growing as to promise in the near future to assume the leadership. Steel manufacturers will regulate the demand for ore as hitherto, but they will represent a score of products, and not steel rails alone. Fluctuations will occur necessarily, but they will not be so violent as when the demand is regulated by the steel-rail trade, which is subject to the mercurial character of the railroad interests. There is still much room to grow in the manufacture of steel for miscellaneous purposes, as the Government tables of importations show. With regard to the Eastern markets now opened to Lake Superior ore, it may be said with almost historical accuracy that 1888 witnessed the beginning of the trade in that direction. Lake Superior ore had been used to a limited extent for several years in a number of Eastern iron works, principally for fettling, but in 1888 docks were erected at Buffalo for the express purpose of handling ore expeditiously and in large

quantities, and the business of forwarding ore to Eastern blast furnaces was inaugurated on a proper basis. The railroads carrying anthracite coal to Buffalo assisted in the construction of the docks, and encouraged the movement of ore eastward by establishing low freight rates. Most opportunely for this trade, ocean freights on foreign ore were high in 1888, thus reducing in a great degree the competition from that quarter, and making the introduction of Lake Superior ore comparatively easy. About 250,000 tons of ore were forwarded to the East from Buffalo in 1888, and it is confidently expected that this amount will be doubled in 1889. An indication of the opinion entertained by Eastern ore-importing houses regarding the possibilities of this trade is shown in the very recent effort by a well-known firm to obtain control of the entire production of one of the leading Lake Superior mines. Even if ocean freights drop to their former figure, it is the belief of the Lake Superior ore men that they will be able to hold their ground in the East with the shipping facilities they now

While the year 1888 was fairly satisfactory to the ore interests, as might be presumed from the statistics given, it began with anxiety and uncertainty, continued to suffer some degree of demoralization until the shipping season was well over, and then wound up affairs with a stiff demand, better prices, and decidedly more confidence in the future. Contracts for the supply of ore were made unusually late by furnacemen last year. They had large stocks, and were in no hurry to add to them, while the price of pig iron was declining and the demand diminishing. With a possible necessity to curtail production confronting them, they deferred contracting for another year's supply of ore until they could see that it would be wanted. Those who knew what they would need held off to bear the market and to depress the price of ore as much as possible, even resorting to direct attacks in order to accomplish their purpose. All the causes which so decidedly depressed the iron market in the first half of 1888 had their effect on the iron ore trade, which, however, suffered an additional de-

TURNING AND BORING LATHE FOR 6-INCH BREECH-LOADING RIFLE HOOPS. ISRAEL H. JOHNSON, JR. & CO., PHILADELPHIA, PA.

have, and with the connections which have been established.

The exact production of Lake Superior iron ore in 1888 has not yet been ascertained, but it is estimated by the *Marquette Mining Journal* to have been about 5,000,000 tons, or about 800,000 tons more than 1887, which had in its turn exceeded any previous year. Of this production about 40 per cent. was contributed by the Marquette range, about 25 per cent. each by the Menominee and Gogebic ranges, and 10 per cent. by the Vermillion range or Minnesota mines. At the close of Lake navigation for the season of 1888, according to the *Cleveland Iron Trade Review*, the quantity of unsold ore at Lake Erie ports was considerably less than 200,000 tons, as against 750,000 tons at the corresponding time in the previous year, showing that the ore shipments of the season of 1888 had gone directly into consumption, and with them had gone about 600,000 tons of stock carried over from the previous year. As it is further estimated by ore men who have looked carefully into this matter that at this time last year many furnaces were stocked with ore sufficient to carry them well into the fall, while they now have but enough to supply them until navigation opens, involving an increased consumption of fully 400,000 tons above that of last year, it can easily be seen how the consumption of 800,000 tons in 1888 is obtained.

pression from these attacks. When prices were established in May, the ruling rates were \$5.75 for the best grades of Bessemer magnetics, \$4.75 to \$5 for Bessemer hematites, \$4.75 for non-Bessemer magnetics, and \$3.75 for non-Bessemer hematites, at Lake Erie ports. Sales were made at rates under these by mining companies in need of money to meet pressing obligations. Lake freights opened at \$1.25 between Lake Erie ports and Ashland, \$1.25 Two Harbors, \$1.15 Marquette, and 90 cents to \$1 Escanaba. The lateness with which season contracts were made for ore by the furnacemen seriously interfered with the proper management of their business by the ore men. They were particularly handicapped in arranging for tonnage, and seriously felt it later in the season when the demand for ore increased and unemployed vessels were scarce. The higher prices received for ore inured largely to the benefit of the vesselmen under the circumstances. Bessemer magnetics sold for \$8, hematites, \$5.50, non-Bessemer magnetics, \$5 and hematites \$4.25 and \$4.50, at Lake Erie ports, while vessel freights advanced to \$1.70 from Ashland and Two Harbors, \$1.50 from Marquette and \$1.25 from Escanaba. The price of ore would in all probability have gone higher if the mines had not been prepared to meet the sudden demand which came upon them in midsummer. They had closed up the season of 1887 in

most excellent shape, with the expectation that the next year's requirements for ore would be larger. Hence dead work had been carried on, machinery had been overhauled and improved, large stock piles had been accumulated at the mines and the increased production was a matter of ease when the time arrived. The new mines of course contributed largely to this result. As to the profits of the year's business, the mine owners assert that only the best mines and the most carefully managed properties have earned dividends for their stockholders. Many mines have barely paid expenses and made the necessary additions to their plant and working capital.

So much for the past, and now for the future. On interviewing the mine owners and sales agents at Cleveland we find the opinion quite general that contracts for ore will be made much earlier than last year. A repetition of the experience of 1887 is not expected, when almost the entire output of ore for the year was sold in January and February, but, on the other hand, a much better opening of business is looked for than in 1888. If the price of Bessemer pig iron had kept up to the rates ruling last fall the furnacemen would have been placing their contracts for ore now. The quiet condition of the pig iron trade is influencing both buyers and sellers of ore. Buyers will naturally endeavor to get ore at lower prices than those prevailing at the close of the season, insisting that they cannot afford to pay them, while sellers will endeavor to hold prices up to these figures, so as to realize better results for their mines than accrued from last year's business. It is generally believed that a more active demand for pig iron will be felt by February 1, and that a better price for ore can be obtained by waiting until then rather than by attempting to force the market earlier. The general condition of business throughout the country being better now than it was at the opening of 1888, and disturbing elements being remarkably few and far less threatening, a prosperous year is anticipated, which should not be endangered by precipitous action. The condition of the ore interests is also much better. The Gogebic mines have recovered from the demoralization of the speculative era through which they passed in 1887, compelling a number of them to sell ore in 1888 at very low prices in order to meet pressing liabilities, and they can this year wait for the demand to mature. Some of the leading Lake Superior companies have already been asked to name prices for the season, it is true, but they have felt that the immediate conditions are not favorable for even the slight advance which they hope to get; and they have therefore declined to quote until they see an improvement in the iron trade. The general opinion is that inside of 30 days circumstances will develop in favor of fixing prices for the season, and that great activity will prevail in ore circles in February and March.

Careful investigation shows that a reasonable increase in production can be made this year. Some mines, like the Republic, Cleveland, Champion, Lake Superior, &c., will turn out about their usual quantity, without regard to an increased demand for ore, if it should come. Their owners prefer to work their properties regularly, with due regard to preserving them in good condition, and by careful management to secure good results, both in active and dull seasons. This policy is gaining more adherents from year to year. Newly opened mines, which have not been thoroughly developed, will of course endeavor to increase their output and enlarge their business. From them will come the increased production of the year. The mines on the Vermillion range in Minnesota, which shipped 450,000 tons last year, will be capable of producing 900,000 tons this year, though their owners believe it

would be inadvisable for them to undertake to make so large an increase in one season. Several of the Gogebic mines are in shape to enlarge their output quite considerably. Taking the entire region, a conservative estimate of the increase expected this year, if no positively unfavorable conditions develop in the iron trade, is about 10 per cent., or 500,000 tons. If a very active demand should spring up for ore, and manifest itself sufficiently early in the season, it is believed that the production of the year could be brought up to 6,000,000 tons. The greater proportion of this increase would be in non-Bessemer ores.

The remarkable fact, as previously demonstrated, that the consumption of Lake Superior ore last year was about 1,000,000 tons greater than the production, so that stocks at lower lake ports and at furnaces will be pretty well exhausted by the opening of navigation, causes the ore men to look forward to the placing of contracts for the coming season with a great deal of interest. The earlier the contracts are placed, the more definitely can the season's work at the mines be planned. If it is clearly established that considerably more ore will be needed than was mined last year, preparations can be made to meet the enlarged demand. From three to six months' notice is needed to get the mines in good shape to materially increase their output. Dead work would have to be done which is not now contemplated, and good-sized stock piles should be prepared by the time navigation opens. So far as shipping arrangements are concerned, the facilities for handling ore on the lakes are now better than they ever were. A very fine class of vessels is now employed in this trade, they are both loaded and unloaded with remarkable celerity, and their movements are controlled as systematically by the large ore shippers as railroad trains are governed by the dispatchers. Immense as is the tonnage of the ore mines, the shipping facilities keep pace with it. In Wisconsin and Illinois the railroads are gradually absorbing the ore business, but thus far only a few thousand tons have been hauled by rail from the Lake Superior mines to the furnaces in Ohio, the circumstances being so exceptional and the rates so high that the movement is not likely to grow until the conditions change very decidedly.

The ore men are anticipating lower vessel rates than those which prevailed at the close of last season, and may be able to secure charters at about the rates paid when the season opened. The mildness of the winter and the short wheat crop in the Northwest are expected to operate in their favor, together with the increased tonnage now in course of construction at the lake shipyards. The winter has been so open that the stocks of coal at the upper lake ports have diminished very little in comparison with previous years, and unless severe weather sets in soon the opening of spring will find stocks still large, with correspondingly less employment for lake vessels in that line. The Minneapolis flour mills are drawing heavily on the light stock of wheat in the Northwest, and are expected to require even the wheat in the Duluth elevators to meet their wants. With an increased number of vessels demanding employment, the new tonnage under construction, amounting to over 100,000 tons, it would appear that the ore men have good reason to look for a decline in freights. The vesselmen, however, are not yet prepared to accept the situation, and may hold out for some time against the pressure now being brought to bear on them.

The partnership heretofore forming the Teal Hoist Company, Limited, of Philadelphia, has been dissolved by mutual con-

sent. In the future the business—the manufacture of Teal's portable hoist—will be conducted under the firm name of the Maris Machine Company, which is composed of Frank Maris and Charles E. Maris, who have purchased the business, patents and fixtures of the original company.

Lubricating Oil in Bulk.

The attempts made a short time ago to transport Russian refined lubricating oil in bulk to Antwerp and other ports of Europe do not appear to have been very successful. Refined machinery oils depend for their reputation and sale upon their color, and, as the mere addition of a few drops of water will discolor a large quantity of oil, most of the consignments, if not all, had to be subjected to clearing processes afresh before they could be placed on the market. Possibly by extremely careful manipulation, and rendering the tank steamers absolutely water-tight it may be found possible in time to overcome the defect; but in the meanwhile an innovation respecting which so many sanguine expectations were expressed a short time ago appears to have dropped out of favor. At any rate the Shibajeff firm, which is the principal lubricating oil firm at Baku, has not adopted the new system, and still sends the whole of its large consignments of refined mineral oil in barrels. A good deal of dissatisfaction is expressed in Russia at the way sham or adulterated Russian lubricating oil is placed on the English market. The accusation is freely made that a large proportion of mineral oil sold in England as Russian is not Russian in the strict sense of the term at all, often consisting of simply a fraction of Russian oil mixed with sham mineral oils of vegetable origin. In this manner the high reputation given to Russian mineral oil by Mr. Boverton Redwood, Professor Sadler, and other experts, is not justified in the article sold, and an ill impression is created very annoying to the Baku firms. It is in order to avoid impairing this reputation that the Shibajeff firm have refused to send their oil to England in tank steamers, notwithstanding that they manufacture 8,000,000 gallons a year under the supervision of V. Ragozine, the founder of the mineral oil industry in Russia. All the same, seeing how many advantages would result from handling the oil in bulk, it ought not to be wholly impossible to devise some means whereby water can be totally excluded from the tanks during the overseas voyage. Every year the demand for machinery oils grows greater and greater, and the largeness of the sale will in time justify even costly attempts to overcome the difficulty at present attending their conveyance in bulk.

An examination tending to show the chemical union of lime and silica by long contact has been made by Mr. John Spiller, F. C. S., of England. A sample of ancient mortar was taken from the section of an old London wall recently laid bare in St. Martin's-le-Grand. From the fact that a large quantity (11 per cent.) of silica could be dissolved out readily by caustic soda, and there being a deficiency of carbonic acid without any evidence of free caustic lime, the inference was drawn that silicate of lime was present, this body being the result of direct combination between the lime and sand in the course of many centuries. Samples of a London mortar about 100 years old and another of recent date contained 1.1 per cent. or less of soluble silica—that is, only one-tenth of the amount now actually found in the Roman mortar analyzed.

The Pencoyd Twenty-five Ton Crane.

In the description of the Pencoyd Iron Works of A. & P. Roberts & Co., Pencoyd, Pa., published in *The Iron Age* of

were largely built there. The mast, which is 25 inches in diameter for a length of 14 feet 5 inches, is probably the heaviest forging in this country. The swing of the crane, as will be observed from the

tached to the mast, which has a diameter of 11 inches and 8-foot stroke, the rope running over the shears shown. The trolley is handled by a $6\frac{1}{2}$ -inch hydraulic cylinder, having a 12 $\frac{1}{2}$ -foot stroke. The

Fig. 1.—End Elevation.

Fig. 2.—Plan.

TWENTY-FIVE TON CRANE.—A. & P. ROBERTS & CO., PENCOYD, PA.

December 27, 1888, page 966, we alluded briefly to the two cranes which serve the 20-ton hammers in the new hammer shop. These cranes, which can handle a load of 25 tons each, have been designed by the engineers of the Pencoyd Works, and

accompanying engravings, is 28 feet. It is swung by means of an 8-inch hydraulic cylinder, with 2 foot 7 inch stroke, the rack and pinion movement being transmitted, as shown. The load is handled by means of the hydraulic cylinder at-

total height of the crane from the floor line to the top of the girder is 22 feet. The working pressure for the hydraulic cylinders is 700 pounds. The works have built two of these cranes, one on each side of the large hammer.

The Standard Metal Cross-Tie.

The objections which have been made to the various forms of metallic railroad ties which have been tried are founded almost wholly upon the form of the tie itself and the method of fastening the rail to it. It is conceded by many leading railroad managers that a metal tie would be far preferable to one of wood, if it were designed so as to meet the essential requirements. The experience gained by studying the behavior of those ties which have been used more or less extensively in England, Germany and India has brought out the defects in the forms, and has indicated the characteristics which should be found in the perfect tie. When the rail rests in direct contact with the tie, there is invariably a certain space, caused by unequal expansion and contraction, through which it is free to vibrate. This greatly increases the noise, and produces crystallization. Wedging between the rail and tie does not overcome the difficulty. Wooden ties have a comparatively rough surface, with which the ballast engages in such a way as to firmly hold the tie in place. Metal ties, not having this feature, have a tendency to move laterally, the pressure of the train against the outer rail being sufficient to move the track. Attempts to remedy this defect have been made by downwardly curving or bending the ends of the tie to enable it to grip the ballast.

The steel tie of the Standard Metal Tie and Construction Company, of New York, which we herewith illustrate, appears to do away with these objections. The general form of the tie is clearly shown in the several drawings. In the channel of the tie is accurately fitted an oak block, the grain of which runs vertically. The block

ment is prevented by the upturned ends which encounter the ballast between the rails, where it is much more compact than at the ends of the ties.

No fish plates are required with this tie, as the rail joint is made over a broadertie, provided with two bolts, which pass through the clips instead of one; and in order to prevent the creeping of the rails a steel plate is used, which has four vertical lugs, one at each corner, arranged to engage notches formed in the rail base. That this tie and fastening are extremely simple in construction is apparent; it is also evident that the rail and tie are united with such force as to practically form one piece. Carnegie, Phipps & Co. have entered into a contract with the Standard Metal Tie and Construction Company to furnish the plates for the ties. The E. W. Bliss Company have furnished the presses for shaping the sheets.

STEEL RAILROAD TIES, MADE BY THE STANDARD METAL TIE AND CONSTRUCTION CO., OF NEW YORK.

is of the same width as the base of the rail, but is $\frac{1}{4}$ inch less in height than the depth of the channel. The sides of the channel are cut out under the rail about $\frac{1}{4}$ inch, to permit the rail to rest directly upon the wood. Through the bottom of the tie, at each side of the block, are cut two square holes, through which the lugs of the clips C hook. The upper end of the clip is beveled to correspond with the upper surface of the base of the rail, and its middle or body portion is curved inward, so that when the clips are drawn together by the bolt B they press against the sides of the block before closing down upon the rail. The blocks are tested under hydraulic pressure, and their durability is increased by creosoting. This arrangement of clips and bolt forms a secure fastening, which should prevent any movement of the rail. But should the rail become loose, a slight turn of the nut on the bolt would bring the jaws of the clips further over the rail and again firmly hold it.

The central portion of the bottom is cut out and the ends bent upward at an angle of about 45°. A separate bearing surface is thus formed under each rail, the weight is reduced, while the strength remains practically the same, and lateral move-

The following tables show the actual cost of a standard track having wooden ties and stone and gravel ballast, and the estimated cost of a similar track furnished with the Standard ties. The former figures were taken from the books of a trunk line in January, 1884, and are believed to be as low as it was possible to build a good track at that time. The percentage of the first cost of steel ties over wood would be less at the present time than that shown in the tables, owing to the increased weight of rail and the larger and heavier fish plates and larger ties needed. According to the tables the additional cost of steel over wooden ties is the same as the additional cost of stone over gravel ballast; hence it is possible to lay steel ties with gravel ballast at the same cost as wooden ties with stone ballast.

The Standard Company calculate that their steel ties will last at least 40 years, and that a mile of track will cost \$6600. The cost of renewals in blocks, bolts and nuts is estimated at \$1689, making a total cost of \$8289. It is estimated that wooden ties, plates and spikes cost \$2469.02. Renewals necessary to meet the life of steel ties, taken as at 6 to 40, cost \$16,460.13. Labor at 30 cents per tie, and five and a half renewals during the period, \$4646.40. This makes the total cost of wooden ties for 40 years \$21,106.53, and shows a saving per mile in favor of steel of \$12,817.53.

In 1887 Norway imported metals to the value of £537,000, of which £276,000 was in raw or half worked metals, and £182,000 in iron plates. Machinery to the value of £110,000 was imported.

Improved 10-Inch Shaping Machine.

The accompanying illustration represents an improved 10-inch shaping machine, built by Boynton & Plummer, of Worcester, Mass. This machine, being on a pedestal, admits the placing of long work in front, for which there is provided a face plate for attaching such work as legs of machines, &c., to, and to which may also be attached an angle plate, either in a right or left-hand position and at any angle with the face plate, thereby enabling the planing of any angle or bevel required. The feed is automatic and reversible, and the cutter bar has a graduated swivel head. Through the body of the machine, directly under the tool, is a large open space which permits the placing of long work,

present population is 1,400,000, many of the counties having doubled and even trebled in population during the past year. The value of the mineral products in 1888 is placed at \$20,000,000; manufactured products, \$170,000,000; orchard products, \$24,000,000; cereal crops, \$55,000,000.

The Friction of Locomotive Slide Valves.

At a recent meeting of the British Institution of Civil Engineers a paper was read on "The Friction of Locomotive Slide Valves," by Mr. J. A. F. Aspinall, M. Inst. C.E.

In this communication the author stated that only scanty data existed as to the

relation between the pull or the push on the valve and the pressures recorded by the indicator could be expressed by a simple linear equation:

$$L_i = 5.61 + 1.26 L,$$

where L_i was the pressure due to the force required to move the valve, and L the pressure shown by the indicator. The results of experiments with the apparatus on an ordinary brass valve, a brass Allen valve and a cast-iron valve were then given, both with the link in full forward gear, and with the link notched up. A small excess of the pushing pressures over the pulling pressures was shown to be due to the steam pressure on the back end of the spindle. Samples of the diagrams and calculations were submitted. As the valve resistance was not uniform throughout the stroke the causes of variation were discussed. These were the variation of pressure on the back of the valve, the variation of pressure on the face of the valve, the variation of pressure in the exhaust space, and the inertia of the parts in motion. As the most convenient measure of the valve resistance the author took, not the mean resistance of the valve, but the resistance at mid-stroke, and he compared his resistance with the few experiments previously made. The author's results made the valve resistance considerably less than it had been supposed from previous experiments. He found the resistance of a valve in motion, with 127 to 139 pounds pressure on the back, to range from 982 to 1321 pounds. The valve was $16\frac{1}{2} \times 10$ inches. Taking one case, the total load on the back of the valve was 22,110 pounds; the relieving pressure on one steam port, 1800 pounds; the relief due to steam in the valve passage, 980 pounds, and the relief pressure on the exhaust area, zero. Hence the resultant load was 19,330 pounds. The force necessary to move the valve was 1321 pounds; the coefficient of friction was therefore 0.068. Similar calculations for two other valves gave coefficients of friction of 0.054 and 0.051. The lowness of the coefficient was remarkable, especially as the temperature of the surfaces must be about 350° F. The author calculated the percentage of power lost in slide valve friction at 1.34 to 2.26.

IMPROVED 10-INCH SHAPING MACHINE, BUILT BY BOYNTON & PLUMMER, WORCESTER, MASS.

such as shafts for key seating, &c. The table is adjusted by means of a crank at the side. Although the machine is rated as having a stroke of 10 inches, it will make a stroke of $10\frac{1}{2}$ inches, and can be adjusted to any less distance. With the machine is furnished a swivel chuck and also a plain chuck taking work the full length of traverse; the former may be fastened to either the face plate or angle plate. The head, or ram, has a horizontal traverse of 15 inches. The vertical traverse of the table is 18 inches. The swing shafts and feed-screws are made of the best steel, and the screws and other parts are case hardened where necessary. The weight is about 1000 pounds. These machines are especially suitable for model-makers, die-sinkers, railroad repair and other shops, because of the accurate work they will do. The manufacturers also make 6 and 8-inch shaping machines.

San Francisco papers claim that the past year was the most prosperous in the history of California. It is estimated that the

friction of slide valves, and that the few experiments which had been made were not of a very satisfactory character. Hence he was led to design an apparatus for graphically recording the force required to move slide valves during the whole of their travel. The apparatus consisted of a small hydraulic cylinder and piston, which was made to form part of the valve link. An ordinary steam-engine indicator was screwed on to one end of this cylinder, and an air valve was placed on the other. For pulling, the indicator was on one end of the hydraulic cylinder. For pushing, it was placed on the other end. A second indicator on the valve chest gave a simultaneous diagram of the pressures on the back of the valve. The pressure on one side of the hydraulic piston being atmospheric pressure, that shown by the indicator at the other end was the force required to move the slide valves, less any friction of the apparatus. The author described the experiments made to determine the friction. The results showed that the

Behavior of Tempered Steel.—B. Pensky, after experimenting with two steel rods 100 mm. in length, observed that they exhibited an increase in volume after they had been tempered by heating to redness and plunging in water. *Industries* reports that he attributes this to the fact that the external layers solidify first, and consequently prevent to a certain extent the contraction of the interior mass during cooling. The length of the rods under these circumstances showed a variable behavior, inasmuch as one of the rods, 27 mm. thick, increased in length 0.083 mm., while the other, 13.5 mm. thick, decreased in length 0.080 mm. It would thus seem that a rod when tempered becomes longer or shorter according as the proportion of surface to volume is either below or above a certain limit. Subsequent to the tempering both rods became gradually shorter at the ordinary temperature, the decrease in length amounting to 0.032 mm. and 0.021 mm. respectively. When they were now heated to 120° they underwent a further diminution in length amounting to 0.015 mm. and 0.021 mm.; but further exposure to the same temperature produced no alteration in the length. On the other hand, by subjecting the rods to successively rising temperatures continued shortening was observed. Very hard steel disks suffered similar decrease in the length of their diameter, gradually at ordinary temperature, but more rapidly after being heated.

Foreign Intrigues in Corea.

A Russian treaty with Corea, just negotiated, ostensibly for the promotion of trade on the Northern frontier, excites suspicion of an ulterior object; and the agency which Mr. Denny, "the smooth-tongued American" who acts as the king's adviser, is supposed to have had in the matter, opens more widely the field of conjecture. It concerns the United States, as the leading power in opening Corea to commerce, and as being the first to accept her foreign ambassadors, to learn through what influences the plans for Corea's commercial development under the treaty negotiated through Admiral Schufeldt in 1882 have been so effectually thwarted. China, it is well known, has resolutely refused to recognize Corea except as a vassal state, and she insists on maintaining at the Chinese legation at Seoul a military mandarin, who is accused of arrogating to himself the direction of Corean affairs in a sense that conflicts with the special prerogatives of the king, thereby exciting the fierce antagonism of Mr. Denny, who, at the same time, professes a desire to conciliate the high authorities at Peking. The relations of the king's adviser are so equivocal that he is openly charged by the *Japan Gazette* with pursuing a traitorous policy, and from another source comes the intimation that he would, in an emergency, favor an alliance with Russia.

The commercial treaty referred to was concluded early in August last, securing for Russian subjects the priv-

in the future of Corea, whose wealth of gold, as yet undeveloped, and valuable woods will constitute important articles of commerce. Altogether Corean affairs are badly mixed. Between the intrigues of Russia and China the arts of diplomacy will have an ample field, and the so-called "adviser" may find himself seriously perplexed.

New Engine Valve.

We show on this page several illustrations of a new form of engine valve brought out by the Chickasaw Iron Works, of Memphis, Tenn. Its design and function will be readily understood, the plan and

Fig. 1.—Transverse Section.

Fig. 2.—Vertical Longitudinal Section.

Fig. 3.—Sectional Plan.

NEW ENGINE VALVE, DESIGNED BY THE CHICKASAW IRON WORKS, MEMPHIS, TENN.

ilege of trading direct with Seoul through certain open ports. All Russian diplomatists and officials shall be free to travel in any part of Corea. On the other hand, Corean subjects shall be allowed to travel in Russia for pleasure or trade. The Corean Government shall permit the construction of factories by Russians in all places, and it will not be permissible for any obstructions to be made in future. Stringent customs rules are provided. All controversies in Corea between Russian subjects and subjects of other Powers shall be settled by the Russian officers without interference from the Corean Government. Actions against Coreans brought by the Russian authorities in Corea shall be decided according to Corean law by Coreans. The treaty is to remain in effect five years. The statement on London authority that Russia had declared a protectorate over Corea Mr. Denny pronounces a fabrication, as the treaty "gives no privileges to Russia from which other countries are to be excluded." Mr. Denny expresses himself as being a firm believer

sections requiring little explanation. It will be observed that the steam chest is of the ordinary design. Within it, however, at each end or in the middle, steam chambers with vertical and horizontal faces are provided. The latter rest on the bottom of the steam chest, while the former constitute a passage-way in which the valve travels. The arrows in Fig. 3 indicate the direction of flow of the steam, the ports *a a* serving for admission and the ports *b b* for exhaust. The valve, we need perhaps scarcely add, is practically balanced, and appears to have been introduced with good results.

The contract for the construction of the Merchants' Bridge across the Mississippi at St. Louis has been awarded to the Union Bridge Company, of New York City. The bid in gross for the building of the bridge only and for what iron work is specified for in the approaches is \$1,200,000. According to the charter agreement, work must be begun by February 2, or a forfeiture to the United States is the result.

Natural Gas at Louisville.

Prof. Edward Orton, State Geologist of Ohio, has submitted to J. R. Proctor, State Geologist of Kentucky, a preliminary report on the natural gas territory in Meade County, Ky., tributary to Louisville, the distance from the center of the gas field to the city being 27 miles, the pipe line having a length of 80 miles.

In the early days of the oil excitement the existence of traces of oil in the vicinity of Brandenburg, Ky., near the Ohio River, led to the drilling of a number of wells, of which several showed considerable quantities of gas and brine. One of them, on the Moreman farm, flowed without restraint until 1872, when the Moreman Salt Works were established, the associated gas being utilized as fuel in the manufacture of salt. The works, though small, proved exceptionally profitable.

The general recognition of the value of natural gas, so long delayed, naturally directed the search for it to the localities of earlier discoveries, and the cities of Louisville and New Albany naturally turned to the Meade County field. Companies were organized to drill, and wells multiplied between West Point and Brandenburg, Ky. From the level of the bottom lands in that portion of the Ohio Valley in which the new gas field is situated the drive-pipe of the new wells is quite uniformly from 100 to 125 feet, in valley deposits of clay, sand and gravel. Below the drive-pipe a series of limestones,

shales and possibly shaly sandstones is struck, which continue for 100 to 300 feet, and this in turn is followed by about 100 feet of soft, blue shale, called soapstone, or sometimes "mud-rock," by the driller. In the upper beds of this soapstone the casing of the wells is usually set. The soapstone is in turn underlaid by a bed of black shale, 50 to 100 feet in thickness, and this is the main gas rock and also the source of the salt water of this district.

The Meade County field constitutes a remarkable exception to conclusions held for a long time and which seem established on a sufficiently wide induction. The Meade County gas horizon is not like the Findlay gas rock, a newcomer in the field. The Ohio shale, under its various names, has been as long and as well known in connection with natural gas as any other strata in our entire series. Along its outcrops in Western New York, on the shores of Lake Erie, the gas springs that issue from it have been known since the region was first occupied by civilized men. The utilization of the gas

in this region goes back, in fact, to the first quarter of the present century. Since these earlier examples of successful use, wells have been drilled by the hundred, along the lake shore and in contiguous territory, expressly in the search for gas for household use. There is scarcely a mile, and certainly not a single township, along the line of the outcrop of this formation, from Silver Creek in New York to Huron River in Ohio, in which wells have not been drilled for gas. In many towns and villages a large and conspicuous service has been rendered by these wells. Erie, Pa., and, in Ohio, Conneaut, Ashtabula, Painesville and Cleveland may all be named as examples of this successful use. Throughout the entire district, success in drilling these wells has been the rule, and failure the comparatively rare exception.

After this wide and long-continued experience in the gas production of the Ohio shale, the geologist certainly felt warranted in deducing the laws and characteristics of this production. The characteristics are easy to define. The gas is of the Pennsylvania type, free from the sulphurous compound of limestone gas; it is low-pressure gas—or, in other words, it is not reservoir gas; it is not closely associated in production with salt water in the rocks. The shale sometimes contains salt water, it is true, but the gas is not delivered by the pressure of a water column. Such pressure is presumably the cause of the flow of high pressure or reservoir gas. The shale is practically an impervious rock. The pressure of the shale gas never exceeds 100 pounds to the square inch, and is generally limited from 10 to 30 pounds to the square inch—the daily yield of shale gas wells is consequently small. A production of 100,000 cubic feet per day is usual. The wells already described are mainly limited to less than 10,000, or to even less than 5000, cubic feet per day. This small production and the absence of an aggressive water column in the rock from which the gas is drawn give to these wells their long lives. Deductions drawn from these low-pressure wells are not applicable, unmodified, to high-pressure wells. The former may last for centuries where the latter would exhaust themselves in decades, or even in a single year. The Fredonia wells, so often quoted as proving the permanence of natural gas, were yielding in their best days 1500 to 3000 cubic feet per day, and deeper drilling has not permanently enlarged the supply. The use of torpedoes in these shale wells has not as a rule been successful. There is no way known of enlarging the flow or increasing the pressure of this group of wells. We must take them for what they are, and apply them to what seems their proper use—viz.: the furnishing of light and heat for domestic use.

The gas of the shale wells appears to be indigenous—that is, it is derived from the rock in which it is generated. The supply may be maintained by a slow conversion of the oil with which the shales are charged into gas. But there is nothing to indicate that the total amount of petroliferous contents in the shales has been increased since they were originally deposited. These conclusions in regard to shale-gas production seemed, as before stated, to be established on a sure foundation, and the geologist might well feel warranted in predicting what the behavior of the formation as a gas-rock would be, in any new locality in which it should occur.

The Meade County gas is unmistakably derived from the black shale, and it agrees with such an origin in chemical composition. But all of the other more important conclusions, that we have drawn in regard to the characteristics of shale gas, are promptly set aside by the new experience. The Meade County gas is reservoir or

high-pressure gas. It is associated with, and driven by a salt-water column. Its wells reach a maximum production of 2,000,000 cubic feet per day. They are greatly improved by the use of torpedoes. The rock pressure is low, it is true; but this evidently results from the shallow depth to which the gas-rock is found, for the depth is always a function of the rock pressure in reservoir wells. In the heart of the new field the rock pressure ranges from 100 to 125 pounds per square inch, the depth of the wells ranging from 300 to 500 feet below the surface. Again, the gas wells of this district produce salt water freely in connection with the gas, without, in all cases, at least, being over-run by it.

All this is confusing to a high degree. It seems at first sight as if such an experience destroyed all possibilities of scientific or practical provision in the search which our cities and towns are so eagerly pressing. But a closer examination shows us that but a single change has occurred in the character of the shale. Through the accidents of its history it has become a porous rock, and, consequently, a reservoir for gas, oil and salt water. All the other changes above noted follow at once upon the transformation of the shale from an approximately impervious rock to a porous rock.

PROVING THE FIELD.

The history of the first well of the new development has been already given in a preceding section. A daily flow of 800,000 cubic feet of dry gas was obtained from the well known as the Major Davis well, or well No. 1 of the Union Gas Company. This company has since drilled three other wells in the immediate neighborhood, one of which is unproductive, but the remaining two of which agree with the first in general character. The total production of the three wells is 2,500,000 cubic feet per day. The Kentucky Rock Gas Company next came into the field, having secured drilling privileges for a large acreage on the Kentucky side of the river, directly opposite the low arch which Major Davis had already discovered in the Indian hills. A number of wells have since that time been drilled by the company, on the Fountain, McGehee, Bickerstaff, and other farms in this immediate district, and it is this group of wells that mainly give character to the field.

The first well to be drilled by this company was the one known as the Bickerstaff well No. 1. It found the shale at a depth of 886 feet, and gas was found in good volume at 892 feet. The well was completed in January of the present year, and was allowed to burn without check until March, when it was shut in. On being opened a few weeks thereafter it was found to contain salt water. The water gained rapidly upon the gas, greatly reducing its flow. This is a type of several wells that have been drilled within the limits of the company. In some, indeed, the salt water makes the conspicuous feature of the production.

Another and better type is represented in the Bickerstaff well No. 2. In this the shale was found at 342 feet and gas in large volume at 368 feet. The well was torpedoed with 45 pounds of dynamite of 75 per cent. strength, and the flow of gas was greatly increased thereby. The gas proves to be entirely dry, and its production exceeds 2,000,000 cubic feet per day.

The First National Gas Company's expenditures and tests, in the search for natural gas, have been made a few miles up the river. They have found gas in excellent volume, in several wells, but in all cases it has been associated with salt water, at least after the wells have flowed for a few weeks. The original production of the Smith well, in this series, is represented to have been as vigorous as

any yet found in the valley. The well drilled at West Point, by Messrs. Cox & Montgomery, produced salt water and gas, the latter in comparatively small amount. The statements given above suffice to show that the black shale, when dripping from its outcrop, at New Albany, to a depth of 300 to 500 feet in the Ohio Valley, becomes, under certain conditions, a reservoir of natural gas and salt water on a large scale. Can its contents be made available for use? In other words, what is

THE VALUE OF THE FIELD?

In answering this question we are obliged to bear in mind that the Meade County field stands by itself in several important particulars. There is nothing, so far as I know, in the records of gas production that is exactly comparable with it. In the first place it is peculiar from the large production of its wells, when taken in connection with their shallow depth and their consequent low rock pressure. In the second place, it is peculiar because of the almost constant association with the gas of salt water of fair strength and exceptional purity. Up to a very recent date the presence of salt water has been counted so unfavorable to the flow of gas that fields are promptly condemned by the appearance of this last-named element in them. In the usual reservoir rocks it is counted certain that the salt water, if it once finds access to them, will steadily gain upon the gas and overpower it at last unless kept down by unremitting care.

In default of like experience in other fields, we are obliged to use the experience that has been acquired in this. The Moreman well will furnish us our best example. As already stated, it has been steadily producing gas and salt water since 1863. Since 1872 salt manufacture has been going on continuously at the works. But salt manufacture is not the end for which the present development is going forward. It is natural gas which is in demand. What is the promise of the new field, as seen in the light of the Moreman well, in this respect? Through the courtesy of the proprietor, I had an opportunity, in August last, to measure the volume of the original well. I found its daily flow to be but little less than 200,000 cubic feet. It is not at all probable that the original flow has been maintained throughout all these years without diminution. But, assuming that it has been 200,000 cubic feet per day, What is the total volume of gas to be credited to this little drill hole? The calculation shows it to be 1,825,000,000 cubic feet. We are certainly warranted in enlarging the amount to cover the diminution of the well to a total of 2,000,000,000 cubic feet. What value would this amount yield at a rate of 10 cents per 1000 feet? On this basis the gas that has flowed out of the Moreman well would be worth \$200,000. It is the extreme vitality of the Moreman well that has impressed me most favorably in my study of the field.

The failing supply of gas in the Eastern fields has led the pipe line companies, that are operating there, to devise means for separating the salt water that invades the reservoir as the gas is withdrawn from it, and also to devise means for restoring or supplementing the declining rock pressure. This system can be introduced at once into the Meade County field, and thus be made to aid very greatly in its development. I take it there is no longer a question as to the practicability of separating gas and water when produced by a single well; and also of sending the gas forward to its destination with any required pressure, if only the gas is at hand. In default of this experience, the new field would appear in a very different light from that in which we can now regard it.

HOW LONG WILL THE FIELD HOLD OUT?

No one duly acquainted with the history of gas and oil production, in this country and elsewhere, can for a moment doubt that, in all their usual occurrences, they are forms of stored power. There are no forces in operation that will ever refill the reservoirs which the driller exhausts. Least of all has nature the power to meet, with her slow and patient method of working, the rapid depletions which our modern engineering skill can effect. The renewals of nature are adequate to the maintenance, for long periods, of the weak outflows of gas and oil which we call "surface indications," but beyond this they cannot go.

The bituminous matter, including gas and oil, of the black shale of Central Kentucky, and also the salt water that is found associated with the gas, are, in my opinion, undoubtedly stored products. The amount of them now existing in the shale is practically all that there ever will be. If brought to the surface on a large scale the salt water will gradually lose its strength, being replaced by fresh water that will follow it from the outcrops of the formation, and, in like manner, the volume and pressure of the gas will presently decline, as wells are multiplied.

Is there enough gas in this great reservoir to justify the large expenditure that a pipe line from the gas field to Louisville requires? It is obvious, I reply, that a few billion feet of gas, brought to the Louisville market, will suffice to return the capital invested in the entire plant, and also to duly reward the enterprising company that is solving the problem of making demand and supply meet, so far as this much coveted fuel is concerned. The gentlemen who are engaged in the work have looked intelligently at all the available facts, and they have satisfied themselves that they occupy safe ground. This gas field, as already shown, stands by itself in several important particulars, and must make its own history.

Universal Milling Machine.

This machine has all the good points of the heavy Universal milling machine built by Pedrick & Ayer, of Philadelphia, although it does not, of course, admit of the latter's great range of work, but for its size and weight it has a greater range. It is designed for boring, drilling, forcing, milling, profiling, key seating, cotter drilling, rack cutting (any length), gear cutting, &c., and will make a valuable shop machine on delicate and accurate work. The spindle is of extra quality hammered cast steel and runs in bronze boxes, having an adjustment by which the original centers are always maintained without altering their position laterally—an important point, as the journal and bearings wear always in the same place. The front bearing is 3 inches in diameter and 4½ inches long; the back bearing is 2 inches in diameter and 4 inches long. The cutter arbor supporting bar, with its adjustable center, can be moved out to support the cutter arbors from the end of the spindle, or pushed back out of the way. This construction facilitates the milling or boring of a large piece of work that would be prevented by the ordinary fixed bar. It is 3¼ inches in diameter and of solid cast steel, making a very rigid support. The bar is provided with a harness to fasten to the knee of the machine when large centers are used and on extra heavy work.

The three feeds—vertical, horizontal (in line with the spindle) and transverse (at right angles to the spindle)—are all reversible, and are operated or stopped altogether by the handle shown in the engraving near the cup-board board. The

reversing device is common to engine lathes, does away with the crossing of belts and saves time. The three-step cone on the spindle belts to the lower cone, the shaft of which runs in a hollow stud and drives, by means of the reversing device referred to above, a shaft running through the base of the column. Bevel gears connect this shaft with the vertical shaft, and the latter by bevel gears with the horizontal shaft in the knee, which communicates in turn with the several screws for the various feeds in the front of the knee by clutch gears. These clutch gears can be engaged or disengaged at will by the knurled knobs shown in front, giving a vertical or horizontal feed. The platen feed is operated from the upper shaft in

desired, and is driven by a 3-inch bolt on a 4-step cone, the largest diameter of which is 11 inches. The internal gearing is 4 to 1 and the external 8 to 1. The dials read in decimals, or divided by 2, 4, 8, &c., enabling any measurement to be made.

The Pittsburgh Exposition.—The present outlook for the holding of an exposition in the city of Pittsburgh during the present year is indeed gloomy, and the lack of interest shown by the citizens and business interests of that city in the project is surprising. The annual meeting of the Western Pennsylvania Exposition Society was held on Tuesday, the 8th inst., during which the president of

NO. 1 UNIVERSAL MILLING MACHINE, BUILT BY PEDRICK & AYER, PHILADELPHIA, PA.

the knee by means of a pair of miter wheels running in a bearing which is a part of the platen slide on the knee. A vertical stud passes upward to the long screw in the platen, and is connected to it by clutch miter wheels. The screw in the platen is splined, and can be engaged and disengaged by a clutch lever, shown in the cut, convenient to the operator.

The platen is 48 inches long, 9¼ inches wide and has two slots on top for ¾-inch bolts and two slots on the edges. The latter are very useful and convenient. The platen has a transverse feed of 33¼ inches and a horizontal feed of 7½ inches. It can be turned completely round and fed in line with the spindle. It has an automatic stop while feeding in either direction, and is secured by four ¾-inch steel bolts in the swivel base, of easy access with a wrench. The knee is so designed and constructed as to withstand all strains liable to be brought upon it. The gearing is made either internal or external as

the society stated that the main building was nearly half completed, and that in order to complete it the sum of \$108,303 would have to be raised in a very short time, and unless this is done it will be impossible to have the buildings completed in time to hold an exposition during this year, as was the original intention. As is well known, Pittsburgh is one of the wealthiest, if not the wealthiest, cities of its size in the country, but it would seem as though its citizens had not sufficient faith in the benefits to be derived from an exposition to be willing to contribute toward its expense. It is announced that a mass meeting of the citizens will be held at an early date, for the purpose of increasing public interest in the enterprise, if possible.

Sheffield, England, exported cutlery to the United States in the year 1888 to the value of \$1,077,000, showing a slight gain on the previous year.

THE WEEK.

The *Mexican Financier* claims to have information that President Harrison will urge the immediate passage of an enabling act to carry into effect the pending reciprocity treaty between the United States and Mexico.

The New York City tax assessment books for 1889 show a real estate valuation of \$1,884,785,866, a net increase over last year of nearly \$82,000,000. Heavier taxes this year are predicted.

Tri-weekly vestibule trains will run from New Orleans to the City of Mexico, beginning on the 27th inst.

A report from Findlay, Ohio, says more than half of the oil fields of the State have been purchased by the Standard Oil Company, that \$1,500,000 have been paid by them for oil lands since December 1, and at the present rate of absorption this corporation will own the whole before spring.

The Hebrew Technical School in this city is flourishing. It now has 122 pupils, an increase of 22 over last year.

Somerville P. Tuck, the Assistant Commissioner General of the United States to the Paris Exposition of 1889, says that applications for space for exhibiting already number 750 and are from all parts of the country, comprising all industries, arts, &c. Much more space has been applied for than can possibly be allotted to American exhibitors. The United States Commission intends to forward, besides an exhibit of the working of its departments, a display of the various objects contained in its bureaus and museums—such as specimens from the collections and apparatus of our Patent Office, Hydrographic Office, Smithsonian Institution, National Museum, Coast Survey, Fish Commission, Life Saving Service, Lighthouse Board, Bureau of Engraving and Printing, Geological Survey, &c.

Germany is becoming excited on account of alleged American interference in Samoa and she is no less troubled by the active resistance of African slave-traders to her schemes for traffic on the coast of Zanzibar.

Shipments of sugar machinery from New York to Cuba and Mexico are the largest ever known. Hardware, locomotives and miscellaneous railroad materials are also going out freely.

The Haytian Minister Preston in New York City fiercely denounces the Dominican Consul Julia for his purchase of a menhaden steamer to be converted, it is alleged, into a man-of-war, for the use of one of the hostile factions in the Haytian Republic. The money, it is charged, was furnished by Jimenes, a wealthy merchant of Cape Haytien, a relative of Hippolyte, and virtually in control of the Dominican Government. A war with San Domingo is said to be in prospect.

A distinguished citizen of East India, who represents an influential educational society there, is now in the United States to secure competent skilled workmen to return with him and establish schools for instruction in the best methods of manufacturing iron, glass, and the various metals, as well as in mechanical engineering. A part of his plan is to secure admission for a number of young men into American workshops and factories as apprentices. Other young men will enter our colleges and universities. Dr. Pepper, of the University of Pennsylvania, has interested himself to promote these objects.

An assuring fact bearing upon the maintenance of American steamship lines is the prosperous condition of the United States

and Brazilian Steamship Company. Only a short time ago the line was losing money so rapidly that there was a serious intention of abandoning it. Circumstances have so far changed that the organization does not now owe a dollar and soon expects to declare a dividend.

The Russian budget for 1889 shows a considerable surplus, which the Minister of Finance declares is due to the "sincerely pacific policy of the Czar."

Mayor Chapin, of Brooklyn, wants to spend nearly \$8,000,000, including \$1,500,000 for the purchase of property adjoining the new municipal building, and large amounts for new sewers and paving.

Wharton Barker, who was said to have obtained valuable concessions from China, is now defending himself in court against the impecunious claims of his protégé, the Count Mitkiewicz.

According to the *Chicago Tribune's* figures, the lowest cost of getting cattle ready for market is 24 cents per pound. "An average bullock weighing 1000 pounds costs the producer \$25. He is sold for \$30, which gives the raiser 20 per cent. profit. After passing through the slaughter-house, his hide, meat, tallow, &c., are sold for \$37, a profit of 23 per cent. Then the retailer takes the 500 pounds of dressed meat for \$30. He gets 18 cents a pound for choice cuts and an average of 7 for the rest, making a total of \$48.75, an advance of more than 60 per cent."

The cyclone that swept through the country last week wrought great destruction. The most serious calamity befel Reading, Pa., where a silk factory was prostrated and about 30 persons, mostly young girls, were buried in the ruins and 18 killed outright. The loss financially was computed at \$110,000. The fact that the mill was heated by steam and lighted by electricity alone averted a frightful conflagration, with the most deplorable consequences. Another disaster occurred almost simultaneously in Pittsburgh, where Welden & Co.'s building was thrown down by the united force of the wind and falling walls, crushing 14 persons to death. The walls adjacent had been freshly laid, and several carpenters at work on the structure are among the victims. The Fort Pitt Foundry also suffered, and much damage was done to the Mount Penn Stove Works. At the nail mill in Sunbury two stacks were blown on the roof and several were seriously wounded, two of them fatally. In Brooklyn two large gas tanks exploded, the force of the wind having caused them to careen, and the escaping gas ignited from a street lamp. The company's loss is \$80,000. The Navy Yard barracks were damaged to the extent of \$10,000. At Staten Island the chemical works were destroyed.

The managers of the New York Mercantile Library have decided to erect a new building on the present site in Astor Place, to be of iron, brick and terra cotta, and practically fire-proof. The estimated cost is about \$250,000.

A dispatch from Queenstown says that the Cunard Line steamer Umbria, which left this port on January 5, passed Brow Head at 5 p. m. on Friday, making the passage in six days, two hours and forty-five minutes and beating the best previous eastern record, which was six days, four hours and forty minutes, and was made by the Etruria in April, 1888.

An appeal will be taken from Judge Barrett's decision in the Sugar Trust case to a higher court, and John E. Parsons, of counsel for the trust, states that the Lord Chief Justice of England has come to an exactly opposite conclusion in a case which

he thinks cannot be distinguished from this. The New York Court of Appeals has made a very recent decision, which, he says, is significant of what he believes will be the ultimate decision here. Mr. Parsons adds that about the only effect of the decision, provided it stands and is applied to other cases, will be to increase prices by placing impediments in the way of trade. F. B. Thurber thinks that more importance is attached to the decision than it deserves, and he calls attention to the fact that, if the charters of each member of the Sugar Trust become forfeited in successive suits, a stock company will be formed by all the interests involved, which will take the place of the trust and do all that it has done.

The New Haven Water Company propose to build a large dam at Woodbridge, to be 43 feet in height, and have a capacity for 300,000,000 gallons.

James G. Blaine, Jr., decides to become a mechanical engineer, serving an apprenticeship under master mechanic Pillsbury, at Waterville, Me.

The great problem, the employment of convicts in State prisons, was the subject of a bill presented in the New York State Legislature last week by Mr. Crosby on behalf of the Prison Association. It practically restores the State-account plan. The Yates bill is repealed, but a part of the system established by it is left. The bill provides that instead of all the prisoners being employed in the manufacture of articles used in State institutions, only so many shall be kept at that work as are needed to supply the institution. Experience has shown that this means a very small percentage of the 3300 or 3400 inmates of prisons. The rest of the convicts under the new bill are to work on the State-account plan, with this proviso: That the number employed in any one industry shall not exceed 10 per cent. of the free laborers employed on that industry in this State. It is thought that the bill will pass the Legislature despite the opposition of some of the manufacturers and labor organizations. The labor men will introduce a bill retaining the present Yates law so amended that the great bulk of convicts shall be employed on State farms and public works.

English investors are attempting to control the largest sugar factories in Cuba, but it is thought that they can "never get the best of the American market."

There are in Connecticut 85 savings banks, with deposits of \$105,850,078.95, an increase of deposits for the year of \$3,660,144.23.

During 1888 the total output of the shipbuilding yards of the United Kingdom is put in round figures at 900,000 tons, or 825,000 tons more than in 1887. The value of the property thus created, at a moderate estimate, must exceed \$45,500,000.

A consular report received in England is to the effect that the piracy of British trade-marks is practiced in Germany on the largest scale. It is charged that Germans sell words in Africa "by the millions" bearing the Queen's portrait on the blades.

The Brazilian flag is to be hoisted on four Atlantic packets, the Legislature having granted to Baron de Jacaguay a subsidy of 300,000 milreis a year for lines of packets between Hamburg and Santos and Genoa and Santos, making each six round trips a year.

The State of Minnesota, in deference to the wishes of labor organizations, a few years ago abolished contract labor in the State prisons. The problem now presented, according to the statements of the Governor in his biennial message, is: How

shall the prisoners get work? "When the State furnishes convicts by imprisonment, it should at the same time do its part to bring about their reformation. To this end, the industries of the prison should be, as far as practicable, such as will qualify them to follow useful pursuits after their terms have expired, and they again take their places as citizens of the State." In this view the most capable prison managers seem to have nearly agreed.

The contract for building an addition to the Ridgewood Reservoir, in Brooklyn, was awarded to Edward Freil, whose bid was \$293,770, or \$100,000 below the estimates of the engineer.

According to *Kuhlow's* there are several large orders in the English market for steel rails and sleepers. The South Indian Railway asks for 23,000 tons of rails, with fish plates, &c., and 24,000 tons of transverse steel sleepers, with 800 tons of bolts and other fittings. Large quantities of steel rails and sleepers are also wanted by the Southern Mahratta Railway Company. In addition to these orders, another for rails, larger than either of the above, is in course of being arranged for Victoria, "which it is hoped may come to Germany." The same journal also says that there is a heavy demand just now in most large machinery-making establishments for heavy machinery for large equipment works and machinery-manufacturing establishments, and that leading engineering works are oversold for from three to four months. A very large portion of the contract work placed since July 1 is special, and embodies specific improvements or inventions. The equipment of the new machine and railroad shops is strengthening the machinery market, and is causing more or less overtime to be made.

The cotton goods industry in the United States last year prospered more than any other important branch of textile manufactures, particularly in the domestic trade, as the export trade shows less improvement. Fall River dividends averaged 9.85 per cent., against 8.3 per cent. in 1887. Outside of Fall River many corporations show a decline.

The New Orleans import trade has gained 75 per cent. in six years, and merchants there now hope to regain the business lost since the war. The value of merchandise entered in 1888 was nearly \$18,000,000.

Advices from Washington Territory show the rapid strides making by that section of country in all the leading industries. The output of lumber from the saw mills on Puget Sound last year is valued at \$5,397,000, and of the entire Territory \$7,776,000, exclusive of "small stuff." Less than seven years ago the Baltic controlled the imports of lumber into Australia. Now Puget Sound has driven the Swedish product completely out. Large shipments are made from Puget Sound to Adelaide and Brisbane, and at last accounts two vessels were loading for London. Trade with South America is gaining every year, and that country is now the second largest purchaser. The total tonnage of vessels entering Puget Sound during the year was 941,167 tons. Seattle, the chief city and commercial depot of the Territory, promises to become the center of large manufacturing interests. It now has three iron works, one brass works and two boiler-making establishments. The Moss Bay Steel Company, which has located its works on the east shore of Lake Washington, is an enterprise far greater than any other iron enterprise on the Pacific Coast. It proposes to create smelting, rolling and subsidiary works on a large scale, and to employ a force of 5000 men. The supply of ore will be drawn from the Snoqualmie mines.

MANUFACTURING.

Iron and Steel.

A report was current in Pittsburgh last week to the effect that Mr. Andrew Carnegie had purchased the interest of Henry Phipps, Jr., in the firm of Carnegie, Phipps & Co., Limited, paying \$2,000,000 for the same. Upon being interviewed on the matter Mr. Carnegie stated that there was no truth in the rumor whatever. Since the retirement of Mr. Phipps as chairman of Carnegie, Phipps & Co., Limited, that gentleman has occupied the same relation to the firm as Mr. Carnegie—that of consulting partner without salary. We also learn that the report that H. M. Curry had succeeded to the office of chairman of Carnegie Bros. & Co., Limited, made vacant by the death of D. A. Stewart, is also without foundation. The latest report is that Mr. Frick, long identified with the Carnegie interests, is to be the successor of Mr. Stewart.

For the last 16 days in December the total output of the two Lucy Furnaces, of Carnegie Brothers & Co., Limited, at Pittsburgh, was 6479 tons, furnace No. 1 having made 2709 tons, and furnace No. 2 3770 tons. The highest output in one day was 267 tons, made by furnace No. 2, and the lowest was 145 tons, made by furnace No. 1.

During the year 1888 there have been 67 Smith gas producers and furnaces erected in this country and Canada, including 16 now in course of erection, as follows: Four for Minnesota Car Company, Duluth, Minn.; two for Union Steel and Iron Company, St. Joseph, Mo.; two for the American Wire Nail Company, Anderson, Ind.; two for the Tredegar Company, Richmond, Va.; two for the Chicago Horse Shoe Company, Chicago, Ill.; one for the Richmond Standard Spike Company, Manchester, Va.; one for the Virginia Nail and Iron Works Company, Lynchburg, Va.; one for the Judson Mfg. Company, Oakland, Cal., and one for Henry Warden, Philadelphia. The patents for the erection of the above furnaces are controlled by Alex. Laughlin & Co., engineers and contractors, Cleveland, Ohio, and M. V. Smith, of Pittsburgh.

On the 9th inst. a wind and rain storm blew over two of the stacks at the plant of the Sunbury Nail, Bar and Guide Iron Mfg. Company, at Sunbury, Pa., killing a number of the workmen, and seriously injuring others. The damage done was quite extensive.

The trustees for the creditors of Brown, Bonnell & Co., Youngstown, Ohio, have commenced proceedings on behalf of 44 creditors to obtain judgment aggregating \$18,000. The Menominee Mining Company have also brought suit for \$2869 due on a consignment of iron ore.

The new Soho Furnace of the Moorhead-McCleane Company, of Pittsburgh, was blown in on November 15 last, and from that date up to December 31 of last year it produced 8850 gross tons of pig iron. This is a much larger output than was anticipated for it by the owners.

The furnace owned by the Niagara River Iron Company will again be put in operation. The furnace has been idle nearly 12 years. It was built in 1873-4 by the present owners, among them Messrs. S. S. Jewett, Josiah Jewett, P. P. Pratt, F. H. Root, George B. Hayes, and the Glenny and Austin estates. The property is located at Ironton, near Buffalo, between Black Rock and Tonawanda, and has been leased by Frank A. Baird and others of Perry County, Ohio. Mr. Baird is one of the owners of the Baird Furnace. The furnace originally cost about \$400,000. The plant will be put in order and it is

expected that the furnace will be blown in about April 1st. At present there is not a furnace in operation at Buffalo. When the Niagara Furnace was built the furnaces of the Union Iron Works and the Fletcher Furnace were in operation. The Fletcher was the last to suspend. — *Bulletin*.

It is probable that the plant of the Warren Tube Company, at Warren, Ohio, will be disposed of at an early date. Week before last Messrs. John O. Hart, J. B. Graham and S. A. Corbin appraised the plant at \$89,000, which allows of its being sold for \$60,000. The first appraisement was \$115,000, and the works could not be sold for the two-thirds of that amount.

Mr. S. P. Williams, of Philadelphia, has received the appointment of general manager of the works of the Standard Iron Company, at Bridgeport, Ohio, to take the place of Mr. T. B. May, who resigned some time since. The appointment takes effect on the 15th inst.

The wages at the Edgar Thomson Steel Works of Carnegie Brothers & Co., Limited, at Braddock, Pa., for the present month will be based on rails at \$30 per ton. It will be remembered that in the early part of last year an arrangement was made with the men at these works, by which the wages to be paid each month were to be based on the selling price of rails for that month. At the time this plan was submitted to the men there was considerable opposition to it, the men stating that they would be unable to make the wages they formerly made. However, the reverse has proven to be the case. This sliding scale has been in force now for some months, and under it the workmen have made better wages than before it was adopted. Last month the rate of wages paid was based on rails at \$28.50 per ton. At the present time it is a well-known fact that rails are selling considerably under \$30 per ton, and the firm's object in basing wages on rails at that figure is a mystery.

The Gray's Ferry Iron Works, in Philadelphia, shut down in March, 1888. The works have since been dismantled, sold and converted to other uses than iron working. They were built in 1858 by Mr. Edward S. Buckley, who owned them until the time of their sale last year. The product of the works was plate iron and charcoal blooms.

Carnegie, Phipps & Co., Limited, of Pittsburgh, have been awarded the contract for the rails of the extension of the Wheeling and Lake Erie road from Bow-erstown to Martin's Ferry, Ohio. Four thousand tons will be required.

Lemont Furnace, in Fayette County, Pa., has been abandoned and the machinery removed to Alabama. The Messrs. Hogsett, who owned Lemont Furnace, have built a large coke furnace at Trussville, Ala.

During the year 1888 the blast furnace of the Bellaire Nail Works, at Bellaire, Ohio, produced 51,750 gross tons of Bessemer pig iron, while the steel department turned out 64,827 gross tons of billets and slabs. At the annual meeting of the board of directors of the company, held on the 24th ult., a semi-annual dividend of 5 per cent. was declared.

The two Fox River charcoal furnaces, at West Depere, Brown County, Wis., are to be dismantled in the spring.

Laurel Furnace, at Locust Point, Baltimore, owned by Messrs. R. C. Hoffman & Co., of Baltimore, is for sale. It is a charcoal stack, 9 x 50 feet, and was rebuilt in 1882.

The Warwick Iron Company, of Pottstown, have elected the following officers, all excepting president and treasurer being from Philadelphia: President, Isaac Fege-

ley; managers, Peter Schemm, Vincent P. McCully, Jacob Rech, Philip Doerr, Charles G. Burlinger, Louis Bergdoll; secretary, Vincent P. McCully; treasurer, Jacob Fegeley. Edgar S. Cook is superintendent.

Sharon Furnace, of the Sharon Iron Company, at Sharon, Pa., has resumed operations after an idleness of several weeks caused by the caving in of the lining.

The Wheeling Steel Works, at Wheeling, W. Va., have signed the Amalgamated Association scale of wages for the ensuing year.

The Green Forest Furnace, Mfg. and Land Improvement Company have been organized at Lexington, Va., with a capital stock of \$500,000. A. T. Barclay has been elected president. The object of the company is to develop the rich Buena Vista iron mines at Green Forest, on the Richmond and Allegheny and Shenandoah Valley Railroads, lay out a town and build a 200-ton iron furnace.

Ivanhoe Furnace, in Virginia, recently remodeled to work on coke, has been running for two weeks.

Machinery.

On Saturday, the 5th inst., the *Ætna* Machine Company, of Warren, Ohio, closed a contract with the Chicago Splice Bar Mills, owned by Morris Sellers & Co., of Chicago, to furnish them with a 500 horse-power engine to drive a train of rolls in their mills in that city.

The annual election of the Lloyd-Booth Company, of Youngstown, Ohio, proprietors of the Falcon Foundry and Machine Works, held last week, resulted as follows: President, Lloyd Booth; vice-president, H. M. Garlick; treasurer, C. H. Booth; secretary, C. W. Bray. The company report that they have plenty of orders on hand, and that the outlook for the year just entered is very encouraging.

The American Wire Company, of Cleveland, Ohio, are placing in their works what is claimed to be the heaviest leather belt in use in that city. It is 60 inches wide, 140 feet long and weighs 1593 pounds, being double thickness. It will drive about 1000 horse-power at times, and will run from band wheel of a Corliss engine 24 feet in diameter, with 62-inch face and $\frac{1}{4}$ -inch crown, running at a speed of 80 revolutions per minute, giving a belt velocity of over 6000 feet, or over 1 mile per minute. This belting was made for this concern by the Jewell Belting Company, of Hartford.

The Baldwin Locomotive Works, at Philadelphia, turned out 787 locomotives last year, or at the rate of over two per day.

The Westinghouse Electric Company, of Pittsburgh, have received the contract for lighting the city of Toronto, Canada, with 3000 lights. The plant will be operated by the Toronto Gas Consumers' Company.

Ewald Iron Company, St. Louis, Mo., are mailing to their friends in the trade something very neat in the way of a memorandum book. It is $2\frac{1}{4}$ inches wide by 4 inches in length and just fits the vest pocket, for which it is evidently intended. The blank sheets are removable and pads for future use can be obtained by applying to the above firm. It contains some useful and interesting information, giving approximate weight per foot of round-rolled and square-rolled iron, also table for computing weight of boiler-heads and weight per foot of angle irons. In addition it contains calendar of current year.

Albert B. Bowman, 823 North Second street, St. Louis, Mo., reports a large increase in his sales during the past three

months in comparison with the corresponding months of 1887. He reports a number of sales of Erie engines, Giddings medium high-speed automatic engine, for electric lighting stations, and Cleveland and Hardwick slide-valve engines.

The new catalogue of the Lidgerwood Mfg. Company may be said to be indicative of the machines produced by them, being of unusual interest. The paper and press-work are unexceptionable and the illustrations are good samples of engraving. Among the new cuts we notice improved quarry engines, hoisting engines, stationary engines, &c. The improved hoisting and conveying apparatus, designed especially for quarries, bridge and dam building and contractors' uses, is fully illustrated and clearly described, as is also the special engine to be used with this apparatus. The inclined cable for quarries is likewise shown.

Hardware.

We are advised that the goods of the Waltham Emery Wheel Company, Waltham, Mass., received the highest award of merit at the Cincinnati Exposition. They report business as good.

E. S. & F. Bateman, Spring Mills, N. J., refer to the increase of their business from year to year, and the growth of their plant and facilities. They allude especially to their magnificent water supply, of which they say it has never once failed them—father and sons—of furnishing an ample supply during their occupancy of over half a century.

Wilson Bohannon, Brooklyn, N. Y., in order to meet the demand of his increasing trade and the enlargement of his line of locks, has built a new factory, giving him improved manufacturing facilities.

The Hollow Cable Mfg. Company, Hornellsville, N. Y., are now located in their new factory bordering on the tracks of the New York, Lake Erie and Western Railroad, where they have exceptionally good shipping facilities. The factory is 40 x 140 feet, and thoroughly equipped with new power and improved heating apparatus throughout, thus putting them in excellent shape for the manufacture of their braided barbless fence wire, hollow cable wire clothes lines and box bands.

The Ludlow-Saylor Wire Company advise us they are actively engaged in all their departments, and the demand for their new artistic iron sign—which they recently placed on the market, and which was illustrated in these columns a few weeks since—is very gratifying. They also report an increase in their 1888 business over that of 1887 of 25 per cent.

The St. Louis Wire Mill Company have just completed the new wire mill erected on the site of the one burned last September. It is divided into two compartments, one of which is utilized for bathing and baking the wire preparatory to its being taken into the drawing-room, which occupies the other compartment, where the wire is drawn to the various sizes required. The drawing-room contains 66 wire blocks, all of which are in active operation. The power required is obtained from a 350 horse-power throttling cut-off Corliss engine, made by the St. Louis Iron and Machine Company, St. Louis, Mo.

The Gilbert & Bennett Mfg. Company, Chicago, Ill., and Georgetown, Conn., were recently awarded the contract for about four miles of their World's web wire fencing and several gates to inclose the new military post, at Highwood, Ill. This fence is referred to as having longer twists, and is galvanized after the wires are woven, making, it is claimed, an especially strong and durable inclosure. The fence has been furnished, put up and approved. The

company have also just completed an extensive addition to their wire mill at Georgetown, Conn., and are now able to make the wire and all the goods they manufacture.

Simonton & Co., Kidd Steel Wire Company, Pittsburgh, Pa., advise us that they have just completed putting natural gas in their works at Harmarville, and that they now have a capacity of 1000 pounds polished drill rods daily. They also refer to reports from consumers as being already received bearing testimony to the quality of their stock as equal to Stubs' imported rods.

The Freeman Wire Company are feeling very much encouraged with the favorable inauguration of their new wire and iron works department at No. 410 North Main street, and are increasing their force of workmen and putting in additional machinery and appliances to meet the requirements of their rapidly developing and increasing trade. They are now considering the advisability of increasing their facilities by adding a 25 horse-power engine to their plant to provide the power necessary to drive the machinery and supply a dynamo to run electric lights. They have shipped several good orders South on work secured by their salesmen, and have also completed a job in bank partition railing for the Chester Commercial Bank, at Chester, Ill. They report the outlook for contract work very good, having secured the order of Mr. Edward Henry for fitting up his Crescent Stables on West Olive street with the wire and ironwork for about 100 stalls, and have the following contracts in hand for elevator inclosure work: Cunningham Bros., Eighth and Lucas avenues; H. L. Fox, new building, Ninth and St. Charles streets, to be occupied by Brown-Daughaday Wholesale Dry Goods Company, and have in co-operation with the Union Brass Architectural Works, of Chicago, Ill. (who furnish the brass-work for the first floor), the wire and ironwork for the remaining seven floors to inclose two pair double service elevators for Odd Fellows' Hall, corner Ninth and Olive streets.

In a review of the business of the last three years, the anomaly is presented of a number of failures above the average, despite the indications of general prosperity. An explanation is not readily found, but the situation is stated by the *Financial Chronicle* as follows: "One statement no one will deny, and that is that the risks of business must have increased; that industrial pursuits must have become uninterruptedly more hazardous. That is always the case when values have reached an inflated level. Or it might be the case when there was any condition which left the margin of profit fluctuating, doubtful, or very narrow. Certainly, as to the meagreness of profits there has been great complaint. We can see that fact illustrated and a struggle against it in the trusts that have been formed of late years. A narrow margin for profits tries the trader severely. For it is only the merchants of intelligence, judgment and close business methods who can succeed with such surroundings. Large capital, too, permits economies which small or borrowed capital prevents, and large business covers expenses which small business fails to meet. So accurately does this describe the situation now that it has almost run into a proverb that only the mill which is well situated, which is capable of large production, which is well managed and has modern machinery and abundance of capital, can prosper. Where is the place for the small trader with his borrowed capital in such a fight? Would he not naturally become discouraged, venture-some, and fail?"

The Iron Age

New York, Thursday, January 17, 1889.

DAVID WILLIAMS, - - - PUBLISHER AND PROPRIETOR.
CHAS. KIRCHHOFF, JR., - EDITOR.
GEO. W. COPE, - - - ASSOCIATE EDITOR, CHICAGO.
RICHARD R. WILLIAMS, - - HARDWARE EDITOR.
JOHN S. KING, - - - BUSINESS MANAGER.

The Railroad Situation and the Iron Trade.

It is admitted by all the leading authorities in the iron trade that its near future will be shaped very largely by developments affecting the position of the railroad interest. Briefly summarized, the principal features developed during the past year were these: In spite of a decline in the requirements of steel for new mileage, our consumption of domestic iron has been equal to that of the year 1887 when 15,000 miles of railroad were built. Roughly, the falling off in the demand was compensated for by cutting off a large share of our imports. Prices abroad have hardened steadily, while ours have declined in many lines, and have at best held their own in others; therefore the tendency has been for some months past to cut down sales of foreign material even further. To that extent home producers will be relieved, and they need only reckon with the two factors of domestic production and consumption. The former is progressing at an unprecedented rate, so far as the basis of the whole business—the manufacture of pig iron—is concerned. The question is whether the demand can cope with it. The softening of prices lately would indicate that it cannot, but that is possibly a merely temporary matter caused by the halt in consumption which is usual at this season of the year.

Dealing with the subject broadly, we may divide the consumptive requirements into two great groups. One embraces the quantities absorbed for agricultural purposes, like fence wire; for building, like nails, beams, channels; for domestic uses, like stoves; for town service, like water and gas-pipe, street railroads, &c., and for the general industries of the country, like engines, boilers, machinery, &c. The second takes in the railroad requirements, including primarily rails and track material, iron and steel in many forms for rolling stock, and for subsidiary foundry and machine shops working chiefly for the railroads. We are convinced that the general average prosperity of the country gives every assurance that the volume of business in the first group will be satisfactory, however inadequate the margins of manufacturers may be.

The uncertain element is the demand of the second group. That is the part of the trade which so keenly and so quickly feels the influences which speculation in Wall street, to a large extent, reflects in an exaggerated form. The business world accepts as an axiom that the iron trade is the barometer of the prosperity of the country. It would be if we could separate from it the consumption of industries dependent upon the railroads as their customers. They look to the movements in the great financial world to furnish them with a cue.

To those who are connected with them there is something ludicrous in arguments of bulls or bears, based on the condition of the iron trade as a barometer which predicts coming sunshine or cyclone. They are converting into manufactured goods money raised months ago in the financial centers. Their activity is proof that funds have been invested. It does not furnish a fair indication that further outlays would be profitable.

Viewed from this standpoint the developments in the railroad world during the past week possess extraordinary significance for all engaged in the iron and steel trades. Let it be granted at once that reasonable doubts have not been removed, and that important points are still to be settled. But there has been an earnest effort on the part of the principal officers of a number of warring railroads to reach an understanding whereby the power for doing irrevocable mischief is taken out of the hands of petty subordinates. Hasty action often dictated by unworthy personal motives will be superseded for some time to come by the caution and deliberation growing out of individual responsibility. A truce has followed the disastrous warfare which plunged great interests into confusion and has brought them to the verge of disaster. The gain, such as it is, promises to be important. It is the first step toward recovering confidence. While there is always the possibility that all may be undone in the near future, the chances favor progress in the same direction.

It will be conceded that considerable time must elapse before some parts of the country will have grown up until they can support the new mileage provided during the past two years. This is notably true of Kansas and the Northwest. To a considerable extent extension of railroad mileage has been reckless, but it does not follow that errors made there should check legitimate development in other sections of the country. It would be useless to deny that they have embarrassed it. But though one set of investors have been hurt or are financially weak, others are seeking opportunities to profitably place surplus earnings. The moral effect upon them of the disasters which have overtaken some of the roads which built extensions in Kansas and in the Northwest would soon be lost sight of, especially if they obtained the conviction that the capitalization of new ventures was nearer cost than it has been hitherto. A revulsion of feeling in financial circles, which might readily follow a few months of peace, would cause the maturing of many plans for extensions in other parts of the country, and notably in the South, which are now languishing.

Thus far the predictions of new mileage in 1889 are necessarily little better than guesses, with the balance of probabilities in favor of those who name low figures. But it must be considered that railroad construction itself is carried through nowadays at an enormously accelerated rate. Work occupying years formerly is now crowded into one season, so that the consumption of material for new undertakings follows far more quickly the completion of financial plans. This in itself tends to render more readily possible sudden recovery from apathy in buying.

The only hope for a better condition of the iron and steel trades lies in the growth

of a feeling of confidence in financial circles over the railroad situation. Should that not be realized, should there be a notable falling off in the new mileage in 1889, as compared with 1888, when it was about 7000 miles, a gap would be created in the demand which would force a restriction of output. The next month or two must decide. The start has been made against serious obstacles.

The Impending Revival in Peru.

The proclamation by the United States Government on November 7th last of the conclusion of a comprehensive treaty of amity and commerce with Peru encourages expectations that under its operation mutual prosperity and good understanding will be promoted. It coincides with the remodeling of the Grace-Tyler-Aranibar contract through negotiations between the Peruvian Minister of the Treasury and Lord Donoughmore, the bondholders' representative, who in August last proceeded from London to Lima. In accordance with authority given the latter embodied in the new contract, the bondholders agree, fully, absolutely and irrevocably, to free Peru from all responsibility for the loans made abroad in 1869, 1870 and 1872, representing the sum of £54,000,000. The bonds are to be canceled and so exhibited before the contract goes into effect. A company is to be organized in London to which will be transferred all the concessions, grants and property ceded by this contract for the purpose of mortgaging them, in order to raise money for the work proposed. All questions arising are to be decided by the courts of Peru, and the company shall be considered to have their domicile at Lima. They, the bondholders, will pay over £50,000 on ratifying the contract, and 19 monthly payments of £10,000 each, and Peru guarantees to them the sum of £80,000 for 80 years as a security for interest on the £6,000,000 proposed to be immediately expended in the undertaking. But these reciprocal payments do not commence until the beginning of the fourth year of the contract.

All the guano in Peru not subject to the conditions of the treaty of peace with Chili is to be given to the bondholders, excepting such amounts as the country requires for its agricultural necessities, and the Chincha Island deposits are to be worked for that purpose if they should be sufficient. Peru, furthermore, gives the bondholders her national railways, certain grants of agricultural lands and certain mines. The bondholders agree to complete the roads and maintain them in perpetuity. The mining rights extend over a long series of years. The mines are silver, coal, quicksilver, &c., and are said to hide untold riches. The railways are expected to yield £80,000 a year. The grant of land for colonization is 1,800,000 hectares, of 2½ acres American, or about 70,000 square miles. The syndicate property is to be free from taxation, and whatever may be imported is to be duty free.

The trouble that threatened to arise about the Arequipa, Puno and Cuzco railroad, the property of the American contractor, Mr. Thorndike, and about the Lima-Oroya Railroad, on which Mr. Grace, of New York, had made a contract, will, of course, be done away with

by the final ratification of the Donoughmore settlement by the Plenary Congress of Peru, to assemble during the present month at Lima. The Donoughmore settlement had been submitted to the Chamber of Deputies of Peru on November 25, and returned unratified by the same four days later, by a vote of 50 to 38, simultaneous, by an additional protocol, considered objectionable, by a vote of 71 to 15. The Senate being ready to ratify the settlement, it will be again submitted to the Plenary Congress in extraordinary session, and there is little apprehension that it will not pass. Should, contrary to expectations, ratification be denied, the bondholders appear resolved to dispose of their claims to Chili, in which event the latter would be the sole creditor of Peru, with a positive right to her customs revenues, her railways, &c.—in a word, all her means of maintenance, and in the present and weakened condition of Peru she could offer no resistance.

Once the settlement is ratified, the American railroad contractors, being again placed in possession of their property, would perhaps induce their colleagues at home to assist in perfecting the Peruvian system, which, toward the Amazon Valley, has, in conjunction with Brazil, a great future, and American exports to Peru would perhaps receive a renewed impulse. The \$60,000,000 paper money in circulation in Peru became next to worthless last spring, the people refusing to take it any more, and there is, besides, a bonded home debt of \$55,000,000, both of which might become a subject for a domestic compromise on equitable terms from the moment the Donoughmore settlement was ratified, and thereby Peru's foreign credit restored in an honorable manner to the satisfaction of the bondholders who, through their influence in the London and Continental money markets—would naturally do all in their power to befriend a country in whose regeneration they would henceforward have a direct interest.

The revival of Peru and her mining industry, as well as her sugar planting interests, and the many other resources the country possesses, will prove a great gain in trade on the West Coast. Before the war with Chili Peru produced 60,000 tons of sugar, in 1888 she produced only 30,000 tons, because the fine machinery of half of the sugar estates was destroyed during that unfortunate strife, and there was no money for replacing it by new machinery since. Everywhere the war left its mark; indeed, there are few countries that have been so thoroughly ruined. But the great resources which the incendiary's torch could not reach are there still, and only await capital, enterprise and labor to cause them to yield liberally.

American trade with Peru, through the impoverishment of the people there, has shrunk to insignificant proportions.

Fiscal year.	Import.	Domestic export to Peru.
1888.....	\$300,400	\$865,180
1887.....	461,726	717,968

Before the war, when Peru had its guano to draw upon, and London to float its loans in, the people spent money freely, and so they no doubt will after a return to prosperity; all trading nations will, therefore, be glad to see them in a flourishing condition once more.

The Sources of Our Iron Imports.

The Bureau of Statistics publishes annually elaborate tables showing in detail the countries from which the goods we import come. These figures, unfortunately, deal with the fiscal years; still they are of considerable interest, since they give a good general idea whose customers we are. During the fiscal year ending June 30, 1888, we imported 919,644 gross tons of iron ore, as compared with 1,141,744 tons in the fiscal year 1887. The following table shows the principal countries from which we import:

Imports of Iron Ore, Fiscal Years, Gross Tons.

	1887.	1888.
Total.....	1,141,774	919,644
Spain.....	522,719	416,138
Algeria.....	215,760	163,496
Cuba.....	109,928	117,504
Italy.....	114,423	98,343
England.....	72,546	56,090
Greece.....	44,173	25,707
Canada.....	23,431	13,330

The only gain has taken place in the case of Cuba, where the Juragua Company are operating. Even here the quantities are small considering the magnitude of the operations of the two steel companies who are interested in the mines.

For pig iron, which, of course, includes spiegeleisen and ferromanganese, the figures stand as follows:

Imports of Pig Iron, Fiscal Years, Gross Tons.

	1887.	1888.
Total.....	413,919	325,517
England.....	279,150	161,788
Scotland.....	81,506	105,982
Germany.....	47,169	46,713
Netherlands.....	2,552	345
Spain.....	2,300	2,002
Belgium.....	1,696	1,948
Sweden.....	556	4,106

The falling off, it will be observed, has been chiefly in the shipments from England, counterbalanced to some extent by the increase from Scotland. We have bracketed Germany and the Netherlands because, probably, the shipments of the latter country are produce of the former.

Scrap comes to us naturally from many sources, the following table giving the figures for the two fiscal years 1887 and 1888. They, of course, include old iron rails, but do not include steel scrap, such as bloom ends, crop ends, &c.

Imports of Scrap Iron and Old Rails, Gross Tons.

	1887.	1888.
Total.....	245,755	142,067
England.....	103,322	56,117
Scotland.....	18,259	6,120
Ireland.....	4,327	3,199
Netherlands.....	20,787	10,589
Germany.....	33,260	19,916
France.....	14,792	8,172
East Indies.....	10,437	7,287
Belgium.....	9,804	1,948
Sweden and Norway.....	7,558	7,616
Cuba.....	4,019	2,565
Spain.....	3,964
Denmark.....	2,478	4,067
Argentine Republic.....	2,067	2,304
Canada.....	3,147	2,153

In steel scrap the principal means of supply are naturally the leading manufacturing countries, as the following table shows:

Imports of Steel Scrap, Fiscal Years, Gross Tons.

	1887.	1888.
Total.....	28,012	13,019
England.....	9,307	7,647
Scotland.....	3,385	1,597
Ireland.....	1,103
Germany.....	1,708	1,215
Belgium.....	1,169	167

France.....	1,586
Canada.....	5,052	1,743
Spain.....	2,300

In rolled or hammered bar iron Sweden and Norway lead, England, Germany and Belgium following with small quantities:

Imports of Bar Iron, Net Tons.

	1887.	1888.
Total.....	37,036	37,182
Sweden and Norway.....	28,819	22,171
England and Scotland.....	4,305	5,624
Germany.....	1,870	4,481
Belgium.....	3,487	4,329

It will be observed that practically the quantities of bars imported here remained the same, but that there has been a falling off in the quantity of Swedish bars, while there has been an increase from other sources. This is probably due chiefly to the inroads of mild steel upon the territory occupied by the Swedish material.

In steel rails there was an increase from 77,026 tons in 1887 to 136,799 gross tons in the fiscal year 1888, England shipping 60,718 tons and Germany 11,031 tons of the former quality, while in the last year English manufacturers sent 118,519 tons and German makers 12,136 tons, with Belgium credited with 2040 tons.

Cotton ties came exclusively from Great Britain, the quantities having been 14,119 net tons and 21,348 net tons, respectively, in the fiscal years 1887 and 1888.

In steel hoops, bands, sheets and plates the figures stand as follows:

Imports of Steel Hoops, Sheets and Plates, Net Tons.

	1887.	1888.
Total.....	17,564	25,112
England.....	11,338	14,399
Scotland.....	3,867	7,742
Germany.....	2,010	1,416
Belgium.....	346	1,488

In steel ingots, blooms, billets and slabs England has the greater part of the trade. In the fiscal year 1887, out of the total imports of 319,689 net tons, England was credited with 198,784 net tons, Scotland with 19,873, Ireland with 1524, Germany with 77,015 tons, Belgium with 16,406 tons, and Sweden and Norway with 4622 tons. In the fiscal year 1888 the total quantity was reduced to 207,245 net tons, in which the leading countries participated as follows: England, 113,633 net tons; Scotland, 16,347 tons; Germany, 53,418 tons; Belgium, 19,234 tons, and Sweden and Norway 4,340 tons.

The bulk of the steel plate and taggers iron imported comes from Great Britain, the total quantities imported in the two years having been 7537 net tons in the fiscal year 1887 and 8175 tons in 1888. The only item of interest is that the imports of sheet iron from Russia, the genuine sheets, fell off from 2033 net tons in 1887 to 1075 tons in 1888. It is fair to assume that this is due to the growing recognition of the quality of the home product.

Tin plates come exclusively from England, although small quantities—3069 tons in 1887 and 1149 tons in 1888—are credited to Canada, through which country they, of course, merely passed in transit. The total imports were 286,110 net tons in 1887, and 317,472 net tons in the fiscal year 1888. There is probably no single item in the wide range of the metal and iron trades which reflects more closely the steady growth of the consumption of the country at large than the quantities of tin plate imported. The article enters into a number of important lines, for whose ac-

tivity it furnishes a good indicator. The imports of tin plate are interesting in another particular, as it is in this item that direct imports in bond to interior cities have developed most. The following table gives the details:

Imports of Tin Plates by Customs Districts, Net Tons, Fiscal Years.

	1887.	1888.
Total.....	286,110	317,472
Baltimore.....	39,907	44,259
Boston and Charleston.....	12,798	12,412
Buffalo Creek, N. Y.....	892	1,043
Chicago.....	14,216	27,137
Cincinnati.....	682	1,504
Galveston.....	221	1,203
Huron.....	2,972	775
Indianapolis.....	292	949
Kansas City.....	3,274	3,577
Louisville.....	294	584
Miami, Ohio.....	303	626
Milwaukee.....	1,763	2,345
New Orleans.....	2,908	5,288
New York.....	119,437	125,784
Oregon, Ore.....	3,763	1,787
Philadelphia.....	45,396	58,714
Pittsburgh.....	1,225	2,147
Portland and Falmouth, Me.....	4,409	1,642
St. Joseph, Mo.....	437	742
St. Louis.....	4,591	5,755
San Francisco.....	13,298	15,530
Willamette, Ore.....	1,040	930
Yorktown, Va.....	857	1,032

It will be noted, in a general way, that the interior towns have gained considerably, the most notable increase being that of Chicago, which has nearly doubled its direct trade in one year.

Germany retains its supremacy in the rod trade, the figures standing as follows:

Imports of Wire Rods, Net Tons, Fiscal Years.

	1887.	1888.
Total.....	161,269	135,470
Germany.....	97,376	78,763
Netherlands.....	15,010	1,075
Belgium.....	13,475	15,499
England.....	9,927	11,368
Sweden and Norway.....	25,482	29,345

The export of wire rods from the Netherlands is somewhat surprising, since no rods are manufactured in that country, and as the duty is levied at the rate of 45 per cent. ad valorem at the works producing the article, there must have been some special causes to lead to the statement by the importer that the Netherlands were the source of supply. The table given above is of interest in this respect, that it indicates how large a proportion of the total imports are common basic and acid rods, for fence wire and ordinary market wire. Practically, all of the imports from Germany, the Netherlands and Belgium come under this head.

The Bureau of Statistics prints also in detail the imports of merchandise by customs districts. We have believed it a matter of general interest to show how large a proportion of the total imports of iron and steel went to Pacific Coast ports, because it is in that part of our country where foreign producers have the greatest advantages in their favor.

Imports into the Pacific Coast.

	1887.	1888.
Articles.	Total	Pacific Coast. Total.
Iron ore, gro. tons.	1,141,774	5,172 919,644
Pig iron, gro. tons.	418,919	19,297 325,517
Scrap " gro. tons.	245,755	20,019 142,087
Bar iron, net tons.	37,036	962 37,182
Steel rails, gr. tons.	77,028	401 136,799
Steel ingots, billets and slabs, n't tons.	319,684	12,646 207,245
Tin plates, net tons.	286,110	18,100 317,472
Wire rods, net tons.	161,269	1,204 135,470

There has therefore been an increase in nearly every item, the most notable one being that of rails. The Pacific Coast has taken over one-half of the whole imports in the fiscal year, 6913 tons going to Puget

Sound, 11,484 tons to San Diego, 45,841 tons to San Francisco, 9652 tons to Willamette and 1500 tons to Wilmington, Cal.

An unwonted sensation was caused last week by the abrupt removal from office of Appraiser McMullen, and the temporary substitution in the New York Custom House of Appraiser Stevens, of Boston. Immediately reports were rife that enormous fraudulent valuations would be exposed as the result of a promised investigation, although no facts were cited in evidence of malfeasance on the part of the officer so summarily relieved. The Boston Appraiser was quoted, however, as charging that "the Government has been robbed of millions of dollars," and it was notorious that previous rumors reflecting upon the management of the Appraiser's Department in New York were supposed to have originated from the same source. Bearing these facts in mind, it seemed but fitting that Appraiser Stearns should be called upon to substantiate charges so serious. Simultaneously other experts were summoned to co-operate in making thorough inquiry, and Secretary Fairchild himself appears upon the scene, to obtain personally from leading importers conclusive evidence respecting the points in question. The cry of fraud is by no means original with this day or generation, for rival interests are quick to discover any opportunity which may be turned to advantage. Metals have already passed through a trying ordeal, and now other prominent staples in trade—notably sugar, tobacco and wool—are to be subjected to searching inquiry. In the present instance the suspicions of rival cities are excited, it being openly charged that discriminations in favor of New York are permitted, to the detriment of other Atlantic ports. Honorable merchants will deprecate the course of events. The cry of systematic undervaluation at this port has gained such currency, and the suspicions become so firmly established, particularly in the New England States, that it is well to probe the matter thoroughly, and either confirm or refute, by positive evidence, the damaging allegations.

The managers of the Paris Exposition have planned a series of "conferences" and "congresses" to be held during the current year. The aim seems to be to promote gatherings of men eminent in different branches of science, industry and professions to discuss questions of general or international interest. Ever since the Centennial Exhibition, when the first tentative and partly unsuccessful efforts were made in this direction, international conferences of specialists have been held, with results which have given much encouragement. There is every indication that, under the auspices of the management of the Paris Exposition, the system will be carried out under peculiarly favorable auspices. Even now a discussion of the mooted question of the nomenclature and classification of iron and steel is suggested, and there is some agitation for an International Congress on standard tests for iron and steel. M. E. Cornut, chief engineer of the association of owners of steam boilers in the North of France, has addressed a letter to the French Minister of Commerce and Industry, suggesting an inter-

national conference. He reviews the efforts repeatedly made in this direction and dwells on the importance of uniform standards of size. The subject had been so repeatedly discussed in this country, and its importance is so clearly understood, that it is unnecessary to go over the ground now. Since a large number of our leading metallurgical, mechanical and civil engineers are going abroad this year, and since a good many English and French engineers and iron and steel makers will be present at the forthcoming Paris meeting of the British Iron and Steel Institute, it would seem appropriate that the conference be held during the course of that gathering. A good deal of preliminary work could be done in this country by bringing the subject up before the meetings of the different societies which are to take place in the near future.

The present unfavorable outlook in the iron trade has not discouraged Benner, the famous prophet, who has just emphasized in a fresh bulletin the predictions made at an earlier time. His latest words are: "I predict that the price of iron will advance, and the average price for the year 1889 will be higher than the average of 1888, and I also predict that there will be a wonderful advance in prices for iron, stocks and all products and commodities in the year 1890. All business will be prosperous; it will be a year of good crops—the boom year in the period of activity. In the beginning of the year 1891 business will be at its height—a great business inflation—pig iron \$50 per ton in the markets of our country. I predict that there will be a panic in the year 1891. The over trading and general inflation of business and expansion of credit and confidence will produce the result." So far as the current year is concerned, these are words of good cheer, contrasting strongly with the hesitation and the feeling of weakness developed in nearly all sections of the country. We sincerely trust that the future may bear out Mr. Benner.

A successful experiment was made at the Standard Iron Company's works in Norristown, Pa., by the Continental Steel Car Wheel Company, with a process of making rolled steel car-wheels patented by Colonel Theodore W. Bean. It is claimed for these car-wheels that they are free from inequalities of the surface, thus avoiding vibration of the car; that they will have a mileage of 200,000 miles, while the life of a cast-iron wheel is 35,000 miles; that while the *papier mache* wheel costs \$50, and the cast-iron wheel \$12, they will cost \$12 or less; and that by actual test they will stand three times the strain an iron wheel will stand. The company operating this patent has a capital of \$100,000 subscribed, and will build a complete plant on the site of the Slemmer Oil Works in Norristown.

Of the sugar consumed in the United States last year it is estimated that 1,362,000 tons had passed through the refineries of the United States and 106,500 tons were consumed without refining. The Sugar Refineries Company handled about 1,000,000 tons and the independent refineries 359,000 tons.

The Central Railroad of New Jersey is having built a fine iron twin-screw steamer 260 feet in length, which will be launched in February.

CORRESPONDENCE.

The Coal Consumption of Heating Furnaces.

To the Editor: In your issue of 8d inst. I notice a statement that a ton of finished iron was heated by a Smith furnace, erected at Zanesville, Ohio, with only 255 pounds of slack coal. It is evident from the table given that the furnace ran single turns only. It would seem to be in order to ask your correspondent whether the coal given in the table included that used to keep the furnace up during the night, and get it hot for the next shift. Unless such coal is included the figures are apt to be misleading. In this part of the country we are accustomed to figure the tons of iron heated at 2240 pounds per ton, and not 2000 pounds, as is done in the case above referred to. In this connection it would be interesting, if correspondence was invited on the subject from many who have used gas heating furnaces, to really see what amount of coal is used per ton in actual practice, giving conditions, consecutive or intermittent work, kind of fuel, size of piles and weight, product per ton, &c. Yours respectfully,
S. PETERS.
PORTLAND, ME., January 9, 1889.

To the Editor: Replying to Mr. Peters' communication, to which you kindly call our attention, we beg to state that the record given of the fuel consumption of the Smith furnace we built at Zanesville did not include coal used to keep the furnace up over night, but simply showed coal used during "actual working hours." Our idea in publishing this record was to give iron manufacturers generally an opportunity to see the comparative fuel consumption of the Smith gas heating furnace as constructed by us and an old style coal burning furnace. We use the word "comparatively" advisedly, as experience has taught us that when a manufacturer says he uses from 900 pounds to 1200 pounds of nut or lump coal to heat a ton of iron in a coal furnace, he refers to coal used during "actual working hours" only.

Admitting the above statement to be correct, the question resolves itself into this: Will as much coal be required to keep up a Smith furnace over night as to keep up a coal furnace of the same capacity? In answering this we say No, without hesitation, as it is an obvious fact that the comparative saving at night must be the same as in daytime. We, in the West, also figure the tons of iron heated at 2240 pounds, but in referring to finished iron, which the record alluded to is based on, we consider a ton to be 2000 pounds. Now that this subject is opened up, we would like, in justice to ourselves, to state that we do not consider the Zanesville record one to be proud of, as the furnace never heated what we consider a full turn's work, the average for ten days being only 36,500 pounds of finished iron, while we know from actual practice elsewhere that it was capable of heating at least 45,000 pounds of finished iron in the same time. That it did not do so was in nowise the fault of the furnace, but was entirely owing to the disadvantages in equipment mentioned in *The Iron Age* of January 8.

For your correspondent's further information we might state that a 9-inch mill in this city, which has been operating one of our furnaces for some time single turn, advises us that their entire fuel consumption, including nights and Sundays, is only 400 pounds slack coal to the ton of finished iron, but they have been getting unusually large tonnage.

We agree with Mr. Peters that correspondence giving the actual gas furnace practice would be very interesting, but to

our minds the loss by oxidation is more important than any of the subjects he refers to. We would suggest that Mr. Peters open the correspondence by giving his own experience with the Smith furnace, stating fuel consumption per 24 hours, and considering quality as well as quantity of fuel. In conclusion, it might not be amiss to say that to cover the objection urged to our record we are prepared to contract to erect complete plants under a guarantee that we will use but a certain quantity of coal per 24 hours to run the furnace, thus removing all element of uncertainty as to amount of coal used to keep furnace up over night on single-turn mills, and displacing the question of tonnage entirely, which is too largely governed by local circumstances to be a reliable basis for figures. Yours truly,
ALEXANDER LAUGHLIN & Co.

CLEVELAND, January 1, 1889.

The Charcoal Furnaces on January 1st.

We print below our monthly report of the status of the charcoal furnaces on the first of the current year.

Charcoal Furnaces January 1.

In New York Millerton went out in December, and will remain idle until prices are more satisfactory. In Maryland Muirkirk is at work. The product of the furnaces for the second half of 1888 was 6322 gross tons. In Virginia the total product for the same period was 6225 tons. So far as is known preparations for the coming season include the blowing in of the following furnaces: Reed Island, February 15; Cedar Run, April 15; Beverly, May 1; Speedwell, May 15, and White Rock, April. In Ohio Mt. Vernon went out on the 4th inst., and Bloom on the 10th, the latter for relining, which will keep it idle till March. In Michigan Peninsular continues in blast. The total output of the furnaces reported by all but one company was 86,252 tons. Estimating the missing stack at 5500 tons, we reach a total of 91,752 tons. In the South, Standard, of Tennessee, now known as Warner No. 2, will go in on February 1st. No. 2 Nashville, a new furnace, is to be put in this month. It has been out only because the boiler capacity of the plant was not great enough to run both, one having been at work with coke as a fuel for some time past. In Alabama Gadsden went out on the 22d ult., and Tecumseh was banked in the beginning of the year. Rock Run, just rebuilt and refitted, has made its best run thus far lately. In Texas Old Alcade furnace blew out in the middle of December, to resume on January 21.

Washington News.

(From Our Regular Correspondent.)

WASHINGTON, D. C., January 15, 1889.

The tariff debate in the Senate is now on the homestretch. One week from today the vote will be taken, and the question, so far as the Senate is concerned, will be disposed of. Since the reassembling of Congress the Senators have not manifested a very lively interest in the subject. The Republicans having carried the election, the incentive to agitation for political effect no longer exists. The members of the Finance Committee have kept up their interest as a matter of pride in the completion of their work. The rest of the Senators, as a rule, have given such attention as local interests demanded. Much delay has been occasioned during the debate in hunting up a quorum when votes have been demanded. In view of the increasing indifference, Senator Edmunds addressed a letter to the Republican Senators, requesting them to be in their seats during these closing days of the discussion, in order to press the consideration of the bill to completion, so that there may be no reason for an extension of the time for taking the vote. The bill has been gone over to the end, and some unsettled points will now be taken up and disposed of. The Senators are very generally applying themselves to the demands of the bill, and from present appearances will be ready to take a vote at the time agreed upon.

At a conference of Senators an understanding has been reached which will secure a full Republican vote for the bill. The only serious point of disagreement has been on the sugar schedule, and that will be so reconciled as to prevent any break in the party vote. It is not probable that the bill will receive any Democratic support unless it should be the vote of Brown, of Georgia. While some features might be acceptable, there are enough otherwise to give a reasonable ground of justification for voting against it as a partisan measure. The management of the Democratic side of the discussion has been unexpectedly vigorous and efficient. The illness of Senator Beck gave rise to much apprehension that there would be no one to take his place in the leadership of the opposition. The Democratic members of the Committee on Finance, except Mr. Beck, were not sufficiently familiar with the subject to do so. Senator Voorhees, of Indiana, is not disposed to array himself against some degree of opposition. Senator McPherson, of New Jersey, had a contest for re-election on hand. Harns, of Tennessee, had his re-election to look after and was a pronounced free trader, and Vance knew less on the question than his colleagues. As a result Senator Vest, of Missouri, not a member of the committee, came to the rescue and has gained a decided reputation for himself and rescued his party in the Senate from permitting the opposition to go by default. Senator Vest never made the tariff a specialty in his study of national questions, but in this emergency he carried the opposition along by devoting the hours of adjournment to the study of the points which would be taken up next. The Senator always had a reputation as a first-class debater, but in this crisis he fairly outdid himself.

The following is the authorized presentation of the amendatory proposition submitted by Senator Allison, chairman of the sub-committee, in lieu of the sections relating to the duty on tin plate:

Sheets of iron or steel, common or black, including all iron or steel commercially known as common or black taggers' iron or steel, and skelp iron or steel, valued at three cents per pound or less, thinner than No. 10 and not thinner than No. 20 wire gauge, one cent per pound; thinner than No. 20 wire gauge and no:

thinner than No. 25 wire gauge, one and one-tenth cents per pound; thinner than No. 25 wire gauge and not thinner than 20 wire gauge, one and three-tenths cents per pound; thinner than No. 20 wire gauge, one and four-tenths cents per pound; corrugated or crimped, one and four-tenths cents per pound; provided, that all common or black sheet iron or sheet steel not thinner than No. 10 wire gauge shall pay a duty as plate iron or plate steel.

All iron and steel sheets or plates, and all hoop, band or scroll iron steel, excepting what are known commercially as tin plates, terne plates and taggers' tin, and hereafter provided for, when galvanized or coated with zinc or spelter, or other metals, shall pay $\frac{1}{2}$ cent per pound more duty than the corresponding gauges of common or black sheet or taggers' iron or steel, and on and after the first day of January, 1890, all such iron and steel sheets, when coated with tin or lead, or with a mixture of which these metals or either of them is a component part, by the dipping or any other process, and commercially known as tin plates, terne plates and taggers' tin, shall pay $\frac{1}{2}$ cent per pound more duty than the corresponding gauges of common or black sheet or taggers' iron or steel.

Sheet iron or sheet steel, polished, planished or glanced, by whatever name designated, $2\frac{1}{2}$ cents per pound; provided that the plate or sheet or taggers' iron or steel, by whatever name designated, other than the polished, planished or glanced herein provided for, which has been pickled or cleaned by acid or by any other material or process, or which is cold rolled, shall pay one-quarter of 1 cent per pound more duty than the corresponding gauges of common or black sheet or taggers' iron or steel.

Sheets or plates of iron or steel, or taggers' iron or steel coated with tin or lead, or with a mixture of which these metals or either of them is a component part by the dipping or any other process, and commercially known as tin plates, terne plates and taggers' tin, 1 cent per pound until January 1, 1890.

The Senate has also incorporated the sugar bounty provision, paying 1 cent a pound on all sugar manufactured from cane, sorghum or beets within the United States until April, 1900. The bounty is to be paid annually from the duties collected on foreign sugars. This is a radical measure and not as a rule popular among the people. The reduction of 50 per cent. on sugar would reduce the revenues about \$80,000,000. The bounty was simply a compromise and necessary to secure the support of Senators Stanford, Ingalls and Plumb. If the bounty scheme should become a law it will open a very new and very troublesome element in future partisan economic discussion.

The resolution of Representative Cole, referring a proposition to repeal certain portions of the Internal Revenue tax to the Committee on Appropriations, carried by an overwhelming vote, was one of the most direct snubs which any committee has had for years. The proper committee would have been Ways and Means, but, by the vote of the Democratic House, the question was taken out of the hands of Mr. Mills and was deliberately turned over to Mr. Randall. That gentleman will report a bill very soon and will take the leadership. On this proposition he will have a majority of the House with him, and will, in the passage of an internal revenue repeal bill, secure the adoption of the only measure which will have a reasonable prospect of concurrent action.

The Audubon Monument.—A committee appointed by the New York Academy of Sciences, with committees from the scientific societies of New York and vicinity, is endeavoring to raise funds for a monument to the great naturalist, Audubon, who lies buried in Trinity Cemetery. Some years ago a number of gentlemen, noticing that his remains were buried in a part of the Trinity Cemetery likely to be interfered with by the cutting through of a street, Prof. T. Egleston, Chairman of the Audubon Committee, induced the authorities of Trinity Cemetery to transfer the remains to a more prominent place, and to construct a new vault for the purpose. It was then suggested that a monu-

ment be raised over his remains, and a committee was appointed for the purpose. The committee have been soliciting subscriptions for some time. They have just issued a portrait of Audubon which will be given to every subscriber of \$1 and upward. As Audubon lived and died in New York, and was the first as well as the greatest American ornithologist, it is hoped that the money for erecting the monument, about \$10,000, will be raised.

Recent Customs Decisions.

The Secretary of the Treasury has rendered the following decisions under the Customs laws affecting imports of metals and manufactures:

CERTAIN JAPANNED WARE NOT HOOKS AND EYES.

In appealing from an assessment of 45 per cent. ad valorem, the appellants claiming duty as plated or gilt articles and japanned-ware, the Secretary says: "It appearing from the special report of the appraiser that the merchandise in question consists of hooks and eyes, some of which have been coated with Japan varnish, while the rest have been tinned and coated with lacquer, none of them being known commercially as japanned-ware or as plated or gilt articles, the claim of the appellants is hereby rejected."

DUTY ON STEEL CLASPS.

On an appeal from duty at 45 per cent. ad valorem, appellants claim purse buckles at 25 per cent as jewelry, and purse frames at 35 per cent. for pocket books. The Secretary, in affirming the assessment of 45 per cent., says: "From your report and that of the appraiser it appears that the entry did not embrace any buckles or purses, but certain clasps composed of steel, with small steel chains attached for ornamentation, which are used in the manufacture of purses, and were classified as manufactures of steel. An examination of the samples submitted shows that the articles are parts of purses, and the Department is of opinion that they cannot be properly classified by assimilation to pocket-books or purses, inasmuch as they are not completed articles, and in their present condition are not intended for any use other than as materials."

CERTAIN FRAMES DUTIABLE AS METAL.

The Secretary, affirming a duty of 45 per cent. on certain frames, says: "It appears from the report of the appraiser and an inspection of the sample submitted, that the merchandise in question consists of frames for triplicate mirrors. The frames are in three parts, each being double—that is to say, an outside frame of wood and an inside frame of metal which is secured to the wooden frame and is intended to hold the glass. The metal, which is not plated, being of material importance in the construction of the article, as well as of considerable value, duty was assessed at the rate provided for manufactures in part of metal and in accordance with Department's decision."

DUTY ON ALUMINIUM POWDER.

On an appeal from 45 per cent. on so-called aluminium bronze powder, claimed to be dutiable at 15 per cent. as bronze powder, the Department says: "The appraiser reports that the article is a powder composed wholly of aluminium, and commercially known as 'aluminium powder,' and not as 'bronze powder;' that it is not adapted to the same uses as bronze powder, and that bronze powder is never made of the finer metals, such as aluminium, platinum, gold or silver, but of the common metals, such as brass, tin or copper. The Department is of the opinion that the powder in question was properly classified

as a manufacture of aluminium, and your assessment of duty thereon is hereby confirmed."

Southern Pig Iron Contracts.

Thomas H. Carter, commissioner of the Southern Railway and Steamship Association, has issued the following circular, under date of January 9th: At a meeting of lines interested in pig iron traffic from Southern furnaces, held at Atlanta, Ga., December 18th, 1888, the following was adopted:

Moved, That the commissioner be requested to advise all furnace companies that under the agreement of June 14th, 1888, contracts will only be protected on sales to actual consumers of the iron, and that billing orders that are now out, covering sales to commission agents, in all cases where the actual consumers are not shown on request from the commissioner, be cancelled for the unexpired shipments.

The agreement of June 14th, 1888, referred to was practically a renewal of the agreement then in effect, as published in our Circular Letter, No. 22, Series 1887-8, copies of which have been furnished you. Furnace companies in whose favor billing orders are now in effect for shipments to commission agents have been furnished abstracts of the same, and notified that the orders will be withdrawn unless the actual consumers of the iron are shown.

The secretary of the Cincinnati Corrugating Company writes us some further particulars in regard to the recent purchase by his company of the machinery, good will, &c., of the iron-roofing firm of Caldwell & Co. The latter was established in Cincinnati over 30 years ago, being the oldest concern in this line in the West, and among the oldest in the whole country. They were engaged principally in the manufacture and sale of the Outcalt patent elastic joint iron roofing, for which they held a very substantial trade, one that stayed with them for years, and until the death of the senior member of the firm, which took place a few months ago. Some of the oldest work alluded to in the Corrugating Company's well-known circular, "Life of an Iron Roof," was of the Outcalt patent, and put on by this firm. One of the strong points claimed for this style of roofing is that there are no nails exposed to the weather. However, the firm in question labored under the great disadvantage of not being able to obtain the steel sheets, now available for work of this kind.

According to dispatches received at the Navy Department, Washington, from Lieut. Cowles, at Philadelphia, the new dynamite cruiser Vesuvius, at the third official trial made on the 10th inst., attained a speed of 21.64 knots an hour, or 24.88 miles. This exceeds the speed called for by the contract by 1.64 knots, and closely approaches the best time made by torpedo-boats in Europe. The trial took place in deep water in Delaware Bay over a two and one-half mile course, the vessel running back and forth.

Claus Spreckels expresses the opinion that California, Oregon and Washington Territory can produce 1,500,000 tons of sugar annually. He sees no reason why Indiana, Kansas, Iowa, Illinois, Missouri, and other States of the Union cannot produce their own sugar, and the United States be able to grow not only the sugar required for domestic consumption, but also become a large exporter, provided the tariff remains untouched. The result of the season's work at Spreckels' Watsonville factory, in California, established less than a year ago, was 1640 tons of sugar, which netted \$30,000 profit, or nearly \$20 per ton.

TRADE REPORT.

Chicago.

Office of *The Iron Age*, 95 and 97 Washington street, CHICAGO, January 14, 1889.

Pig Iron.—Buyers of Coke Pig Iron are very apathetic, and as stocks are accumulating rapidly at many furnaces sellers are becoming anxious and are soliciting orders eagerly, with the usual result. Prices are declining, and the market is now so unsettled that it is difficult to make an exact quotation. Some dealers are advising their customers not to purchase beyond their immediate requirements, but to buy only from hand to mouth until something like a firm basis of values is struck. These dealers believe that the decline will continue until a number of furnaces are obliged to go out of blast and the production is seriously curtailed. The point at which the manufacture of Pig Iron ceases to be profitable at some furnaces has nearly been touched, and already their owners are discussing the probability of an early suspension of operations. The limited volume of trade in Coke Pig Iron is almost entirely confined to the local furnaces in the present condition of the market. Southern and Ohio makers are unable to compete with them in price. The Ohio furnaces, particularly, are badly handicapped by the recent advance in freights. The manufacturers of that State, though worsted in their first effort to have the new rates reduced, have not abandoned all hope, but believe that they will shortly be able to secure an abatement of at least 40¢ per ton, which will help them considerably in retaining their hold on the market. Lake Superior Coke, No. 1 Foundry, is now selling at \$17 @ \$17.50, No. 2 at \$16 @ \$16.50, and No. 3 at \$15 @ \$15.50, cash, f.o.b. Chicago, but a very weak feeling exists among the makers. American Scotch (Blackband) No. 1, is quoted at \$19.50 @ \$20.50, cash, but these prices are merely for small lots. Jackson County Silvery No. 1 is held at \$18, cash. Other Ohio Soft Irons are available at \$17 @ \$18, cash. Lake Superior Charcoal is quiet, but is more firmly held than other kinds of Pig Iron, occupying a stronger position in the trade. It is quoted at \$20 @ \$20.50, cash. Numerous inquiries are in the market, but the manufacturers are somewhat in doubt as to whether they should contract very freely for future delivery, the absence of snow interfering seriously with the preparation of a fuel supply for the season. Quotations on Southern Coke Iron are nominally as last reported, but sales are being pressed and prices are very weak.

Bar Iron.—A gradual weakening of prices is occurring all along the line. The Mahoning Valley mills are generally holding out for 1.60¢ at mill, half extras, for Common Bars, equal to 1.73¢ Chicago, but it is intimated that on good specifications this price would be shaded. How much it would be necessary to cut it to get a good order can be inferred from the fact that other mills recently quoted 1.70¢ without success. Local mills name 1.70¢ @ 1.75¢, half extras, as their price for Mill lots, according to quantity. Orders are scarce, but an abundance of work is in prospect, which should soon develop into business. Stores quote 1.90¢ @ 2¢ for small lots, according to quantity and quality.

Structural Iron.—The local bridge builders have heavy contracts in view, which will probably be in shape for the purchase of material within the coming 30 days. Architects are also very busy on plans of houses, including a very considerable number of large structures, which

give promise of an active season in that line as soon as spring opens. Contracts for Beams are now in sight aggregating from 2000 to 3000 tons. But while the outlook is thus encouraging, everything is very quiet at present. Quotations on Mill lots are as follows, f.o.b. Chicago: Angles, 2.15¢; Universal Plates, 2.20¢; Tees, 2.60¢ @ 2.65¢; Beams and Channels, 2.90¢. Small lots from store are quoted at 2.35¢ @ 2.50¢ for Angles; 2.70¢ @ 2.75¢ for Tees, and 3.50¢ for Beams. Car Truck Channels are quotable at 2.30¢ in carload lots. Large orders have recently been placed at a considerable reduction on this price.

Plates, Tubes, &c.—Plates are very quiet and prices are weak. Sales from store are being made at the following rates: Sheet Iron, Nos. 10 to 14, 2.50¢; Sheet Steel, 3¢ @ 3.50¢; Tank Iron, 2.40¢; Tank Steel, 2.60¢ @ 2.75¢; Shell Iron, 3¢; Shell Steel, 3.12½¢; Flange Iron, 4¢; Flange Steel, 3.50¢; Fire-Box Steel, 4.75¢ @ 5.75¢; Boiler Rivets, 4¢ @ 4.25¢; Ulster Iron, 3.75¢. Boiler Tubes, 62½¢ off.

Sheet Iron.—No. 27 Common Black is now quoted at 2.80¢ @ 2.85¢ at mill, equal to 2.95¢ @ 3¢, f.o.b. Chicago, for carload lots, with light sales. The prominent Sheet mills are still running double turn on old orders, and, as they expect a renewal of contracts much earlier than usual this season, they look forward to making the entire circuit of the year on double turn. Small lots from store are selling on a basis of 3.30¢ for No. 27.

Galvanized Iron.—Although the warehouses of manufacturers' agents show stocks as badly broken as ever, and desirable sizes are in greater demand than the supply, jobbers are quoting small lots of Juniata at 65¢ off and Charcoal at 65 and 2½¢ off. The manufacturers have formed an association and propose to control the price hereafter. It would not be surprising to see a sharp advance in the near future.

Merchant Steel.—Advices were received here on the 11th inst. of the dissolution of the association. The special combinations controlling Plow Steel, Rake-Tooth Steel and File Steel are understood to be unaffected, and remain intact. Prices show no change as yet, but quotations continue as follows: Bessemer Bars, 2.80¢; Tool Steel, 8.50¢ @ 9.50¢; Specials, 13¢ @ 25¢; Crucible Spring, 3.75¢; Open-Hearth Spring, 2.50¢ @ 2.70¢; Open-Hearth Machinery, 2.40¢; Tire, 2.25 @ 2.50¢; Sheet, 7¢ @ 10¢.

Steel Rails.—Nothing has occurred in this market worthy of note during the past week beyond the establishment of a general sales agency for the three Chicago mills, referred to in greater detail elsewhere. Inquiries are coming forward from which a fair amount of business is expected to develop very shortly. Quotations are firm at \$30.

Old Rails and Wheels.—The past week witnessed much greater activity in Old Iron Rails than has been the case for a long time. Large sales were made at prices varying from \$22.62½ down to \$22, and stocks in this vicinity have been pretty well cleaned up for the present. Old Steel Rails are lower, sales of long lengths having been made at \$17 and short lengths at \$14.50 @ \$15. Old Car Wheels are in better demand and prices are stiffening. Offers of \$19 have been declined, holders asking \$19.50, while in some quarters an early advance to \$20 is expected.

Scrap.—The week has been generally quiet, although some dealers have managed to work off a considerable quantity of stock in the belief that prices will be lower. Mixed Country Scrap is now worth

about \$14. Carefully selected Scrap is offered at the following rates by city dealers, per ton of 2000 lb.: No. 1 Wrought, \$20; Track, \$19; No. 1 Mill, \$14.50; No. 2 Mill, \$10; Horseshoes, \$18.50; Axles, \$25; Machinery Cast, \$18.50 @ \$14; Stove Plate, \$10; Cast Borings, \$9; Wrought Turnings, \$10.50 @ \$11; Axle Turnings, \$12.50 @ \$13; Coil and Leaf Steel, \$15; Tires, \$15.50; Mixed Steel, \$10.50 @ \$11.

General Hardware.—The Shelf Hardware trade has opened up very well, the traveling men of all the local wholesale houses now being on the road and making their work felt thus early. The prospects for business are reported very flattering. The Heavy Hardware houses also report a very encouraging start for the year.

Nails.—Cut Nails are improving in the direction of greater firmness in price, although at present the manufacturers are making but light sales. A few large dealers who failed to lay in stocks when prices were low are now in the market, but they are buying sparingly at the advanced rates now asked by all the manufacturers. They quote slightly higher prices for March delivery than for January and February. The advance of 2½¢ per keg freight from Wheeling adds that much to the cost of Nails laid down here. Jobbers are selling small lots of Steel Nails at from \$2 to \$2.10, and mixed carloads at \$1.95 and cartage. Wire Nails are quoted at \$2.55 from stock, but influences are at work which may cause these figures to be lowered if they continue for any length of time.

Barb Wire.—Jobbers report a very good demand springing up, but it is not sufficiently strong to cause any advance in price, and no change is anticipated in the near future. Small lots of Painted are still quoted at 2.90¢ and Galvanized at 3.60¢, with the usual abatement on carloads.

Pig Lead.—Purchases of Refined are reported for January and February delivery to the extent of 700 tons, and of Common about 200 tons, at prices ranging from 3.60¢ to 3.65¢. Consumers generally have fair stocks.

Charles Himrod & Co., 115 Dearborn street, Chicago, have issued their annual chart showing the course of local prices of Pig Iron. The chart just at hand covers 1882 to 1888, and shows the monthly fluctuations on Lake Superior Charcoal, Lake Superior Coke, Ohio Blackband and Southern Coke. Appended to the diagram are the following remarks: "Consumption of Pig Iron during the year 1888 has been about the same as the production, say 6,000,000 tons, or about 600,000 tons less than 1887. About 1,000,000 tons less Pig Iron was manufactured into Bessemer Steel, so that about 400,000 tons more was used for other purposes. As our annual capacity for production is so much larger than the past year's requirements, prices at the close of the year are lower and weaker than at the opening. With a capacity for 1889 of 7,500,000 tons, the prospect for immediate advances in prices seems somewhat uncertain."

Julian L. Yale has been appointed general sales agent for the entire product of Steel Rails of the North Chicago Rolling Mill Company, the Union Steel Company and the Joliet Steel Company. His office is located in the Rookery Building, Chicago, room 768. Mr. Yale was formerly a resident of Cleveland, where he was engaged in the railway equipment and supply business, and has a wide acquaintance in railway circles. From this time forward all contracts for Steel Rails to be made by the Chicago mills will be negotiated through him.

Philadelphia.

Office of *The Iron Age*, 220 South Fourth St.,
PHILADELPHIA, Pa., January 15, 1889.

Pig Iron.—The continued dullness is beginning to have its affect upon prices, which, while nominally unchanged, are at least 50¢ per ton lower on foundry grades. Mill Irons are not effected to the same extent, but they are dull, and under pressure to realize would have to be shaded considerably for large lots. Consumption is large, but new contracts are both few and unimportant, as buyers are not prepared to bid for large lots. A great deal of Iron is being taken on former contracts, and in some cases deliveries are made with the understanding that buyers will have the benefit of any reductions that may be made within the next 30 days. It is also quite likely that in some cases private arrangements may have been made by which prices are not to be made public, so as to enable sellers to maintain quotations to the smaller class of trade. In fact, a variety of expedients have been employed to postpone—if not obviate—the necessity for an all-round reduction, but it will be impossible to sustain such a course for any length of time. The aggressive competition from the West and South has now reached a point which will compel local makers either to reduce prices or blow out some of their furnaces. A considerable amount of Iron could still be sold at \$16 for Gray Forge, and at \$18 @ \$18.50 for No. 1 Foundry, but with a constant scattering of Southern and Western Irons, a little here and a little there, and once in a while a big lot somewhere else, it is simply impossible that the entire local output should be taken without some adjustment of prices in accordance with the changed conditions. Compared with last week Western and Southern Irons are from 50¢ to \$1 per ton lower, with several transactions closed at the reductions named. Under these circumstances exact quotations are hardly possible. It is easy enough to quote asking prices, but what would be accepted as a selling price for round lots is another thing. The weakness is not due to any material falling off in consumption, but rather to the increase in production, the accumulation of stocks during the Christmas holidays and to increased pressure to realize by furnaces at a distance, besides which it is always hard to sell on a falling market, even though material may be required just as much as at any other time. A large consumption is regarded as a matter of certainty during the coming spring, and, while prices cannot go much lower, there is evidently very little confidence in the quotations now current, which are \$18 @ \$18.50, at tide, for No. 1 Foundry; \$17 @ \$17.50 for No. 2, and \$15.75 @ \$16 for Gray Forge. Southern Irons are offered at \$15, ex-ship, for Gray Forge, \$16 @ \$16.50 for No. 2, and \$17 @ \$17.50 for No. 1, with transactions at the inside quotations.

Foreign Iron.—Entirely nominal at last week's quotations, viz.: Bessemer, \$20, c.i.f., duty paid, and 20 % Speigeleisen, \$27.

Blooms.—Prices are irregular and are said to be shaded considerably on bids for large lots. Quotations nominally as follows: Steel Nail Slabs, \$28.50 @ \$29, at mill; Billets, from \$32 to \$36, according to analysis; Charcoal Blooms, \$52 @ \$54; Run-out Anthracite, \$42 @ \$44; Scrap Blooms, \$32.50 @ \$34 per "bloom" ton of 2464 lb.

Bar Iron.—The market is irregular, and on all but the best makes exceedingly dull. A few special orders have been on the market, but special brands were required, so that comparatively high prices were realized, say 1.85¢, with full extras.

There is a great deal of good Iron for sale at 1.75¢ @ 1.8¢, and common Iron at 1.6¢ @ 1.65¢, but the demand is not in proportion, so that the general report of the market is that it is distressingly dull. Skelp Iron is likely to be wanted in large quantities, but as yet no direct offers have been made. Prices are nominally 1.85¢ for Grooved and 1.95¢ for Sheared, but Western quotations are said to be so much more favorable to buyers that the chances for business in this vicinity are not likely to be good until the West is more fully employed.

Muck Bars.—The market is dull and lower, with sellers at \$20.50 at mill, or \$28 @ \$28.50, delivered to consumer. The offerings are large, and bids not easily obtained except for small lots.

Plate and Tank Iron.—The market is in a most depressed condition, and, while prices are nominally unchanged, cuts of 10¢ @ 15¢ per 100 lb are by no means infrequent when fair-sized orders are offered. Steel Plates are the weakest, but as so much depends on requirements as to tests, &c., we can only quote in a general way as follows: 2¢ @ 2.1¢ for Ordinary Plates and Tank plates, 2.1¢ @ 2.2¢ for Universal Plates; Shell, 2.4¢ @ 2.5¢; Flange, 3.5¢; Fire-Box, 4¢; Steel Plates, Tank and Ship Plate, 2.2¢ @ 2.3¢; Shell, 2.7¢; Flange, 3¢ @ 3.1¢; Fire-Box, 3.1¢ @ 4.1¢.

Structural Iron.—Business appears to be gradually opening up, although, as yet, the amount actually closed has not been important. Several matters are under consideration which will require a great deal of Iron, sooner or later, with a fair probability that at least some of them will be on the market before the end of the month. In the meantime some of the mills are fairly busy, while others are doing very little. Prices are easy, and likely to remain so until work becomes more plentiful. Quotations, nominally, as follows: Bridge Plate, 2¢ @ 2.1¢; Angles, 2¢ to 2.1¢; Tees, 2.4¢ to 2.6¢; Beams and Channels, 2.8¢ for Iron or Steel.

Sheet Iron.—A great deal of business is offered to manufacturers for summer delivery, but at prices too far from the asking rates to lead to business. Small lots sell at quoted rates for the best makes, but the amount is not important, and sellers prefer waiting rather than accept the terms usually offered. Quotations for small lots:

Best Refined, Nos. 26, 27 and 28.... 3½¢ @ 3½¢
Best Refined, Nos. 18 to 25.... 3¢ @ 3½¢
Common, ½¢ less than the above.
Best Bloom Sheets, Nos. 26 to 28.... 4½¢ @ 4½¢
Best Bloom Sheets, Nos. 22 to 25.... 4¢ @ 4½¢
Best Bloom Sheets, Nos. 16 to 21.... 3½¢ @ 3½¢
Blue Annealed..... 2.7¢ @ 2.9¢
Best Bloom, Galvanized, discount..... 62½¢ %
Common discount..... 67½¢ %

Merchant Steel.—Orders have come in quite freely, and in some instances a decided increase of business is noted. Prices are unchanged—viz.: Tool Steel, 8½¢; Machinery, 2.6¢; Crucible Spring, 4½¢; Crucible Machinery, 5¢; Best Sheet Steel, 10¢; Ordinary Sheet, 8¢.

Steel Rails.—There is very little report in the way of new business. There is a good deal of inquiry and some bids for fair-sized lots, but not on terms such as are acceptable to sellers. Small lots are taken at \$28 at mill, and the disposition is to maintain that as a firm quotation, as there is a growing impression, that a turn for the better cannot be delayed much longer.

Scrap Iron.—There is more disposition to do business and prices appear to be pretty well held, as follows: \$20.50 @ \$21 for cargo lots; \$21.50 @ \$22 for carload lots, delivered, or for choice \$22.50; No. 2 do., \$14 @ \$15; Turnings, \$18 @ \$14; Old Steel Rails, \$20 @ \$21; Cast Scrap, \$15 @ \$16; do. Borings, \$9 @

\$10; Old Fish Plates, \$25 @ \$26; Old Car-Wheels, \$17 @ \$18, Philadelphia, or its equivalent.

Old Rails.—Prices are firm, although there is no great demand. The offerings are very light, however, and as stocks are in strong hands prices are likely to be maintained. Asking prices \$23.50 @ \$24, Philadelphia, according to delivery, with buyers at about half a dollar less money.

Wrought-Iron Pipe.—There is a great deal of business on the market, but prices are irregular and on large orders increased discounts are usually obtained. Nominal discounts are as follows: Black Butt-Welded, 52½ %; Galvanized do., 42½ %; Black Lap-Welded, 62½ %; Galvanized do., 52½ %; Boiler Tubes, 60 %.

Nails.—Are as dull as usual at this season, but it is believed that when business starts up it will be at higher figures than have ruled for some time past. Several leading mills are closed and will probably remain closed unless prices improve. Store prices are from \$1.90 to \$2, with slightly lower figures for carload lots.

Mr. Paul Thompson (of the late W. H. Walbaum & Co.), in connection with Mr. John W. McGennis, formerly superintendent of the North Chicago Rolling Mill Company, have formed a partnership and will continue the Iron Commission business at 206 South Fourth street, Philadelphia, under the firm name of W. H. Walbaum & Co.

Pittsburgh.

Office of *The Iron Age*, 77 Fourth Ave.,
PITTSBURGH, January 15, 1889.

The general Iron and Steel business continues very dull, and the fact that almost everything in these important industries has been declining in value is not without its effect in curtailing business, as buyers, while this continues to be the case, will buy only as their immediate necessities require. It is a characteristic of buyers both of Iron and Steel of late years to hold off at the same time and then buy together. While this is good policy in some respects, it is bad in others. They frequently buy and sell at the wrong time. However, the policy once so common of carrying from two to four months' stock has been pretty well discarded. It was then a necessity, but now, in view of the greatly increased railway facilities, it is not, and jobbers and large consumers order always as they require. Now and again, however, when prices are weak and tending downward, as has been the case for some time past, demand falls off, and will not improve much until there is a reasonable assurance that the lowest point has been reached. While business is dull at present, the situation as regards the great interests in question is by no means discouraging; on the contrary, there is every reason to believe that the Iron and Steel business of 1889 will be prosperous.

Our manufacturers generally are a good deal exercised in regard to the excessive price demanded for natural gas, as well as the increasing number of restrictions issued by the gas companies in the consumption of the same. There is no failure of the supply, nor is such a thing at all probable, but the gas companies say they have been furnishing gas too low; they also claim that there has been a very great wastage on the part of large consumers. Some of our manufacturers aver that if the present policy of the natural gas companies is continued they will discard the use of gas and go back to coal.

The Monongahela River coal mines are still standing idle, and it looks now as if they would not be started before March. This is unfortunate, as it keeps some 6000 miners out of employment.

Pig Iron.—The dullness noted for some weeks past continues, but it is believed that there will soon be a change for the better. Just as soon as consumers can be assured that the market will go no lower there will no doubt be a change for the better, as they are mostly low in stock and will want to replenish. As it is now and has been for several weeks past, buyers are not buying a ton more than they can possibly help. City furnaces are selling most of the Iron that is being bought just now. Shenango and Mahoning valley furnaces are offering very little now in this market, claiming that they can do much better elsewhere. It is generally admitted that present prices, under the most favorable circumstances, cover little more than actual cost, and it looks as though—if the cost of production cannot be reduced by cheaper Ore, Coke, &c.—the market will sooner or later have to stiffen up. The situation at present is anything but satisfactory to furnace men. Prices may be fairly quoted as follows:

Neutral Gray Forge.....	\$15.00 @ \$15.25, cash.
White and Mottled.....	14.50 @ 15.00, "
All Ore Mill.....	16.00 @ 16.25, "
No. 1 Foundry.....	17.50 @ 17.75, "
No. 2 Foundry.....	16.75 @ 17.00, "
No. 2 Charcoal Foundry.....	21.00 @ 22.00, "
Cold Blast Charcoal.....	25.00 @ 26.00, "
Bessemer Iron.....	17.00 @

In regard to Bessemer Iron there have been no sales reported for over a week, and, while it is very dull, so far as we can learn no well-known reliable brands can be had under \$17, cash. No. 1 brands of Neutral Gray Forge sold during the week under review at \$15.25, cash.

Muck Bar.—There is little or no demand, and we have to report a continued dull market, with prices weak and drooping. It is now offered at \$28, cash, although there are makers who will not sell below \$28.50.

Ferromanganese.—Sale 100 tons 80 % at \$55, cash; Spiegel, 20 %, \$27.50 @ \$28, cash.

Manufactured Iron.—The demand continues light and prices are weak and irregular. We continue to quote Bars at 1.75¢ @ 1.80¢, 60 days, 2 % off for cash. Plates 2.20¢ @ 2.25¢; No. 24 Sheet 2.85¢ @ 2.90¢. For desirable orders the above rates would no doubt be shaded, as some mill owners are desirous for business. Skelp Iron is hard to quote, as it is being sadly cut; Grooved is quoted at 1.75¢ @ 1.80¢, and Sheared at 1.95¢ @ 2.00¢.

Nails.—There is nothing doing here and it is not likely that there will be as long as buyers can do so much better in the Wheeling district. The Wheeling card is 10¢ per keg below that of Pittsburgh; the latter are refusing to sell below a 1.90¢ basis for 12d to 40d, 60 days, 2 % off for cash, while the former are selling upon a basis of 1.80¢.

Wrought Iron Pipe.—The Pipe trade continues dull. Some mills are standing idle, and but few, if any, of those in operation are working up to anything like their full capacity. However, it is probable that there will be an improvement within the next few weeks, although no special activity is looked for until March or April. Prices continue irregular, and are difficult to quote, as each firm makes its own rates. Discounts are about as follows: On Black Butt-Welded Pipe, 52½ and 5 %; on Galvanized do., 45 and 5 %; on Black Lap-Welded, 62½ and 5 %; on Galvanized do., 52 and 5 %; 2-inch Tubing, 13¢ per foot, net; Boiler Tubes, 65 % off list.

Old Rails.—There is no demand, and in the absence of sales it is difficult to give reliable quotations. Some of the brokers intimate that an offer to buy at \$24 would probably be accepted, although the last sale reported was at \$24.50. Contrary to general expectation, the weather has been favorable all the winter for lift-

ing, and this has been an element of weakness, as it has kept up the supply much better than was looked for. The last sales of Old Steel Rails reported were at \$18.50 for short and \$20 @ \$20.50 for long lengths.

Steel Rails.—Heavy Sections are still quoted at \$28, cash, at mill, for lots ranging from 1000 up to 5000 tons. A sale of 5000 tons was reported at the price quoted. As intimated in our last report, it is possible that for a large order the price quoted would be discounted.

Billets, &c.—Bessemer Steel Billets continue dull and we now quote at \$28.25 @ \$28.50; Nail Slabs, \$27.75 @ \$28; Domestic Bloom and Rail Ends dull and weaker. We now quote at \$18.50 @ \$19.

Railway Track Supplies.—Railway Spikes are still quoted at \$2.10, 30 days, free on cars at works in Pittsburgh; Splice Bars, 1.85¢ @ 1.90¢; Track Bolts, 2.80¢ with Square and 2.90¢ with Hexagon Nuts.

Merchant Steel.—Tool Steel remains unchanged at 8½¢ for best brands; Crucible Spring, 4½¢; Crucible Machinery, 5¢; Open Hearth do., 2½¢.

Old Material.—The market in all kinds of Scrap continues dull, and there is so little doing that it is difficult to give reliable quotations. The last sales of No. 1 Wrought Scrap reported were at \$21 @ \$21.25, net ton; Cast Scrap at \$15.50 @ \$16, gross; Old Wheels nominal at \$19.50 @ \$20.

On Monday, the 14th inst., announcement was made at Pittsburgh that Mr. H. C. Frick, president of the H. C. Frick Coke Company, at Pittsburgh, had purchased the interests of the late D. A. Stewart in the firm of Carnegie Bros. & Co., Limited, and had also succeeded to the office of chairman of that firm. This position was occupied by Mr. Stewart before his death some weeks since. As is well known, the firms of Carnegie Bros. & Co., Limited, and the H. C. Frick Coke Company are closely identified with each other, and as a result Mr. Frick will still continue to hold the office of president of the H. C. Frick Coke Company. The following official announcement of the change was issued by Carnegie Bros. & Co., Limited, on Monday, the 14th inst.

Mr. H. C. Frick having purchased Mr. D. A. Stewart's interest in the Carnegie firms, he was unanimously elected Chairman of Carnegie Bros. & Co., Limited, Mr. John G. A. Lieberman retaining the position of Vice-Chairman and Treasurer. The active members of the firm felt that the growth of the business required an increase in the managing force, and as Mr. Frick had so successfully managed the extensive coke interests, it was decided to offer him an interest in the firm and make him one of the active managers. Mr. Frick will continue president of the H. C. Frick Coke Company, of which he is the founder, as the business of these two companies, which are controlled by the same parties, can be advantageously combined.

Mr. Frick entered upon the duties of his new office immediately after the appointment was made.

Chattanooga.

Office of *The Iron Age*, Carter and 9th Sts., CHATTANOOGA, January 14, 1889.

Pig Iron.—The situation can be summed up in a very few words. Some of the furnaces are keeping their yards quite clear of Iron by shipments on old contracts. What there is left over after the monthly shipments on contracts is sold at a concession of 50¢ to \$1 per ton. Other furnaces that are piling up metal are obliged to do so partly for want of cars to make shipments and partly for want of a disposition to sell at present prices, believing that the future will develop higher rates, and some are piling up metal simply because they positively refuse to accept pres-

ent figures, and are able to hold; so it will be seen that it would be quite difficult to give a correct report of the condition of the market. A careful estimate of what the Southern districts will turn out the present year develops the fact that 1889 will exceed 1888 by about 350,000 tons, and in the face of this the question may be asked, What is going to be the result on prices? Should Iron go lower, many of the Northern stacks will probably blow out, which will serve in a measure to equalize production with consumption, and it is so looked upon by many of the Southern producers. At any rate they say that they are willing to continue to blow as long as Pig Iron nets them an average of \$11 on cars at the works. The Gadsden, a comparatively new furnace, has so far made an excellent record by averaging 120 tons per day, about two-thirds Foundry, and of very excellent quality. It is 16 x 75. The very fine weather that has prevailed for the past four weeks has enabled all the furnaces to make exceedingly good runs, and of superior qualities.

Detroit.

WILLIAM F. JARVIS & Co., under date of January 14, 1889, report as follows: There has been a little more activity developed since our last report, and some round lots of L. S. Charcoal have been placed. The demand seems to be for the high numbers and prompt delivery. Mahoning Valley Coke Irons are held firm, but some of the Southern brands are still offered considerably below the regular market. Considering the very large production, it appears remarkable that so little cutting is being done, and it can be accounted for only by the consumption keeping so nearly up to the production. Stocks of L. S. Charcoal are still diminishing, and this is encouraging to makers of this grade, as all other stocks have increased to some extent. We quote for the present as follows:

Lake Superior Charcoal, all numbers.....	\$20.00 @ \$20.50
Lake Superior Coke, all ore.....	19.75 @ 20.25
Lake Superior Coke, cinder mixed.....	18.00 @ 18.50
Standard Ohio Black Band.....	19.75 @ 20.25
Southern No. 1.....	17.75 @ 18.25
Southern Gray Forge.....	15.25 @ 16.25
Southern Silvery.....	17.00 @ 17.50
Jackson County (Ohio) Silvery.....	18.50 @ 19.00
Old Wheels.....	20.25 @ 20.75

Cleveland.

CLEVELAND, January 14, 1889.

Iron Ore.—None of the mining companies have fixed upon their prices for 1889. In the face of a weak and apparently declining Pig-Iron market the furnacemen seem less anxious to push negotiations than was noticeable ten days ago. It is the general opinion among all interested parties that Lake freights will vary but slightly from the schedule of 1888. Notwithstanding the evident lack of all activity in the market it is probable that several quite important sales of new Ore will take place within a very few days. The Ore in question is a high-grade Bessemer and the price paid for it will serve as a basis for estimating the selling rates for nearly all kinds of Ore during the coming season. About 8000 tons of the Ore now on the docks has been sold during the week and 36,000 tons have been sent to the inland furnaces.

Pig Iron.—Furnacemen are standing up courageously under the somewhat depressing influences now prevailing, and are making no efforts to force sales. It is known that an immense amount of Iron is being consumed, and an active buying movement must come sooner or later. The holiday and inventory seasons of the year still affect the market, the mills not being in readiness to purchase new Iron. The market cannot be said to be either active

or firm, but prices have not been cut, and good business is looked for before February.

Old Rails.—The market is dull, and \$24 @ \$24.50 has been the price paid for all the Old Americans reported sold.

Nails.—Steel Wire Nails have dropped to \$2.50, owing to the animated competition among manufacturers. Steel Nails at \$2 are selling quite freely.

Manufactured Iron.—Common Bar at 1.60¢ forms a basis for the price of all grades of Iron of this variety.

Cincinnati.

Office of *The Iron Age*, Fourth and Main Sts.,
CINCINNATI, January 14, 1889.

Pig Iron.—The local market for Pig Iron has been demoralized during the past week, yet the pressure to sell Iron at the low prices prevailing has been more marked among producers than among agents. Reports are current here of sales which are looked upon as nothing less than sacrifices, and reflect a stampede among furnaces. Yet such is the fickleness of the market that these very transactions, in a few weeks, may be applauded as sales well made. The conditions of the market respecting supply and demand have not changed essentially, but the evidence of an oversupply is more prominent. A local authority remarks: "Values have declined more rapidly since December 10 than in any equal period for years." The weakness has been more apparent in Southern Iron, but the Ohio and Tennessee product has also figured in the decline. A few local buyers have entered the market for 500 and 1000 ton lots, among them being rolling mills and stove manufacturers. In addition, there have been several lots of 1000 and 2000 tons of both Mill and Foundry grades, but there has been an absence of large trades. Several round lots, however, in which local parties are interested, have been sold at near-by points, among them being about 7000 tons at Louisville. No 1 Southern Coke Foundry has been sold at \$15.50 @ \$16; No. 2 do. at \$14.50 @ \$15; Gray Forge at \$13 @ \$13.50; Mottled at \$12.50 @ \$12.75; Open Bright at \$13.75, &c. Car-Wheel Iron, however, has not entered into the market, and prices for it are well sustained. The following are the approximate prices current here at the close for cash, f.o.b.:

Foundry.

Southern Coke, No. 1 (new classification).....	\$15.50 @ \$16.00
Southern Coke, No. 2 (new classification).....	14.50 @ 15.00
Southern Coke, No. 3 (new classification).....	14.00 @ 14.50
Ohio Soft Stone Coal, No. 1.....	16.00 @ 17.00
Ohio Soft Stone Coal, No. 2.....	15.00 @ 16.00
Mahoning and Shenango Valley.....	17.00 @ 17.50
Hanging Rock Charcoal, No. 1.....	21.00 @ 22.00
Hanging Rock Charcoal, No. 2.....	19.00 @ 22.00
Tennessee and Alabama Charcoal, No. 1.....	18.00 @ 18.50
Tennessee and Alabama Charcoal, No. 2.....	17.00 @ 18.00

Forge.

Strong Neutral Coke.....	13.00 @ 13.50
Mottled Neutral Coke.....	12.50 @ 12.75
Gray Forge.....	13.00 @ 13.50

Car-Wheel and Malleable Irons.

Southern Car-Wheel.....	29.00 @ 25.00
Hanging Rock, Cold Blast.....	22.00 @ 25.00
Lake Superior Car-Wheel and Malleable.....	21.00 @ 22.00

Manufactured Iron.—There has been a more active demand from carriage builders, stove men and others, and prices have been well sustained, although an easier tone has prevailed, in sympathy with the continued and rapid shrinkage in prices of Pig Iron.

Nails.—The market has ruled easy in tone and prices have been barely sustained, with little demand: 13 @ 40d sold at \$1.90 @ \$1.95 per keg, with 10¢ rebate in carload lots at the mills; 50 @ 60d 25¢, 10d 10¢, 8 @ 9d 25¢, 6 @ 7d 40¢, 8d \$1,

and 2d \$1.50 per keg more. Steel Nails sell at \$1.90 @ \$1.95, and Steel Wire Nails at \$2.60 @ \$2.65 per keg.

Old Material.—There has been but little doing and an easy tone has prevailed. Buyers have reduced bids on Old Wheels to \$18.50, and Old Rails are not readily sold over \$21.50 per ton, but sellers are not disposed to accept such prices, asking at least 50¢ per ton above these rates.

Louisville.

LOUISVILLE, KY., January 14, 1889.

Pig Iron.—The market has been very active during the past week, with sales at reduced prices. Large blocks of Iron have been sold for delivery during 12 months, the heaviest sales being of off-colored and Mill Irons. It is impossible to tell what is the value of Iron to-day, so different are the views of various furnaces. From some sales made indications point to low prices for some time to come, and even the most conservative furnaces are willing now to make concessions and sell for several months ahead. We will not change quotations of the past week, though these are outside figures, and sales have been made for less money, as it is impossible to tell until the market becomes settled what is the price of Iron. We quote as follows:

Southern Coke, No. 1 Foundry, new classification.....	\$15.50 @ \$16.00
Southern Coke, No. 2 Foundry, new classification.....	15.00 @ 15.50
Southern Coke, No. 3 Foundry, new classification.....	14.50 @ 15.00
Gray Forge.....	14.00 @ 14.50
White and Mottled, different grades.....	13.50 @ 14.00
Silver Gray, different grades.....	13.75 @ 14.50
Southern Charcoal, No. 1 Foundry.....	16.50 @ 17.00
" " No. 1 Mill.....	15.25 @ 15.75
Southern Car-Wheel, standard brands.....	22.50 @ 23.50
Southern Car-Wheel, other brands.....	18.50 @ 20.00
Hanging Rock Coke, No. 1 Foundry.....	16.00 @ 16.50
Hanging Rock Charcoal, No. 1 Foundry.....	20.00 @ 21.50
Hanging Rock, Cold Blast.....	21.25 @ 24.25

New York.

Office of *The Iron Age*, 66 and 68 Duane street,
NEW YORK, January 16, 1889.

Foundry Pig.—The feeling continues one of uncertainty, brought about chiefly by lower offerings of Southern Irons, principally for January and February delivery. Some agents of Southern furnaces ask \$17.50 for No. 1 and \$16.75 for No. 2, delivered on dock, but there is accumulating evidence that \$17 for No. 1 and \$16.25 for No. 2 has been done. The question of the prompt delivery to consumers of Southern Iron contracted for is again becoming vexatious. Delays of weeks at Savannah are frequent. It is evident that the quantity of Iron to be marketed from the Chattanooga and Birmingham districts will not depend upon the ability or the eagerness of the producers to place Iron with consumers in Philadelphia, New York and New England, but that it will be limited by transportation facilities so long as rates remain as low as they now are. We quote standard brands of Northern Iron: No. 1 Foundry \$18 @ \$18.50 and No. 2 \$16.50 @ \$17.

Scotch Pig.—The small lot referred to as having been sent on consignment has been sold at a sacrifice. We quote: Coltness, \$20.50 @ \$21; Shotts, \$20 @ \$20.50; Langloan, \$20 @ \$20.25, Summerlee, \$20.25 @ \$20.50 and Dalmellington, \$19.25 @ \$19.50.

Spiegeleisen.—With the exception of a small quantity of 20 % Spiegel at \$28, no transactions are reported, the market remaining \$28 @ \$29 for 20 % English, and nominally the same for German. Ferromanganese is nominally quoted \$54.50 @ \$55.

Plates.—We quote Iron Tank, 2¢ @ 2.2¢; Shell, 2.25¢ @ 2.4¢; Steel Tank and Ship Plate, 2.15¢ @ 2.25¢; Shell,

2.35¢ @ 2.5¢; Flange, 2.6¢ @ 2.75¢, and Fire-box, 3½¢ @ 4¢.

Structural Iron.—We quote Sheared Plates, 2¢ @ 2.1¢; Universal Mill Plates, 2.1¢ @ 2.2¢; Angles, 2¢ @ 2.10¢; Tees, 2.5¢ @ 2.6¢, and Channels and Beams, 2.8¢ on dock for all sizes.

Bar Iron.—We quote: Carload lots on dock, half extras, Common, 1.65¢ @ 1.75¢; Medium, 1.75¢ @ 1.8¢, and Refined, 1.8¢ @ 2¢.

Steel Rails.—In the East the market has been very quiet, no transactions of any magnitude being reported. It is intimated that \$28, at tidewater, could be done readily, which would be equivalent to about \$27 @ \$27.25 at Eastern mills. Some of the Western works are basing quotations on tidewater delivery. The shipments of the different mills during the year 1888 were as follows:

Gross tons.	Gross tons.
1..... 85,448	9..... 136,029
2..... 82,363	10..... 25,110
3..... 138,946	11..... 126,016
4..... 29,940	12..... 6,599
5..... 114,675	13..... 39,168
6..... 123,310	14..... 3,705
7..... 163,040	
8..... 121,960	Total..... 1,206,279

These figures do not include Light Rails. The total sales for 1889 delivery up to January 1 are reported officially at 434,381 tons, out of a total allotment of 777,000 tons.

Merchant Steel.—There is quite a flow of small orders, but no contracts of any consequence have been closed for season delivery. Prices continue low.

Wire Rods.—There is some inquiry, but buyers and sellers are still apart, the latter asking \$41.50 @ \$42 for German Basic.

Old Rails.—We note sales in 300 and 400 ton lots of an aggregate of 1000 tons of American Tees, at \$23 Jersey City, and \$23.50 delivered to lighter. We continue to quote \$23 @ \$23.50.

Steel Scrap.—Crop Ends, and Billet and Bloom Ends afloat, the quantity being about 500 tons, are being offered at \$21.75 @ \$22.

Track Material.—The Spike market is weak and dull at \$2.10, delivered. We quote Angles 1.85¢ @ 1.9¢.

Coal Market.

The Anthracite Coal market is without animation, complaints being general that the absence of zero weather retards consumption. Meanwhile stocks at all points are for the present amply supplied, both East and West. It is only in the supply of furnace and steam sizes that any activity is noticed. Meanwhile the tendency of prices is to droop, despite the efforts to restrict production, and although the companies affirm that schedule prices are faithfully adhered to by the corporations engaged in mining, it is admitted that considerable Coal mined by individuals finds its way into the market at cut prices averaging something like 25 %. For the week ending January 12 the reported receipts are 640,417 tons, which is nearly up to the average for December, showing that restriction sometimes fails to restrict. For the corresponding week last year the average was 635,076 tons. Since January 1 the aggregate is 1,049,706, against 1,143,196 for the same time in 1888, a decrease of about 94,000 tons. Quotations remain unchanged, viz.: Hard White Ash, Lump, \$4.50; Broken, \$4.15; Egg, \$4.40; Stove, \$4.65; Chestnut, \$4.55; Free-Burning, f.o.b., Broken, \$3.95; Egg, \$4.80; Stove and Chestnut, \$4.65; Pea, \$2.75.

Reading reports for the last week 128,000 tons of Coal, of which 28,000 went to Port Richmond and 19,000 tons to Port

Liberty. The Pennsylvania transported since January 1 139,465 tons of Coal, a decrease of 61,000 tons compared with the same time in 1888.

Bituminous Coal is dull and prices in some instances are said to scarcely return the actual costs. The pool quotation is \$3.25, f.o.b. Clearfield reports for the week, 76,689 tons; Cumberland, 48,439 tons; Beech Creek, 30,004 tons and Pocahontas 32,960 tons.

The mining plant at Pittston, Pa., where 1000 men were employed, has been sold to a syndicate consisting of George B. Newton, of New York, and associates in Philadelphia and Scranton.

The Buffalo, Rochester and Pittsburgh Railroad Company have bought three docks in Buffalo, with a frontage of 1700 feet. The object is to develop and extend the Coal business of the road in Buffalo and to lake ports of the Northwest. The company have also bought 14 acres at Charlotte, Lake Ontario, with docks, shutes, &c., complete for handling Coal. The Coal tonnage of the Lehigh Valley Railroad for the year was 7,950,447 tons of Anthracite and 74,887 tons of Bituminous, making in all 8,025,334 tons, an increase of 1,141,377 tons over the tonnage of 1887 and exceeding that of any other year.

President Corbin, of the Reading, says that but for the blizzard of March that company could have readily produced at least 620,000 tons of Coal over the production for the year 1887.

The first hearing in the suit of Cox Bros. & Co. against the Lehigh Valley Railroad before the Interstate Commerce Commission for discrimination in charges for hauling Coal will take place at Washington on next Friday.

Metal Market.

Copper.—The markets on both sides of the Atlantic have been excessively dull since our last report. In London only 350 tons were sold at a slight advance of 2/6, spot Chili Bars and good merchantable, which are cabled £77. 17/6, futures remaining £78 for both, and Best Selected £79. 10/. Here nothing beyond a sale of 25,000 lb at 17.30¢ for March was done in a speculative way, consumers buying what little they may stand in need of from the syndicate at 16 1/4¢, Lake, and casting brands at 16¢, the nominal Lake quotation in the open market remaining 17¢ @ 17.40¢ for the present. The remnant of the short interest still to be covered at New York is understood to be trifling, and the entire position of the metal is devoid of interest, except so far as a cable dispatch is concerned, received on Monday morning from Paris, in which it is asserted that the syndicate has exhausted its resources and is to create a "metal bank" to get out of the scrape. The Société des Métaux proposes to assume 40,000 tons of Copper and the "metal bank" 90,000 tons, together with all contracts for the two years to come. The liabilities of M. Bex, the unfortunate speculator in Copper shares, who recently committed suicide, amount to 11,000,000 francs, and his assets do not exceed 4,000,000 francs. The syndicate opened the year with a joint stock of Copper of something like 145,000 tons here and in Europe, and if the experience of last year is to be repeated in 1889 it will hold 245,000 tons at the close of the latter. The 145,000 tons alluded to represent about \$50,000,000 American gold. To financier successfully such amounts and maintain the price in the face of rapidly growing production all over the world is not an easy task, which can hardly be accomplished if anything unforeseen happens and pushes the syndicate and its financial supporters to the wall. The whole

enterprise as it stands rests on a most precarious basis, and consumers will do well to proceed with the utmost caution, and shun all anticipation of requirements if they can.

Tin.—Has been lacking activity since our last report, both in London and here, quite as much as Copper, the sales in London not exceeding 200 tons all told, the price giving way from £98. 15/, spot Straits, to £98. 2/6 this morning, and futures from £99. 10/ to £98. 12/6. Here nothing was sold but 10 tons spot at 21.70¢ and 10 tons March at 21.95¢, which quotations have remained nominally upheld.

Tin Plates.—Our market has been dull on the spot, but fairly active in futures at steady rates. Prior to the late Birmingham meeting, alluded to in our last, a large business was done on the other side in anticipation of it, but the meeting resulted very quietly, without anything of moment being arrived at, and since then trade over there has relapsed into a dull state at 13/ @ 18/8 for Coke. We quote at the close, large lines, per box: Siemens-Martin Steel, Charcoal Finish. \$4.75 @ \$5.50; Coke Finish, \$4.65 @ \$4.70; Ternes, \$4.12 1/2 @ \$4.25; Coke Tins, \$4.22 1/2 @ \$4.30; and Wasters, \$4.12 1/2 @ \$4.15.

Lead.—Some 300 to 400 tons Common Domestic were taken in the open market at 3.85¢, at which figure the market winds up firm, the quotation out West being 3.60¢. London has not budged from £18. 2/6, Soft Spanish, and £13. 5/, English Pig, in the meantime.

Spelter.—Has remained featureless and inactive at 5¢, Common Domestic, ordinary brands, and Silesian nominally 5.90¢, having declined in London from £18. 12/6 to £18. 7/6.

Antimony.—The demand has been moderate at 12 1/4¢ @ 13¢ Cookson and 10 1/4¢ @ 11¢ Hallett, the latter not varying from £45 in London.

New York Metal Exchange.

The following sales are reported:

THURSDAY, January 10.		
32 tons Lead, March.....	3.90¢	
FRIDAY, January 11.		
10 tons Tin, March.....	21.95¢	
0 tons Tin, spot.....	21.70¢	
TUESDAY, January 15

Financial.

The event of the week was the consummation of the railroad presidents' agreement, all interests represented working in harmony, with the single object of maintaining tariffs on a basis of equity conducive to the general prosperity. The sincerity of the action taken was considered beyond a doubt. It was believed, too, that while some modification is probable, the underlying principles are in compli-

Spelter.—The market firm, but demand moderate. Quoted at £18. 5/ @ £18. 10/ for ordinary Silesian.

Hardware.

There are signs of increased activity in Hardware circles, though the volume of business is not yet heavy. The opening of the year has brought less than the usual number of changes in list prices and discounts, goods generally being held without material change.

Wire Nails.

There are evidences of a reaction from the extreme prices which within a few weeks have been made by some of the manufacturers, and in some instances the lowest figures at which sales were made have been withdrawn. Some of the manufacturers are disposed to practically withdraw from the market until the situation becomes more settled and satisfactory. The price at factory for carload lots remains \$2.30, f.o.b. Small lots from store are held at the usual advance.

Cut Nails.

The New York market is quiet and steady, the volume of business being satisfactory for the season. Prices remain at \$1.80 to \$1.90 for carload lots on dock. On Friday, the Eastern Cut Nail makers hold a meeting at Philadelphia, to receive the report of the committee appointed to draw up a plan for an organization. It is understood that this committee has conferred with the managers of the Ohio Valley association, and that the plan proposed will be on the same general lines, involving the deposit of a fixed sum per machine, and allotments of sales, with payment of penalty of 10 cents, according to whether the month's sales do not reach it or exceed it.

The regular monthly meeting of the recently organized Western Cut Nail Manufacturers' Association was held at Wheeling, W. Va. on Wednesday, the 9th inst. Nothing but routine business was transacted. It was decided to make no change in the present card rate of \$1.90, less 10 cents per keg in carload lots, 2 per cent. off for cash. It is stated that there has been a decided improvement both in price and demand since the organization was formed, and that the card rate is being steadily adhered to by the members.

The Calumet Iron and Steel Company, of Chicago, have adopted the policy of improving the character of their Steel Nails in every way possible, believing that in the present condition of the Nail trade preference will be given to the best goods to be had at an even price. Their common Cut Nail is described as very symmetrical and of exact proportions, special attention being given to points, which are often passed over with slight consideration. The Parallel Chisel-Pointed Nail, which they put on the market a short time since, is said to be meeting with increasing favor, and they regard it as bidding fair to become a strong competitor with the Wire Nail.

Barb Wire.

The Eastern market is characterized by continued inactivity, business being limited almost entirely to small lots for immediate requirements. Quotations are thus, to a large extent, nominal, but are referred to as well maintained, being held as follows, with deliveries: Four Point Galvanized, in car lots, 3.6 cents; 3-ton lots, 3.7 cents; smaller parcels, 3.9 cents.

Miscellaneous Prices.

There is more or less irregularity in the prices at which the jobbing trade are selling the Winchester Arms, the restrictions heretofore imposed by the company having been withdrawn, leaving the wholesale dealers free to sell at any prices they

choose. Even with the contract system heretofore in force there was more or less cutting of prices, as is to be expected with leading goods so widely and favorably known. A further irregularity has been induced by the quotation of the E. C. Meacham Arms Company, St. Louis, Mo., who are offering the Winchester Arms, in case lots, at discount 25 and 10 and 10 per cent. from the manufacturers' list, terms spot cash, orders of less than a case being given a discount of 25 and 10 per cent.

In connection with the new list of Putnam Nails, which has been adopted by the Putnam Nail Company, Neponset, Boston, Mass., and which was printed in our issue, January 8, we would call attention to the fact that their discount of 15 per cent. applies to purchases of 1000 pounds during the year. The following letter from the Company explains more fully the system of discounts which they have adopted, and gives information of interest in regard to this method of marketing the goods:

Since the issue of our new list and discounts based on quantity our mail has been loaded with inquiries as to its practical working. Knowing that through your valuable paper we can reach most of those who handle our goods in this country, we take the liberty to ask you to publish this for the general information of the trade. In the past, when the trade in our goods was more limited, our former method of quoting special discounts to each customer was more practical, but with the extension of the business, especially since opening our Chicago branch, there has been much friction caused by the cutting of prices, so that it has been said there is little profit in handling Putnam Nails.

Now, although none expect to make so large a margin on staple goods as on others, yet the high reputation and well-known character of such articles make the sales easy in large quantities, as they require no introduction and no special effort to effect sales. From our list, which was published in your issue of January 8, we make the first discount of 15 per cent. to purchasers of 1000 pounds, and settle accordingly. Should, however, this same customer increase his purchases to 3000 and afterward to 5000 pounds and over he will be entitled to settle on the whole purchase of the year at 15 per cent. and the discounts allowed for such a quantity. If a party books an order in good faith for 5000 pounds and over for the year we shall extend to him the same line of discounts. We shall, however, discourage syndicates, or combinations of parties for the purpose of securing discounts to which they are not entitled.

This puts the whole trade on an even basis, and, if all will live up to it, will enable the small trade to furnish the goods at a reasonable price to the smiths, and at the same time insure a fair profit to those who handle the goods in large quantities. We now look to the trade for a cordial support in sustaining these quantity discounts, and we shall absolutely refuse to furnish our goods to any person, firm or company who intentionally cuts these rates. We have furnished a box price to the shoers based on \$4.75 for No. 8's. We shall not undertake to fix the price to the smiths, but leave that to the discretion of the small trade. We leave the supply of the shoers to the local trade, as it is utterly impracticable for us to furnish the goods in small lots. We allow freight on direct shipments in lots of ten boxes and over to place of destination at railroad points.

Simonton & Co., Kidd Steel Wire Company, Pittsburgh, Pa., are quoting a discount of 30 and 2½ per cent. on their Drill Rods. These Rods are described as made from specially imported crucible cast steel, and their quality is emphasized.

The Auburn Mfg. Company, Auburn, N. Y., advise us of an advance on their Scythes above the discounts named in our last issue, making their present prices as follows:

Grain Scythes.....dis 40 %
Grass and Bush Scythes...dis 40&5 @ 40&10 %

Cooper & McKee, 119 Gwinnett street, Brooklyn, N. Y., have issued their catalogue for 1889 in the form of a conveniently arranged and attractively printed pamphlet with an elegantly engraved cover. It represents an attractive line of Refrigerators, of which a variety of patterns are shown, Meat Safes, Blacking Cases, and a number of specialties in

Wooden-Ware. It is accompanied by the following discount sheet, which refers more in detail to the contents of the price list, and gives discounts, there being an extra 2 per cent. discount for cash in 10 days:

	Discount.
Domestic, pages 3 to 6, 16 and 17.....	45 %
Columbia, pages 9 to 11 and 18.....	45 %
Household, pages 12 and 13.....	45 %
Houses and Flats, pages 14 and 15.....	50 %

Steel Shovels.....	8.50
Steel Wire Brooms.....	5.75

Bemis & Call Hardware and Tool Company, Springfield, Mass., have made a reduction on their No. 3 Pipe Wrench, the discount on which is now 40 and 10 per cent., instead of 35 and 5 per cent., as heretofore. Having improved facilities for the making of these particular Wrenches, by which they are enabled to produce them at a reduced cost, they have decided to give the trade the benefit, as above noted.

The market for Rope is firm, but no further advance has at this writing been

made. One reason for the strength of the market is the small supply of both Manila and Sisal Hemp, which is accounted for largely by the unwillingness of importers to import more than is required for actual necessities, on account of the uncertainty attending tariff legislation, there being some likelihood of a reduction in the duty. The stock held abroad is understood to be ample.

The course of the market during the past few weeks has witnessed slight concessions on Strap and T-Hinges and Wrought Butts. Quotations at which these goods are offered by different manufacturers vary somewhat, but ruling prices are acknowledged to be unsatisfactorily low.

As we go to press a report reaches us that a number of the manufacturers of Enamelled Hollow-Ware have formed a combination and agreed upon advanced prices. We are not advised in regard to the details.

Gay & Parsons, Augusta, Me., issue a new edition of their circular and list relating to their Double Action Screw-Drivers. They explain its mechanism, allude to its advantages, give list prices and name the discount of 35 per cent., cash in 30 days.

The Palermo Mica Company, 27 Peck slip, New York, publish the following reduced price list of Mica for 1889, the new list taking effect from January 1:

Size.	Price per lb.	Size.	Price per lb.	Size.	Price per lb.
1 1/2 x 2	\$0.40	2 1/2 x 3 1/2	.90	3 1/2 x 5 1/2	7.00

1 1/					

tendency for the retailers to buy from the manufacturer, having been educated by trade journals like *The Iron Age* in that direction, but our experience teaches us that they soon get sick of it. Of course a retailer who has trade enough to buy in quantities will buy from the manufacturer largely, but he must have an outlet for a large amount of goods to enable him to do so with satisfaction. Manufacturers generally don't want small orders, and are generally unable to fill them promptly, whereas in selling the jobber they get orders for round lots, which furnishes an incentive to put on machines and get the goods out. In our opinion, the jobber is indispensable, and always will be the distributor of manufacturers' products. Education by trade journals, pools, trusts, combinations, &c., have all tended to injure the jobbers, and are doing so now, but we are strongly of the opinion that jobbers are here to stay, and that the retailers must have them, if they do come high.

Regarding the apparent tendency toward direct dealings between the manufacturer and the consumers, a well-known Ohio company write as follows:

With reference to the question as to increase of trade direct from retailers, we beg to say that our observation is that there is a tendency in that direction on part of both retailer and consumer, which we discourage in case of the former by fixed prices f.o.b. here, which enables jobbers in selling at the same prices to save customers' freight from this city. We aim to deal wholly with the trade, and protect their interests carefully against ravages from the consumer, and consider it a matter of business as well as justice to do so.

A jobbing house in Illinois gives the following report in regard to the same matter, alluding especially to the probability that small retailers purchasing directly from the manufacturers will be induced to order more goods than they require:

The larger retailers among our trade buy of the manufacturers whenever they can, and often will buy for a better price than they do of us, always buying in better quantities. The smaller retailers only buy direct occasionally, and invariably buy more goods than they want or need, which teaches them a lesson which lasts a short time. We find that dullness in trade makes us come in competition with the manufacturers oftener than when trade is good, the increased demand probably keeping the manufacturer at home. We manage to hold our own, however, notwithstanding all these drawbacks, and do not believe the retailers can afford to buy of the manufacturers, as a rule.

From a long-established and widely known Western house occupying the position of manufacturers and merchants we have the following advices on the subject:

We believe there is a growing tendency with the manufacturers and retailers to buy from the factory direct. This is largely owing, no doubt, to the fact that small manufacturers have been driven out and the large corporations are taking the trade. This has been in certain lines of goods only. As far as our trade is concerned, it has shown an increase each year, and we believe the jobber is requisite to the trade, and think that manufacturers generally are disposed to recognize the jobber as the legitimate distributor of their goods. We know that the active brokers are on the alert and are endeavoring to show the manufacturers that their interests lie with them. We will not discuss the matter, however. It has always been our aim in business to maintain the most pleasant business relations between manufacturers and ourselves, believing our interests are identical and in the motto "live and let live," and we have only found one or two manufacturers in the many years we have been in business who have acted contrary to this spirit.

An Ohio concern manufacturing a line of Power Tools advise us that it has been their aim, so far as possible, to have good reliable dealers in each of the larger cities handle their Tools, and they give to them the exclusive agency for the same and protect them in every way possible. They state that this has been found more advantageous in many respects than to endeavor to sell direct to the users of Tools.

Referring to their methods of marketing the goods a well-known Eastern manufacturer of a special line writes:

We find St. Louis an excellent point for the sale of our goods, as more business is probably done there through agencies for the different manufacturers than through the branch stores of the manufacturers themselves. We find that we can handle the consumers' trade from Boston to Chicago direct at a better advantage than we can through agencies, but west of Chicago, as well as through the South, more especially the Mississippi Valley, we find it to our advantage to have our goods sold through agencies appointed by ourselves.

A large manufacturing concern of Pittsburgh, Pa., refers to there being an increasing tendency, not only on the part of merchants, but also on the part of consumers, to buy direct of the manufacturer, but as manufacturers, our correspondents advise us, they make a quantity price on some of their lines, preferring to sell in large quantities and lower prices to responsible merchants, who have more regard for their business obligations than many of the small dealers.

A prominent Hardware house in Ohio refers to the fact that each year since their establishment they have increased their business over the preceding year, the year just past being no exception, and allude to this as evidence that in the present tendency they, as jobbers, find nothing to cause apprehension.

St. Louis.

B. G. Farrar & Co., brokers and manufacturers' agents, have removed from 624 Chestnut street to 620 and 622 N. Main street, St. Louis, Mo. Prominent among the manufacturers they represent are the following:

Indianapolis Bolt and Machine Works, Indianapolis, Ind.—Machine Bolts, Lag Screws, &c.
 Maris Machine Co., Philadelphia, Pa.—Portable Hoists.
 Jayne & Crosby, New York.—Patent Coat and Hat Hooks.
 Stover Mfg. Company, Freeport, Ill.—Screen Doors and Sash Pulleys.
 Hammer & Co., Branford, Conn.—Iron Oilers and Lamps.
 A. E. Currier, Chesterfield Factory, N. H.—Auger Bits and Lake's Gimlet Bits.
 Seneca Falls Lawn Mower Company, Seneca Falls, N. Y.—Lawn Mowers.
 Gibbs' Lawn Rake Company, Canton, Ohio.—Gibbs' Lawn Rakes, Post-Hole Diggers and Dutchy Hoes.
 Thompson Mfg. Company, Lansingburg, N. Y.—Sunshine Shoe Sets and Daubers.
 Paragon Novelty Company, New Haven, Conn.—Paragon Wrenches, Brass Knucks, Speed Indicators, &c.
 E. D. Ransom & Co., Albany, N. Y.—Foundry Facings and Foundry Supplies.
 Cleveland Twist Drill Company, Cleveland, Ohio.—Twist Drills, Reamers, &c.
 F. F. Adams Company, Erie, Pa.—Wringers, Step Ladders, Mouse and Rat Traps, &c.
 Vitrifed Emery Wheel Company, Westfield, Mass.—Emery-Wheels and Emery-Wheel Machinery.
 Niagara Stamping and Tool Company, Buffalo, N. Y.—Tanners' Tools and Machines.
 Sequatchee Hoe and Tool Company, South Pittsburg, Tenn.—Planters' Hoes.
 Sharon Steel Casting Company, Sharon, Pa.—Open-Hearth Steel Castings of every description.
 Romer & Co., Newark, N. J.—Padlocks, Jail Locks, Railroad Car Locks and Queen Anne Patent Door Locks.
 Cummings & Hosack, Fredericktown, Ohio.—Farm and Church Bells.
 Birmingham Lock Works, Birmingham, Ala.—Locks, Nails and Brads.
 O. Lindemann & Co., New York.—Bird Cages, Tea Trays and Cutlery.

Items.

Bates, Wilson & Co. announce to the trade that they will hereafter conduct their business under the name and style of their factory, the Snell Mfg. Company. The office and warerooms will be continued at 80 Chambers street, New York, the same as heretofore. Duncan K. Major, well and favorably known to the trade, will be their sole representative on the road. They expressly hope that they will be favored with a continuance of the patronage which has been accorded them from many of the leading firms of the United States and foreign countries. It is a pleasure to note that this company is about entering upon the completion of its first century, having been established in 1790, and has been in existence continuously since that date. The fact that they have within a few years added to their Auger and Bit and Boring Machine works at Fiskdale, Mass., a large factory, devoted to the manufacture of Ship Augers and Ship Bits of all kinds, which have become well and favorably known to the trade, indicates the growth and enterprise of the company.

The Portchester Bolt and Nut Company, Portchester, N. Y., have issued a new price list January 1, 1889. Besides representing their former line of goods, it shows a much larger line of Cold Punched Nuts for car builders, locomotive works and machinists, this branch of their business having more than doubled during the past year. They report an excellent trade in all their lines, and regard the outlook for the future as gratifying. The price list is a pamphlet of 25 pages, well and clearly printed.

Gwinner, Dowrey & Co., Hamilton, Ohio, advise us that the Reading Hardware Company are no longer handling their Casters exclusively, but they are making arrangements with parties in different parts of the country to represent them. Among these are F. L. Honore, Chicago, for the Northwest; W. H. Quinn & Co., 99 Chambers street, New York, for the East, and W. J. Flynn, Toronto, Ont., in Canada. They also issue a circular relating to their Casters, in which they allude to a small Store Truck, 16 x 20, which is furnished with a No. 7 Caster and listed at \$1.50. It is referred to as very convenient for stores that have boxes to handle.

E. E. Prussia & Co., Fort Dodge, Iowa, issue a colored lithographic calendar, in which they call attention to their line of Hardware, Stoves, Blacksmiths' Supplies, &c.

I. B. Williams & Sons, Dover, N. H., have opened a store, under the management of Daniel J. McVay, at No. 16 Dey street, New York, where they will carry a full stock of Oak Tanned Leather Belting and Rawhide Tanned Laced Leather of their manufacture.

John Sommer's Son, Newark, N. J., is issuing some excellent Blotters with printed matter, which calls attention to his extensive line of Faucets. They are sent out with circulars in German and English.

Announcement is made that the partnership lately subsisting between John C. Schmidt and Chas. D. Nes, York, Pa., under the firm name of John C. Schmidt & Co., was dissolved January 1 by mutual cons. nt. The business of the partnership will be settled up by John C. Schmidt, who will continue the manufacture of Chains as heretofore, under the name of John C. Schmidt & Co. Announcement is also made by Chas. I. Nes that he, with the superintendent of the old firm, will commence at once to erect a new plant, which will be known as the Nes Chain

Mfg. Company, for the manufacture of Chain. They expect to be in operation, with improved facilities, by the middle or latter part of March.

Under date January 1, 1889, the Gilbert & Bennett Mfg. Company, New York and Chicago, issue a revised price list of Galvanized Steel Wire Netting. Illustrations and list prices are given.

C. C. Taylor, Pontiac, Mich., has a convenient calendar, brilliantly mounted, in which he calls attention to the Pontiac Platform Wagon, Carriages, Cutters, &c., of his manufacture.

The Nubian Iron Enamel Company, Chicago, Ill., issue a price list in convenient form relating to their Bonnell's Quick Drying Nubian Iron Enamel, Quick Drying Boiler Black, Paraffine Boiler Black, Stove Polish, &c. They also illustrate the attractive lacquered can with a colored label in which their Nubian Iron Enamel is put up for household use. They also put their best grade of Quick Drying in small cans for home use.

The Hollow Cable Mfg. Company, Hornellsville, N. Y. issue a circular relating to their Preston's Braided Barbless Fence Wire, illustrating its special features and enumerating its advantages, with explanation of the manner in which it is used, and extracts from parties familiar with it. Information is thus given in regard to the number of feet per pound, its tensile strength, and how to build a good wire fence. They report orders as coming in very satisfactorily for spring delivery, prospects being good for an increasing trade in their Braided Fence Wire, Patent Hollow Cable Wire Clothes Lines, of which four sizes are made, and their Patent Braided Wire Box Straps.

It will be observed that F. V. Wooster, 68 Beverly street, Boston, Mass., illustrates his Whiffletree Hooks and other goods in his advertisement on page 77. Mr. Wooster emphasizes the quality and advantages of these Hooks, and remarks that while so much depends on the Whiffletree Hooks when drawing a load up hill and on the Shaft Hooks when going down hill, yet many carriage builders will use the cheapest they can get, thereby saving about 1 cent in the cost of a single carriage, but greatly increasing the liability of accident.

Beck & Gregg Hardware Company, Atlanta, Ga., occupied their former store, at 2 and 4 South Pryor street, for 17 years, but their present location, Nos. 9, 11 and 13 North Pryor street, gives them much larger quarters and better facilities for handling the business. Their present floor space is 30,000 square feet, an increase of 50 per cent. on their former floor space, but they refer to this as giving them no more room than they require for their present business. This is a gratifying indication of the growth of their trade. They issue a very convenient condensed price list of Wrought-Iron Pipe, Fittings, &c., in which small cuts are given of the different Fittings mentioned, with which it may be presumed that many of their customers are not sufficiently familiar to recognize the goods simply by the technical name. Attention is also called to their stock of Globe, Angle, Check, Safety and Pop Valves, Inspirators, Injectors, Steam Jets, Dean's Steam Pumps, Hydraulic Rams, &c. They also issue a card giving new standard price list of Leather and Rubber Belting.

By a typographical error in our last issue the address of the Anderson Bolt Works was given as Anderson, Md., instead of Anderson, Ind., the correct location. They there manufacture Common Carriage Bolts, Machine Bolts, Tap Bolts, Bolt Ends, Coach Screws, Skein Screws,

Bridge and Roof Bolts and Nuts and Washers in large variety. They refer to their use of natural gas fuel as enabling them to furnish a finely finished article at a low price.

Matthai, Ingram & Co., Baltimore, Md., issue a unique and daintily printed pamphlet which is admirably designed for its purpose. It opens with their greeting for the new year, "Good Cheer, Good Business, Good Health," and the pages which follow are devoted to a representation of the progress which has been made in the manufacture of Tinware, their facilities for producing their varied line of goods, illustration of their factory buildings and office, salesrooms, &c. On opposite pages are representations of the method of manufacture "Then" and "Now," the former representing a Knight of the Bench in the period from 1647 to 1872, and the latter a stamping machine of the present day. In describing the old time method they say:

Making an average of 36 Baking Pans per day seems like a small number; but THEN you see the "artist" had to depend on his muscle with but mallet and stake. True, their working hours were longer, but during political campaigns when the "boss" was out arms became weary and tongues would work; but as long as the "average" was kept up nothing more was required.

In regard to the present methods, in answer to the inquiry, What is required? they say:

Brains to originate and construct suitable machines for making better goods, more goods, novel goods. We have many such, and the attending artisans are not talking "tariff" or "the weather," but "while the wheels go 'round" must attend to business strictly.

Result: "Then" 36 pans per day; "Now" 500 dozen, 6000 per day. "Then" high prices; "Now" cheap enough for the poorest mechanic or most lowly cottager to indulge in.

The sheets of which this pamphlet is composed are fastened together with ribbon, the ends of which are passed around it and are used in tying it, giving it a tasty finish. They also issue a neat pamphlet in which they describe their line of new embossed goods, including Mugs, Dredge Boxes, Tea Steepers, Dippers, Dust Pans, Umbrella Stands, Trays, &c., of which illustrations are given. They announce that they expect to add new articles and new designs.

John Campbell, Manchester, N. H., is sending out circulars relating to his Wood Hitching Posts, Hitching Weights, Dumb Bells, Wood Harness Pins, Dumb Waiter Wheels, Giant Stove Truck and Standard Clothes Drier

Announcement is made that Tower & Lamont, Rochester, N. Y., together with David Eastman, formerly with J. R. Torrey & Co., and C. B. Fuller, have associated themselves together under the name of the Electric Cutlery Company, whose office will be at 91 Chambers and 73 Reade streets, New York; the factory being at Rochester, N. Y. The company also succeed to the business of Friedman & Lauterjung at the above address, and will continue the manufacture of fine Razors, Razor Strops and Cutlery of all kinds. They will manufacture and carry a complete line of the Electric Razors and Cutlery, Peters Bros.' Cutlery and the well-known Lamont Razor Strops. They are also agents for the Southington Cutlery Company. Circulars announcing these changes and giving further particulars are issued by Tower & Lamont, David Eastman and the Electric Cutlery Company.

The Niagara Stamping & Tool Company, of Buffalo, N. Y., favor us with an illustrated catalogue and price list of tinnerns' Machines and Tools and Machinery for working sheet metal, &c., which they manufacture. It is of convenient size and contains over 150 pages. Accompanying the illustration are brief descriptions pointing out the special features of the tools

and machines, and lists of sizes and prices are given in all cases. In a note to the trade they call attention to the fact that their complete illustrated catalogue, with price list, contains three distinct sections, the one before us being section A, and containing the class of goods referred to, while section B contains the power and foot presses and dies of all kinds, and section C illustrates canning machinery and implements appertaining to the canning industry. On the front page is given an extract of a report concerning their machinery exhibited at the Buffalo International Exposition.

The Safety Water Columns manufactured by the Reliance Gauge Co., Cleveland, Ohio, are sold in St. Louis by Ripley & Bronson, who have for two or three years carried a complete stock of these and other manufactures of the company, doing an extensive trade at that point.

Haines, Jones & Cadbury, of Philadelphia, are distributing a little circular bearing on the cover the compliments of the season, and giving within an account of the plan of co-operation that they have followed so successfully. The 31st of December closed the second year of profit sharing with their employees, and the sum of 6 1/2 % of each man's total wages is to be distributed the 26th of January. The total wages for 1888 amounted to \$140,000, and the dividend \$9100.

E. S. Wheeler & Co., New Haven, Conn., the American representative of Humphrey & Sparrow, Tin Plate merchants, Liverpool, Eng., ask elsewhere attention to their guaranteed Roofing Tin. They claim to have a large line of tough Roofing Plates which they offer at attractive figures to enable their customers to compete with other and cheaper forms of roofing. Inasmuch as freights West and South are the same from New Haven as New York, they hope, with their foreign connections and their low expenses, to be able to extend their business outside of New England, where they have long been known.

Krite & Kirschbaum of Collinsville, Ill., have issued a calendar for the new year designed to be used as an easel. It consists of a piece of cardboard cut to represent the outlines of a bear standing upon its hind feet. This is lithographed in dark colors to make the design more effective. The twelve leaves constituting the calendar proper are so placed as to make it appear that they are held by the bear with the claws of his forefeet. At the back is a standard or rest adapting it for use upon a table or desk.

The Carriage Builders' National Association of America, have appointed Mr. Charles A. Heergeist, editor of the *Carriage Monthly*, Philadelphia, Commissioner to the Paris Universal Exposition. The report to be furnished will be technical, and it is expected that it will be of great service to the carriage trade at large.

American Steel Scraper Company, Sidney, Ohio, issue a well-arranged 20-page pamphlet, in which descriptions are given of their Drag Revolving Wheel Scrapers, Wheelbarrows, Grading Plows, &c. The special features of the different goods are described with more than the usual fullness in such a catalogue, which will render it of the more service to the trade.

Among the Western cities Louisville, Ky., aspires to rank among the foremost in business activity and enterprise. Her bank clearances for 1888, in comparison with those of the entire decade, indicate a surprising progression. From an aggregate of about \$127,000,000 in 1879 there is an expansion exceeding \$300,000,000 in the year just expired—a fact readily accepted as a fair gauge of the volume of

W. P. Kellogg, Troy, N. Y., who is represented by Fuller Bros., 33 Chambers

Forms used in sending remittances are still receiving attention at the hands of our readers, and, in addition to those which we have already published, we are permitted to give the one printed below, for which we are indebted to the Towers Hardware Company, Birmingham, Ala. Under an appropriately engraved heading, giving the firm name, date line and address of their correspondents, the form is as follows, it being filled out to indicate its utility :

The new Manhattan Bridge across the Harlem River is now nearly completed, and is a fine specimen of bridge architecture. It spans the Harlem from One Hundred and Eighty-first street and Tenth avenue, on Manhattan Island, on the west side to Aqueduct avenue, on that part of the cliff formerly of the estate of Mrs. William B. Ogden, on the east bank. The structure includes immense granite viaducts as approaches, arched masonry passages 60 feet wide on shore, and two steel-plate structures, each 512 feet in the span. The submarine portion of the pier on the eastern side of the river, at the outer extreme edge of the shore line, is built on a pneumatic caisson, laid on solid rock, 40 feet below mean water. The bridge roadway from its New York terminus at Tenth avenue to Aqueduct avenue on the opposite bank is 2384 feet long; the height at mean high-water mark is 151 feet 6 inches, 5 inches higher than the Statue of Liberty. The actual width is 80 feet. It is estimated that between 7000 and 8000 tons of steel and iron have been used in the construction. The land approach on the west side is walled on either side with a massive perforated granite parapet of unique and chaste design, in the apertures of which are set bronze rings handsomely lined and scrolled. The ornamental cornice rail on the steel spans is of bronze and iron. The first stone was laid on the river bank by Contractor Miles Tierney October 12, 1886. The cost of this new addition to the city's facilities is set down at \$2,600,000. The bridge is practically a new street connecting the northwestern section of the city with the great and growing city north and east of the Harlem.

Avery Flush Bevel Protractor.

The accompanying illustration represents the special features of this tool, which is put on the market by W. G. Avery Mfg. Company, Cleveland, Ohio. The entire tool is made of metal, and is nickel plated. It will be observed that there is a thumb-nut in the end of the handle, which is for the purpose of fasten-

*Avery Flush Bevel Protractor.*

ing the blade at any desired point. This tool is made in 6, 9 and 12 inch sizes. Its simplicity, durability and convenience are the points on which the manufacturers lay emphasis.

Adjustable Window Screen.

To meet the general demand for an adjustable window screen so arranged as to do away with the necessity of removing the screen each time it is desired to close the window, E. C. Stearns & Co., Syracuse, N. Y., have put on the market their new Monarch Screen, as shown in the accompanying cut, which shows its special features. The point is emphasized that this screen is so arranged as to slide upon guides, and may be placed in position on the inside of the window and left there throughout the season, as it is so constructed that the window slides past, and may be raised or lowered without disturbing the screen. It presents the same appearance on both sides; and when extended or closed the sides have an adjustment of 4 inches, and are fastened at the required extension by a thumb-screw shown in the cut. The frames are made of maple, attractively beaded, and finished in the

*Adjustable Window Screen.*

natural wood with white transparent varnish. The cloth is described as tightly drawn and securely fastened in the frame, a uniform tension being secured by processes for which the manufacturers have obtained letters patent.

The Manhattan Bridge Company, Edmund Driggs, president, contemplate erecting another bridge across the East river, at least 130 feet above high water, no pier to be erected outside of the pier line. The

termini will be at or near the corner of Chrystie and Broome streets in this city, and Hooper street, in Brooklyn.

The Weir Tongueless Riding or Walking Three-Wheeled Gang Plow.

This gang plow is manufactured by the Weir Plow Company, Monmouth, Ill. The

frame is built upon the same principle as that of their Weir Tongueless Three-Wheeled Plow, which enables sufficient strength to be attained with the lightest possible weight. The point is emphasized that the plow is carried at all times on its wheels. It is pointed out that an angled

*The Weir Tongueless Riding or Walking Three-Wheeled Gang Plow.*

rear wheel makes landside unnecessary, lessening draft and friction. The rear wheel is rigid, and the front wheels are casters for the purpose of facilitating turning, and the company explain that if the corners of land are slightly rounded plowing may be continuous around the field without lifting the bottoms out of the ground in turning, something which they refer to as unaccomplished heretofore by any gang plow. No change whatever is required when using it as a walking plow. Either three or four horses can be hitched abreast and the off horse walk in the furrow in either case. Lightness of weight and draft, simplicity and excellence of construction, ease and perfection of work, are advantages to which reference is made. A tongue can be used, but it is not essential, and is only furnished on a special order.

The capacity of the Brooklyn bridge is to be enlarged by adopting the Barnes-Marin plan, which consists, so far as the New York terminus is concerned, in widening the station until it covers both wagon ways, thus making room for two additional tracks, one on the north side for in-bound trains, and the other on the south side for trains loading for Brooklyn. The new tracks will be arranged as sidings, joining the main lines a short dis-

tance from the station. The present cable will supply all the motive power needed. In-coming trains will reach the station by gravity after dropping the cable. Out-going trains on the south switch will be started by an engine. Those on the main line will continue to pick up the cable as they do now. This arrangement may answer for a makeshift, until another bridge becomes a permanent necessity.

The enormous business of the New York Post Office is shown by the annual report of Postmaster Pearson. In all departments there is an increase compared with last year. The weight of postage stamps sold was 18 tons, and the total weight of mail matter received and dispatched daily was 248 tons. The total receipts of the office were \$5,163,000, and the net revenue \$3,270,000. In the money order department the year's business amounted to \$87,299,000. Foreign mails frequently include as many as 800 bags, and require from seven to twelve two-horse trucks for their transportation.

The steel railroad ferry-boat built at Cleveland at a cost of \$325,000, for river service at Detroit, is intended to be a powerful ice-breaker, her bow for several feet being of nearly solid steel. She has four steel boilers, 11 feet 6 inches, 16 feet long, or 4½ feet longer than the longest ordinary boilers on the lakes. They have two domes 20 feet long and 48 inches in diameter, and one dome 10 feet long and 6

feet in diameter. The boilers will furnish steam for six cylinders; two 28 x 48 inches on each side for side wheel engines, and two cylinders 28 x 36 inches for a propeller engine, each with separate condensers. The cylinders are double low pressure with horizontal engines. The latter have two steel spur gears 16 feet in diameter, all cut teeth, and two steel spur pinions 5 feet 6 inches in diameter, also all cut teeth. Her engines are all constructed from original patterns made by her builders, the Cleveland Shipbuilding Company, and the length of the vessel is 280 feet over all, 45 feet 6 inches beam, 17 feet 3 inches hold.

Probably the oldest timber in the world which has been subjected to the use of man is that found in the ancient temple of Egypt, in connection with stonework which is known to be at least 4000 years old. This, the only wood used in the construction of the temple, is in the form of ties, holding the end of one stone to another. When two blocks were laid in place an excavation about 1 inch deep was made in each block, in which a tie, shaped like an hour-glass, was driven. It is, therefore, very difficult to force any stone from its position. The ties appear to have been of the timarisk or Shittim wood, of which the ark was constructed.

A New Punch.

The accompanying illustration represents a new punch which is being put on the market by L. A. Sayre, Newark, N. J. The manner in which the punch is reamed out on the side to permit the escape of the

safety position. The hand or pawl which rotates the cylinder has two working points to engage the cylinder ratchet, and by an ingenious construction this pawl also serves as cylinder bolt, and positively prevents any further rotation after one of the chambers in the cylinder coincides

the newspaper box, so that very large packages can be put in easily. The usual slots on the side are arranged to drop letters into the letter compartment. The bottom of the box is composed of two drop doors, hinged at the ends and opening in the middle. When the collector unlocks the box these doors drop, and the entire contents fall into his bag, which is hung on a hook on the bottom of the box. The contents of the newspaper compartment drop at the same time, a lever connected with the lower doors causing the bottom of the newspaper compartment to open and close with them. Panels are arranged on the front of the box on which to paste the schedule of collection hours. A dial in the center of the front exposes the hour of the next collection, and changes automatically with the opening and closing of the bottom doors. A dial in one of the upper corners gives the day of the week, and changes automatically when the last collection is made for the day. These dials are detectives to show whether the box has been tampered with. If an unauthorized person should by any means open the box and abstract the contents, the hour of collection will change when he closes the box,

L. A. SAYRE.

A New Punch.

punched out matter is sufficiently shown in the cut. The quality of the punch and its efficiency in use are points which are made in regard to it.

The Colt's New Double-Action Self-Cocking Revolver.

The new Colt's double action self-cocking revolver, which is represented in the accompanying illustrations, Figs. 1 and 2, has been added by the Colt's Patent Fire Arms Mfg. Company, Hartford, Conn., to their line of revolving pistols. Fig. 1 gives a view of it as closed, and Fig. 2 shows it with the cylinder swung out, the ejector being represented in the act of throwing out the empty shells, after which it will be automatically returned to its place in the cylinder, which will then be ready for loading. This revolver obviously differs from all others in the market, but while in some of its new features it is a departure from the other pistols of this company's make, it is claimed to retain those qualities of accuracy, strength and simplicity which have given the Colt revolvers the high position they occupy for reliability and endurance. Its cylinder contains six chambers. In order to facilitate the loading of cartridges and to allow the simultaneous ejection of the emptied cartridge shells, the cylinder is so mounted upon a crane pivoted in frame below the cylinder seat that, on drawing the cylinder latch to the rear, the cylinder swings to the left and downward out of its seat in the frame; in this position all the chambers are presented for loading, while pressure against the end of the ejector-rod under the barrel ejects all the shells. When, after ejecting and loading, the cylinder is returned to its seat in the frame, the cylinder latch automatically secures it there. By this construction it is pointed out that all the facilities for loading and ejecting are obtained without sacrificing the important feature of a solid frame, such as all modern Colt pistols show, there being no hinge or joint in the frame between the barrel and stock, the wearing of which might disturb the accuracy of the pistol. The ejector is effective, its working simple, so as to be understood at once, while the absence of complicated and delicate parts prevents it from getting out of order. The lock mechanism also is very simple and strong. The hammer may be cocked by the thumb or by the trigger, and after firing it rebounds, and is positively locked in this safety position, so that it cannot strike the primer of a cartridge until it is again cocked. The cylinder cannot be swung out of the frame unless the hammer is in its safety position, and the act of swinging the cylinder out of the frame automatically locks the trigger and the hammer in this position. Thus premature discharges during manipulation are prevented, as also accidental discharges from blows such as result from a fall, &c. The falling of the hammer from any position cannot fire a shot unless the trigger is fully pulled back at the same time, as only then the hammer can fall beyond the

with the bore of the barrel. The cylinder latch prevents its backward rotation. We are advised that it was the feature of the jointless, solid frame, combined with the simultaneous ejection and its other good qualities, which caused the officers of the Bureau of Ordnance, after a series of most searching trials, to adopt this revolver for the service of the United States Navy in preference to any and all others, and the Colt Company are at present filling an order from the Navy Department for a large number of these revolvers. The Navy pistol has a barrel of 6 inches length;

Fig. 1.—Colt's New Double Action Self-Cocking Revolver.—
Half Size.

the same revolver will be made for the trade with a shorter barrel.

New Design for a Street Letter-Box.

Two Chicago mechanics, named T. Regensteiner and M. Rosenfield, have invented a most ingenious letter-box, which they propose to submit to the Post Office

and the collector will observe this on his next round. A gong rings whenever the doors are opened or closed, and is intended to attract the attention of persons in the vicinity. If a thief should endeavor to reset the dials to get them into their proper order and conceal his depredations from early detection, the constant and unusual ring of the gong would probably attract the attention of a

Fig. 2.—Colt's New Revolver, Showing Operation of
Ejector.

Department in competition for the contract soon to be awarded. The box is of regulation size, constructed of cast iron, and handsomely finished. It contains two compartments, the upper one for newspapers and the lower one for letters. A hanging door extends the full width of

policeman. The dials have other uses which are obvious, but one of the most important is that they would show whether collections were being made promptly or whether a box was neglected. A place is arranged for a number, the intention being to number all the boxes in a city, so as to

make it easy to report when anything has occurred to one of them. The mechanism of the box is of a very simple character, being operated by levers, ratchets and toothed wheels, which are not apt to get out of order even with long use. The persons interested with the inventors are Louis Benjamin, Henry Rosenfield and Jacob Newman, all of Chicago. A sample box is on exhibition at the offices of Block, Pollack & Co., rooms 70 and 71, Commerce Building, Pacific avenue, Chicago.

The Hold-Back Hinge.

The accompanying cut represents a new hold-back spring hinge which has just been perfected and placed on the market by E. C. Stearns & Co., Syracuse, N. Y., and which they state is the result of careful study with a view of remedying the faults and strengthening the parts which in other hold-back hinges have been found weak. They explain that the tendency of hold-back hinges to get out of order, owing to their complication of parts, has been avoided in this hinge by making it in three parts only, so that under no combination of circumstances can it get out of order, while at the same time it is equally well adapted for use on either right or left-hand doors and will hold the door either open or closed. The wings are cast, as shown in the illustration, in imitation of hammered work, and japanned. The springs are of steel, nickel plated, described as uniformly tempered and to be depended upon for the regularity and certainty of their operation. The hinge has

The Hold-Back Hinge.

a surface of $3\frac{1}{2}$ inches and is said to possess great strength.

The same firm are also introducing a single-spring hinge with variable tension, which may be used on either right or left-hand doors. It is of the same size and general design as the hold-back. It is especially strong and is made with either a silvered or japanned spring. This hinge is represented, it will be observed, in their advertisement on page 60.

The Sjöström Barb Fence.

A barb fence, notable both for the originality of its design and of the methods for its manufacture, is proposed by Johannes Sjöström, of Brooklyn, which we

wire into a loop at both ends, our engraving showing part of a length. It is not claimed that this barb fence can take the place of the ordinary barbed wire for its ordinary purposes. It is claimed, however, that it is sufficiently striking to keep

Fig. 1.

Fig. 2.

Fig. 3.

The Sjöström Barb Fence.

illustrate in the accompanying engravings. Sheet metal is cupped, the cups being placed in twos at regular intervals from one another. By a special machine the metal is punched in the manner shown in Fig. 1, the cups occupying the center of the spaces. Automatically the two cups connected by the hinge shown are doubled

stock from approaching it at all, and that it is light and strong. Painted in different colors and arranged in a simple way, it can be made quite ornamental. It can be readily attached to either wooden or iron supports.

The work of renewing the roadway bridges and the two drawbridges on the Newark and New York Branch of the New Jersey Central Railroad is being pushed forward rapidly. The drawbridge over the Hackensack has been completed with the exception of the engine-house. The turnout track and temporary draw for the other are nearly finished. The old draws were built over 20 years ago. They are of the Moseley type, being bow-string girders, the free ends of which are suspended during swinging by guys from a central gallows frame. In the roadway bridges all the compression members were of cast iron. The floor beams were carried by stirrups passing over the foot of the columns. The renewing is being done by Cofrode & Saylor, of Philadelphia, and by the New Jersey Steel and Iron Company, of Trenton, N. J.

The improvement in ocean freights first noticed about a year ago is now supposed to have become permanent. The previous depression, comprising a period of four or five years, gave place to an increasing demand for tonnage, which has gradually become more urgent, until at length we find all the shipyards on the Atlantic coast and on the lakes filled with vessels in process of construction. Iron ship builders are pressed with work as never before. The extent to which a change has been effected may be gathered from the fact that, as compared with this time last year, the rates for grain per steamer to the United Kingdom were 2d., against $4\frac{1}{2}$ to 5d. now; to Adelaide, per sail, general cargo, 21 cents per cubic foot, against 27 $\frac{1}{2}$ cents; to San Francisco via Cape Horn, coal, \$7 per ton, against \$12, and lumber, \$15, against \$25; case oil to Japan, 30 cents, against 40 cents. These quotations are sufficient to indicate how much the cost of transportation has advanced.

Industrial homes for released prisoners are being established in our principal cities. One was opened in Philadelphia this week, to teach the trades. At the home in this city last year 2000 convicts were assisted in finding employment.

CURRENT HARDWARE PRICES.

JANUARY 16, 1889.

Note.—The quotations given below represent the Current Hardware Prices which prevail in the market at large. They are not given as manufacturers prices, and manufacturers should not be held responsible for them. In cases where goods are quoted at lower figures than the manufacturers name, it is not stated that the manufacturers are selling at the prices quoted, but simply that the goods are being sold, perhaps by the manufacturers, perhaps by the jobbers, at the figures named.

THE IRON AGE

THURSDAY, JANUARY 24, 1889.

New Forging Machine.

Among the tools for forging iron which have been recently brought out is a header built by the National Machinery Company, of Tiffin, Ohio. This tool is the result of several years' experience and experiment, and its builders believe that in many ways it is a decided advance on anything heretofore constructed for the same purpose.

The machine is designed for heading bolts, rivets and car pins, upsetting ends of truss rods, stud ends for connecting rods, round and flat eye bars, &c., also

wheel, is a friction clutch operated by the levers A' and B'. These levers are held in position by the weights C' and D'. The lever A', Fig. 2, starts the machine and gives one or more entire strokes and when relieved stops the machine on its back stroke, leaving the dies open; when used with lever B' (drawn forward) it will stop or start the machine in any position. This gives the operator an opportunity to set his dies without barring the machine around, also to stop the machine in case there should be more stock allowed than can be forced into the dies. The clutch T is on a sleeve on the shaft X, which sleeve

be fastened into the tool holder T', furnished with this machine.

The stock gauge E', Fig. 5, is on a hanging arm operated by a rocker, F', and block, G'', on the header slide. This gives a rapid motion in raising and lowering and locks it in position, preventing the clattering of the old-style gauge.

The grip cam C, Fig. 4, is a side cam operating alternately on the arms B G, pivoted on the rack shaft B. The rolls 2 2 are conical, and all elements of both cam and roll intersect in the intersection of the axes D and B, thus avoiding all surface friction. The control of the rolls and

FORGING MACHINE, BUILT BY THE NATIONAL MACHINERY COMPANY, OF TIFFIN, OHIO.

welding links and turnbuckles, and, in the hands of an ingenious man, it is hard to say what cannot be accomplished by its aid. Often, where the machine itself does not finish the forging, it will put the stock in shape for the drop or steam hammer.

The machine in operation is very similar to the Pittsburgh or Chapin headers—that is, it has a gripping mechanism to hold the rod and confine the stock while a plunger acts on the projecting end. On some kinds of work the enlarged end is forged by the confining dies, as in a machine bolt where the stock is confined on but two sides and afterward forged into shape by turning and re-gripping.

The bed-plate or frame of this machine A, Figs. 1 and 2, is a single massive casting, and the strains come direct on this casting without the intervention of bolts or other tension members. The machine is driven by an 8-inch belt on a 36-inch pulley. On this pulley, R, which also acts as a fly-

also carries the pinion A'' and gear wheel B'', and may be held from revolving by the slip-bolt 2 in case very heavy work is wanted. The back gear U U'' C'' which runs on a heavy eccentric stud, is thrown in and locked in place and the machine is back geared 14 to 1, with the gear out it is back geared 4½ to 1. In back gear it gives 12 strokes per minute and out of back gear 37 strokes per minute. The main crankshaft D is 9 inches in diameter and has bearings 13 inches long. The heading slide A is very long, runs on wearing pieces in the bed and has square gibs which can be set up so as to reduce lost motion to a minimum. This construction permits the slide to be easily trued up when the unavoidable cinders and scale wear the surface out of true. The crank connection P' works in a brass knuckle box, P'', and has a 10-inch diameter by 6-inch bearing on crankshaft. The tool is clamped in a recess in the heading slide by means of two heavy clamping bars, R' S', or if made with a round shank can

arms by the cam C is direct, and there is almost no power wasted in useless components of pressure. The lever G is loose on the shaft, and is rigidly held attached to the shaft by the piece H'', keyed to shaft and the breaker I''. This breaker falls and allows the lever to drop back if the work gets between the dies. This rack shaft B is of ample size, and runs in brasses.

On the forward end of B the short crank Z', Fig. 3, is keyed and operates on the grip jaw H, Figs. 1, 2 and 3, through the connection Y. This gives the toggle grip the full length of jaw H, thus preventing its springing at the mouth of dies as in present machines. The wear is confined to the connection Y', and the toggle pins which are 2½ inches in diameter and have a bearing 17 inches in length on connection Y'. The grip jaw H swings on a pin, J', at its lower end. The pin is so placed that the opening of the jaw for the first 2 inches of its motion is practically in a straight line. The wear on pin J'' is

taken up by conical brass brushes which are forced into a tapered hole. The heading strain is sustained by the wearing piece I". The lever I moves thrice to each revolution of shaft and is operated by the three-lobed cam 8 through the shoe J and the rubber cushion 9. In the front end of the lever I and the lug on bed A' dies can be placed to give a bend to the stock or reduce it a little or modify it in some way, or shearing dies for trimming ends can also be put in. The cushion

of shovels and spades to be rated as blanks, without exception, \$1 per dozen and 25 per cent.

The Lehigh Valley Semi-Centennial.

The *Catasauqua Dispatch* prints a letter from Oliver Williams, the well-known iron manufacturer, which we reprint as follows:

On July 4, 1890, now but eighteen months in the future, there will occur an anniversary that will not only be of local

remained for an unknown man, from a distant land, to make, not only a mechanical, but a commercial triumph of the undertaking.

It was in 1839 that the Lehigh Coal and Navigation Company brought this man to this country, and at their suggestion he selected the site of Catasauqua as a fit place to try the experiment of utilizing the at that time almost valueless iron ores of Lehigh County by the use of the then equally valueless anthracite coal of Carbon

Fig. 1.—Plan.

FORGING MACHINE, BUILT BY THE NATIONAL MACHINERY COMPANY, OF TIFFIN, OHIO.

gives an elasticity somewhat like a cushion hammer, without which drawing out stock would be impracticable.

The data of the machine are as follows: Grip opens $3\frac{1}{4}$ inches; die box is 17 inches long, 18 inches wide, and takes two die blocks $17 \times 9 \times 6$ inches; the header slide has 12-inch stroke and will gather $62\frac{1}{4}$ -inch stock; header slide makes 12 strokes per minute for heavy work and 37 strokes for light work.

The Customs Department of the Dominion has announced, under date of Ottawa, January 2, that the rate of duty on steel file blanks is 30 per cent. and that the rate on steel cut to shape for the manufacture

interest, but it will be the semi-centennial of an event that has developed into national importance. From the experiment of that day has grown an industry so vast that it has not only been one of the main factors in promoting the wonderful material prosperity of this country, but it has become the barometer by which its commercial condition is constantly gauged. It was on the 4th day of July, 1840, after months of weary labor, that the first furnace to successfully and profitably smelt iron ores by the use of anthracite coal made its first cast. Several attempts to accomplish this end had been made previously in other parts of Pennsylvania, and with some degree of success, but it

County. Single handed, he went into the undertaking; no trained help at his bidding, no foundries, no machine shops, no mechanical engineers, no fire-brick works worthy the name in the whole land. Every phase of discouragement conspired to make the trial a failure, but all obstacles were surmounted by the indomitable determination of one man, and the outcome has been marvelous. During 1840 less than 1500 tons of anthracite pig iron was produced in the United States—in 1890 8,000,000 tons will easily be the output. The story now reads like a romance; but there are men and women still living who were old enough and close enough to the great central figure of the undertaking to

distinctly remember how little of romance there was in the daily struggle with the combined adverse forces of nature and of man, and to those of us who know how savage the opposition of the latter was, it is difficult at this day to determine which was the harder to overcome.

One thing is certain, the men who were in a position to appreciate the greatness of

bodied in some more durable form than that of the heart or even of the written page. What more fitting than a monument of bronze on a pedestal of pig iron. The cost may be more than the people of Catsauqua alone could defray, but David Thomas has friends all over this great country, who would be glad to contribute to such a fund. Eighteen months, however,

The Direct Process at Brewsters.

The Coneley Rummell Iron and Steel Co., of Brewsters, N. Y., will put up 20 retorts to manufacture iron direct by the Blair process, modified. The company use concentrates from the Theall mine, operated by the Cheevers, mixes them with ground charcoal, and exposes them

Fig 2.—Cross Section.

Fig 3.—Section through A A.

Fig 4.—Grip Cam.

Fig 5.—Stock Gauge.

FORGING MACHINE, BUILT BY THE NATIONAL MACHINERY COMPANY, OF TIFFIN, OHIO.

the task then begun now stand amazed at the completeness of the victory won, as measured by the advantages enjoyed. David Thomas, the victor in this great struggle, has passed away. His memory is still cherished in the hearts of hundreds who knew him and honored him. In a few years more, these hundreds will have passed over to the "land of the majority." It seems but fitting that his name and the story of his achievement should be em-

is but a short time to prepare for what can be made the greatest gathering ever held in the Lehigh Valley. Whatever is to be done must be done quickly. Whatever is done should not be determined on solely by the citizens of Catsauqua, but should be the combined work of a committee of the best men from Easton to Mauch Chunk. There is no man in this valley, however distinguished he may be, but would esteem it an honor to be on such a committee.

to the proper temperature in horizontal cast-iron retorts in which rotates a hollow water-cooled arm provided with plow blades. In three hours and a half the ore is reduced. Formerly it was shot into closed cars, allowed to cool, and was mixed with pitch and poured into barrels, to be shipped in that form to crucible and open-hearth steel manufacturers. The charge is about 1200 pounds. The company are getting ready to put up two

double puddling furnaces, to use them for balling the iron product, and will also put in a trip-hammer.

HUNT'S RAIL SPECIFICATIONS.

Rail Managers Discuss Them.

In *The Iron Age* of October 25 we published the greater part of a paper read by R. W. Hunt, of Chicago, at the Buffalo meeting of the American Institute of Mining Engineers. It was in substance a presentation of specifications for the manufacture of steel rails, with the grounds which led to the adoption of the requirements embodied in them. Coming as they did from one whose experience as an engineer and manager reaches back to the infancy of the manufacture in this country, they commanded attention. *The Iron Age* invited an expression of opinion from steel makers, while our contemporary, the *Railroad Gazette*, of this city, brought out the views of leading railroad engineers, which we take pleasure in presenting herewith, as we have no doubt they will prove interesting to our readers. Since correspondents refer frequently to the different sections we reproduce the specifications themselves.

HUNT'S SPECIFICATIONS FOR STEEL RAILS.

Section.

Section 1.—The section of the rail rolled shall conform to the template furnished by the railroad company with an allowance in height of 1-64 inch under and 1-32 over, being permitted in a delivery of 10,000 tons of rails. The fit of the fishing or "male" template shall be maintained perfect.

Sec. 2.—The weight of the rail shall be kept as near to pounds per yard as is practical after complying with Section 1.

Lengths.

Sec. 3.—The standard length of rail shall be 30 feet at a temperature of 60° F. Shorter rails of lengths will be accepted to the extent of 10 per cent. of the entire order. A variation in length of $\frac{1}{4}$ inch longer or shorter than the above specified lengths will be allowed.

Finish.

Sec. 4.—The rails must be free from all mechanical defects and flaws, and shall be sawed square at the ends, and the burrs made by the saws carefully chipped and filed off; particularly under the head and on top of the flange. In sawing care must be taken to avoid a flow of steel, which will produce a swell on the top of lower flange, as the rail lies under the saw, thereby affecting the fit of the fish-plate.

Sec. 5.—The rails shall be smooth on the heads, straight in all directions, both surface and line, and without any twist, waves, or kinks, particular attention being given to having the ends without kinks or drop. The hot straightening shall be carefully done, so that gagging under the cold press will be reduced to the minimum, and so applied that the rails shall not be made "lumpy."

Drilling.

Sec. 6.—Circular holes $\frac{1}{4}$ inch in diameter shall be drilled through the web at $\frac{1}{4}$ inches from the bottom of the flange. The center of the first hole $\frac{1}{4}$ inches from the end of the rail; and $\frac{1}{4}$ inches from the center of the first to the center of the second hole, and so on if more than two holes are required. These holes must be accurate in drilling in every respect, and left without burrs.

Branding.

Sec. 7.—The number of the charge, the name of the maker, the month and year of manufacture, shall be marked in plain letters and figures on the side of the web of the rail in such a position as not to be covered by the fish-plates when laid in the track. If the purchaser prefers, the number of the charge shall be stamped on the end of the rail.

Percentage of Carbon.

Sec. 8.—The steel to contain as high a percentage of carbon as the maker is willing to put in and still meet the requirements of Sections 9 and 21.

Tests.

Sec. 9.—While the heat is being cast, two (2) test ingots shall be made. The first from steel going into the first regular ingot, the other from metal representing the last one. These test ingots shall be 3 x 8 inches and not less than 4

inches long. From them bars at least $\frac{1}{4}$ -inch square shall be drawn at one heat by hammering. Each bar when cold shall be bent, without breaking, by the blows of a sledge to not less than a right angle. Should one bar from a heat fail and the other stand the test, a third bar may be taken from a bloom rolled from the same ingot represented by the failed bar. If this stands the test it shall be accepted in lieu of the failed one. If the makers choose, more than the two test ingots may be taken, but they must be from the steel of the first and last regular ingots. If this is done and a test bar fail, another one may be drawn from the duplicate ingot and tested, and if it stands, accepted.

Treatment of Ingots.

Sec. 10.—After the ingots are cast they shall be either constantly kept in an upright position until ready to be rolled, or else so maintained until the interior steel has had time to solidify.

Sec. 11.—No "bled" ingots or ingots from "chilled" heats shall be used in the manufacture of rails under this contract.

Sec. 12.—No ingots from badly teemed heats shall be used, excepting as they shall be subject to the provisions of Section 18.

Cutting of Blooms.

Sec. 13.—After cutting off, or allowing for the "sand" or top end of each ingot, at least 12 inches more of seemingly solid steel shall be cut off that end of the bloom or partially formed rail; if the latter, then the pieces so cut off shall equal 12 inches in length of a 7 x 7 inch bloom; a greater length than 12 inches being preferred; and if after cutting such length the steel does not look solid, the cutting shall continue until it does.

Heating.

Sec. 14.—Care shall be taken to avoid overheating the steel in shape of either ingots or blooms; and under no circumstances shall a "cinder" heat be allowed—that is, a heat high enough to cause the cinder to run off the steel as it is being drawn from the furnace. This does not apply to cinder which may be sticking to the under side of the steel, when drawn from a horizontal furnace, or to the bottom of an ingot when drawn from a soaking pit.

Inspection.

Sec. 15.—Inspectors representing the purchaser shall have free entry to the works of the makers at all times while this contract is being filled, and shall have all reasonable facilities afforded to satisfy them that the rails are being made in accordance with these specifications. The makers shall furnish them with the carbon determinations of each heat, if so required.

Sec. 16.—The inspectors shall have power to reject rails made from insufficiently sheared blooms, or from heats the test pieces of which have failed, or from badly poured heats, or from "chilled" heats, or from "bled" ingots. The rails made from uncut blooms, if otherwise perfect, to be received as No. 1 short rails, if sufficient lengths have been sawed off to make an amount of steel equal to the original demand of 12 inches. The rails made from heats, the test pieces of which have failed, may be accepted as No. 2 rails. The rails from a badly poured heat may be received as No. 2 rails, but if made from a "chilled" heat or "bled" ingot to be absolutely rejected. By an imperfectly poured heat is meant one which from any cause has been teemed without the control of the operator. A "chilled" heat is one which, from the steel chilling, has to be either pricked or poured over the top of the ladle. A "bled" ingot is one from the center of which the liquid steel has been permitted to escape.

Sec. 17.—Imperfectly drilled, straightened or chipped or filed rails shall be rejected, but will be accepted after being properly finished.

Sec. 18.—Rails failing to comply with Section 1 will be rejected as No. 1 rails.

No. 2 Rails.

Sec. 19.—The requirements of No. 2 rails shall be the same as for the No. 1, excepting they will be accepted with a flaw in the head not exceeding $\frac{1}{4}$ inch, and flaws in the flanges not exceeding $\frac{1}{4}$ inch in depth, and may have been made from an imperfectly poured ingot or heats from which the test bars have failed.

Sec. 20.—No. 2 rails to the extent of per cent. of the whole order will be received.

Guarantee.

Sec. 21.—The rail makers to guarantee the No. 1 rails against breakage and unusual wear at the ends or elsewhere for five years from the time of delivery to the railroad company; and should any such rails so fail, will, upon the return of such failed rails to their works, deliver free of cost on cars at their works perfect rails to replace such failed rails, the failure of which is not attributable to improper laying or want of care after being laid, or unusual circumstances of derailment from failure of other railway machinery or appliances, or

negligence of the railroad company's employees. In event of failure at the ends or elsewhere of the No. 1 rails, not exceeding 10 per cent. of the amount of the contract before the expiration of five years' guarantee (and when the rails in all other respects warrant such a course), the railroad company will cause to be cut off so much of such rails as may be necessary to make perfect rails of them, but in no case leaving them less than feet in length, the maker to pay in cash for cutting, redrilling, and restraughtening such rails. The loss in weight so sustained by the railroad company to be made up to them by the makers on the return to them of the pieces so cut off in good and perfect full-length rails of such section as may be agreed upon. The points of delivery of failed rails, ends of rails cut off and rails to replace the same, or mode of such settlement, may be varied to conform to the peculiarities of each contract.

The Railmakers' Views.

One correspondent writes: "I have read the specifications through very carefully and find that they correspond so closely with the practice at our works that I really find no opportunity for discussion or criticism. I believe the specifications to be perfectly fair and reasonable, and if strictly carried out would result in producing good rails, as far as the manufacturer is able to see or provide against."

Another mill presents the following views:

I heartily subscribe to most of what Captain Hunt recommends, and think that, with some modifications, his specifications are judicious and reasonable. Up to section 9 of his specification I see nothing on the list to criticize. I must say, however, that I am far from having the confidence which he expresses in the style of test recommended in section 9. The breaking angles of test pieces taken in this way are much influenced by the manipulation of the blacksmith and the temperature at which they are hammered out. The varying results thus obtained have caused us to lose confidence in this method of testing, although we still continue its use. The drop test is not so convenient, but is more reliable in showing the strength of the rail as it really is and by indicating the grade of metal which may be advisable for the particular section which is being tested. The shortcoming of both methods is that, although the strength of the metal may be indicated, the wearing qualities are only indirectly indicated.

In section 10 it seems to us that unnecessary stress is laid upon keeping the ingot "in an upright position until rolled, or else so maintained until the interior steel has had time to solidify." This would compel the abandoning of all furnaces in which the ingot is heated in a horizontal position, or else the holding of the ingot in an upright position until the interior steel had time to solidify before putting into the furnace. This latter alternative would be very objectionable in the light of our practice, as we find that the sooner the ingots are put into the heating furnace after stripping the better they roll, and the colder they are allowed to get before heating the more likely they are to crack in rolling and make second quality rails. It may be injurious to the ingot to throw it violently upon its side in the pit immediately after stripping, but we think it will be difficult to show any injurious effect from placing it (after the top is well set) horizontally upon a car, and transferring in that position to the heating furnace. There does not seem to be anything objectionable in the remaining sections.

Another correspondent writes:

These specifications do not impress me as at all desirable for securing the best results, and they convey more of an essay on the method of making steel rails than a clear-cut exposition of what can be reasonably required of steel-rail makers. The practice hitherto pursued by the purchasers of steel rails has been to follow one of two lines of specifications. The first is to submit the chemical constituents that are demanded in the rails. This is simple and direct, and when the rail-maker conforms to this, he has fulfilled all that can be required of him. I may say here, that the pursuit of this course has proved a very serious failure. The second line of requirement in the manufacture of steel rails is in the purchaser demanding that the steel rails stand certain tests independent of their chemical composition. These physical tests to be applied under the care of the inspector of rails, and if they conform to this condition, no complaints can be reasonably made in regard to any other matter.

I hold it as a general principle that whilst manufacturers of rails are not inclined to submit all the operations to an intellgent inspector, yet they hold the position in all its strength, that the trained men of the manu-

factorer are the best agents in assuring satisfactory results in the manufacture of steel rails.

As to the five years' guarantee, no manufacturer of steel rails who has any character at all would tolerate this condition for a moment. If the purchaser insists on chemical and physical tests, and the manufacturer has conformed to these tests to the satisfaction of the inspector of rails, it is quite evident that no further demand should be made of the manufacturer. Parties asking this five years' guarantee intend to cheat somebody, because the manufacturer has no control of the condition of the tracks, and they may put his rails into some miserable mud bed, in which the ends will be hammered to pieces in one or two years, and ask him then to supply rails for those that were unfairly treated by the inadequate ballast of his track; or the business of the road may be increased from the time such guarantee is given, demanding very much more duty from the rails than anticipated in the guarantee; or, the increased weight of locomotives and rolling stock may demand a very large increased wear on the rails, which could not be anticipated at the time of the guarantee. On the whole, I would suggest that these specifications need an absolute and entire remodeling, omitting the details of the manufacture of rails in all their conditions. To insist upon one or two series of tests, either chemical or physical, and one of these to be satisfactory to the purchasers, if they come up to the agreement in the specifications for such tests.

The superintendent of a leading mill reviews the specifications as follows:

Under Section 1 to 7 inclusive we see nothing objectionable.

Section 8. There is little doubt that rails, with as high percentage of carbon as may be, and avoiding brittleness at the same time, will give best wear, and, if made of good stock, can be made safe against breakage with a track in ordinary good condition. It is not clear whether this section is intended to stand as it reads in a specification attached to contract, or to have definite carbon limit preagreed upon.

Sec. 9. The practice of drawing a bending test piece from a cutting off of bloom commands itself as much to be preferred over test ingots 3 x 3 x 4 inches. There is an inevitable difference in the structure between such small ingots and large ones, especially a sponginess of small ingot. From this cause a specimen taken from a large ingot itself—that is, from the bloom reduced from the large ingot itself—is more truly representative of the material in the rails. Since it is pure accident if a drop test discovers a defective rail, or any quality except either hardness or brittleness, defects are really best guarded against by good regular practice on the part of the manufacturers, and Mr. Hunt's remarks that he should certainly discourage contracting for rails with other than those works whose practice is good, is commendable, and appears to be the keynote upon which the specification is written outside of the guarantee.

The bending test applied early in the manufacture is a better check for the maker than the drop test can ever be. The drop test, while very simple in operation, is difficult to interpret further than as to hardness or softness. It will furnish a check here, but carbon tests answer equally well and are applied to every heat, and to do which becomes an expense with the drop test.

Bending by blows of the sledge is not good. Bending under a former is more regular, hence a fairer test. The radius of inside curve is not mentioned. It should be given at $1\frac{1}{2}$ times the diameter of the bar.

Sec. 10, 11 and 12. See remarks under heading of Section 16.

Sec. 13. This touches a point upon which we would consider more information desirable. We note, in a general way, a difference between top and body of ingot, but we are not aware of any careful investigation having been made as to exactly how much apparently steel is unreliable or likely to cause battered rail ends.

Sec. 14. This is correct practice, but a still more valuable point to watch, if the trade warranted it, would be the heat at which rails are finished.

Sec. 15 and 16. These imply substantially the constant presence of an expert in rail manufacture at the works of contractor during the execution of an order. If rail experts could be found in sufficient number, and at low enough cost, doubtless the purchasers might be benefited by such inspection. It is believed, however, that it is bad to give the inspector (as inspectors go, or granting a reasonable improvement in the craft) such powers as are given by Section 16. Such powers might be safely intrusted to Mr. Hunt himself, and hence makers as well as buyers would be safe under specification and Mr. Hunt; but the specifications strike us as being of a character which needs to be supplemented in the bidder's mind by a knowledge of who the inspector is to

be. We consider this to be such a defect as to condemn the specifications for general use.

Sec. 21. We suggest a guarantee as this compliance with Sections 8, 9, 10 11, 12, 13, 14 and 16, or such modifications of the practice therein outlined as the judgment of makers might dictate, may safely be left to the makers themselves. It is not an unusual proceeding for buyers before giving out a large contract to satisfy themselves in regard to the capacity and practice of bidder, and this, it is pretty safe to say, is all that would commonly be done (by deputizing an expert, say in the person of Mr. Hunt) under these specifications. Makers do not object to giving intending buyers this kind of information, and would much prefer giving it once for all to the headquarters rather than instruct and train each new young man who may be sent to see that these specifications are enforced. As Mr. Hunt says, if the works practice is not satisfactory, do not buy their rails. As a whole, the specifications abandon the objective point toward which effort has been directed in the past, and which we think the proper directions to work in (or allow us to cut down the specifications rather than expand them)—namely, to specified qualities of product rather than modes of manufacture. They look to a supervision of manufacture rather than an inspection of product as far as concerns quality of material. When buyers insist upon a certain mode of manufacture, it is decidedly unfair to exact a guarantee in addition. As a move toward improving the inspection business, the specifications are well calculated.

The manager of a large mill says: "I consider the specifications of Capt. R. W. Hunt as being based on practical experience, and I can see no objection to them, with the possible exception of Section 21. The greatest evil in connection with the maintenance of a good smooth railway is crushed rail ends. As a rule, crushed rail ends are caused by faulty designs of rail sections, and fish-bar connections, and bad roadbed and poor maintenance. If a rail batters at the ends without showing any defects, while the main body of the rail shows good wearing qualities, it is the fault of the railway. Captain Hunt's specifications, Sections 4 and 18, guarantees almost absolute protection from the evil of split-ends, and at the start of the service of a steel rail, a low joint—viz., a close inspection of the ends, to see they have no short 'kinks or droops,' and the liberal cropping of the bloom that represents the top of the ingot, giving good sound material in the bloom. So far as Section 21 is concerned, that is for the mill owners to consider."

Electric Welding of Metals.—The Thomson Electric Welding Co. are now moving into their new factory at Lynn, Mass., where they have abundant facilities for the production of their welding apparatus. The factory is 200 feet long, 85 feet in width and furnished with 500 horsepower engines from the Providence Steam Engine Co. Their welding machines are now in active and successful operation in the factories of Wallace & Sons, Ansonia, Conn., Roebling's Sons Co., The Trenton Iron Works, Trenton, N. J., and elsewhere. They have lately received orders from the United States Government for apparatus for welding steel wire for guns. The contract was awarded them after very exhaustive experiments had been made by the Ordnance Department, with the view of securing the best process of welding this wire. The company are rapidly developing the large field for welding, brazing, &c., which their process covers.

Mr. H. P. Smith, one of the leading stockholders and general manager of the Allegheny Bessemer Steel Company, has been South for some time past for the benefit of his health. The company in question have booked several orders for rails and it is expected that the rail department of the works will soon be in operation. Mr. Smith was for several years with the firm of Carnegie, Phipps & Co., and had charge of the Homestead Mill of the firm last named. While not of the capacity of the Edgar Thomson Works, the rail mill of the Allegheny

Bessemer Company is said to be one of the most complete in the country, having been supplied with all the latest improvements and appliances. Mr. W. G. Perk, of the Black Diamond Steel Works, is one of the active men in the management of the Allegheny Bessemer Company.

Outrigger Hoist.

We show herewith a compact and complete outrigger hoisting apparatus, made in two sizes of 500 and 1000 pounds capacity by the Energy Mfg. Company, 1115 South Fifteenth street, Philadelphia. As will be seen, the hoisting gearing is placed on two beams inside of building so that it is protected from the weather, the only part being exposed is the rope used for raising the loads. The ropes can be made any length desired. This hoist is fitted with double-acting brakes, both controlled by one brake cord. One being automatic, holds the load at any point when hoisting, and will not allow the load to run down when the hand rope is let go. The other is used when lowering to control speed. By regulating the pull on the brake cord, the load can be lowered quickly or slowly.

Outrigger Hoisting Apparatus.

If the brake cord is pulled hard or let go, the hoist is stopped, so that no accident can be caused by the neglect of the operator. The prices being low, they are within the reach of any desiring a hoisting machine of this class.

The utilization of water-power is a problem that is being agitated by a large number of Michigan towns, in view of the recent practical demonstration that it can be used to furnish electrical distribution for both power and light. Many towns in that State are situated within a few miles of swiftly flowing streams, whose value as an agency of power has never been fully realized. Some have waterfalls within their incorporated limits. Marquette proposes to take the initiative, and is now at work upon an elaborate and at the same time peculiar scheme for the manufacture of the electric current.

In a recent issue we alluded to the fact that the basis of the sliding scale of wages at the Edgar Thomson Steel Works, Braddock, Pa., for this month was \$30, against \$28.50 the previous month. The statement caused considerable surprise, to which we gave expression. We understand that the cause of the advance in the rate is the fact that the mill happened to have some \$85 rails to make, which brings up the average considerably.

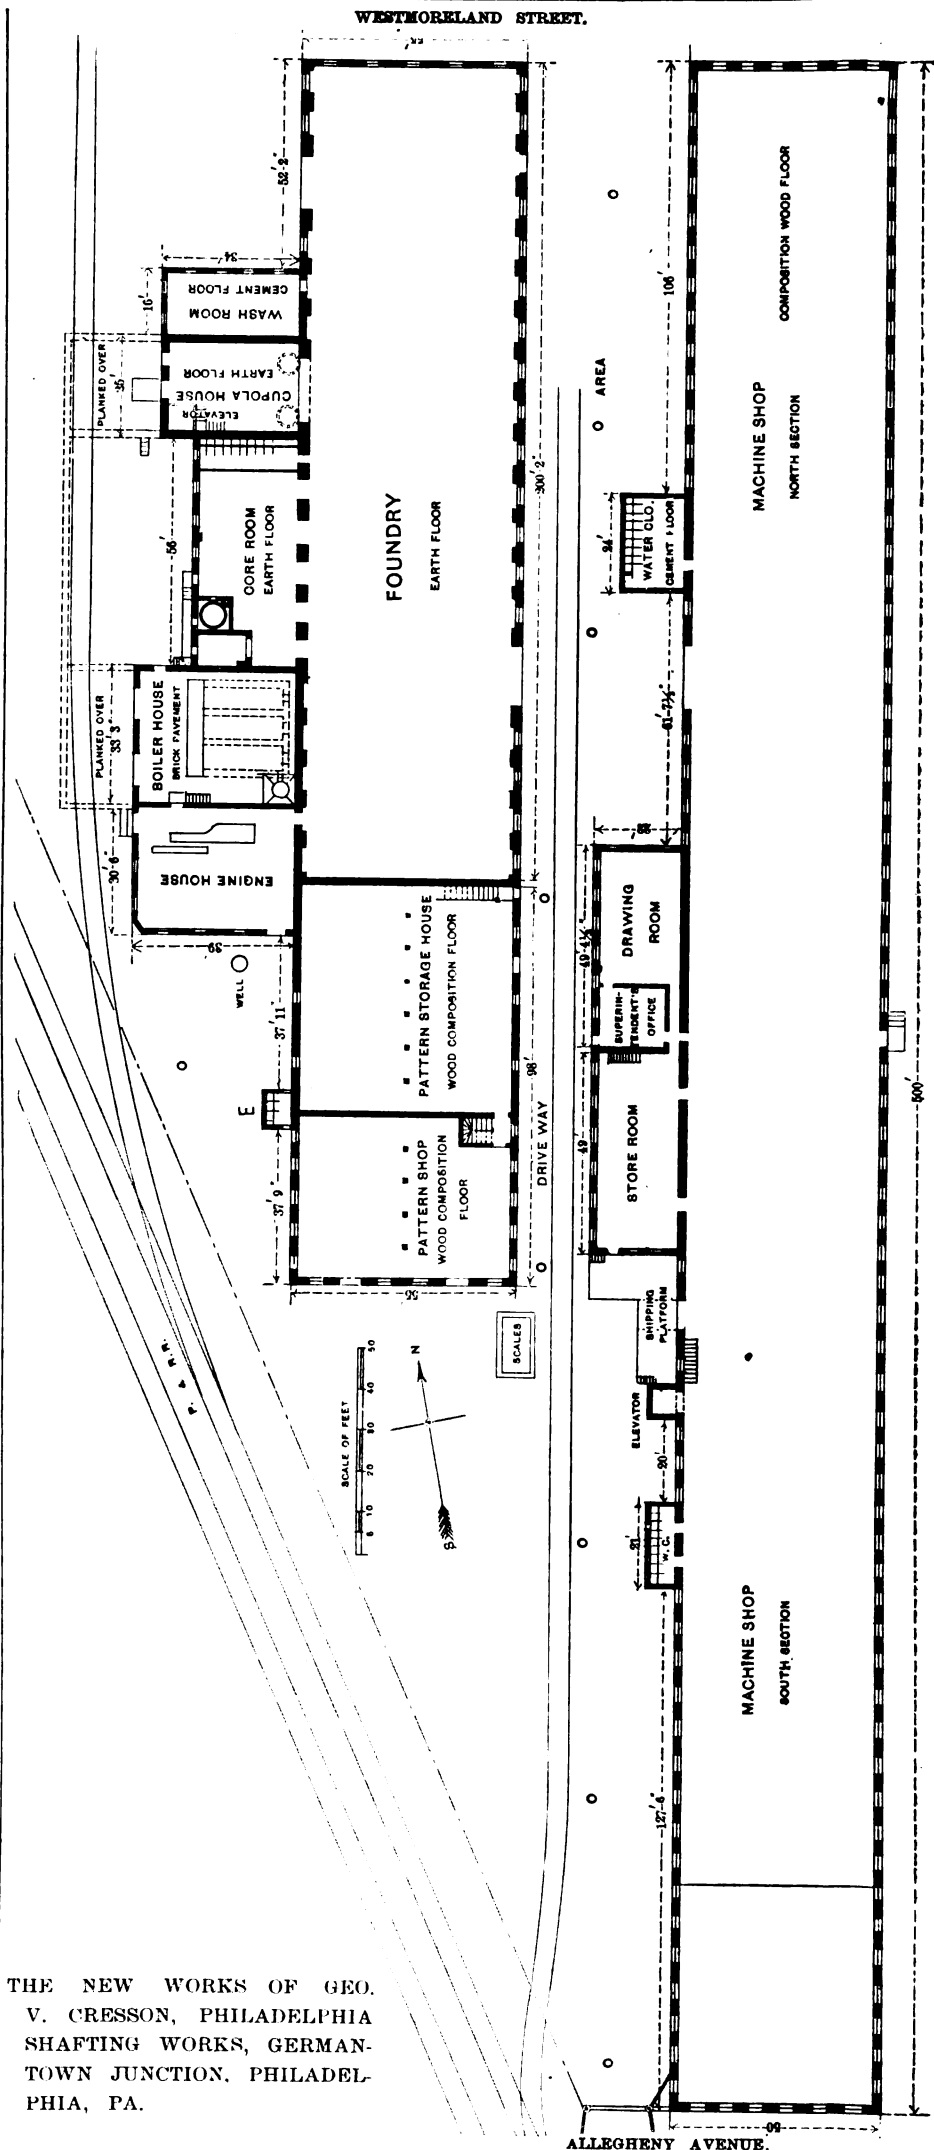

New Works of George V. Cresson.

Twenty-five years' experience in the manufacture of any particular article should result in establishing sound, practical ideas regarding the machinery to be employed and the accommodations necessary, in order that the work may be carried on to the best advantage. The factory, of which we herewith show the ground plan, may be said to be the outgrowth of such a length of time spent in the making of shafting and all its appurtenances. The factory is located at Germantown Junction, a suburb of Philadelphia, on the Philadelphia and Reading Railroad. Direct and quick communication with the coal and iron regions and convenient shipping facilities are thus obtained. Three principal considerations governed the laying-out of the works: 1, The economical handling of raw material; 2, The economical handling of unmanufactured raw material, and 3, The economical handling of the finished material.

By the first, we mean those materials which form component parts of the completed product, such as pig iron and shafting in the rough. By the second, we mean the handling of castings and shafting. By the third, the loading of the finished product on the car or wagon for delivery. These most essential features were secured in a simple and effective way. The time-worn fact that it consumes time and costs money to move heavy weights was kept well in view, as was also the fact that, if a heavy weight must be moved, it is cheaper and quicker to move it on a level than either up or down. The buildings were, therefore, so planned as to bring all work upon the same floor level, with the single exception of the pattern shop, which is more than one story high. Distance was reduced as much as possible, and it was arranged so that very heavy work could be done in that end of the shop nearest the foundry, the weights gradually lessening toward the far end, where only comparatively light articles could be finished.

Two tracks connect with the railroad, one west of the foundry and the other between the foundry and machine shop. All supplies for the cupola are unloaded at the door and raised by means of an elevator. The cupola-house is 25 x 34 feet. North of this house is a washroom 16 x 34 feet made with a cement floor which slopes toward the center where a drain is provided. Upon the opposite side of the house are the corerom and ovens. The boiler and engine-house, south of the corerom, measures 63 x 39 feet. East of these is the foundry, 55 x 200 feet and 35 feet high, which is lighted by a double row of wide windows. The walls of the foundry are buttressed upon the inside to form seats for the tracks of a traveling crane which may be moved to any desired spot. The pattern shop and storage-room occupy 76 feet of the southern end of this building. The machine shop is a single room 50 feet wide and 500 feet long, the walls being 16 feet high. At the western side are the drafting and store rooms and the superintendent's office, the latter being about in the center of the works, so that he is within quick call. The shop is lighted on all four sides by long windows extending nearly to the roof and placed 8 feet, centers to centers. The southern end of the shop is fitted up as general offices.

The ground upon which the buildings are located slopes slightly from north to south. This afforded a most excellent floor for the foundry and permitted the laying of the northern part of the machine shop floor, where all the heavy machinery is placed, directly upon an earth foundation. It also furnished a lower story under the southern end of each building. Ample window spaces, aided by a plenti-

THE NEW WORKS OF GEO. V. CRESSON, PHILADELPHIA SHAFTING WORKS, GERMAN-TOWN JUNCTION, PHILADELPHIA, PA.

ful supply of whitewash, which it is proposed to frequently renew, thoroughly light all of the rooms. What might be termed general illumination, for night work, is obtained from arc lights, incandescent lamps being used at the machines. The buildings are heated by the exhaust steam from the engine, all danger of back pressure being relieved by means of a pump, which delivers the water of condensation—flowing by gravity to the pump from all the radiators—to the boilers. Power is transmitted from the engine to each of the shops by 1½-in. manila rope belting. This method of transmission was adopted mainly because of the great distance to the driving shaft of the machine shop and the sharp turns in the line. The belt passes through a tunnel under the roadway separating the two buildings. All possible precautions, both as regards materials entering into the construction and apparatus, have been taken to guard against fire. All posts are of yellow pine. The core oven rooms, cupola and boiler-house are built entirely of iron and brick

fore which the cases were first tried, ordered a preliminary injunction to be served on the companies, holding that where valuable franchises had been granted by the commonwealth or municipality, and where there was virtually no competition, the people from whom the franchises were received had recourse to the courts through proceedings in equity. As soon as this decision was announced, the gas companies immediately carried the cases to the Supreme Court, which has reversed the decision in both cases, and has also dissolved the injunction. As the matter now stands, it would seem that the gas companies have the right to charge whatever they see fit for their fuel, and if the people do not wish to pay these prices, they can return to the use of coal.

Geared Hoist for Elevators.

The geared hoist for passenger or freight elevator service, which is illustrated herewith, has several new features.

Manufactures in Japanese Prisons.

A visitor to a Japanese prison in Tokio thus recounts, in the *Pottery Gazette* (London), a portion of his experiences:

We visited a workshop where *jirikishas* were being made, then one where umbrella handles were elaborately carved, then one where every kind of pottery, from the rough porous bottle and jar to the egg-shell teacup, was rolling from a dozen potters' wheels, and then came the great surprise. Two days previous I had visited the house of the most famous maker in Japan of the exquisite *cloisonne* ware—the enamel in inlaid metal work upon copper—who rivals in everlasting materials the brush of Turner with his pigments and the pencil of Alma Tadema with his strips of metal. And I had stood for an hour behind him and his pupils, marveling that the human eye could become so accurate, and the human hand so steady, and the human heart so patient. Yet I give my word that here in the prison at Ishikawa

GEARED HOIST FOR PASSENGER OR FREIGHT ELEVATOR. BUILT BY MORSE, WILLIAMS & COMPANY, PHILADELPHIA, PA.

masonry. Water under a sufficient head for fire purposes can be obtained from the city's mains. Water for general use is obtained from an artesian well, sunk just south of the pattern shop.

The Price of Natural Gas.

On Monday, the 7th inst., the Supreme Court of Pennsylvania, in session at Philadelphia, announced a decision in the suit of the consumers of natural gas in Allegheny City against the Allegheny Heating Company, and also in the action brought by the citizens of Servickley against the Ohio Valley Natural Gas Company, both of which were to restrain the companies from advancing the charges made for natural gas. The main point at issue in the two cases mentioned was as to the right of the courts at Pittsburgh to determine the rates which should be charged by the companies for natural gas. It was claimed, on the part of the plaintiffs in the suits, that when the question of excessive charges was raised, the courts had the right to hear the evidence, and if said charges fixed by the gas company were deemed excessive, to establish new rates. The local court at Pittsburgh, be-

Both pinion and gears are cut by the most approved methods, thereby securing greater accuracy than has been attempted heretofore in the same class of machinery, and giving a smooth and noiseless motion at a high speed. It is provided with a centrifugal governor that acts in case the belts break in descending; has slack cable device that stops the car instantly and applies the brake, keeping the cables taut on the drum when the car is obstructed in its descent. It is also provided with an automatic drop forge, wrought iron stop device, which prevents breakage. The machine is right or left hand, and can be placed in any position desired, as the bolts will run at any angle. The pulleys are self-oiling, requiring attention only once in six months. It is manufactured by Morse, Williams & Co., Philadelphia, New York and Boston, who also manufacture hydraulic, worm-gear and hand-power elevators.

Several gentlemen interested in the prosperity of Pittsburgh seriously propose to increase the volume of the Allegheny River by constructing a canal to Niagara Falls at a cost of \$12,000,000, and obtaining water sufficient for the purposes of navigation.

sat not six but 60 men, common thieves and burglars and peace breakers, who knew no more about *cloisonne* before they were sentenced than a Hindoo knows about skates, doing just the same thing—cutting by eye-measurement only the tiny strips of copper to make the outline of a bird's beak, or the shading of his wing, or the articulations of his toe, sticking these upon the rounded surface of the copper vase, filling up the interstices with pigment, coat upon coat, and fixing and filing and polishing it until the finished work was so true and so delicate and so beautiful that nothing except an occasional greater dignity and breadth of design marked the art of the freeman from that of the convict. Fancy the attempt to teach such a thing at Pentonville or Dartmoor or Sing Sing! When our criminal reaches his prison home in Tokio he is taught to do that at which the limit of his natural faculties is reached. If he can make *cloisonne*, well and good; if not, perhaps he can carve wood or make pottery; if not these, then he can make fans or umbrellas or basket work. If he is not up to any of these, then he can make paper, or set type, or cast brass, or do carpentering. If the limit is still too high for him, down he

goes to the rice mill, and seesaws all day long upon a balanced beam, first raising the stone-weighted end, and then letting it down with a great flop into a mortar of rice. But if he cannot even accomplish this poor task regularly, he is given a hammer, to break stones with the 29 men out of 2000 who could not learn anything else.

Ore Concentration at Brewsters.

The new concentrating plant of the Tilly Foster mine of the Lackawanna Coal and Iron Company, at Brewsters, N. Y., has been running in an experimental way for some time. The plant itself consists of three 100 horse-power boilers and a 65 horse-power Beckett & MacDowell engine. The lean rock, as it comes from the famous

posit is going on rapidly. The original contract called for an outlay of about \$290,000, but it is believed now that it will not go beyond \$225,000.

The Rader Case.

Judge McPherson has handed down an opinion in the suit of Charles J. M. Rader vs. W. Kaufman & Co. He found the facts as follows:

1. In September, 1883, the plaintiff, who was then employed at Phoenixville, Pa., as a blast furnace manager, was asked by the defendants to accept a similar position at their furnaces, at Sheridan, Pa. Some negotiation followed, resulting in a parol contract, of which these are the substantial terms:

The plaintiff agreed to accept the position and discharge the duties of manager at Sheridan. In consideration the defendants agreed

Improved Rotating and Exhaust Fans.

Rotating fans, designed to create a circulation of air in rooms, are usually mounted in a triangular frame of a more or less ornamental character. The sides of the frame are generally cast separately and then rigidly united to hubs through which the spindle passes. This formed a most clumsy article to handle, one that occupied much space when stored, and one that required boxing when shipped. The most serious objection was the danger of the frame breaking and the difficulty of making repairs. It is claimed that all of these drawbacks have been eliminated in the frame illustrated, which has been in-

Fig. 1.

Fig. 2.

Fig. 3.

Fig. 4.

IMPROVED ROTATING AND EXHAUST FANS, MADE BY THE BACKUS WATER MOTOR COMPANY, OF NEWARK, N. J.

mine, is passed through a 15 x 20 Blake crusher, from which it is delivered to two Ball stamps, used for the first time for this purpose east of the Allegheny Mountains. The crushed ore goes to five Conkling jigs. The plant has not yet in its results gone beyond the stage of trial, and some additions are now being made. It is of considerable interest, because it represents a radical departure in some respects from the principles upheld as correct by the majority of those who have given attention to iron ore concentration. It is, we repeat, too early to form a judgment of the merits of the general design and the advantages of individual parts of the plant. We noted an interesting little "kink" in the engine-room, which is the idea of Captain Cosgriff, the manager at the mine. He has put up three oil receivers into which he conducts exhaust steam, thus having the oil warmed before it is used for lubrication. The plan is very simple, inexpensive, and is pronounced very effective.

At the Tilly Foster mine the great work of uncovering the whole roof of the de-

to employ him for five years, to furnish him with a house, to pay him 1% per cent. per ton of the selling price of iron at the furnace while iron was being made at both furnaces or at either; to pay him \$2500 per year if both furnaces should be out of blast at the same time, and, if he should be discharged without cause during the five years, to pay him \$3000 in addition to the other sums above stated.

2. The plaintiff, in fulfillment of this contract, went to Sheridan toward the end of October, 1883, and remained there as manager until about September 18, 1885, when he was discharged by the defendants. During this period the plaintiff performed the duties of manager, as required by his contract, giving the necessary care and attention to the work, and obeying the defendants' orders as to the proportions of iron ore and mill cinder to be used in the furnace.

3. There remains unpaid to him the sum of \$1455.82, being a balance of 1% per cent. per ton upon the selling price of iron at the furnace. The sum of \$3000, above referred to, is also unpaid.

The court decided that the plaintiff was entitled to recover \$5324.82.

In their East African policy Germany and England are believed to be thoroughly in accord.

roduced recently by the Backus Water Motor Company, of Newark, N. J. The sides are cast with taper dovetails adapted to fit dovetails formed in the Babbitt metal hubs, which are so cast as to make a perfect bearing for the shaft. The manner of joining the sides and hubs is plainly shown in Figs. 1 and 2. No screws or rivets are needed to keep the parts in place. When necessary, the frame can be taken apart and arranged as in Fig. 3 for storing or shipping.

The new feature of the exhaust fan, Fig. 4, is found in the shape of the blades. The inner portions of the alternating blades are cut away, while the other blades extend to the hub. The engraving shows the shape of the blades. Careful tests made with this exhauster prove that it delivers a full volume of air from hub to periphery. The loss of power resulting from back lash is eliminated. This allows of its being run at an unusual rate of speed and enables it to deliver a greater quantity of air—using the same power—than fans which are troubled with the return current.

THE WEEK.

Retaliation has taken effect in Canada through a new customs order received from Washington, which prohibits any Canadian-built car passing Detroit without paying duties, if such cars are intended to ply between points in the United States. Both the Canadian Pacific and Grand Trunk folks say that the order will have no material affect upon them, as they both have plenty of American-built cars for the business of carrying freight from Eastern points in the United States through Canada to Chicago and Western points. They have only to fear the retaliation of the Dominion Government in preventing the American-built cars from passing through Canada, in which case it would be necessary to tranship all international freight at the boundary line.

Two trusted officers in the employ of the Pennsylvania Railroad Company are charged with selling steel rails and scrap to the Trenton Steel and Iron Works. The depredations extend over a period of three years and are said to amount to \$8000.

The Assembly ceiling, at Albany, for which the people of the State have paid \$227,000, seems to be a sham, and an investigation will be necessary. While the bill was pending before the Legislature it was understood that the new ceiling should be of carved oak. After the bill had been signed and work was begun the use of papier-maché was discussed. When the work was finished the startling discovery was made that the panels were not composed of quartered oak nor of papier-maché, but of plaster of paris run into molds with a backing of burlap.

The Commissioner of Agriculture in Washington states that the attempt to manufacture beet sugar in Maine is a failure, owing to the cost of culture and the necessity of siloing the beets in winter, but the industry promises to become important in some other localities.

A bill amending the contract labor law has been reported in Congress by the Ford Investigation Committee which has a chance of passing the House. No vessel is allowed to carry more than one immigrant to each registered ton, which is about half the number now permitted to be carried, and the head tax is to be raised to \$5, and collected upon all alien passengers by land or by water, except consular and diplomatic representatives or agents.

The New York Chamber of Commerce, after a full discussion, voted 41 to 3 in favor of an up-town location for the proposed customs buildings, and a special committee will report to the Chamber at the next meeting in reference to further action.

A resolution before the State Trades Assembly Convention, in Albany, urged the passage of a law curtailing the use of labor-saving machines in factories. By abolishing machines altogether it might be possible to satisfy the demands of some of these professional agitators.

A proposition to turn the waters of Niagara River into the Allegheny came to naught last week, when the engineer reported that if a canal was cut through as proposed there would be a rush of water in the opposite direction. The Allegheny would be drained, and not filled.

One of the Northwestern railroads runs vestibuled trains heated by steam from the engine, and illuminated by electricity from a dynamo in the baggage car. The sleeping cars have an incandescent burner in every section.

A bill introduced into the Legislature of Pennsylvania provides that it shall be unlawful for the representatives of mining or railroad companies to meet or combine for

the purpose of regulating the traffic, cost of production or the transportation or price of anthracite coal, or for the controlling of the rates of wages to be paid to their employees or persons employed in the mining, transportation or production of anthracite coal, or for the purpose of controlling the number of days and hours of work to be performed by said employees.

At the annual meeting of the Franklin Institute, held in Philadelphia last week, J. C. Bayles, of New York, described a new machine for manufacturing spiral weld tubing, and exhibited specimens of the product. He said the tubes were manufactured from steel, and were cheaper and better than iron, and stronger than tubing made by other processes. For the purposes of conveying petroleum, natural gas, steam and water, for all of which it is at present in use, the inventor claimed for it special advantages. After Mr. Bayles had concluded, Mr. Wiegand moved that the invention be referred to the Committee on Sciences and Arts for examination and award, which was agreed to.

The Franklin Institute, of Philadelphia, reports a membership of 2081, and the library contains 31,762 volumes. The total receipts for the year were \$30,077, and the expenditures \$18,660. The officers are: President, Joseph M. Wilson; vice-president, Frederick Graff; secretary, Wm. H. Wahl; treasurer, Samuel Sartain; auditor, Wm. A. Cheyney; managers, George V. Cresson, Persifor Frazer, Edwin J. Houston, Enoch Lewis, John Lucas, Samuel P. Sadtler, Wm. H. Thorne, John J. Weaver.

Mr. Bland introduced in the House a bill providing for the free coinage of silver, and recognizing the standard silver dollar as a standard of value on the same basis as gold. He favored a report on the bill as a preliminary to work in the next Congress. As soon as the tariff is out of the way, he said, the silver question is coming up again.

Detroit College has decided to have new buildings, to cost \$200,000.

The Postmaster General has concluded the parcel post convention with the United States of Colombia, similar to that recently concluded with Mexico.

For more than a quarter of a century the "proposed" bridge or tunnel for crossing the English Channel has formed a periodically prominent topic. It is now stated that Messrs. Schneider and Hersent have completed plans and specifications for the bridge they propose to erect from a point near Cape Griznez, on the French coast, to Folkestone, a distance of 87 km. The bridge is to be 30 m. wide. The cost is estimated as follows: Foundations and masonry, 360,000,000 francs; superstructure, 900,000,000 francs. Of course the business that would probably flow over the bridge has been carefully tabulated.

Australian advices via San Francisco pronounce the Melbourne Exhibition a failure, a very large sum having been sunk in the undertaking; consequently the buildings will be closed at the end of this month, instead of remaining open until June next, as was intended. So great was the success of the World's Exhibition of 1872 that the buildings were enlarged to cover 30 acres, and all calculations were on a corresponding scale of increase, but vaulting ambition overleaped itself.

Increasing activity in shipbuilding is reported at all points on the lakes, stimulated by the handsome profits of last year. Sales are reported almost daily of steamers still on the stocks at high prices, and of others at prices well above their Lloyds valuation. The Majestic, the largest wooden carrier on the lakes, sold last week at Bay City for \$150,000 before she

had turned a wheel. There is a strong disposition to build vessels of the largest carrying capacity, at a cost ranging as high as \$275,000 for a single steamer, but the limited depth of water is an impediment not easily overcome. Last year a round 100,000 tons measurement, nearly all being steamers and of an average carrying capacity of about 2500 tons, was turned out on the lakes, and there are now 65 vessels on the stocks, with a total carrying capacity still greater. Of these 12 are steel and four are composite.

A three days' sale by auction of the Great Eastern and her fittings has taken place at Liverpool. The catalogue contained 895 lots. The hull and fittings realized £43,000, the copper bringing £2960; the gun metal, £4480; brass, £3980; lead, £4185; outer iron plates, £12,500; beams, &c., £12,280, and anchors about £300. The machinery brought about £10,000 in addition, making a total of more than £50,000. The breaking up of the steamer will occupy about one year.

Isaac Bell, Jr., late American Minister to the Hague, died on Sunday morning at St. Luke's Hospital. Mr. Bell was born in New York about 40 years ago. He was the eldest son of Isaac Bell, for many years a prominent Wall street shipping merchant, and later president of the Old Dominion Steamship Company.

One of the electric illuminating companies in this city has been granted permission by the Board of Electric Control to lay an experimental cable for the purpose of testing the subway system. The result ought to be conclusive.

A proposed bridge across Detroit River excites the fierce hostility of many who are interested in lake navigation. It is charged that railroads want a bridge rather than a tunnel at the point designated, because they would economize at the expense of the shipping interest. The Buffalo *Commercial Advertiser* says: "There is not a channel in the world traversed by so much commerce as this one. The great and rapidly increasing trade of Lake Superior nearly all comes down Detroit River, as does the entire commerce of Lake Michigan and the lumber trade of Lake Huron and the Georgian Bay. Much of this business is done by means of great tows, in which from three to six vessels are connected together and drawn by a powerful steamer. It is hard enough to navigate the rivers as they are now; frequent collisions and groundings take place. The erecting of bridge abutments in the channel would increase the dangers a hundred-fold." A tunnel, it is declared, is entirely practicable.

Up to the present time at least the Hudson River is as free from ice as in summer, freight barges running to Poughkeepsie without obstruction, or even as far up as Rondout.

American window glass manufacturers are struggling against excessive production and are much perplexed on account of foreign competition. The president of the Manufacturers' Association, Frank L. Bodine, of Philadelphia, states that from 1880 to 1888 there was an increase of from 700 to over 1200 pots in actual operation. The product of the blast of last year is 200,000 boxes greater than that of the previous year. Of course the consumption increased also, but not to keep pace with the production. The consumption of both the American and the imported article was very large last year, but the prices were ruinous on account of the great output and the immense importations. The increase of importations last year over the previous year was 120,000 boxes, and the total exportations amounted to more than 750,000 boxes,

which is 37 per cent. of the entire consumption. The stock in the hands of the American manufacturers is 550,000 boxes, as against 350,000 boxes for the previous year.

Secretary Fairchild on Saturday transmitted to the Senate a copy of the manuscript report of frauds in sugar at New York and Philadelphia, dated November 1, 1887, which was submitted by Special Treasury Employee T. Aubrey Bryne. He presents a table showing the loss to the revenue on sugar imports at New York and Philadelphia from June 1, 1883, to June, 1886, by reason of the lower rate of duty paid at New York and Philadelphia than at Boston. This loss aggregates \$4,045,800. He says "the charge of the Boston customs officers and merchants, that Philadelphia is two degrees invariably and sometimes three degrees below the Boston rates as per classification stands reasonably proved." Mr. Bryne suggests the establishment of a permanent "sugar statistical bureau" at the ports of New York, Boston and Philadelphia.

A desolating drought again threatens the province of Ceara, in Brazil, and the Government has adopted energetic measures to mitigate its severity. A great reservoir is contemplated by building a dam 74 feet high.

Three new revenue cutters are to be built for the Government. Pusey, Jones & Co., of Wilmington, secured a contract for one at \$74,000, and bids for another will be opened in a few days.

Another alarming subway explosion has taken place, this time in Nassau street near the Sub-Treasury. This is the third which has occurred during the past few months, and all within half a mile of each other. This last was unlike any of the others. In each of those cases there were electric light or telegraph wires in the conduit, which were supposed to have ignited gases in the manholes. But the Nassau street subway has never yet been used. Nobody suspects enemies of the subway system of being concerned in an act of vandalism.

The House passed the Omnibus bill providing for the admission of South Dakota, Montana, Washington and New Mexico, and it is expected to go through the Senate.

A rupture between Mr. Edison, the famous inventor, and his late legal adviser is said to have originated from the fact that in effecting the sale of the phonograph patents to a Pittsburgh capitalist the sum of \$250,000 was not accounted for, this being in excess of \$500,000 paid over to Mr. Edison, who appears not to have been informed respecting the details of the transaction. The inventor is reported as saying "that he was perfectly satisfied with the price his patent brought, but would have been glad to get the other \$250,000." It was not his intention to pursue the subject any further.

Senator Allison declares that there are more extensive deposits of tin in this country than in all the rest of the world, and that Dakota alone could supply the demands of the world.

The completed naval appropriation bill, in addition to the appropriation of \$450,000 for an additional cruiser of the Vesuvius type, and \$1,500,000 for a cruising armored monitor on the Thomas plan, provides \$10,340,000 for continuing work on the new vessels already authorized by Congress.

Mayor Grant, referring to a bill now before the Legislature of this State, says there should be no delay in putting up a public building to replace the Register's

Office, General Sessions Building and engine-house, in the northeast corner of the City Hall Park, that the records might be safely kept and the various city departments withdrawn from rented quarters. Mr. Grant hoped that the bill would become a law. A fire-proof building for the preservation of the city records is demanded by urgent considerations.

The Lehigh Valley has definitely decided to abandon the Morris Canal. No boats will be run up it after this year, and probably none will be started out this year. Arrangements are about completed with the city of Newark for supplying it with water. The canal is fed from Lake Hopatcong and Greenwood Lake. The railroad agrees to furnish 50,000,000 gallons of water daily, and to sell the plant for \$6,000,000.

The January crop report of Michigan, issued by the Secretary of State, is devoted to the cost of producing wheat in that State during the past five years. Deducting the value of straw and rental values, as applied to plant and buildings, and dividing by the average yield per acre, the cost of producing 1 bushel of the cereal in Southern Michigan last year was 66 cents; in Central Michigan, 65 cents; in Northern Michigan, 57½ cents; average, 64 cents; the average cost per acre for five years in the State at large was 64½ cents.

The *Industrial Journal*, Bangor, says 1888 was a better shipbuilding year in Maine than 1887, while 1889 is likely to show still better. The activity has been occasioned by the demands of the coasting trade. Scarcity of tonnage and high rates have made a harvest for shipbuilders. In 1888 Maine turned out 54 vessels, aggregating 16,086.48 tons, as compared with 41 vessels, aggregating 17,454.75 tons, in 1887. The vessels built in 1888 have thus averaged much smaller.

In a recent work on the British farmer and his competitors Mr. W. E. Bear makes a suggestion which will startle Americans. His argument is that unless the area of wheat growing is greatly extended in the United States we must cease to be a wheat exporting country before the close of the present century. The statistics by which this view is supported are the average annual consumption of wheat in the United States during the five years ending with 1884, which was 324,000,000 bushels, and the average export, which was 140,000,000 bushels.

An ocean cable is about to be laid between Coatzaacoalco, in Mexico, and Galveston, duplicating the Gulf system and insuring ready communication with all important places in South America, both on the Atlantic and Pacific coasts.

A trust to contro! prison-made brushes has been formed in Columbus, Ohio, and includes in the sphere of its operations the large works in Elmira, N. Y.

Tank oil steamers are growing in favor. The Standard Company are about to contract for a steamer of 10,000 barrels capacity for the coastwise trade, and two more, each of 30,000 barrels capacity, are building in the Clyde for the Transatlantic trade, to be known respectively as the Manhattan and Bayonne. The latter will be considerably larger than any of the fleet of ten employed in the German trade.

The proposed Ottawa ship canal, designed to form an unbroken line of navigation from Montreal to Lake Huron by the improvement of the Ottawa and French rivers, will engage the attention of the Dominion Parliament during the coming session. According to the engineer's estimate, the distance between Montreal and Chicago would be shortened by 270 miles as compared with the St. Lawrence route.

Of the total distance between Montreal and Lake Huron, 352 miles are already good navigation, and it is considered practicable so to improve the remaining 79 miles as to convert the whole drain of waters into a first-class navigation for steam vessels. The cost of the work is estimated at \$12,000,000.

A sanguine believer in the Nicaragua canal says it is evident that the nineteenth century will not see the question of a ship canal across the American Isthmus solved by De Lessep's company, for, with a debt of \$400,000,000—interest and administration charges alone on which amount to about \$250,000 annually, and the almost proved impossibility of raising more money—there can be very little hope for the completion of the undertaking. But that the question will be solved, and that, too, in the present century, is abundantly testified by the finished surveys of the Nicaragua route, where nature is so propitious to the project, notably in furnishing the greater part of the way—almost five-sixths—and the activity of the company holding the concession from the Nicaraguan Government and organized for the prosecution of the work. This company has already deposited \$100,000 as the guarantee of good faith exacted by the Nicaraguan Government, and is now about to commence active operations.

A stubborn contest will take place in the New York Legislature over the question of employing convict labor. The members of that body are said to be impressed with the urgent necessity of a change, independent of questions relating to the respective advantages of the contract or State account systems. An Albany correspondent says: "'Honest labor,' of which so much has been heard, will not countenance a law that practically reduces 3500 fellow-men to the level of barbarians and imbeciles, and only such a law will be favored by demagogues. It is estimated that New York State spends \$25,000,000 a year on its convicts, jailbirds, tramps, paupers and lunatics, and, aside from any question of economy, common justice and fairness to taxpayers would seem to indicate that some fair equivalent should be received from those whom this enormous sum benefits. State prisons should certainly be made self-supporting, and can be made so without reducing the wages of honest workmen one dollar a year."

Examples of mercantile honor in these alleged degenerate days contrast pleasingly with too frequent instances of chicanery and downright fraud lately brought to public notice. Not long ago the discovery was made that even mortgages were open to suspicion as evidence of security in real estate transactions, in consequence of the use of fraudulent signatures. It was ascertained that a mortgage clerk, intrusted with the business of one of the legal firms in New York enjoying the highest reputation, was in collusion with a well-known notary in swindling operations of the first magnitude. The shock sustained in business circles was soon alleviated by the announcement that the law firm in question had instantly made good the losses, amounting to hundreds of thousands of dollars, sustained by its customers by giving bank checks equal to the deficit. Another case in point arises in the experience of the New York Produce Exchange. The guarantee fund of that institution having suffered heavily from the recent mortgage forgeries of Wm. R. Foster, Jr., the father of the faithless attorney presents the fund with \$50,000 for the purpose of reducing the deficiency, while as yet the criminal is a fugitive from justice. The trustees of the fund gracefully recognize the motives that inspire this action. Mercantile honor does not exist merely as a sentiment of the past.

MANUFACTURING.

Iron and Steel.

Messrs. Charles Huston & Sons, Lukens Rolling Mills, Coatesville, Pa., have placed contracts for a new steel plate mill, which will be larger than any one in the country. The rolls will be 120 inches long and 34 inches in diameter, to be made by the A. Garrison Foundry Company, of Pittsburgh, while the train will be made by MacIntosh, Hemphill & Co. It is to have automatic hydraulic tables, and everything will be done to make it the most complete in the country. The train will be driven by a 36 x 60 Corliss engine, to be specially built by Robert Wetherill & Co., of Chester, Pa. It will have a 50-ton fly-wheel, and the steel shaft will be 18 inches in diameter in the journals.

The Oxford Iron Works, manufacturers of cut nails, resumed operations on the 21st inst., after a suspension of several weeks.

No. 5 furnace of the Crane Iron Company at Catasauqua, Pa., has been blown in, after being relined and repaired, and No. 6 stack has been blown out for repairs. Five furnaces of this firm are now in operation.

The trustees for the creditors of Brown, Bonnell & Co., of Youngstown, have commenced proceedings on behalf of 44 creditors to obtain judgments aggregating \$18,000. The Menominee Mining Company have also brought suit for \$2889 due on a consignment of iron ore.

A special dispatch from Sharon, Pa., under date of the 15th, says: "The Wheatland Rolling Mill, which for a year has been undergoing repairs, and been fitted up with new hydraulic machinery for the manufacture of pipe iron, was started up this afternoon preparatory to resuming operations permanently. The hydraulic machinery is unique. It is the invention of a Pittsburgher, Mr. Mattocks. Rolling of iron by its use is made easier, the labor amounting to the mere controlling of several levers. Large pieces of iron are placed on a bed when taken from the furnace, and by the ingenious mechanism are rolled to different sizes, elevated and depressed, the bed having several motions all worked by levers. A Pittsburgh company, composed principally of the Wood's heirs, own the patent. T. S. B. Wood is superintendent."

The *Bulletin* of the American Iron and Steel Association reports that No. 1 Furnace of the Andover Iron Company, at Phillipsburg, N. J., which made such a good record one week early in December, made a still better record for the week ended December 29. The last week it produced 824 gross tons of No. 2 X, No. 2 and gray forge pig iron on a consumption of 2220 pounds of fuel to the gross ton of iron made. This is certainly remarkably good work, and reflects great credit on the management of Mr. Joseph C. Kent, the superintendent. The fuel used was three-fourths anthracite coal and only one-fourth coke. The size of the stack is 17 x 75 feet. Compared with the previously noticed week in December the last week's work shows a gain of 24 tons, and a saving in fuel of 41 pounds per ton. We do not know to what extent the use of Lake Superior ore has influenced the splendid results which the *Bulletin* announces.

A dispatch from Phillipsburg, N. J., dated January 7, says: "The old blast furnace at the Oxford Iron Works, at Oxford, is being torn down to make room for a large wheelwright and blacksmith shop. The furnace is one of Oxford's oldest

relics, it having been erected a century ago. It is the oldest stack in New Jersey and, it is claimed, rendered services in manufacturing ammunition for the Revolutionary war. Many of the people around Oxford are securing bricks, &c., that come from the stack as relics." Oxford Furnace was built by Jonathan Robeson in 1742. It has divided with Cornwall Furnace, in Lebanon County, Pa., the honor of being the oldest furnace yet standing in the United States.

At Pittsburgh last week Nimick & Co. entered suit against James Marshall, Jr., doing business as James Marshall & Co., for \$10,434.40 with interest from May 15, 1893. The suit was for the price of pig iron sold to Marshall, who was an iron broker.

Notice has been posted at the steel plant of the Pottstown Iron Company, at Pottstown, Pa., that unless business improves the works would be shut down for an indefinite period.

The Hamburg Rolling Mill, at Hamburg, Berks County, Pa., owned by the Philadelphia and Reading Coal and Iron Company, has been leased to Mr. Walter Nevegold, of Philadelphia, from April 1, 1890. The mill has been idle for the last two or three years.

On the 1st inst. the name of the Johnston Steel Street Rail Company, of Johnstown, Pa., was changed to Johnson Company. This company last spring erected a new rolling mill at Johnstown for rolling street rails. White & McLure, iron and steel factors, are the Pittsburgh representatives of the company, and are located in the Peru Building in that city.

T. B. May has resigned his position as manager of the plant of the Standard Iron Company, at Bridgeport, Ohio, and will be succeeded by S. T. Williams, of Philadelphia.

D. W. C. Carroll, Limited, of Pittsburgh, are bidding on 15 miles of water-pipe for Colorado. The pipe is 36 inches in diameter, and made from No. 7 iron. The work amounts to \$62,000, and is to be completed in nine months.

James P. Witherow, the well-known engineer and contractor, of Pittsburgh, reports that his firm has a large amount of work in hand. At present he is building for the Chester Rolling Mills, at Chester, Pa., a Bessemer steel plant, which, when completed, will have a capacity of from 300 to 400 tons daily. The mill will make ship plates. Mr. Witherow has also contracted with the above firm for the erection of an additional blast furnace at Roanoke, Va. He is also engaged in the erection of a new blast furnace for the Jefferson Iron Works, at Steubenville, Ohio, and three new furnaces for the Bessemer Iron and Steel Company, at Bessemer, Ala. and also a new stack for Raney & Berger, at New Castle, Pa. He has just completed a new stack for the Junction Iron Company, at Mingo Junction, Ohio.

The new blast furnace of the New River Mineral Company at Ivanhoe, Va., was recently put in blast. The following are the dimensions of the furnace: Total height, 60 feet; bosh, 12 feet; hearth, 6 feet. It is equipped with two 60 x 16 feet Whitwell stoves, one 84 x 36 x 48 inch blowing engine, built by J. P. Witherow & Co., two batteries of Heine boilers, and an incline hoist. The limestone ores, peculiar to the Cripple Creek region, are mined less than a mile from the furnaces, and washed in the rear of the stock house by four double washers. These ores, together with an admixture of Potsdam ores, make a foundry iron of remarkable strength and fluidity. Pocahontas coke will be used.

Andrews Bros. & Co., proprietors of the Haselton Iron Works at Youngstown, Ohio, have recently bought about 10 acres of ground in the immediate vicinity of their plant, and will utilize it for switching purposes to meet the demands of their growing business. This company have in view some extensive improvements to be made at an early date on their Haselton blast furnace. The entire plant of the firm is being operated to its full capacity.

The Trinidad (Colorado) Rolling Mill is expected to begin work on the 1st of February. M. Lenhart is president, Henry Schneider is vice-president, and F. A. Marriott is superintendent of the company. They will make merchant iron from scrap.

The Montreal Rolling Mills Company, of Montreal, Canada, are making some extensive improvements to their plant, which will be completed about June next.

The rolling mill at Pomeroy, Meigs County, Ohio, is now in the hands of the Pomeroy National Bank, which is desirous of disposing of the property. The mill was idle in 1888, but is said to be in excellent condition.

The stock of the Bloomsburg Iron Company, at Bloomsburg, Pa., changed hands during 1888. The president of the company now is Mr. S. Knorr, and the secretary and treasurer is Mr. L. S. Wintersteen.

The Carbon Iron Company, of Pittsburgh, are operating their plant double turn and have plenty of work on hand for some time ahead. The steel manufactured by this firm is giving satisfaction to their customers, among whom are some of the most reliable people who use steel. All their product is made by the direct process, which has proved successful.

At a meeting of the stockholders of the Laughlin and Junction Steel Company, held in the office of the company, at Mingo Junction, Ohio, on Thursday, the 17th inst., the following named gentlemen were elected directors for the ensuing year: W. L. Glessner, Morgan L. Ott, Henry K. List, Manuel Gutman, H. M. Priest, David Gutman, W. W. Holloway and James W. Paxton. The board organized by re-electing W. L. Glessner and H. M. Priest general managers; W. L. Glessner, president; M. J. Urquhart, secretary and business manager, and W. H. Bradley, superintendent.

The Canton Steel Roofing Company, formerly the Canton Iron Roofing Company, of Canton, Ohio, who claim to have originally introduced steel roofing, have just completed their new plant, the dimensions of the main building being 100 x 200 feet, covered with their H. W. Smith patent steel roofing, and sided with pressed corrugated iron of their own manufacture. To their former extensive facilities they have added the latest improved machinery, also railroad switch, and increased their office and shop forces. The officers of the new company are: T. C. Snyder, president; Jas. H. Richardson, secretary; Clifford Holbrook, treasurer; T. C. Belding, superintendent. The capital stock is \$50,000.

A press dispatch announces that on the 19th the converting, blooming and rail mill of the Bessemer department of the Bethlehem Iron Company were closed for an indefinite period, and blast furnaces Nos. 1 and 4 will be blown out. In the ordnance department work will this week be commenced on 8 and 10 inch guns.

The Keystone Iron Works, at Reading, Pa., which have been idle for several weeks, resumed on the 21st, giving employment

to 90 hands. The foundries of the Reading Stove Works, where no work has been done for some weeks, are preparing to go into full operation.

Morris Sellers & Co., of Chicago, are about to make extensive improvements in their rolling mill to adapt it to the manipulation of steel. Their specialty is the Samson splice bar, which has up to this time been made exclusively of iron. As many of their customers are now calling for steel splice bars, the firm find it necessary to equip their mill to meet this demand. A 500-horse power engine has been ordered of the Aetna Machine Company, of Warren, Ohio, and a heavier train of rolls will be put up than any now in use in the mill. Steel blooms will be purchased. The firm will not abandon the use of iron, but will supply either iron or steel splice bars, as desired.

Machinery.

The Westinghouse Electric Company, of Pittsburgh, are now engaged in putting up an electric plant at Portland, Ore., where the generating station is 12 miles distant from the lamps, an electric feat which has never been accomplished by any electric company either in Europe or America. The greatest distances which so far have been covered are seven miles and four miles.

G. A. Crosby & Co., of Chicago, manufacturers of sheet-metal workers' machinery, have broken ground for a new factory to be located at 176 and 178 South Clinton street. The main building will be 140 feet deep by 40 feet wide. The first floor will be 160 feet deep, the extension being used for a blacksmith shop, one story high. The building will be four stories high, built of brick, with a pressed-brick front, substantial stone foundations, and a flat roof. The air-shaft on the side of the building will have iron pillars with large windows filling the intermediate space. It is expected that the building will be completed by May 1, when the firm will remove from their present quarters at 269 to 273 Randolph street.

The Chapman Valve Mfg. Company, Indian Orchard, Mass., favor us with a copy of their catalogue of Gate Valves and Fire Hydrants which they manufacture. The catalogue is gotten up in the shape of an engineer's pocket-book, the first 60 pages of which are devoted to illustrations and descriptions of the extensive variety of Valves made by this concern. The illustrations are exceptionally fine, and accompanying them are descriptive particulars and where necessary tables of sizes and styles are also given. What makes the catalogue of special value to the trade, however, is the collection of miscellaneous data and information with which over 150 pages are filled. This part of the book, which is called an engineering appendix, contains a large number of very valuable tables, such as squares, cubes, circumference of circles, specific gravities, weights, composition of alloys, contents of vessels, water pressure, steam tables, friction of water in pipes, dimensions of standard pipes, candle power, &c. In addition to the tables, very much other miscellaneous information is provided, but, which it would be impossible to summarize, even by name, in a brief notice of the book. Suffice it to say that it is of the nature of an engineering pocket-book, and has been very carefully compiled, so that the most useful information is brought together in the smallest possible space.

The Acme Machinery Company, of Cleveland, Ohio, are at present erecting a two-story brick machine shop, 50 x 120 feet; also a separate L, 32 x 40 feet, to connect the new shops with their present one. The lower story will be used for offices and toolroom, and the second story for stockroom, and the upper story for

drafting-room. The company started in business four years ago to manufacture the Acme bolt and screw cutter, employing six hands. At present they employ 54 outside the foundry.

On the 10th inst. the Aetna Machine Company, of Warren, Ohio, sold a 400 horse-power engine to the New Albany Forge and Rolling Mill Company, to drive a train of rolls in their rolling mill at New Albany, Ind.

The Lloyd-Booth Company, proprietors of the Falcon Foundry and Machine Works, at Youngstown, Ohio, are now building for Andrews Bros. & Co., of Youngstown, Ohio, one of their No. 1 lever shears for shearing car axles, the weight of which is 50,000 pounds. The Lloyd-Booth Company have recently added a roll-turning department to their plant, which is now well organized, and they are now prepared to design and finish rolls for all purposes. The company are operating their plant to its utmost capacity, and report trade very good for this season of the year.

William Tod & Co., of Youngstown, Ohio, are building a pair of blooming-mill engines for the new Bessemer plant of the Chester Rolling Mills, at Thurlow, Pa., of an entirely new design. The frames are more substantially braced than is usual in this class of engines, and the links are supported centrally. The cylinders are 30 inches in diameter by 48-inch stroke.

The Racine Hardware Mfg. Company, of Racine, Wis., under date of the 14th inst., write us as follows: "We are manufacturing oil-burning outfits from 1 to 50 horse-power, for both stationary and marine purposes. One of our 30 feet 6 feet beam yachts, with a 6 horse-power oil-burning outfit, very compact, weighing but 1200 pounds, and occupying floor space of but 27 x 48 inches, made 12 miles per hour on Oconomowoc Lake, Wis."

The Stiles & Parker Press Company, Middletown, Conn., makers of presses, dies, &c., have been obliged to erect another addition to their works. The large number of orders which they have lately received necessitate this extra amount of room.

Goulds & Austin, 167 and 169 Lake street, Chicago, have issued a circular, under date of January 7, announcing that a corporation named Goulds, Austin & Caldwell Company will succeed them. While the business of the old concern will be taken over by the new company, the management will be unchanged, except for the addition of Robert W. Caldwell, a gentleman of large experience and unquestioned ability. Mr. Caldwell was formerly in business in Cincinnati.

The new Gaskill pumping engine of the Buffalo Water-Works, which was started the 12th, has a capacity of 20,000,000 gallons per day. It is of the compound condensing type, with a stroke of 48 inches. The steam cylinders are 34 and 72 inches in diameter, and the pump 36 inches. The fly-wheel is 30 feet in diameter and weighs 30 tons. It was built by the Holly Mfg. Company, of Lockport, and cost, with four 200 horse-power boilers, \$94,250. A duplicate has been contracted for, to cost about \$85,000.

Rankin & Fritch Foundry and Machine Company, St. Louis, Mo., have placed in their erecting shops a new 15-ton crane. They are very busy and report some heavy sales, and are compelled to run double turn.

Hardware.

Among the certificates of incorporation filed with the Secretary of State, at Columbus, Ohio, January 7, was that of the W. G. Avery Mfg. Company, Cleveland, Ohio; capital stock, \$30,000, the

incorporators being W. G. Avery, S. P. Churchill, George W. Avery, Joseph A. Osborne and B. G. Tremaine.

It is reported that a company is being formed at Lynchburg, Va., under the name of the Lynchburg Wire Picket Fence Company, for the manufacture of wire picket fence.

E. T. Fraim, Keystone Lock Works, Lancaster, Pa., who was recently burnt out, started up again in full on 15th inst., and is now prepared to fill all orders promptly, as heretofore.

The proprietors of the Ohio Lantern Works, at Findlay, Ohio, have decided to remove the plant to Tiffin, Ohio. A. L. Baron, the head of the enterprise, states that a failure of Findlay to comply with its contract relative to free natural gas fuel caused him to remove. The works will employ 75 hands and will begin operations April 1.

It is stated that a large plant for the manufacture of three-cornered wire nails will be established at New Castle, Pa., at an early date. The company which proposes to engage in the manufacture of these nails is known as the Three-Cornered Wire Nail Company, and has its headquarters at Pittsburgh. It is composed of J. C. Williams, William Taylor and other capitalists of that city. Mr. Taylor is the patentee and inventor of the machine for making those nails, and spent several days in New Castle recently, looking at several sites which the citizens of that place agreed to donate to the company if they would consent to locate there. A proposition was made to the company, which is now under consideration, and it is expected that within the next few days some definite action will be taken by the parties interested looking to the erection of the plant.

We are informed that the Mail City Lantern Company, of Wheeling, W. Va., contemplate making some extensive improvements to their plant located on Water street in the above-named city at an early date. As soon as the present stock is worked up a fourth story will be added to their building. A steam engine will also be put in, the office removed from the first to the second floor, and all the heavy machinery will be set up on the first floor. The present third story is one that has been added to the building since the company occupied it. The demand for the lanterns turned out by this firm, which have acquired an excellent reputation, has become so large that additional facilities for their manufacture have become a necessity. The proposed improvements will be completed at the earliest date possible and when finished the firm will have an exceptionally well-appointed establishment.

Miscellaneous.

The Lehigh Car Mfg. Company, of Stemton, Pa., recently shipped a lot of new cars to the island of Cuba for use in transporting iron ore from the mines of the Jaragua Iron Company to the seashore. The works have enough orders on hand to keep them in operation until next July.

The Electrical Accumulator Lighting and Power Company, of St. Louis, have just closed the contract to erect a central station electric light plant to illuminate the City of Dyersburg, Tenn., by the accumulator system of "storage batteries."

Matthew Addy & Co. report that the Pioneer Furnace, located at Thomas, Ala., made last week 902 tons of iron, of which 83 per cent. was foundry grades. It is claimed that this furnace, size considered, is beating the record, for output and quality, of Southern furnaces.

The Iron Age

New York, Thursday, January 24, 1889.

The Pig Iron Situation.

During the past few weeks matters in the pig-iron trade have been rapidly approaching a crisis, and the situation demands the closest study both on the part of the producer and of the consumer. The weakening has become general and widespread, and there is nothing to be gained by blinking at the facts. We believe that a careful survey of the ground cannot fail to lead to the conclusion that for the time being consumption has fallen behind current production. Our statistical reports have proven that the latter is progressing at the rate of 7,500,000 gross tons per annum, not counting imports of pig, of which a certain quantity, chiefly manganiferous material, must be purchased from abroad. We are not prepared to assert that the requirements of the country will not take care of such a quantity in 1889. But we are in a dull season of the year, when the average tonnage is not being melted in cupola, converter or furnace. If our ironmasters were generally in the position where a moderate accumulation of stock need not frighten them we might tide over a dull period readily. Unfortunately, the majority of makers are not so situated. A lull in buying, even for a time, causes, as it does now, a sharp drop in prices. We have heard of sales on a large scale much below any yet publicly named in one of the leading markets of the country. The price has not become general as yet, and may not be accepted by the majority of sellers, but it shows, on the one hand, to what length some furnaces may go to capture trade, and, on the other, that the point is not very far off at which very large buyers, having the experience of a lifetime, are willing to enter into heavy contracts.

We have spoken frankly, because we believe it to be for the best interests of the entire trade that the gravity of the situation be thoroughly appreciated. The remedy is clear. Serious loss can be avoided by those who are unable to go below present open quotations by at least \$1 a ton only by blowing out or by banking. There seems little prospect that the position will be materially improved until spring. For some time past complaints have been growing more and more numerous that the prices prevailing until lately were unremunerative. We have reached a lower level now, and unless there is some means of materially cutting down cost, circumstances would indicate that a suspension of operations would be the wisest policy in all doubtful cases. It has been vigorously asserted by a number of pig-iron manufacturers that there was no room for reducing cost. Since that is certainly the case with a good many plants, their owners would do best to face the inevitable now rather than make sacrifices in the hope of an early improvement.

Every decline of a fraction of a dollar narrows down the number of those who are able to make both ends meet, and at the same time increases the number of buyers who reach the conclusion that the time for contracting for supplies has come, but no marked movement can be expected to set in until the obvious disparity between output and consumption has been lessened. To close buyers the present and the near future seems sure to offer exceptional opportunities for making advantageous contracts. In spite of all the wild statements of promoters, or the boastful utterances of some furnacemen, it is a fact that the best prices lately named cut very close to the cost of production of the majority of the best situated and best equipped plants in the country. We repeat that there is little chance for lowering that cost. It is evident, therefore, that we are fast approaching bottom figures, and that a quick adjustment of the output to current requirements may check the present tendency toward demoralization.

Investors as Owners.

One of the most hopeful signs of the times in the railroad world is the disposition shown on the part of owners of stocks and bonds to take a more direct interest in the management of their properties. Stock jobbing has been a national disgrace in the eyes of foreign capitalists. From trading in the stock market upon exclusive, but innocent information, on the part of railroad managers it is an easy step to such quiet manipulation as will force a rise or fall of stock. Of course honorable railroad men would not be guilty of the latter, and yet, if the former is considered legitimate, there is no drawing a line of distinction in practice; while if we prohibit all buying and selling of stocks, we infringe upon a common commercial right, and, more than that, we do not allow a railroad manager to be interested in the success of the road he serves, a principle everywhere recognized as productive of the best service. These chances for stock jobbing are greatly increased by the difficulties which our laws and customs place in the way of combined action on the part of small stockholders. In the Interstate Commission's recent report it is estimated that of all railway capital 48 per cent. consists of bonded debt and 42 per cent. of stock. In most cases the stock alone carries the voting power, while it is a common occurrence to find the management of railroads in the hands of men who own perhaps not more than a quarter of the stock. Thus it appears that it is possible for managers and their friends actually owning but one-tenth of a railroad's capital to control the business and policy of the other nine-tenths. The temptation to use the whole directly or indirectly in the interest of the small minority is great. This would be in part avoided if the large number of small investors could make their influence felt in the policy of the management. Under present circumstances this can best be done through banking firms if they will but take a real and permanent interest in transportation questions beyond the matter of their commissions.

Such action on the part of representative bankers would have a good effect upon the building of new lines and extensions. It would be a great help toward

stopping of parallel lines and those constructed cheaply merely to be sold dearly. Undoubtedly the building of the Nickel Plate or the West Shore furnished purchasers of iron and supplies for the time, but it may well be doubted whether the iron and steel trades would not have done better in the long run had these roads not been built. The losses to investors discouraged legitimate investments in new railroads actually needed, while the usual repairs, which under the pressure were omitted on the older roads, went far to balance the sales to these useless railways. If we would have healthy and steady trade we must discourage such railway building as cannot show good reasons for its plans and a fair chance at least for escaping bankruptcy. In no other business is careful planning so necessary as in this. A factory badly built and losing money is indeed unfortunate, but its losses affect but few comparatively. A railroad built for speculative purposes may for a series of years prevent a number of other lines in its territory from making any money, and consequently from paying for a large amount of renewals and supplies. Railroad gambling, in the long run, is not a help, but an injury, to the iron trade. For much of this gambling in the past our leading bankers must take their share of blame.

Competition is the life of trade, but war is its destruction. We ought not to expect that the former will be eliminated from transportation any more than from any other business, but regarding senseless rate-cutting the bankers can bring to bear a powerful influence. To bring the quarrels to light, and to discuss them, is a long step toward adjusting them—a step, too, which stock and bondholders should long ago have taken. It is not to the interest of business in general that railroads should waste all profit through lack of belief in each other's common honesty. The present agreement among presidents is not greatly different from many others only made to be broken. The new element of representations of stock and bondholders, however, if really determined and not merely temporary, may make a success of the present movement. For the benefit of all concerned, it is to be hoped that some good may come of it.

Western manufacturers and merchants have recently met with more annoyances than usual in the transaction of their railroad business. Some of these annoyances are due to the arbitrary arrangements of railroad managers, while others owe their origin to outside influences over which the railroad officials have no control. One of the most serious is an advance in Colorado and Pacific slope rates on some classes of goods which will effectually check shipments by Chicago manufacturers and dealers on contracts made last fall when rates were supposed to be on a stable basis. Another occurrence of a similar nature was the advance in rates on iron from Ohio points to Chicago, which was made at a time when business was dull, and prices were weak, and all conditions were most unfavorable for the imposition of higher freight rates. So much pressure was brought to bear on railroad officials in this case that a large part of the advance was abated, but rates are still higher than they

were some time since when trade was quite active. The demurrage charged on cars at Chicago after 48 hours is accompanied with considerable inconvenience to many persons who find themselves so circumstanced that they cannot promptly unload merchandise consigned to them. The fine imposed is regarded in various quarters as illegal and unwarranted, and steps are being taken to test the matter in the courts. The last occurrence to vex the minds of shippers is the order just issued by the Government requiring all Canadian-built cars running from Canada into the United States to be held for payment of duty. Exchanges of cars are made on so many railroads operating in the Northwest, involving the use of Canadian-built cars, that it is feared the service may be seriously impaired until the matter is straightened out, with, of course, decided detriment to shippers.

The Western Iron Trade.

General complaint is made of dullness in all branches of the iron and steel trades. Business is so unusually depressed and orders are so remarkably scarce that surprise is everywhere manifested at the peculiar conditions prevailing. The outlook is by no means discouraging, as there are no ominous clouds in the financial horizon, no political disturbances are pending, harvests have been good, money is plenty, trade is not being interfered with by epidemics, labor is fairly employed and apparently more contented than for years, and why such a restriction of business should occur under these circumstances is most perplexing. It is true that more or less talk is heard of the disturbing influence of the railroad question. But the railroads are better off now than they were a year since. Then they were suffering from a scarcity of freight. The roads running through purely agricultural regions were barely able to pay expenses, and, in fact, some of them ran behind. They were obliged to retrench in every way, and they did. Business generally suffered in the early part of 1888 in consequence of it, and a whole train of woes accompanied the leading cause, all of which had their influence. But now the railroads have passed through that most trying period, they are in shape to invest more freely in repairs and betterments, and even if new work should lag for a time, a heavy demand is to be naturally expected to meet the necessities of old lines.

As usual, the first effect of the depression is to reduce the price of pig iron. With the present relations of supply and demand, hardly a commodity can be named which is so sensitive to the varying phases of the general condition of business as pig iron. Productive capacity has now reached such a point that the consumption must keep up to high water mark constantly, or the price cannot be sustained at figures which will make it profitable to operate any but the best or most favorably located furnaces. Owners of furnaces realize this thoroughly and are ready to adapt themselves to the situation. It is part of their business. Already preparations are being made to blow out furnaces in the West at which pig iron cannot now be profitably made. The

owners and operators will not risk the accumulation of large stocks of pig iron, as they do not know how long the depression may continue, nor how far the slump in prices may go. The bottom prices of last year are now in sight, but it is possible that a lower depth may be touched before recovery sets in. Yet the prompt blowing out of furnaces may check the production sufficiently to correct the market very speedily.

It is well for those who are looking for very low prices to bear this in mind. Prices are not high now in Western markets, and much more of a decline is hardly to be expected. If those who need iron and steel defer their purchases too long they may find the supply considerably curtailed and prices much firmer. With the producers suspending operations the impetus of the decline will be arrested, and the whole face of affairs may speedily be changed. It seems almost incredible that the present lull should be any more than temporary, although it must be admitted that it has continued long enough to excite apprehension. But the condition of the great masses of the people is too good, barns are too well stocked, corn-cribs are too well filled and prosperity too generally abounds for serious belief in approaching financial troubles.

Late Developments in Venezuela.

There are indications that the frontier dispute between Venezuela and England about the boundary line between the former and British Guiana near the Orinoco River is about to enter an acute phase. It may not be out of place, therefore, to note recent occurrences in that Republic, and show the actual state of affairs. On July 5 last year the new president, Dr. Pablo Rojas Paul, was installed at Caracas for a term to end on February 20, 1890. He succeeded General Hermogenes Lopez, who, since August 9, 1887, filled the unexpired term of Gen. A. Guzman Blanco, the latter being the successor of President Joaquin Crespo. Early in December last the latter made a thoroughly organized attempt to upset the new administration, but was captured with all his followers. Leniency at home seems to be the policy of the Paul administration so as to stand united against England; hence Crespo has been sent into exile and left for Buenos Ayres, and his followers have been pardoned. The new president is considered a man of great ability, and through long and varied experience well fitted to govern the country. It is also hoped that he may be able to bring about an equitable settlement of the boundary question alluded to, Gen. A. Guzman Blanco's endeavors as Venezuelan representative in Europe, resident at Paris, having led to nothing in this matter so far.

The difficulty is that the territory in dispute is so large and valuable and that the action of former governors of British Guiana has complicated the question. When Venezuela and the rest of Spanish America gained their independence, the boundary lines between the former colonies of Spain, mutually, and between them, Brazil and the possessions of the Netherlands, were not well defined, and the negligent old Spanish surveys—as recorded and mapped in the Colonial Office at Madrid—continued to be looked upon as the frontier between them until recent ex-

plorations led to a better appreciation of the resources of the various countries and caused new surveys to be ordered. Differences then began to arise, leading to wars in some instances, to arbitrations in others, and leaving matters in suspense in a few cases like this Venezuela-Guiana dispute. Venezuela has declared its readiness to submit the matter to arbitration, but England does not consider the present dispute a proper subject to be arbitrated upon, as it accuses Venezuela of gross encroachments on the territory in dispute, one of the richest gold-producing countries extant. Recently England has garrisoned Barima Point, situated close to the mouth of the Orinoco River, which—according to the maps of Guiana—belongs to the latter. A great outcry is now raised in Venezuela, American interference is invoked, and the Monroe doctrine appealed to. While Venezuelans appeal to the latter, Colombians protest against its application to the Isthmus.

In all other matters Venezuela has been getting on remarkably well. Coffee, the chief product, has yielded abundant crops, which have brought high prices here and in Europe, and have enriched the planters. The national indebtedness has, by agreement with bondholders, dated November 24 last, been converted, the foreign debt into £2,675,350 and the internal into £1,078,076 bonds, bearing 4 per cent. interest, secured by customs revenue. The income of the nation was 38,686,246 francs and the outlay 28,644,576 in 1886-87; the budget of 1887-88 squares the expenditure of 27,695,000 francs by a revenue of equal amount. Railroad building has been actively taken in hand by French and German capitalists. Guzman Blanco's permanent stay in Paris as ambassador has done a deal of good to his country; he is personally worth some \$15,000,000, and has inspired capitalists in Western Europe with confidence in Venezuela. Liberal privileges are extended to those who embark in Venezuelan enterprises of a permanent nature. There were, on December 31, 1886, 286 km. of railways in running order, 353 being built and 1982 new concessions granted. Since then various important concessions have been granted. Frederick Krupp, of Essen, Prussia, has undertaken to build the "great Venezuelan railroad," backed by the leading German banks, which is to connect Caracas with San Carlos via Antimano, La Victoria and Valencia. On part of the capital the Government guarantees 7 per cent. interest per annum. A similar guarantee is extended to the Callao-Las Tablas Railroad to connect the gold mines with Las Tablas on the Orinoco, below Ciudad Bolivar, which the Paris Crédit Mobilier and Société des Dépôts et Comptes Courants have engaged to construct, the Batignolles Construction Company having bound itself to build the road within a stipulated short time.

The length of telegraph lines in operation on June 30, 1886, was 4462 km., with 30 offices, the receipts being 239,051 francs in that year, and the expense 886,188. The postal service was carried on through 162 offices handling 2,734,576 pieces of mail matter, the expense involved being 553,868 francs. The regular army has at present a strength of only 2000 rank and file, but the number of combatants may be increased to 100,000 by enrolling

the militia and volunteers. The navy consists of five men-of-war, three of which are steamers. Venezuela imported in 1885-86 62,453,378 francs' worth of merchandise, the greatest amount coming from this country, 15,296,873 francs; from England 9,690,105; from France 9,272,379; from Germany 8,949,085, and from the West Indies 1,680,691. The export reached 82,304,289 francs including 20,107,675 francs of gold bullion, 3,308,911 ores, and 4,442,707 coin. The bulk of products was: coffee, 35,733,423 francs' worth, cocoa, 8,447,986; hides, skins, cattle, cabinet woods, tonka beans and dividivi. There entered Venezuelan ports in 1886 9263 vessels, 1952 thereof being steamers, the joint tonnage being 2,052,140. American trade shows these figures:

Fiscal year.	Import.	Domestic export.
1888.....	\$10,051,250	\$3,008,336
1887.....	8,261,236	2,827,010
Increase.....	\$1,790,014	\$181,326

This increase of nearly 20 per cent. was due to the rise in coffee, the import of which into the United States has risen considerably; from 11,858,478 pounds in 1870 it has increased to 59,463,487 in 1887. The copper product of New Quebrada was 2900 tons fine in 1887, against 3708 in 1886 and 4111 in 1885. There are 14 gold mines in the Yuruari district. Of these the Callao is the richest, turning out 28,808 ounces the last six months. It is owned by a company of Venezuelans, with headquarters at Caracas. The Callao-Bis is owned by an English company, whose office is in London. The Caratel was the first mine discovered. The Tigre, Nueva Providencia and Union are owned by a Venezuelan company. The Eureka and Bolivar Hill are owned by French companies whose offices are in Paris. The Chile, Panama, Potosi, Peru and Nacupsi mines are English, with offices in London. In 1873 the total output of all the mines was \$608,742; 10 years later it was \$4,000,000. While commercially the United States are chiefly interested in Venezuela, England, Germany and France are so in mining and railroads, hence there is a considerable international interest attaching to what is going on in the country, and the turn which the boundary question will take is closely watched abroad.

The annual reports which are coming in from Great Britain emphasize the fact which we have repeatedly alluded to that the ironworkers abroad are enjoying a period of moderate prosperity in spite of the great decline which has taken place in the volume of business done by them with this country. W. Fallows & Co., of Liverpool, in their elaborate review print the following table of exports:

British Exports of Iron and Steel.

Year.	Total	To United States.	Other countries.
1888.....	3,968,984	639,760	3,327,224
1887.....	4,146,907	1,282,445	2,864,462
1886.....	3,338,494	804,570	2,533,924
1885.....	3,128,352	397,618	2,730,739
1884.....	3,496,352	454,804	3,041,548

In other words, the expansion of business with other countries has nearly compensated for the great falling off in the quantities sent to this country. Considering the relation of prices abroad and here this means that our imports will be cut down to a minimum, which they practically are now. It means, too, that should a reaction come from the extreme depression through which nearly all departments

of the iron and steel trades are now passing, we could recover materially without any danger from an active participation of foreign makers in our markets. There may be little consolation in that fact now, but it is a circumstance which should never be lost sight of either by producer or by consumer. So far as pig iron is concerned, the statistical position in Great Britain has certainly improved during 1888. We present the figures below:

Production and Stocks of Pig Iron.

Year.	Production.	Stocks.
1888.....	7,900,000	2,400,000
1887.....	7,441,927	2,616,366
1886.....	6,870,665	2,491,506
1885.....	7,297,295	2,352,169
1884.....	7,528,996	1,909,467
1883.....	8,490,224	1,063,976

In the leading districts, the principal figures of interest are:

Production:	1888.	1887.
Cleveland.....	2,614,983	2,508,184
Scotland.....	1,027,744	932,240
West Cumberland and Barrow.....	1,373,400	1,470,000
Stocks, December 31:		
Cleveland.....	472,628	637,682
Scotland.....	1,244,433	1,223,040
West Cumberland.....	562,000	571,700

While all of the product of the West Cumberland district is Bessemer pig, only a small part of that of the Cleveland and Scotch furnaces is Bessemer or basic. The total amount of the product of Bessemer pig is estimated at 3,064,837 tons in 1888, against 2,600,000 in 1887, while the make of steel ingots rose from 2,264,000 tons in 1887 to 3,047,000 tons in 1888, not less than 471,510 tons of basic being used in the manufacture of steel.

Bridging New York Waters.

Still another great bridge scheme is on foot designed to facilitate communication between New York City and its environs. The parties concerned call themselves the Grand Bridge Company, and they ask for an act of incorporation; capital, \$10,000,000. The location will be fixed somewhere between New York City and Brooklyn, across the East River, by commissioners to be appointed. Other details, respecting the appurtenances, rates of toll, &c., are provided for in a bill now before the Legislature of this State. The remarkable success of the Brooklyn Bridge, both financially and mechanically, inspires confidence in any similar undertaking. The opening of the Poughkeepsie Bridge doubtless will be attended with results not less satisfactory, at least as respects those sections of the country more immediately affected. An important coal trade will be developed in a direct line from the Pennsylvania mines to the Eastern States irrespective of shipments of general merchandise. To what extent the local traffic of New York City may be influenced adversely or otherwise remains to be seen. It does not appear as yet that the bridge will be any serious impediment to navigation. The great bridge across Staten Island Sound, at Kill Von Koll, is another enterprise which may have important consequences and to some extent affect the channels of trade. The general welfare will be promoted if it provides facilities for more complete railway connections, thereby in a more literal sense making New York City the trade center of the United States. In addition, the Staten Island bridge practically extends the water front of the metropolis, and makes available for warehouse purposes a wide

extent of territory, which at a day by no means remote will all be required by the increasing demands of our foreign trade. Still another bridge will be thrown across the East River at Blackwell's Island, and the Manhattan Bridge Company, Edmund Driggs, president, propose to erect another. Engineer Lindenthal's monster bridge at Washington Heights to cross the Hudson is yet in embryo. Altogether, at least a half dozen bridge schemes invite the attention of capitalists hereabout, and no miraculous gift of prescience is needed in order to discern through the vista of coming years a network of aerial structures connecting New York City and its environs which will dwarf in the comparison anything now seen in London or other great centers of European traffic. In the present stage of modern engineering that man is a bold pessimist who pronounces anything mechanically impossible.

Bi-Sulphide of Carbon Motors.

Quickly following the exposure of the Electric Sugar-Refining fraud comes a story of serious trouble about a wonderful "Triple Thermic Motor," in which several reputable men are concerned. The promoters evidently believed they saw a new road to fortune. Nor are they the first victims. They saw machinery successfully worked by substituting bi-sulphide of carbon for steam. It drove pistons economically and with great power. What more could be desired? The machine was set up in Newark for exhibition. One of the victims describes his experience as follows: "Naturally we wished to see the wonderful motor in action. So we went up to the machine shop, 277 Passaic avenue, where the whole thing was in operation. All the machinery was there on the first floor, and it was in full operation, just as any machinery run by steam. But the vaporizing machinery, where the bi-sulphide of carbon was said to be vaporized by steam, so as to produce this wonderful power, was in a closed room, and there it was sacredly guarded. It was in charge of an engineer named Knight. Well, there was a peep-hole in the wall inclosing this machinery, and we were allowed to stand at that and gaze in. Of course we could tell nothing about the thing in that way. Nobody got nearer than the peep-hole. All the investors around here had to go it blind in confidence in the men who fathered the scheme."

Like the electric sugar-refining apparatus, it was seen through a "peep-hole," but enough was seen to induce scores of people to invest their money, and now the courts are invoked to award damages in large amounts. One of the counsel employed for the defense seems to have obtained an inkling of the truth, when he says in a reported interview: "So far as the theory of the Triple Thermic Motor goes, it is all right and undoubtedly a good thing, but there are some practical obstacles which prevent its present success. The object to be attained is the production of an expansive vapor without the great waste of heat necessary in using water for that purpose. Bisulphide of carbon is theoretically the solution of the problem. On the other hand, bisulphide of carbon is a powerful agent, and rapidly corrodes and deteriorates the boilers and machinery in which it is used." In other words, the clergymen lent their influence, unwittingly, as we must charitably assume, in support of an "exploded fallacy." It would be needless to look outside of New York City for evidence amply substantiating this position. Only a very few

years have passed since the public, of course including reporters, were challenged to examine critically the bisulphide motor. Even engineers summoned to witness the exhibition were unable to refute the pretensions then put forth. Suffice to say, the scheme was apparently abandoned, and inquirers at a later day found only portions of machinery rendered useless by corrosion. Moreover, the bisulphide was extremely offensive to the sense of smell, so that a "peep-hole" would amply satisfy any ordinary inquirer for information.

In accordance with views briefly presented above, omitting more than a reference to painful experiences in Lowell, Mass. (where "Professor Trowbridge, of Harvard," made a report construed as endorsing the motor, preparatory to issuing a prospectus), the well-known patent lawyer Edw. N. Dickerson writes as follows:

The papers are giving an account of a stock company founded upon a "bisulphide of carbon" engine, the stock of which has been sold to many victims in Newark and elsewhere, for a great price. This particular form of humbug is very old; and it is very insidious, because of the great pressures which this substance will develop at low temperature. Before 1856 this deception was practiced on Wall street, and another like it called the Cloud engine. In that year I published a statement about these things, a copy of which I annex. My prophecy has been fully realized. The bisulphide machine has since been twice used as a swindle—once at Pittsburgh and once at Boston—and the Cloud engine again deluded a large number of very respectable gentlemen in this city about one year ago. My publication was in a note accompanying the report of an argument in court.

EDW. N. DICKERSON.

NEW YORK, January 17.

[Extract from an Argument Published in 1856.]

This Cloud engine enjoyed a remarkable existence at the Novelty Works, about as long as its relative, the Vampire, both belonging to the genus humbug. Cloud was ushered into public notice with more imposing circumstances than Vampire, however, Mr. Horatio Allen starting it out with a "first-rate notice," every line of which was redolent with wisdom. After giving some rows of figures for the purpose of appealing to the popular credulity which is expressed in the maxim "figures can't lie," the certificate concludes as follows:

"What the proportion of saving is to be remains to be determined by more extensive use; but I am constrained by the facts which have been developed by these trials to state my belief that the Cloud combination will take the place of the high pressure engine, and prove itself one of the most extraordinary and valuable inventions of the age. Yours respectfully, HORATIO ALLEN."

And again:

As the result of the trials referred to, I have to state the increase of pressure arising from combination of steam and air it proved beyond a doubt, and that the increased useful effect resulting from this increased pressure, as shown by these trials, is more than 50 per cent.

In building a high-pressure engine for myself, or for parties who would leave the question of the kind of engine to me, I would unhesitatingly adopt the Cloud engine, and in taking this position I rely upon the facts which have come to my knowledge in the trials made under my directions. HORATIO ALLEN.

Novelty Works, New York, July, 1854.

Referring to the "Vampire" *id genus omne*, Mr. Dickerson adds that it takes about 18 years for one of those animals to revive, that charlatans may grow rich. Taking all in all, there is reasonable ground for pronouncing the "thermo motor" a chameleon of the vampire stamp, assuming attractive hues to correspond with the varying conditions of the market. And so long as dupes can be found, just so long shall we hear of impending revolutions that amount to nothing.

The rates of freight on Southern pig iron, to take effect on February 1, are announced. They are on the basis of \$2.75 from Birmingham, \$2.25 from Chattanooga and \$2.50 from Sheffield to Cincinnati.

CORRESPONDENCE.

The Advantages of Coke for Fuel

CHICAGO, JANUARY 17.

To the Editor: There has been considerable comment in the scientific and other papers upon the late reversion to the use of coal as fuel by some iron manufacturers in the natural gas regions. Without entering at the present into the reasons for which this has become economically possible, we are led by the fact to speculate on the propriety of locating such immense plants as we find in certain districts that have little but the precarious advantage of a natural gas well to recommend them. Of course, it is a matter that admits of exact calculation to determine where a given industry would be placed to best advantage, having regard to costs of fuel and other materials, labor and transportation, but we are inclined to think that in assigning a relative value to natural gas wells there has often been dangerously small allowance made for the fluctuating and uncertain character of the supply. So enormous is the importance of cheap fuel in our great industries, that large amounts of capital are eagerly invested in building new works to secure what already in some cases has proved but a temporary advantage in this respect. And few things are now more generally appreciated than the importance of having our tangible fuel supply mined and used in the most economical manner possible.

The advantage of coke over raw soft coal as a fuel is that otherwise useless slack can be made available by admixture in its manufacture, and especially that it can be perfectly and smokelessly burnt without the need of skilled labor. And we cannot doubt that the public demand for a clear and healthy atmosphere will finally result in the almost complete substitution of coke fuel for soft lump coal. It is to be noted, however, that under present conditions this means simply that the smoke and waste resulting from irregular and incomplete combustion are to be confined to the coking regions. There is an actually augmented waste of fuel incurred in the coking system which is only compensated for by the comparatively low price of coal where it is free from transport charges. The cause of this additional waste is the high percentage of volatile matter contained in soft coal, particularly in our Western soft coal, which yields but one-half its weight of coke. In other words, over one-third of the coal used, including all of the hydrocarbon gases, is burnt and dissipated at the coking ovens.

Under the best mode of treatment (in beehive ovens) it is admitted that only 15 per cent. of the weight of coal needs to be used in coking—say 5 per cent. solid carbon and 10 per cent. of volatile matter. The rest of the volatile matter, which amounts sometimes to one-third of the weight of the coal, is wholly lost. This is the point we would emphasize—namely, that while coke, or artificial hard coal, is practically the best and almost the cheapest fuel for general purposes, there is yet the burden of an exceptionally heavy item of waste in its manufacture.

Very many unsuccessful attempts have been made to recover the excess of coal gases, but it must not be inferred that this cannot be made practicable. It is claimed that by a simple process, now worked in the North of England, all of the excess gas, together with considerable ammonia, is secured, and we learn that a prominent Chicago firm is experimenting in the same direction. The attainment of this object is of national concern, and will involve consequences of the highest magnitude. It will insure the supply of much cheaper coke, and, therefore, the disappearance of smoke from our cities. Existing coking plants will be looked on as artificial gas

wells, from which a permanent and uniform flow of fuel gas can be developed, in both of these respects far more reliable than the supply from any natural gas well. It will furthermore be practicable to set up coke works near large cities, where use can be found for every spare unit of heat that can be secured. For there is no smoke nuisance at such coke works as we refer to; indeed the process applied thereat may be defined as smoke prevention by withdrawal for separate use of all superfluous distillation products from the coal.

A. J.

The Iron-Ore Trade at Buffalo.

Edward B. Guthrie, C. E., of Buffalo, has contributed to the *Railroad Gazette* the following in relation to the iron-ore trade at Buffalo: The great increase in the last three years in the amount of ore handled at Buffalo has gone on with very little attention, considering its magnitude. The receipts of iron ore at that port since 1885 have been as follows, in gross tons:

1885.	1886.	1887.	1888.
7,160	28,430	30,760	246,850

From these figures it is seen that the increase in 1888 has been some 700 per cent. Of the amount received in 1888, all but 26,500 tons had been reshipped at close of navigation. There is now talk of remodeling and starting up the furnace at Iron-ton, located about 15 miles north of the city, on the Niagara River. This furnace has been out of blast 10 or 12 years, and it is rumored that Bessemer pig will be made. Buffalo, with its shipping facilities by water and rail and its cheap fuel, ought to make a good point for manufacturing steel, though its two iron mills have been long out of use.

During the past year three ore docks have been started at Buffalo, one under control of the Lehigh Valley Railroad, on the Tift Farm Improvement, having a length of 2100 feet and width of 200 feet; one controlled by H. K. Wick & Co., located on the Blackwell Canal, 1460 feet long by 200 feet wide; one, the Minnesota Docks, controlled by the New York, Lake Erie and Western, located on Buffalo River, about 500 feet long by 200 feet wide.

At each of the first two, three hoisting and conveying machines, made by the Brown Machine Company, Cleveland, Ohio, are used for hoisting the ore from vessel, conveying it back for immediate reshipment on cars, or stocking up on dock. Each machine consists of a trussed bridge, supported by a pier at each end, movable on tracks parallel to the face of the dock. The bridge is 180 feet long between piers, with a cantilever extension 80 feet long, for dumping beyond the rear pier, and a hinged projection, 34 feet long, allowing buckets to be directly over a vessel's hatchway. The height at the dock end is 30 feet, at the rear end 45 feet, enabling the empty buckets to return to the vessel by gravity. The power consists of three double cylinder engines located at one of the movable piers, operating the buckets, hoisting from out the hold, conveying back from the dock, and moving the whole plant from one point to another in a direction parallel to the face of the dock. Each bucket holds 1 gross ton, and from 1200 to 1500 gross tons can be handled with reasonable speed in ten hours.

At the Minnesota docks five McMilar steam cranes are used, which run on a track parallel to the face of the dock. By these the ore is hoisted from vessel and is then either dumped into cars on parallel tracks for immediate reshipment, or into small cars running on trussed girders supported at each end on movable piers, at center on a fixed pier, the former piers being operated by hand through gearing

transferring the plant from one point to another. The girders are at right angles to the face of the dock, and along them the small cars of ore are pushed by hand, and the ore dumped on to dock where it is stacked. Each bucket is said to hold 2800 pounds, and 1000 tons are handled in ten hours with the five cranes. The first-mentioned machine is the cheaper to operate, and the most speedy, all the power being furnished by steam and gravity. The first two docks were not in operation until August or September last, while the third was started a little earlier.

The Henderson Heating Furnace.

James Henderson has recently erected at McKeesport, Pa., a furnace for heating wrought scrap iron with natural gas. In the construction of this furnace six 1-inch gas-pipes are placed at one end, which deliver the gas into a large expansion chamber, the quantity being regulated by valves and a pressure gauge. The gas expands till it fills this chamber, traveling from the entrance several feet to where it meets the air blast delivered in measured quantity in proportions to produce perfect combustion, through tuyeres placed on each side of the gas channel, delivered diagonally forward to a focus at the entrance to the heating chamber, where combustion takes place. The gas in passing to the air is probably heated to 3000° F. before they meet, and as the air is cold and the gas expanded their volumes approximate being equal and produce a greater effect than when either or both are heated by regenerators.

The bed of the heating chamber is 20 feet long, 4 feet 6 inches wide, and 5 feet space intervenes between it and the roof in the clear. The flame is from 1½ to 2 feet above the piles on the hearth and 1 foot from the roof all the way from the front to the uptake. Iron charged simultaneously at each of the four doors of the furnace becomes as quickly heated at the uptake as where the combustion takes place or, in five minutes 250 pounds charged at each door is at a welding heat ready to draw, so that five piles may be heated every five minutes of 250 pounds each. By charging at one door and drawing at the same time from another a pile may be drawn every minute, amounting to 1440, or 180 tons in 24 hours. It is claimed for this furnace, if doors be applied which exclude air during the heating (which is not the case at McKeesport, where it was sought to ball up through a hole in the door), that the waste in heating iron will be largely reduced. The economy in fuel is very great, as the gas ranges from four pipes at 8-ounce pressure to six pipes at about 4-ounce pressure, which is one-half to three-quarters of the gas used in the old kind of heating furnaces, while the output is claimed to be seven times greater from a much smaller quantity of gas, say, from nine to ten times less.

Wrought iron exposed on the hearth of this furnace in large lots begins to melt in 10 minutes, becoming so soft that it cannot be balled except water is thrown upon it to cool it, indicating that the furnace will melt rapidly and be economical for making open-hearth steel. The cost of a furnace would not be over \$3000 for a bed 20 feet long and 20 feet wide, to make 20 to 25 tons of open-hearth steel per cast. There are no regenerators, nor is there any heated air used. A small fan blower is placed in the gas pipe, where there is a possibility of a deficient supply of gas to exhaust gas from the wells and at the same time to increase the quantity used, if so desired. This fan may be placed on the shaft that carries the fan for measuring the air, and be driven by the same pulley, and thus measure the air and gas automatically. Where scrap iron is to be

had in quantity, this furnace will increase the output of a works up to 180 tons per day for an outlay not exceeding \$2000 where natural gas is used. If coal is used to make the gas, the cost will be increased by that of a gas producer.

Washington News.

(From Our Regular Correspondent.)

WASHINGTON, D. C., January 22, 1889.

The programme of the Republican managers, now that they have succeeded in passing their tariff substitute, is to let it go to the House, where they expect the Committee on Ways and Means to pigeon-hole it. The measure not receiving concurrent action will then be in condition to receive consideration either during an extra session in May or at the regular session in December. The managers favor an extra session, as it offers a pretext for an earlier organization of the House and lessens the chances of losing control by the possible inroads of mortality upon the slender margin of Republican majority. The Sub-Committee on Finance are emphatically in favor of an extra session should no action be taken on the Senate substitute in the House, for the reason, as one of their number said, that they had promised the manufacturers that something would be done in accordance with their wishes if the elections turned out satisfactorily. They now propose to keep their promises. The Senate substitute is the most decisive step in the direction of protection on principle yet taken, and fixes the issue on the economic policy of the Republican party. The party leaders, in the main, think the bill wise, but some of the most sagacious are of the contrary opinion. They do not regard the bounty provisions as likely to enlist popular favor, and claim that it will ultimately react to the discredit of the protective theory. The point claimed for an extra session is that a bill passed in May or June will have at least six months' trial, and then have ample time for amendment where it pinches before the close of the long session. This, it is thought, will put an end to industrial agitation and enable the great interests of the country to enjoy a few years' respite.

The problem which most concerns the party leaders just now is the probable action of the Randall committee and the House on the Cowles tobacco bill. That bombshell landed in the free-trade camp has created undisguised consternation among the friends of Chairman Mills. It is not Mr. Randall's purpose to have any contest himself. As soon as the Senate substitute reaches the House and is referred to the Committee on Ways and Means, and a reasonable time is allowed for a report. The Committee on Appropriations will act upon the revenue bill sent to them under instructions of the House, the bill will be reported back and the friends of the measure will be left to take charge of it in their own way. The reference of the bill to Mr. Randall's committee was not particularly pleasing to that gentleman, as it placed him in a position which he was not anxious to assume at this stage of the tariff controversy. There is not an improbability that the tobacco men in the House will attempt to take some action with reference to the Senate substitute. There are some who believe that if the measure could be brought to a vote it would secure a majority. The Senators, however, do not expect action so as to bring it into conference. Chairman Mills is disposed to hedge by saying that he would favor a tobacco bill, and is inquiring why the Virginia, North Carolina and other Democratic advocates of tobacco repeal did not take that feature of a bill in his committee. As Mr. Randall expressed it, the most important feature of the Cowles movement was that it rent

asunder the chains in which the Committee on Ways and Means have held the majority throughout this entire Congress. The tobacco men who from party interests and discipline submitted to this tyranny proposed, before the authority of the House passed into other hands, to give some expression of their views in opposition to the restrictive policy of the committee.

The Pneumatic Gun.—The Zalinski pneumatic gun has been proved to be a powerful weapon for harbor defense. On Saturday this gun was charged with 200 pounds of dynamite and 325 pounds of explosive gelatine and threw a shell from Fort Lafayette with sufficient force to destroy the strongest armored vessel a mile distant. Three guns of this kind are to be placed upon the Vesuvius, which has just proved itself to be the fastest war boat in existence, the contract being that they can be fired at intervals of two minutes. Compared with the Krupp gun this weapon appears to have the advantage. The American gun, with carriage, weighs 85 tons less than the German gun of the same caliber, and costs, with carriage, \$125,000 less. Again, it is to be presumed that the effect of one of the American dynamite shells would be much greater than the destruction caused by a Krupp powder-loaded shell.

Horace Tuttle, of the firm of Tuttle, Oglebay & Co., Cleveland, Ohio, was instantly killed in a railroad accident in Northern Michigan on the 19th inst. Mr. Tuttle was a well-known dealer in iron ore, his firm having very extensive connections and representing large interests. He was a man of endearing personal qualities, and the news of his sudden and untimely death is received with universal regret throughout the iron trade of the Northwest. Lieutenant-Governor Macdonald, of Michigan, a prominent business man of Escanaba, and William Cochrane, of the Cochrane Milling Company, Escanaba, perished in the same accident. Their loss is a heavy blow to that enterprising town, whose recent rapid progress in manufacturing activity was in a great measure due to them.

It is now a settled thing that there will be no advance in the price of coke for February delivery and unless there is a decided movement in the demand within the next few weeks a slight decline in present prices is liable to take place. The leading operators in the Connellsville region are taking orders for delivery next month at present prices, which are as follows: Furnace coke, \$1.25; to dealers, \$1.35; foundry coke, \$1.50; crushed coke, \$2.20; all on board cars as ovens, per ton of 2000 pounds. Freight rates from ovens to Pittsburgh, 70 cents per ton; to Shenango Valley, \$1.35; Cleveland, \$2.80; Chicago, \$2.75; East St. Louis, \$3.20. Prices at other points are quoted as follows: Chicago, \$4.25; St. Louis, \$4.70; Louisville, \$4.70; Kansas City, \$7.25; Toledo, \$4; Buffalo, \$4.50. In the latter place Reynoldsville coke is quoted at \$3.75 and at Chicago at \$4.25. New River coke brings \$4.25 at Chicago and \$4.75 at Louisville.

The fourth annual installment of the extension indebtedness of Oliver Brothers & Phillips and the Oliver & Roberts Wire Company, Limited, will, we are informed, be paid at maturity on February 1. The amount, including interest at 6 per cent., is \$306,058.85. This leaves but one more payment to be made by these firms.

One of the furnaces of the Troy Steel and Iron Company, at Troy, N. Y., was blown in on foundry iron a few days since.

TRADE REPORT.

Philadelphia.

Office of *The Iron Age*, 220 South Fourth St.
PHILADELPHIA, Pa., January 22, 1889.

Pig Iron.—The feeling is still very much unsettled, and it is difficult to say what the outcome of the continued dullness will be. On the whole, prices have held remarkably well, 50¢ of a decline being about the average since November 1. The time is at hand, however, when something decisive may be expected, as things can hardly remain in their present condition for any length of time. The general impression is that the demand will pick up sufficiently within the next couple of weeks to check any further tendency toward a decline, although there may be exceptional transactions at specially low prices before the market steadies itself. Sales during the week have usually been on the basis of \$18 @ \$18.50 at tide for No. 1 Foundry, \$17 @ \$17.50 for No. 2, and \$15.50 @ \$16 for Gray Forge, with a few special brands at \$19 for No. 1 and \$16.50 for Gray Forge. On the other hand, sales of Southern brands have been made at \$17.75 for No. 1 Foundry, \$16.50 for No. 2 and \$15.25 for Gray Forge, delivered in consumers' yards, quality said to be equal to Pennsylvania standard. There is some pressure to realize on pretty much all descriptions of iron, but there is a disposition to hold prices as above quoted, one reason for which is that consumers will not take large lots, and another is that they prefer certain brands, and as concessions would not increase the size of the order, sellers feel that they may just as well maintain their prices. Consumption is large, and as the furnaces have not accumulated very heavy stocks there is a fair probability that prices will not go much below what are current to-day, although a good deal will depend upon the course of the markets South and West. At present there is a considerable amount of urgency from these points, but there is an impression that it will only be of temporary duration. Pennsylvania Gray Forge, said to be of strictly good quality, is offered to-day at \$15.25, delivered in consumers' yards.

Foreign Iron.—There is some inquiry for high-grade Bessemer, for which holders ask about \$20.50, c. i. f., duty paid. Speigleisen is held at \$27.25, with buyers at about \$26.50. Prices are said to be too high, however, to permit of business.

Blooms.—There is a good demand, and in most cases at prices about as follows: Steel Nail Slabs, \$28.50 @ \$29, at mill; Billets, from \$32 to \$36, according to analysis; Charcoal Blooms, \$52 @ \$54; Run-out Anthracite, \$42 @ \$44; Scrap Blooms, \$32.50 @ \$34 per "bloom" ton of 2464 lb.

Muck Bars.—The supply is in excess of the demand, so that prices are weak and irregular. Some of the best makes are held at \$28.50 @ \$29, delivered, but there are others offering at about a dollar less, without attracting buyers. Small lots have been placed at \$28 @ \$28.50, Philadelphia delivery, but the demand is limited.

Bar Iron.—The market shows no sign of improvement, and prices are again a shade lower, although nominally the same as last week. There are so many anxious sellers that buyers have no difficulty in securing concessions on lots of 100 tons and upward. As a rule 1.70¢ @ 1.75¢, at country mills, is quoted for good iron, with a fair amount of business taken at the medium figure, although in one or two instances still lower rates have been ac-

cepted. Some of the larger mills maintain 1.8¢ @ 1.85¢ as their quotations, but only limited quantities can be placed at those figures. The outlook is not encouraging at the moment, although it is thought that Skelp orders will be on the market soon, which will be of material benefit to the Bar trade. Expectations on this point are very sanguine, but as yet it is not known that bids have been made for any but small lots. Asking prices are 1.82½¢ @ 1.85¢ for Grooved Skelp and 1.90¢ @ 1.95¢ for Sheared.

Plate and Tank Iron.—Business is in a very unsatisfactory condition, although in one way or another there seems to be plenty of work within reach. The great trouble is in regard to prices. Buyers have been asking for options on large lots at figures which sellers would be willing to accept for prompt deliveries, but it is not satisfactory to have them kept open for three or four weeks, which some of the parties appear to require. What the mills want is work to go on with, as there is a possibility that there may be plenty of business later on, as well as better prices. Meanwhile, quotations are feverish and irregular, and nominally as follows: 2¢ @ 2.1¢ for Ordinary Plates and Tank Plates, 2.1¢ @ 2.2¢ for Universal Plates; Shell, 2.4¢ @ 2.5¢; Flange, 3.5¢; Fire-Box, 4¢; Steel Plates, Tank and Ship Plate, 2.2¢ @ 2.3¢; Shell, 2.7¢; Flange, 3¢ @ 3½¢; Fire-Box, 3½¢ @ 4½¢.

Structural Iron.—There has been very little new business placed of late, but some of the mills are kept fairly busy on old orders. The position remains much the same as for several weeks past, plenty of work talked about, but very little actually given out. Still, the prospects are favorable for improvement, and it is thought that a good deal of business will be on the market in the course of two or three weeks, although in the meantime things are very dull. Prices are about as follows: Bridge Plate, 2¢ @ 2.1¢; Angles, 2¢ @ 2.1¢; Tees, 2.4¢ @ 2.6¢; Beams and Channels, 2.8¢ for Iron or Steel.

Sheet Iron.—There is a fair demand for Sheets, but it is found almost impossible to maintain prices, so that some shading has been done on desirable orders. Prices for small lots are about as follows for the best makes.

Best Refined, Nos. 26, 27 and 28....	3	@ 3½¢
Best Refined, Nos. 18 to 25....	2½	@ 3 ¢
Common, ¼¢ less than the above.		
Best Bloom Sheets, Nos. 26 to 28....	4½	@ 4½¢
Best Bloom Sheets, Nos. 22 to 25....	3½	@ 4 ¢
Best Bloom Sheets, Nos. 16 to 21....	3½	@ 3½¢
Blue Annealed.....	2.8	@ 2.8¢
Best Bloom, Galvanized, discount.....	62½	%
Common discount.....	67½	%

Merchant Steel.—The feeling in this department is a little unsettled and prices are not strictly adhered to, although as yet no change has been announced officially. Nominally quotations are as follows: Tool Steel, 8½¢ @ 8½¢; Machinery, 2.4¢ @ 2.6¢; Crucible Spring, 4½¢ @ 4½¢; Crucible Machinery, 5¢; Best Sheet Steel, 10¢; Ordinary Sheet, 8¢.

Steel Rails.—The demand has not improved and sales are mostly in small lots at about \$28 at mill. The New York Central is understood to have been in the market for several thousand tons, but it is not known what price they paid, although \$28 was quoted by mills in Eastern Pennsylvania. Freights have been more favorable from certain other points, however, as it is not thought that \$28 would be shaded for that kind of an order.

Old Rails.—There is quite a scarcity of Rails, and, while the demand is not large, prices look like going higher. In any case, holders appear to have the utmost confidence in their position, \$24.25, f. o. b. cars here, having been refused for several hundred tons to-day. Buyers are

not numerous, however, and it is only when supplies are wanted in a hurry that they will pay over \$23.25 @ \$23.50. Sales for interior deliveries are reported at from \$24 to \$25, according to circumstances.

Scrap Iron.—There is a somewhat improved demand, and while prices have not changed materially there is a better feeling, especially as regards choice qualities. Prices about as follows: \$20.50 @ \$21 for cargo lots; \$21.50 @ \$22 for carload lots, delivered, or for choice \$22.50; No. 2 do., \$14 @ \$15; Turnings, \$13 @ \$14; Old Steel Rails, \$20 @ \$21; Cast Scrap, \$15 @ \$16; do. Borings, \$9 @ \$10; Old Fish Plates, \$25 @ \$26; Old Car-Wheels, \$17 @ \$18, Philadelphia, or its equivalent.

Wrought-Iron Pipe.—There is a very heavy demand in prospect, but prices are irregular, and on special orders discounts are sometimes increased considerably. Ordinarily discounts are quoted: Black Butt-Welded, 52½ %; Galvanized do., 42½ %; Black Lap-Welded, 62½ %; Galvanized do., 52½ %; Boiler Tubes, 60%.

Nails.—A meeting of Eastern manufacturers was held in this city last Friday, but no definite arrangements were completed at that time, although efforts are still being made to agree to a plan which will yield better prices. Meanwhile prices remain as before, say \$1.90 @ \$2 from store.

Chicago.

Office of *The Iron Age*, 95 and 97 Washington street, CHICAGO, January 21, 1889.

Pig Iron.—The past week was enlivened by heavy transactions, thus realizing the expectations of those who have been predicting a more active market for this month. At the same time prices were badly broken, and thus another set of expectations was realized. The Southern element in this market is charged with the responsibility for the extremely low prices which are made, but the local furnaces held their ground and secured their share of the business. The largest contract placed was for about 10,000 tons of Coke Pig, of different grades, to be delivered through the year in monthly installments at works in Chicago and branch establishments south and east of this point. About four-fifths of this contract was secured for a Southern furnace company. The No. 1 Foundry is understood to have been sold at about the equivalent of \$16, cash, at Chicago, and correspondingly low prices were made for the other grades. To another consumer \$15.75, four months, or about \$15.25, cash, has been quoted for No. 1 Soft Southern. Up to the present time these prices are the lowest ever made at Chicago, beating the record of all previous depressions. The inference to be drawn from the occurrences of the week is that shrewd buyers now feel that the time has come to buy, as the market must be at bottom or very close to it. The establishment of such low rates must accelerate the blowing out of furnaces, being undoubtedly below the cost of production at many of them. The reported bankruptcy of one Southern furnace company is regarded here as indicating that there is a limit to Southern prices and that they cannot be pushed down much lower without disaster. Ohio Soft Irons have sold more freely, and large consumers are quietly placing contracts for their year's supply of Lake Superior Charcoal. The price of Charcoal Pig is maintained very steadily, being apparently uninfluenced by the downward course of Coke Pig. Cash quotations on ordinary purchases are about as follows, f. o. b. Chicago: Lake Superior Charcoal, \$20; American Scotch (Black-band), No. 1, \$19.50 @ \$20; No. 2

\$17.50; Jackson County Silvery, No. 1, \$18; other Ohio Soft Irons, No. 1, \$17 @ \$18; Lake Superior Coke, No. 1, \$17; No. 2, \$16; No. 3, \$15; Southern Coke, No. 1 Foundry, \$16.25 @ \$16.75; No. 2 Foundry and No. 1 Soft, \$15.25 @ \$15.75; No. 3 Foundry, \$15; Gray Forge, and No. 2 Soft, \$14.25 @ \$14.75.

Bar Iron.—More inquiry is reported, particularly from manufacturing consumers, who seem to be strongly inclined to place contracts. Quotations are about the same as they have been, ranging from 1.60¢ at Mahoning Valley mills to 1.70¢, half extras, Chicago, for mill lots of Common Bar Iron of fair quality. On good specifications these prices are shaded, but the mills seem to be fairly firm, notwithstanding their increasing anxiety to secure new business. Small lots are still quoted at 1.90¢ @ 2¢ from store, according to quantity and quality.

Structural Iron.—Matters are slowly taking shape in this line. Some bridge contracts have been placed, but orders for building material are hanging until the price of Beams is settled. It is reported that the combination price is not being adhered to by the members, and that Beams are easily procurable at 2.80¢ and lower. Some consumers assert that they will not place their orders at higher rates than 2.25¢, but this is probably a bluff. Carloads of Angles are quoted at 2.15¢ @ 2.20¢; Tees, 2.45¢ @ 2.50¢; Universal Plates, 2.15¢ @ 2.20¢, f.o.b. Chicago. Small lots of Angles bring 2.25¢; Tees, 2.70¢; Beams, 2.90¢ for foreign to 3.50¢ for domestic.

Plates, Tubes, &c.—Competition is vigorous for orders of any size, but small lots command the following prices from store: Sheet Iron, Nos. 10 to 14, 2.50¢; Sheet Steel, 3¢ @ 3.50¢; Tank Iron, 2.40¢; Tank Steel, 2.60¢ @ 2.75¢; Shell Iron, 3¢; Shell Steel, 3.12¢; Flange Iron, 4¢; Flange Steel, 3.50¢; Fire-Box Steel, 4.75¢ @ 5.75¢; Boiler Rivets, 4¢ @ 4.25¢; Uster Iron, 3.75¢. Boiler Tubes, 62½¢ off. An order for 300 to 400 tons of Tank Steel is in the market, for the new city water works.

Sheet Iron.—Manufacturers' prices are a little weaker, but jobbers still hold small lots at 3.30¢ for No. 27, 3.20¢ for Nos. 25 and 26, and 3.10¢ for No. 24. Orders for mill lots are scarce.

Galvanized Iron.—Mill prices are stiffening, and an advance is expected shortly, in consequence of the formation of the association referred to last week. Jobbers' quotations for small lots are unchanged, however, at 65 % off for Juniata and 65 % and 2½ % off for Charcoal.

Merchant Steel.—The demand is improving from small consumers, and quite a good business is reported by several houses. Mail orders are increasing considerably. Quotations are about as follows, though prices are unsettled: Bessemer Bars, 2.30¢; Tool Steel, 8.50¢ @ 9.50¢; Specials, 13¢ @ 25¢; Crucible Spring, 3.75¢; Open-Hearth Spring, 2.25¢ @ 2.50¢; Open-Hearth Machinery, 2.30¢ @ 2.40¢; Tire, 2.25 @ 2.50¢; Sheet, 7¢ @ 10¢.

Steel Rails.—Business has been very quiet, the largest order taken during the week being for 3000 tons. Inquiries are fairly numerous, and new projects are coming forward which may be carried out, if financial conditions are not too unfavorable. Prices are firm at \$30.

Old Rails and Wheels.—Old Iron Rails are very quiet. They are worth \$21.50 @ \$22 here, on a parity with other markets, but consumers are well supplied for the present, and are not disposed to pay even the lower price named. A sale of 400 tons is reported at \$24, delivered at Toledo.

Old Steel Rails in light demand and short lengths are now quoted at \$14. Sales of Old Car-Wheels are reported at \$19, but this is below the views of most holders, some of whom are willing to sell at \$19.25, while others want more.

Scrap.—Several hundred tons of No. 1 Wrought have been sold at \$20.75 @ \$21, the latter price being for a picked lot. Buyers are discriminating in their purchases of this class of material, and some lots of Scrap which would in times of activity pass readily as No. 1 are now going begging at \$19. The same remark applies to Mill Iron, a choice lot having been sold during the week at \$15.50, while the ordinary grading is worth but \$14. Cast Scrap is a drug at present, owing to the low price of Pig Iron. Mixed Country Scrap of good quality is worth \$14. Carefully selected Scrap sells at about the following prices per ton of 2000 lb: No. 1 Wrought, \$20 @ \$21; Track, \$19; No. 1 Mill, \$14 @ \$15.50; No. 2 Mill, \$10; Horseshoes, \$18.50; Axles, \$25 @ \$26; Machinery Cast, \$13.50 @ \$14; Stove Plate, \$10; Cast Borings, \$9; Wrought Turnings, \$10.50; Axle Turnings, \$13; Mixed Steel, \$11; Coil and Leaf Steel, \$15; Tires, \$15.50.

General Hardware.—Jobbers of Shelf Hardware report a very good inquiry for Nails and Barb Wire, and for spring goods generally, such as Steel Goods, Wooden-Ware, Wire Cloth, &c. Tools and Miscellaneous Hardware are moving quite freely. Traveling men are writing very encouraging letters relative to business prospects, country merchants speak hopefully of the condition of general business in their respective localities, and all signs now portend a large spring trade. Collections are very fair, showing that money is abundant. Prices are well maintained, but margins are very close on many goods now handled by the jobbing trade, compelling a larger volume of business than ever to secure a reasonable return on the capital invested. In Heavy Hardware business continues to improve, and jobbers are taking a much more cheerful view of the situation than in December.

Nails.—Manufacturers' prices are very firm for Steel Cut Nails at previous quotations, but jobbers' prices are irregular, being governed largely by circumstances. When purchased alone small lots command as high as \$2.10, but when ordered in connection with other goods they are sold down to \$2, which is very close to present cost. Wire Nails are in about the same condition, being quoted at \$2.50 @ \$2.55 in small lots and \$2.45 in mixed carloads, while manufacturers' prices are firm, with \$2.35 named as bottom for large lots. The manufacturers of Cut Nails are notifying their customers that present prices are made with no guarantee against change, and not subject to cancellation. They propose to make a radical change in the customs of the trade in this respect, and to make each sale absolute.

Barb Wire.—The demand has increased so rapidly that it now seems quite probable that manufacturers' stocks will be sufficiently depleted by the beginning of February to stiffen prices. Jobbers quote Painted at 2.90¢ and Galvanized at 3.50¢, with the usual reduction for carloads.

Pig Lead.—Sales of 300 tons are reported at 3.60¢ @ 3.65¢. The market is very quiet and steady.

Cleveland.

CLEVELAND, January 21, 1889.

Iron Ore.—The continued dullness in the Pig Iron market accounts for the delay in placing orders for new Ore. None of the numerous mining companies in this city have established their schedule of

prices for 1889. There is very little difference of opinion between the mine owners and the furnacemen as to what these prices will be, but the market is entirely without life, negotiations being confined exclusively to the odds and ends comprising the 60,000 tons of last season's Ore on the docks at Cleveland, Ashtabula and Fairport. The closing prices for last season's ore seem quite likely to be the opening prices for this year. The opinion among all interested parties in December was to the effect that substantial sales of new Ore would occur before the middle of January. Indeed, this opinion was held by both mine owners and furnacemen almost up to the day set for the opening of the market. Although nearly a week has elapsed since that time, there are no immediate indications of a buying movement. When negotiations are again resumed a vigorous demand is looked for and it would surprise no one if 2,000,000 tons of Ore were sold before March 1. About 30,000 tons of Ore have been shipped to the furnaces during the past week.

Pig Iron.—The market continues very dull, and concessions of 50¢ per ton have been made to purchasers of small lots of Bessemer Iron. Mill Irons are less affected by the apathy now existing, although sales are said to have taken place at prices from 25¢ to 50¢ below current quotations. Heavy purchasers are keeping clear of the market, as if anticipating an additional cut in prices, while the furnacemen believe a revival of former quotations and an active buying movement are sure to come within a very few days.

Old Rails.—The market gives but slight evidences of life. Old Americans at \$24 @ \$24.25 are in but slight demand.

Nails.—Steel Wire Nails have dropped to \$2.40 per keg, with no very pronounced demand even at this figure.

Later, by Telegraph.

Representatives of nearly all the mining companies in the city united this morning in the following statement: "None of the companies have fixed prices, and no direct inquiries from the furnacemen have been received. The opening of the Ore market is likely to be delayed until the middle of February. Unsold Ore on dock now amounts to less than 40,000 tons."

Cincinnati.

Office of The Iron Age, Fourth and Main Sts. (CINCINNATI, January 21, 1889.)

Pig Iron.—Another week, in which a very heavy and weak market has been continued, has closed. Cincinnati has not been alone in the whirl which has carried prices of Pig Iron down in the vortex of competition and excitement to a point at which producers can make no profit, and several concerns in the South are reported on the verge of bankruptcy—in fact, a receiver has been appointed for one furnace company, and it is rumored that similar appointments are not improbable. But this outcome has assisted the development of a more conservative feeling, or, at least, a less radical policy. At the close the market is still weak and heavy, but there is less pressure to sell at the lower prices current. It is no secret that list prices have been shaded, and No. 1 Southern Coke Foundry Iron has been sold down to \$14.75, if reliable information is to be credited. Northern, as well as Southern, Iron has shared in the general demoralization, but prices have suffered less acutely.

The volume of business during the week has been fair, but, with one exception, there has been an absence of large trades. One transaction embracing between seven and nine thousand tons of No. 1 Southern Coke Foundry Iron has been made on the basis of \$15 cash, for delivery, extend-

ing through the greater part of the year. Gray Forge has been sold at \$18 and Mottled at \$12, cash, to a moderate extent. A sale of 2000 tons No. 2 Southern Coke Foundry Iron is reported, equivalent to about \$14, cash, here, for delivery during the next 60 days. The following are the approximate prices current here at the close for cash, f.o.b.:

Foundry.		
Southern Coke, No. 1 (new classification).....	\$15.00 @	\$16.25
Southern Coke, No. 2 (new classification).....	14.50 @	14.75
Southern Coke, No. 3 (new classification).....	14.00 @	14.25
Ohio Soft Stone Coal, No. 1.....	16.00 @	17.00
Ohio Soft Stone Coal, No. 2.....	15.00 @	16.00
Mahoning and Shenango Valley.....	17.00 @	17.50
Hanging Rock Charcoal, No. 1.....	21.00 @	22.00
Hanging Rock Charcoal, No. 2.....	19.00 @	22.00
Tennessee and Alabama Charcoal, No. 1.....	18.00 @	18.50
Tennessee and Alabama Charcoal, No. 2.....	17.00 @	18.00
Forge.		
Strong Neutral Coke.....	13.00 @	13.50
Mottled Neutral Coke.....	12.00 @	12.50
Gray Forge.....	13.00 @	13.25

Car-Wheel and Malleable Irons.		
Southern Car-Wheel.....	20.00 @	25.00
Hanging Rock, Cold Blast.....	22.00 @	25.00
Lake Superior Car-Wheel and Malleable.....	21.00 @	22.00

Manufactured Iron.—There has been a fair volume of business, and under the circumstances prices have been well sustained.

Nails.—There has been a slow and an easy market, under a moderate demand and free offerings at previous prices: 12 @ 40d sell at \$1.90 @ \$1.95 $\frac{1}{2}$ keg, with 10¢ rebate in carload lots at the mills; 50 @ 60d 25¢, 10d 10¢, 8 @ 9d 25¢, 6 @ 7d 40¢, 3d \$1, and 2d \$1.50 $\frac{1}{2}$ keg more. Steel Nails sell at \$1.90 @ \$1.95, and Steel Wire Nails at \$2.60 @ \$2.65 $\frac{1}{2}$ keg.

Old Material.—An easy tone has prevailed, but prices have changed but little. Old Rails are quotable at \$22, and some sales have been made at near-by points equivalent to this rate. Old Wheels are not offered under \$19, but there are few buyers over \$18, cash.

Chattanooga.

Office of *The Iron Age*, Carter and 9th Sts., CHATTANOOGA, January 21, 1889.

Pig Iron.—The market remains stationary. In view of the large prospective increase in the Southern product this year over last, it is an open question whether prices will advance, unless some of the furnaces blow out; but, be that as it may, there are those who express the opinion very freely that Southern furnaces will continue to run at a profit, even if Iron goes \$2 or even \$3 $\frac{1}{2}$ ton lower—a decline hardly anticipated. The question of rolling stock for the transportation of Iron has again become a serious matter. In old times it was a very easy thing to get empty cars to carry north-bound freight, for the preponderance of freight was south-bound, and thousand of cars were being returned empty. Now the whole status is changed; empty cars are being called for from Northern connections, who are very reluctant to send them. The result is that the Southern lines, especially in the large manufacturing districts, choose to depend upon their own resources and such cars as they can "beg, buy or steal." The fact is that if 10,000 new cars were added to the rolling stock of the Southern lines they would not have any more than the trade demands, and the cry would soon be for more.

Miscellaneous.—General trade is good; there is no lack of orders among the manufacturers, and, what is more encouraging, there are a large number of moneyed men continually coming South with a view of investing in something or other and growing up with the country. Many parties who went in on the boom some two years ago are in that condition that

they are obliged to realize at the best figures they can get, and are unloading at reduced figures, and such opportunities are being picked up by those who have the money.

Detroit.

WILLIAM F. JARVIS & Co., under date of January 21, 1889, report as follows: The activity noted in our last report has increased, and more buying is being done than at any time for the past month. Car-Wheel Irons are the best in demand, but there is also a larger number of inquiries for Ohio Coke Irons. While prices on Lake Superior Charcoal are held firm, Coke Irons have declined 50¢ $\frac{1}{2}$ ton and some grades of Southern Iron fully \$1 $\frac{1}{2}$ ton. Although Benner still has faith in his prophecy of better prices for 1889, some few furnacemen, and a larger number of consumers, seem to doubt his trustworthiness as a prophet, and something more substantial than prophecy seems necessary to restore confidence in the market and cause prices to advance. We quote for the present as follows:

Lake Superior Charcoal, all numbers.....	\$20.00 @	\$20.50
Lake Superior Coke, all ore.....	19.50 @	20.00
Lake Superior Coke, cinder mixed.....	18.00 @	18.50
Standard Ohio Black Band.....	19.50 @	20.00
Southern No. 1.....	17.25 @	17.75
Southern Gray Forge.....	15.25 @	15.75
Southern Silvery.....	17.00 @	17.50
Jackson County (Ohio) Silvery.....	18.50 @	19.00
Old Wheels.....	20.00 @	20.50

Birmingham.

BIRMINGHAM, ALA., January 21, 1889.

Pig Iron.—There is nothing notably new in the situation here. The market is dull to the point of complaint. There is little stock on hand at any of the furnaces, all being well sold ahead. Recent sales of some off grades has created the impression that there was a material decline in Pig Iron, but it is claimed that high grades hold up fairly well, most of the companies refusing to sell for spring and summer delivery at the present prices, as they feel confident of better figures in the summer months. A prominent local Ironmaster says that not over eight or ten furnaces in the country can make Iron at a profit on the prices made by the commission merchants of the West, and as such a condition of affairs cannot last long, and the supply will soon be exhausted, better prices are to be expected. A few furnaces in the district held off, expecting better prices with Harrison's election, but had to sell at disappointing figures. All seems going smoothly in the way of operation of the big plants. It takes considerable energy to keep up the supply of Coke, but all the furnaces manage to get along. The new Thomas Furnace, No. 1, made the other day 132 tons of No. 1 Foundry Iron. They are mixing a high-grade brown Ore with their red ores. The Williamson Furnace in this city will go in blast on Tuesday, having been increased from a 40 to a 70 ton furnace.

Miscellaneous.—Business is quiet, but healthy, with the rolling mills and other minor Iron industries. Expectation of better prices, certainly by the 1st of February, keeps up hopefulness. The appointment of a receiver for the Sheffield & Birmingham Coal, Iron and Railroad Company, who own three 100-ton furnaces at Sheffield, is not regarded with any trepidation here. Inability of the company to float their securities at fair prices is given as the chief cause of the trouble, while inability to get Ore and Coke is also a well-known and admitted cause. This deficiency, however, can shortly be supplied, as both Coal and Ore are fairly convenient. It is held that the furnaces were built really before proper provision was made to supply them with material for operation.

Pittsburgh.

Office of *The Iron Age*, 77 Fourth Ave., PITTSBURGH, January 21, 1889.

Business is slow and unsatisfactory. In addition to a very light demand, prices for almost everything are being cut to such an extent that there is but little margin for profit, the natural result of an active competition. It appears to be impossible to hold together an organization to keep up prices. Manufacturers anxious for business will cut, and when a desirable order is offered it usually goes the rounds and is cut to such an extent that the successful firm in getting it has to take it at such a price that there is little or no profit. The Iron Nail, Wrought-Iron Pipe and Window Glass associations still keep up their organizations, but for the present they do not pretend to maintain uniform prices. The hitch between the natural gas companies and our manufacturers in regard to the price of gas for fuel still remains unsettled. The gas companies refuse to make any concessions, and thus the matter stands.

Pig Iron.—Since our last report there has been a further decline of 25¢ to 50¢ $\frac{1}{2}$ ton, with sales of Neutral Gray Forge at \$15 @ \$15.25, cash, and Bessemer at \$16.75, cash. Furnacemen say that they will be unable to make any further concessions in price, unless they get down the cost of production, of which there is but little prospect at present. We quote prices as follows:

Neutral Gray Forge.....	\$15.00 @	\$15.25, cash.
All Ore Mill.....	15.75 @	16.00, "
White and Mottled.....	14.50 @	14.50, "
No. 1 Foundry.....	17.25 @	17.50, "
No. 2 Foundry.....	16.50 @	16.75, "
No. 1 Charcoal Foundry.....	23.50 @	24.00, "
No. 2 Charcoal Foundry.....	21.00 @	21.50, "
Cold Blast Charcoal.....	25.00 @	28.00, "
Bessemer Iron.....	16.75 @	17.00, "

Included in the sales reported were 1000 and 500 tons Gray Forge at \$15, cash; 500 do. at \$15.25, and 500 do. at \$15.30, cash, and a small lot of Bessemer at \$16.75, cash.

Muck Bar.—The dullness noted for some time past continues, and while there have been no sales reported below \$28, cash, it is offered freely at that figure. There has been very little demand for the article for some time past, and some mills working almost exclusively on it have shut down.

Manganese.—Sale of 100 tons, 80 %, at \$56, cash; Spiegel is still quoted at \$28 @ \$28.50, cash, for 20 %.

Manufactured Iron.—Demand continues light, and there is reason to believe that desirable orders could be placed below our quotations; it is expected, however that orders will commence to come forward more freely within the next few weeks. In addition to the regular merchant trade it is expected that there will be a good demand for all the leading specialties. We repeat former quotations: 1.75¢ @ 1.80¢ for Bars; Plates, 2.20¢ @ 2.25¢; No. 24 Sheet, 2.85¢ @ 2.90¢, all 60 days, 2 % off for cash. Skelp Iron is quoted at 1.80¢ @ 1.85¢ for Grooved, and 1.95¢ @ 2¢ for Sheared.

Nails.—There is no change to note in the situation here; business continues extremely dull, and no improvement can be looked for as long as Wheeling undersells us 10¢ $\frac{1}{2}$ keg. The Wheeling card is \$1.80, while Pittsburgh is \$1.90, 60 days, 2 % off for cash.

Old Rails.—The market continues very dull, and in the absence of sales it is difficult to give reliable quotations. Consumers continue to hold off, buying only as their immediate actual necessities require, and until they have some assurance that hard pan has been reached it is not likely that they will anticipate future wants. American Tees could no doubt be had at \$24, and possibly for less, but so far as we can learn these have not been

offered below that price. It is only within the last few days that the weather has been so severe as to suspend the work of lifting, and if it should hold out any length of time the offerings will of necessity fall off.

Wrought-Iron Pipe.—There is a fair business for this season of the year, but it is complained that there is no profit at the prices ruling, and in this latter respect there is but little prospect of any immediate improvement. Discounts on Black Butt-Welded Pipe, 52½ and 5¢; on Galvanized do., 45 and 5¢; on Black Lap-Welded, 62½¢; on Galvanized do., 52½¢; Boiler Tubes, 65 and 5¢; 2-inch Tubing, 13¢ per foot, net; 5½-inch Casing, 35¢ per foot, net.

Steel Rails.—There appears to have been no change in the market here during the past week; \$28, cash, is still the ruling price for lots ranging from 1000 up to 5000 tons. We are advised of a sale of 2000 tons at the price quoted. It is probable, however, that for large orders, say, 10,000, 15,000 or 20,000 tons, the price quoted would be discounted.

Billets, &c.—Bessemer Steel Billets are still reported dull and weak; quoted at \$28 @ \$28.25; Bessemer Steel Nail Slabs, \$27.75 @ \$28; Domestic Blooms and Rail Ends, \$18.50 @ \$19. No sales reported recently, and the market is weaker.

Railway Track Supplies.—Demand reported light, while prices remain unchanged. Spikes 2¢, 30 days, for Pittsburgh; Splice Bars, 1.80¢ @ 1.85¢; Track Bolts, 2.80¢ with Square and 2.90¢ with Hexagon Nuts.

Merchant Steel.—Prices remain unchanged, Tool Steel standard brands, 84¢; Crucible Spring, 44¢; Crucible Machinery, 5¢; Open Hearth do., 24¢.

Old Material.—Demand continues light and prices weaker; No. 1 Wrought Scrap, \$21.00, Wrought Turnings, \$18 @ \$18.50; Car Axles, \$25 @ \$25.50; Cast Scrap, \$15.50 @ 16, gross; Cast Borings, \$12 @ \$13; Old Car Wheels, \$19 @ \$19.50, gross; Old Steel Rails \$18.50 for short, and \$20 for long lengths.

The partnership heretofore existing between G. Getty Stuart and F. W. McLean, under the title of Stuart & McLean, Iron and Steel Factors, Hamilton Building, Pittsburgh, Pa., was dissolved on the 1st inst. by the retirement of G. Getty Stuart. The business will be continued by the remaining partner, Frank W. McLean, Iron and Steel Factor, Hamilton Building, Pittsburgh, Pa.

Louisville.

LOUISVILLE, KY., January 21, 1889.

The market has remained steady during the last week, though prices have been very low. Several of the furnaces that were willing to sell have now placed what Iron they desired to offer for the next few months, and there is not the same amount of Iron being offered. Buyers, however, are able to have their wants supplied, especially for short deliveries.

All furnaces are not willing to sell for future shipment, but are holding back, preferring to accumulate Iron until the market is better, or if necessary, go out of blast rather than sell at present prices. There has been a fair amount of Iron bought, and in all cases at low figures, parties believing it is wise to buy for future consumption all the Iron they will need during the coming year at ruling figures. We quote as follows:

Southern Coke, No. 1 Foundry, new classification, \$15.00 @ \$15.50
Southern Coke, No. 2 Foundry, new classification, 14.50 @ 15.00
Southern Coke, No. 3 Foundry, new classification, 14.00 @ 14.50
Gray Forge, new classification, 13.50 @ 14.00
White and Mottled, different grades, 13.00 @ 13.50

Silver Gray, different grades, 13.25 @ 14.00
Southern Charcoal, No. 1 Foundry, 13.50 @ 17.00
No. 1 Mill, 15.00 @ 15.50
Southern Car-Wheel, standard brands, 22.00 @ 23.00
Southern Car-Wheel, other brands, 18.25 @ 19.75
Hanging Rock Coke, No. 1 Foundry, 15.75 @ 16.25
Hanging Rock Charcoal, No. 1 Foundry, 19.75 @ 21.25
Hanging Rock, Cold Blast, 21.00 @ 24.00

New York.

Office of *The Iron Age*, 66 and 68 Duane street.
NEW YORK, January 23, 1889.

Foundry Pig.—Our local market has not been as deeply disturbed as have been those of the West, from which, however, come well-authenticated reports of very low sales, which cannot help having a sharp influence upon the trade here. The aggressors in the West have been some of the Alabama companies. Business has been done in Cincinnati at \$14.75 for No. 1 Southern Foundry, and in Chicago at \$16. This is equivalent to \$12 at Birmingham for both. We should add that these prices have only been made in isolated cases thus far, that other leading companies have declined to meet them, and that buyers have promptly taken hold at the figures named. It remains to be seen whether they are at all likely to become general. But it must be remembered that if they do they establish a distinctly lower level in Philadelphia and here, in spite of the delays of shipments by regular routes to these points. In other words, on the basis of a Birmingham selling price of, say, \$12 for No. 1 Foundry, the Iron can be put into Philadelphia by all-rail, avoiding all delays at Savannah, at \$4.50, making the delivered price \$16.50, while for New York the figure would be \$17. By steamer the figure is \$16 in both cases. Southern Iron shipped by steamer has been offered here during the past week at \$16.75 for No. 1. If the cut in the West initiated by a few should become general, which it has not as yet, the low figures named could be made without any dependence whatever on the mercy of the steamship lines. It seems clear that under such circumstances \$17 for standard brands of Northern Iron would not be a low price, and, unless affairs take a sudden turn for the better, that figure will become the opening price, unless even a greater cut is deemed expedient. There seems little doubt that production at the present rate is in excess of current consumption. Reports from consumers are conflicting. A good many of the smaller foundries are very busy, but some of the larger concerns are doing little. The immediate outlook for many furnaces is very discouraging and indicates that it would be wisest to blow out if the plant is not running to best advantage or cost can be materially reduced, which is probably the case in only a few instances. Iron makers in Eastern Pennsylvania have had additional burdens placed upon them by advances in freights, early in the month, to New England points by all-rail. They have sought some relief by shipping to tidewater and forwarding by vessel to the nearest New England port. Off grade Irons are reported to be weak.

Scotch Pig.—The market is quiet at unchanged quotations. Coltness, \$20.50 @ \$21; Shotts, \$20 @ \$20.50; Langloan, \$20 @ \$20.25, Summerlee, \$20.25 @ \$20.50 and Dalmellington, \$19.25 @ \$19.50.

Spiegeleisen.—No business is reported, the high prices asked causing buyers to hold off and take their chances of the future. We quote \$28 @ \$29 for 20 % English.

Plates.—We quote Iron Tank, 2¢ @ 2.2¢; Shell, 2.35¢ @ 2.4¢; Steel Tank and Ship Plate, 2.15¢ @ 2.25¢; Shell, 2.35¢ @ 2.5¢; Flange, 2.6¢ @ 2.75¢, and Fire-box, 3½¢ @ 4¢.

Structural Iron.—The sensational reports of a rupture in the Beam Association printed in the daily newspapers are without any foundation whatever. A meeting was held at Philadelphia, on Monday, to perfect certain details which could not be settled at the New York meeting, because some of the leading manufacturers were forced to leave for their homes. The principal point taken up at Philadelphia was to give the makers the option to sell Plate Girders at 2.8¢, instead of holding to 3.3¢, as heretofore. We quote Sheared Plates, 1.9¢ @ 2¢; Universal Mill Plates, 2¢ @ 2.1¢; Angles, 2¢ @ 2.10¢; Tees, 2.5¢ @ 2.6¢, and Channels and Beams, 2.8¢ on dock for all sizes.

Bar Iron.—The market is weak. We quote: Carload lots on dock, half extras, Common, 1.65¢ @ 1.75¢; Medium, 1.75¢ @ 1.8¢, and Refined, 1.8¢ @ 2¢.

Steel Rails.—Sales reported by Eastern mills foot up to about 16,000 tons, of which 10,000 tons were taken by a New England road from two Eastern Pennsylvania mills. We note also a lot of about 2500 tons for the Pacific Coast. At this writing probably a 6000-ton order for a Virginia road has been closed, as also a 7000-ton lot by an Illinois road, Chicago delivery. There are orders in the market for the South, and some large business is being talked of for Pacific Coast delivery. Prices at Eastern mill remain the same. It is difficult to quote, each individual order being largely dependent upon the chances of low freight rates by one or more mills. We quote nominally \$27.50 @ \$28 at Eastern mill. An error crept into our table of the shipments of the different mills published last week. We give below the correct figures for 1888:

	Gross tons.
North Chicago Rolling Mill Company	161,945
Carnegie Bros. & Co	188,946
Scranton Steel Company	186,029
Lackawanna Coal and Iron Company	128,310
Union Steel Company	126,016
Pennsylvania Steel Company	121,960
Joliet Steel Company	114,675
Bethlehem Iron Company	85,448
Cambria Iron Company	82,363
Western Steel Company (former lessees)	39,168
Cleveland Rolling Mill Company	29,940
Troy Steel and Iron Company	25,110
Worcester Steel Company	6,569
Springfield Iron Company	3,705
Total	1,200,184

It will be understood that these are the shipments of the different concerns in the year 1888 of Rails weighing 50 lb to the yard and upward, as reported to the Board of Control. James M. Swank, secretary of the American Iron and Steel Association, officially reports the total production of all Steel Rails, including Light Rails at 1,364,337 gross tons. So far as we have been able to ascertain it, the position of the different mills at this writing is: North Chicago, Carnegie, Lackawanna, Pennsylvania, Cambria and Joliet are running, some of them light, and only one, or possibly two, at full capacity. Scranton and Bethlehem are temporarily idle. The others are closed down for an indefinite period. Even among the small number of active mills, some important concerns are not by any means eager sellers. Mills, both on the active list and some who have stopped making Rails, are giving considerable attention to the Billet and Slab trade, and are working on specialties. The market has, therefore, narrowed down very considerably, and the sellers may be classed in three groups—those of Eastern Pennsylvania, including the Bethlehem, the Pennsylvania and the two Scranton mills; the three of the Pittsburgh-Johnstown district, which are Carnegie, Cambria, and the Allegheny, and the three Chicago mills who are acting in harmony. Among these at least three, all of them large works, have practically sold their allotment, or are

very near it, which means that they have six months' work or more on their order books, if they make as much or more even than they did last year. Since the smaller mills are confessedly unable to meet present prices, and a number of the larger works are indifferent about meeting them, being fairly well employed in other directions, it is reasonable to suppose that little can be gained by buyers by holding off. It is not claimed that any sharp advance is probable in the near future, but from our review of the situation the inference seems logical that no further decline is probable, but that, on the contrary, a stiffening is not impossible in the near future. The only uncertain factor is the new mill, which may or may not be eager for business a little later on. Its influence is not likely to be as deeply felt then as it was two months ago, because then the number of contestants for business was considerably larger. While certainly not bright, the outlook is far from being as dark as many seem inclined to regard it.

Wire Rods.—Only a very small business has been done in foreign Rods at \$41.50, which we quote. We note also a sale of 500 tons of domestic Rods by an Eastern Rod mill to a Wire mill at the reported price of \$41.50, delivered at buyer's works.

Old Rails.—The only sales reported are one lot of foreign Tees of 500 tons at a price equivalent to \$23.50, Jersey City, and a small lot of 150 tons to a mill in Eastern Pennsylvania. A lot of 500 tons foreign, in store, is being offered at \$23. There is some demand, and holders continue firm on what little supply there is. We quote \$23 @ \$23.50.

Scrap Iron.—The market is dull, only few sales being reported. The bulk of the arrivals lately have been mixed lots which have sold at \$18. No. 1 Wrought, at yard, is quoted \$20 @ \$20.50.

Track Material.—Spikes are very weak, being readily obtainable, for large quantities, at \$2.05 @ \$2.10. It is intimated even that business has been done at less. We quote Angles at 1.85¢ @ 1.90¢.

Metal Market.

Copper.—Since our last report Spot Chili Bars and Good Merchantable declined from £77. 17/6 to £77. 7/6, futures remaining unaltered, £78, and Best Selected, £79 10/. Sales for the week, 500 tons. In this market the sales were limited to 25,000 lb. January, at 17.20¢, and 25,000 lb. March, at 17.25¢. The quotation of Lake, which the syndicate sells consumers, is, as heretofore, 16 1/4¢, casting brands sell at 15 1/4¢ @ 16 1/4¢. In Philadelphia the latter are locally selling at considerably less than 16¢. The market is altogether featureless and awakens little interest among the trade. During the first ten months of 1888 the Spanish export of Pyrites amounted to 699,838 tons, as compared with 650,535 in 1887 and 574,285 in 1886; of Precipitate it was 24,152 tons, against 23,825 and 23,378.

Tin.—A further decline has taken place in the London market in spot Straits from £98. 2/6 a week ago to £97 this morning, and in futures from £98. 12/6 to £97. 10/. Sales, 510 tons. Our own Exchange has exhibited a little more activity, the tendency being drooping all along in response to the London decline. Some 60 tons were sold, March from 21.75¢ down to 21.70¢, April from 21.95¢ to 21.80¢, and finally February at 21.65¢. The best obtainable for spot is now 21.50¢, and for 5-ton lots 21.70¢ is asked, spot being held at 21 1/4¢ at the close. The entire situation lacks vitality and excites little interest among bona fide dealers owing to the light consump-

tive demand. Messrs. Gilfillan, Wood & Co., Singapore, cable to their agent, Mr. Chas. Nordhaus, 89 Water street, New York, January 17, that the shipments this way first half of January were 300 tons, against 150 in 1888, and to England 600, against 1400. In piculs they were this way first 11 months of 1888, 55,072, against 69,570 in 1887, 66,873 in 1886, 37,058 in 1885, 55,279 in 1884, and 106,231 in 1883. Rains are impeding receipts from the interior of the Peninsula. **Tin Plates.**—The market has been steady, with a light consumptive demand. A moderate business has been doing in futures, without change in price. Makers in Wales hold prices steadily; there is a difference of 2 1/4 to 5¢ per box between buyers and sellers. We quote, large lines, per box; Siemens-Martin Steel, Charcoal Finish, \$4.75 @ \$5.50; Coke Finish, \$4.65 @ \$4.70; Terns \$4.12 1/2 @ \$4.25; Coke Tins, \$4.22 1/2 @ \$4.30, and Wasters, \$4.12 1/2 @ \$4.15. Liverpool Coke rules 13 to 13/3.

Lead.—All that was sold in the open market in the city during the week under review was 600 tons, at 3.85¢ down to 3.80¢, which is the closing quotation on a flat market. The Western markets ranged from 3.60¢ down to 3.55¢. Sales of a few carload lots at the Exchange were made to-day at 3.80¢ for January and 3.85¢ @ 3.87 1/2¢ for March delivery. Soft Spanish has not changed from £12. 17/6, but English Pig gave way from £13. 7/6 to £13. 5. Spanish export of Pig Lead has been, during the first ten months of last year, 109,212 tons, against same time in 1887 111,357 tons, and 94,097 in 1886.

Spelter.—Has been decidedly firmer at 5¢ for Common Domestic because of greater scarcity. Out West more has been done, consumers laying in a stock to last them a couple of months, and the market out there rules stiffer. Silesian is neglected for the moment at 5.87 1/2¢ @ 5.90¢, nominally, not varying from £18. 7/6 in London. In Europe the International Syndicate may be considered virtually renewed for three and a half years to date from July 1 next, with the additional strength that a few makers who had hitherto not joined the same have now done so. Spanish Calamine export during the first ten months of last year has been 24,361 tons, against 21,473 same time in 1887 and 22,497 in 1886.

Antimony.—A brisk demand has been noticeable during the week, for Cookson in particular, which is extremely scarce, and cannot be quoted less than 13¢ @ 13 1/4¢, while Hallett commands 11¢ @ 11 1/4¢, remaining £45 in London.

New York Metal Exchange.

The following sales are reported:

THURSDAY, January 17.	
10 tons Tin, April	21.95¢
10 tons Tin, April	22.00¢
FRIDAY, January 18.	
10 tons Tin, March	21.75¢
SATURDAY, January 19.	
10 tons Tin, March	21.70¢
MONDAY, January 21.	
10 tons Tin, April	21.80¢
25,000 lb Lake Copper, March	17.25¢
TUESDAY, January 22.	
10 tons Tin, February	21.65¢
25,000 lb Lake Copper, January	17.20¢
WEDNESDAY, January 23.	
16 tons Lead, January	3.80¢
16 tons Lead, March	3.85¢
32 tons Lead, March	3.87 1/2¢

Coal Market.

Lugubrious accounts are received from the Coal trade in both branches, Anthracite and Bituminous alike, in the absence of anything approaching zero weather. The complaint is of a sluggish demand,

quite disproportioned to the receipts from the mines, and this despite the combined efforts to retard production, which for the week ended 19th inst. amounted to 604,000 tons, a decrease of 36,000 tons compared with the previous week, but 42,000 tons in excess of the corresponding week in 1888. Since January 1 the aggregate is 1,669,990 tons, against 1,705,772 for the same time last year, a decrease of 35,000 tons. Prices are upheld with tolerable success by the companies, who recognize no change in quotations, but individuals cut freely at about 25¢ per ton off. Even at cut rates it is said that Coal moves sluggishly. Shipping points are well stocked and at Western points there is too much accumulation to please the holders. Quotations are: Hard White Ash, Lump, \$4.50; Broken, \$4.15; Egg, \$4.40; Stove, \$4.65; Chestnut, \$4.55; Free-Burning, f.o.b., Broken, \$3.95; Egg, \$4.30; Stove and Chestnut, \$4.65; Pea, \$2.75.

Freights eastward are weak at \$1.15 and discharge from New York to Boston.

The case of Cox Bros. against the Lehigh Valley Railroad on the charge of discriminating is postponed to February 7. The company have decided to remove their New York headquarters to the Equitable Building.

In the Bituminous trade there is no change.

The Anthracite Coal tonnage for 1888, as compiled by John H. Jones, Chief of the Bureau of Anthracite Coal Statistics, shows that 38,145,718.04 tons were mined, as compared with 34,641,017.15 in 1887. For December the production was 2,703,923.02 tons, against 3,068,078.12 in 1887. The detailed statement for the year follows:

	1888.	1887.
Phila. and Reading	7,175,096.08	7,556,251.13
Lehigh Valley	6,562,715.14	5,784,450.11
Central R. R. of N. J.	5,742,279.03	4,852,559.01
Del., Lack. and West.	6,996,192.00	6,220,702.12
Del. and Hud. Cl. Co.	4,436,188.05	4,046,230.06
Pennsylvania	4,554,440.10	3,516,143.05
Penna. Coal Co.	1,624,438.06	1,803,455.18
N. Y. L. E., and W.	974,373.10	750,834.12
Total	38,145,718.04	34,641,017.15

The product of the three regions was: Wyoming, 21,852,365 tons in 1888, as compared with 19,684,928.15 in 1887; Lehigh, 5,639,236 in 1888, as compared with 4,347,061 in 1887; Schuylkill, 10,654,116 in 1888, as compared with 10,609,027 in 1887. The stock of Coal on hand at tide-water shipping points, December 31, 1888, was 652,156 tons, as compared with 569,233 tons on November 30, and 130,977 tons on December 31, 1887.

The Eastern competitive tonnage, including all Coal which for final consumption or in transit reaches any point on the Hudson River, or the Bay of New York, or which passes out of the capes of the Delaware, was: 1888, 13,657,604 tons; 1887, 12,081,826 tons.

Financial.

Uninterrupted transportation has been remarkably favorable to the movement of merchandise, but since the advance in rates under the recent agreement of railroad presidents and bankers a check is observed in several channels. This is especially noticeable in east-bound shipments from Chicago, which are not one-half of what they were prior to December 17, when former contracts expired. Aside from this influence, as concerns the grain trade, the barge lines on the Mississippi River are competing sharply, to the detriment of railway earnings. Despite this exceptional feature, trade movements in the aggregate contrast favorably with one year ago, as indicated by bank clearances in nearly all leading points. For the week ending January 19 the total shows a gain of 22%. In New York the increase is 25.7%; outside of New York, 15.9%. The improvement is very general,

Boston and Philadelphia not excepted. Points in the Northwest, as usual, show the largest percentage of increase. Denver leads all, with a gain of 56.5 %, and there is more than usual activity in Cincinnati, Milwaukee and Cleveland. St. Paul reports only 4.2 %, against 29.3 % for Minneapolis. Other favorable features are a very substantial improvement in exports, particularly in cotton and provisions; important progress in measures for settling railroad troubles on a permanent basis, and a steady augmentation of bank reserves.

The weekly statement of the city banks was again favorable, showing an increase of \$3,480,400 in the surplus reserve, which now amounts to \$18,029,550, against \$20,914,475 at the corresponding time last year, and \$18,796,375 in the third week of January, 1887. The surplus has thus doubled within a few weeks, placing the banks in a position to meet any drain from a renewal of gold exports, which some bankers regard as more than probable. Loans increased \$3,000,000; specie, \$3,518,000; legal tenders, \$1,639,400; deposits, \$6,750,000. In the West money is in demand. In Wall street money is in abundant supply at about 2½ % on call, with a limited demand. Excepting banks and trust companies, lenders were less particular respecting the character of collaterals, but are looking for better rates in March. First-class paper is quoted 2½ % at 60 days, and 3½ @ 4 % four to six months. In bank stocks, 10 shares of Continental sold at 129, and 35 shares of Commerce at 182.

A statement prepared by the actuary of the Treasury Department shows actual prices of United States bonds during the last two months, and rates of interest accruing to purchasers who buy at present rates and hold the bonds until they mature. It shows that 4 % bonds maturing July 1, 1907, selling at average of 127.9, realize 2.2 % per annum. The 4½s maturing September 1, 1891, sell at 108.7 and realize but 1.06 interest.

Trade circles are quiet. Prices of Wheat have receded about 2¢ a bushel. Dairy stocks, apples and potatoes have suffered from unseasonable weather, and in some instances shippers have suffered severely. Provisions are all on the downward move. Coffee has gained on the basis of crop reports, and groceries generally are tame. The principal feature was the opening dealings on the new crop of Cuba molasses. Exports of provisions from all Atlantic ports last week were 13,946,161 lb bacon, 9,953,221 lb lard, and 5227 barrels pork, a heavy gain on the corresponding time last year. The outlook in all directions for trade in dry goods appears to be favorable for both the spring and fall season. Charleston reports a cotton crop that will approximate, if it does not reach, the magnificent total of 7,500,000 bales.

The Stock Exchange markets drooped, influenced by the passing of the dividend on Atchison, Topeka and Santa Fé, which declined over two points on Thursday, and caused a weakness in other Southwestern shares, more materially Rock Island and Missouri Pacific. Bear raids were the chief source of disturbance. On Saturday Atchison was again the feature. The favorable bank statement caused an improvement, but in the final dealings Atchison was again broken down. A further decline in this stock on Monday had an unsettling effect. The grangers were favorably influenced by reports that a meeting of railroad presidents would be held on Thursday, at which steps would be taken for the organization of the Interstate Railway Association. On Tuesday news of the engagement of \$500,000 gold for shipment encouraged the bears, and the market was irregular at the close.

The Trunk Line presidents, at a meeting in Commissioner Fink's office, passed resolutions recognizing the agreement of the Western presidents.

The market for sterling is strong, owing to the continued scarcity of commercial bills, and brokers advanced their posted rates to \$4.86½ @ \$4.89½. Hopes are entertained that the decline in wheat will go far enough to permit a freer outward movement of breadstuffs, but English prices are about 25¢ under American wheat, and similar conditions prevail in France. At present foreigners are not buying our stocks and bonds. The London *Economist* doubts the wisdom of the recent reduction of the bank rate to 4 %, as the South American demand for gold has been suppressed rather than satisfied, and there are other demands that are believed to have been kept in abeyance because of the higher rates for money that recently obtained.

The December statement of the export of breadstuffs from the United States presents some curious and interesting features. The total money value of the shipments was \$10,155,796, or only \$214,798 less than in 1887. Exports of wheat were curtailed by the high prices then prevailing, but, despite a falling off of 306,684 bushels, the money value was \$59,000 greater than in 1887. There was a decrease in the exports of flour from 1,171,365 barrels in 1887 to 698,613 barrels in 1888. On the other hand, the shipments of corn increased to the extent of \$1,408,277.

According to the Custom House report the exports of specie from this port during the week were \$431,000, making a total of \$1,219,000 since January 1, as compared with \$939,000 for the same time in 1888. The imports of specie for the week were \$220,000.

Nine removals from the appraiser's office were announced, as the result of the investigations of the special Treasury agents in the sugar, wool, hardware, tobacco and damage allowance divisions.

The New York Cotton Exchange has mortgaged its property at Hanover square and William street to the Mutual Benefit Life Insurance Company, of Newark, New Jersey, for a loan of \$310,000, payable in five years. The New York Board of Trade and Transportation elected Ambrose Snow, president; Gardner R. Colby, George L. Pease and James H. Seymour, vice-presidents; Darwin R. James, Secretary, and John C. Cook, treasurer. The annual election of officers at the Coffee Exchange, resulted in the success of the regular ticket for the principal officers. There was an exciting contest, however, over the Board of Managers, and the opposition ticket was carried by a decisive majority.

The imports of merchandise at this port during the week were valued at \$9,161,000, of which \$2,628,000, represents dry goods. Since January 1 the total is \$30,288,320, against \$28,012,00 for the same time last year and \$25,402,000 in 1887.

British Iron and Metal Markets.

[Special Cable Dispatch to The Iron Age.]

LONDON, WEDNESDAY, January 23, 1889.

Chili Bar Copper for prompt delivery has ruled a shade lower. The demand for covering of "short" sales has not met expectations, and outside holders who were disposed to realize had to do so at a loss. Prices for futures are held firmly. There were no deliveries of Chili Bars during the first half of the current month, and the demand from consumers the past week has been very small as well. Furnace Material also

remains dull. A sale is reported of 340 tons American Ore at 14/4½ at Liverpool. Nothing new has developed as regards the "Copper Bank," or the rumored English syndicate. The turnover of Bars in a speculative way the past week is estimated at 800 to 900 tons.

Block Tin has declined about £1 during the week, apparently under pressure from the large operators, who are suspected of manipulating the market with a view of forcing outsiders to part with their holdings. The latter have sold with some freedom because of the cheerless aspect and express surprise at the languid condition of the market. Probably 600 to 700 tons have changed hands during the week.

Tin-Plate makers report a better demand, and in some instances call the market active. The majority are fairly well sold ahead, and, therefore, firm on prices. Stocks at the shipping ports are of larger total now than a year ago. The Ashburnham Company are erecting a new works at Carmarthen.

An improved demand is reported for Wrought Scrap Iron, and the fact is ascertained that the stock here of desirable lots is comparatively small. There is, however, no improvement in the demand for Old Iron Rails.

No new facts come to the surface regarding the proposed combination of Steel-Rail manufacturers, and the presumption is that organization has not yet been completed.

There has been very little change in the course of trade in Pig Iron, Manufactured Iron or Steel the past week, and the variations in prices are slight. Billets and Wire Rods are offered at 1/3 under the figures previously asked, and some brands of Scotch Pig are 6d off.

Scotch Pig.—There has been a fairly active business at about last week's prices.

No. 1 Coltness, f.o.b. Glasgow	50/6
No. 1 Summerlee, " "	50/
No. 1 Gartsherrie, " "	48/6
No. 1 Langloan, " "	49/6
No. 1 Carnbroe, " "	48/6
No. 1 Shotts, " at Leith	49/6
No. 1 Glengarnock, " Ardrossan	47/6
No. 1 Dalmellington, " "	48/
No. 1 Eglinton, " "	47/6
Steamer freights, Glasgow to New York, 3/6	
Liverpool to New York, 10/.	

Cleveland Pig.—Demand has been slow and prices are a trifle weak. No. 1 Middlesboro', G. M. B., 36/; No. 3 do., 33/6.

Bessemer Pig.—A good trade still reported with prices steady. West Coast brands, mixed numbers, 45/, f.o.b. shipping point.

Spiegeleisen.—The market remains very firm and is fairly active. English 20 % quoted 80/, f.o.b. N. W. England shipping point.

Steel Rails.—Demand continues brisk and the market strong. Heavy sections quoted at £3. 19/6 @ £4, and light sections £4. 2/6 @ £4. 12/6, f.o.b. at N. W. England shipping point.

Steel Blooms.—Very little doing in these at the moment. We quote £3. 18/6 for 7 x 7, f.o.b. at N. W. England shipping point.

Steel Billets.—The demand moderately active and sellers very firm. Bessemer, 2½ x 2½ inch, £4. 5/, f.o.b. at N. W. England shipping point.

Steel Slabs.—A fair business passing at firm prices. Bessemer, £3. 18/6, f.o.b. at N. W. England shipping point.

Hardware.

There is some movement in trade and indications of a fair business at an early day. Prices are without important change. While some lines are somewhat firmer, the general tone of the market is not strong, but most leading goods are held at about the figures which have recently prevailed.

Cut Nails.

The market has gained in strength, but prices are not notably higher, although cutting is now reduced to a minimum. We continue to quote carload lots \$1.80 @ \$1.90.

At the meeting of the Eastern Nail manufacturers held at Philadelphia last week no final conclusion was arrived at in regard to the plan proposed. The meeting adjourned subject to the call of the committee, which is elaborating some details.

Wire Nails.

During the past two or three weeks large quantities of Wire Nails have been sold at prices which have varied considerably according to the circumstances, some of the Nails having been purchased at considerably lower quotations than are now obtainable. Several of the leading manufacturers are well supplied with orders, and for this reason are holding prices a little more firmly, while the extremely low quotations made have been withdrawn. The market is consequently in a somewhat better condition, more from the causes mentioned than from any agreement reached by the manufacturers, between whom the competition still continues animated. The price at factory remains about \$2.30 in carload lots, the price from store being \$2.50 to \$2.60.

Barb Wire.

A meeting of the manufacturers of Barbed Wire of St. Louis was held in that city on the 9th inst. A review of the past six months' trade, as admitted by the different manufacturers present, proved anything but satisfactory; on the contrary, it was intimated that the way prices had been cut the business had proved unremunerative, and the only solution of the problem was to make a list of prices and strictly adhere to them. In accordance with this decision it was decided to ask the co-operation of Oliver & Roberts Wire Co., Pittsburgh, Pa., in maintaining the following prices, which was readily obtained. Below will be found prices, which are to continue until further notice: To the in car lots, two or four Point trade, Painted, \$2.90, with 60 cents advance for Galvanized. Less than car-lots, 5 cents above this price. The matter of an advance in Texas freight rates was also carefully discussed, and it was deemed essential and was agreed, that where goods were to be delivered to common points in Texas, with a 63-cent tariff, the price will be \$3.50 for Painted, and \$4.10 for Galvanized. To other points in Texas, where the tariff is over 63 cents, add such excess to the above delivered price. There was the utmost harmony existing in the meeting; every representative fully realized the necessity of adopting the above prices, and also the importance of adhering strictly to them. The St. Louis manufacturers were all represented, namely:

THE FREEMAN WIRE COMPANY,
ST. LOUIS WIRE MILL COMPANY,
AMERICAN BARBED WIRE COMPANY, and
CONTINENTAL WIRE COMPANY

Miscellaneous Prices.

The manufacturers of Picks and Mattocks are conferring with reference to prices, which are characterized as unsatisfactorily low, and they are considering the

feasibility of making an advance, and for deciding this question a meeting will be held at an early day.

The Rope market is without new features, the supply of raw material continuing exceedingly meager, and prices being firmly maintained, as at our last report. The manufacturers of Jute Rope are following the advances made in Manila and Sisal, and have recently named higher prices.

The Sand Paper market is in an exceedingly unsatisfactory condition and characterized by considerable irregularity. Lower prices than were named by the leading houses at the breaking up of the combination are now obtainable, and some makers occupying a less prominent position are making some very low quotations.

The Scythe market is quite active, and a good many orders are being booked. Prices are referred to as unreasonably low, and competition is animated. In the condition of the market it is not thought that they will recede, and it is not unlikely that they may become stronger with the progress of the season.

The Boston & Lockport Block Company, Lockport, N. Y., call attention to a new pattern Wood Metal-Plug Faucet, designated the Star. It is referred to as designed to meet a want for a superior article of this kind, and is described as extra large in size, and having a malleable shank for handle, which gives it the required great strength. At present four sizes are ready for the market, namely, 8, 10, 12 and 18 inch, and they will be so numbered. The prices are: 8-inch, \$3; 10-inch \$4; 12-inch, \$5; and 18-inch, \$6 per dozen, subject to a discount of 40 per cent.

The advance from 5 to 10 per cent. in the prices of Tinned and Enameled Hollow-Ware, to which we referred in our last issue, was made by the concerted action of the leading manufacturers, and is being regularly maintained. The prices that previously prevailed were unprofitably low, and this advance will be accepted as reasonable and satisfactory.

The Jobbing Trade.

Concerning this matter we have the following letter from a house in Iowa. It is an exceedingly satisfactory presentation of the case and shows clearly the necessity for the jobber and the important position he occupies in the distribution of Hardware:

I have read with much interest the reports from various parts of the country on the tendencies in trade. I observe that in the reports from retail dealers those in the Eastern States report more generally a disposition to buy direct from the manufacturers than the retail dealers of the Western States. The presumption is that, being in closer proximity to the manufacturers, their orders may be sent to them and be filled with ordinary promptness—more so than could be depended on by Western retailers on account of the long distance between the Eastern manufacturers and the Western retailer, the great majority of Iron Goods manufacturers being as yet east of the lakes. In the Western States the disposition of retail dealers, so far as heard from in your paper, shows a preference for trading with the wholesaler. In these "last days" of quick sales and small profits the retailer must turn his goods over quickly—in fact, either wholesaler or retailer must turn his goods over quickly, or several times a year, or he will, ere many years, have no goods to turn over. The retailer west of the Mississippi River desiring to replenish his stock with a variety of articles may send an order to any of the jobbing houses on the Mississippi River, have his order

filled, shipped and in his house, and part of the goods out in the hands of his customers, before the order would likely be filled at the factory. Let us suppose a case as an illustration. A retail dealer in any one of the prairie States wishes to send an order to replenish with, say:

25 kegs Cut Steel Nails,
25 kegs of Wire Nails,
5 kegs of Burden's Horse Shoes,
5 kegs of Perkins' Snow Shoes,
3 boxes of Northwestern Horse Shoe Nails,
3 boxes of Star Horse Shoe Nails,
3 boxes C. B. K. Horse Nails,
3 boxes Ausable Horse Nails (as he must keep all brands to suit the peculiarity of various customers),
10 dozen Strap and T-Hinges,
1/2 gross Butt Hinges,
10 gross Wood Screws (assorted sizes),
2000 Common Carriage Bolts,
500 Norway Carriage Bolts,
3 dozen Files,
1/2 dozen Horse Rasps,
1 ton Barbed Fence Wire,
1/2 ton Plain Baling Wire,
5 bundles of Stove-Pipe Sheet Iron,
3 bundles Galvanized Sheet Iron,
1/2 dozen Coal Hods,
1 Finished Cutter,

and a limited quantity of articles too numerous to mention. Now, he may send either to St. Louis, Burlington, Dubuque or St. Paul on the Mississippi River and find all the above articles in one house and ready for shipment same day as received.

Suppose now he desires to deal with the manufacturer direct: For his Cut Nails he sends an order to Wheeling or Pittsburgh; for Wire Nails to Cincinnati, Salem or Newcastle; for Burden's Horse Shoes to Troy, N. Y.; for Perkins' Snow Shoes to Providence, R. I.; for Northwestern and Star Nails to Chicago; for Putnam to Neponset, Mass.; for C. B. K. to Ausable Chasm, N. Y.; for Ausable Nails to New York; Strap and T and Butt Hinges to Pittsburgh, Pa., or Troy, N. Y.; Wood Screws to New York or Providence, R. I.; Carriage Bolts to Detroit, Buffalo, Pittsburgh, Cleveland or Philadelphia; Files to Newark, N. J., New York or Philadelphia; Barb and Plain Wire to Joliet, Ill., Cleveland, Ohio, Johnstown, Pa., or Worcester, Mass., and so on.

How manifestly evident it is that the interest of the retail dealer is to send his order where it can and will be shipped promptly from one house, especially as the price he would pay would, in the aggregate, be less to him than if he sent orders to the various factories where these goods are made. The jobbers feel that the solution of the problem of the manufacturer of how best to get his goods on the market is through the jobbing houses of the country. They are as much of a necessity as the retailer, and as they (the manufacturers) "cannot have their cake and eat it too," or cannot sell both the jobber and his customer, the retailer, they must elect which they will take, as both they may not have. The jobbers do not lie awake nights worrying over this problem. They are getting a large proportion of the trade naturally tributary to them, and they are satisfying their customers as a rule that their best is as good as any one's best. I have watched for many years the growth of the Hardware jobbers of the Northwest, and they are keeping pace with the growth and development of this Western continent, and when they do this they are accomplishing a great deal. You have only to look at the men to conclude that they are abundantly satisfied with the relations existing between themselves and the trade, the retailers, through whom all these goods ultimately reach the consumer. They feel also that the manufacturers will consult their own best interests by putting their manufactures of Hardware through a diversified trade over a broad expanse and rapidly filling up territory through the jobbers of the Northwest;

and they may rest assured that these jobbers are now in a position to put a greater amount of their manufactures into more channels for consumption and at less cost than they (the manufacturers) can by any present known method.

Referring to the condition of things in Sporting Goods, Fishing Tackle, &c., we have the following from a prominent Western house:

The race of jobbers, as we understand the term, is, in our line of trade, at least, practically extinct. We have only larger and smaller dealers, any of whom are willing to retail goods—the larger ones generally at the same prices at which the smaller can buy. This state of affairs is brought about largely by the action of the manufacturers, who, while willing and even anxious to sell both classes, often make, naturally enough perhaps, to the larger buyer concessions which they deny to the smaller. Then in the fierce struggle to sell which ensues, the larger buyer is tempted to, and generally does, give away the advantage he has obtained, and the smaller one is in the soup.

Items.

The Biddle Hardware Company, 507 to 513 Commerce street, Philadelphia, Pa., have taken the store formerly occupied by the Heaton & Denckla Hardware Company, together with the balance of their stock, and this, with their former buildings, gives them a very large and complete establishment. They announce the following in regard to the goods of the Heaton & Denckla Hardware Company:

We offer the old stock of the Heaton & Denckla Hardware Company subject to prior sale on the following low terms: Upon request we will mail a catalogue giving a memorandum of the original stock. These goods are offered at 5 per cent discount for cash in ten days beyond any price at which you have been buying the same goods. To obtain these terms, the price at which you expect the goods must be named on the order, and it is distinctly understood that all orders are subject to prior sale. All goods sold on these terms will be billed on separate invoices and marked on invoice "from Heaton & Denckla Hardware Company's stock." Our job stock will be arranged in our store, 507 Commerce street, conveniently for your inspection, and we feel confident that we can make it pay you to give us a visit and to make your own selections. If the old stock should not contain all the goods wanted, we will either fill the balance out of our own regular stock at bottom prices or write you, giving the lowest price at which we can complete the order. In ordering please state which course you wish us to adopt.

Western File Company, Beaver Falls, Pa., refer to the favor with which their new Horse Rasp, Western 1888, is received and the large business they are doing in it. This Rasp is described as made from a peculiar quality of steel, manufactured especially for that purpose, there being also a special way of annealing and hardening it.

The trade will observe on page 61 the advertisement of the Gibbs Lawn Rake Company, Canton, Ohio, for whom John H. Graham & Co., 113 Chambers street, New York, are agents. It gives illustrations of the Canton Lawn Rake, showing its construction in some detail, and also of the Gibbs Single Blade Post-Hole Digger.

The Beck & Gregg Hardware Company, Atlanta, Ga., issue a variety of circulars relating to the line of goods they handle. One of these calls attention to their Hardware and their supply departments, enumerating a variety of articles under these two heads. They also issue a circular letter, in which they solicit trade and assure their customers of prompt shipments, with satisfactory prices.

The Ames Sword Company, Chicopee, Mass., are issuing an illustrated catalogue of their Patent Perfection Padlocks. The front cover shows the interior mechanism

of these goods, the remainder of the pamphlet being occupied in the illustration of the different articles that they put on the market. Among these are small Padlocks for dogs and cats, Perfection Key Holders, Key Guard Chain, Perfection Padlocks and Padlock Keys, Baggage Protectors, Bicycle Padlocks and Cast Bronze Padlocks. The list of prices on the different goods are given.

E. S. & F. Bateman, Spring Mills, N. J., have issued their 1889 illustrated and descriptive catalogue of their well-known "Iron Age" Farm and Garden Implements. It represents their line of these goods, some of which have been put on the market comparatively recently. It is intimated that during the coming season the old original Iron Age Cultivator and Horse Hoe, which has been extensively imitated, will be still further improved and strengthened.

The Bucher & Gibbs Plow Company, Canton, Ohio, issue an 80-page catalogue, describing their extensive line of Plows, the different patterns of which are illustrated. They allude in their opening circular to the demand for these Plows, which has compelled them to build an addition to their works 46 x 167 feet, three stories high, giving them a much larger capacity. They also issue a separate price list, in which list prices are given without illustrations.

Andrew B. Hendryx & Co., New Haven, Conn., favor us with a beautifully bound copy of their catalogue of Brass, Bronze, Iron and Steel Chain, Wire Picture Cord, a very complete line of Bird Cages and related specialties. Attention is called to some of the special features of these Cages, in which recent improvements have been adopted and a number of new patterns added. The manner which their Wire Picture Cord is put up in boxes is also illustrated. They also issue a catalogue of Hendryx's Fishing Reels, showing a number of patterns, on which prices are given. They state in their circular relating to these goods that they have introduced new methods of manufacture, ignoring the hand-made theory, and making their Reels with improved automatic machinery, permitting them to have interchangeable parts in their Reels. They also refer to the excellence of the workmanship.

The trade will observe the effective illustration on page 51, in which the Shepard Hardware Company, Buffalo, N. Y., bring their Lightning Freezer before our readers. It will be observed that the construction of their wheel dasher is shown, and some of the points in regard to the Freezer, on which they lay emphasis, are mentioned.

The Anderson Bolt Works, of Anderson, Ind., manufacturers of common Carriage Bolts, Lag Screws and Machine Bolts of all kinds, have appointed F. F. Gilmore & Co., of Louisville, Ky., their sales agents for the States of Kentucky, Tennessee, Mississippi, Alabama, Georgia and Southern Indiana and Illinois.

J. P. Caruthers & Co., heavy hardware merchants, 136 Kinzie street, Chicago, have issued a very unique calendar, worthy of a place among grotesque publications. It consists of a large card bearing a colored lithograph of a "gentleman of color," whose feet, extended in front of him, are so large that the soles of his shoes utterly dwarf his body. On the soles are printed the names of the principal articles handled by the firm. A pad with monthly leaves is attached to the bottom of the card.

The annual meeting of the stockholders of the Trans-Continental Car, Lock and Seal Company, of Chicago, was held at the offices of the company, 430 to 434

"The Rookery," on the 16th inst. The following gentlemen were elected as directors for the ensuing year: Warren G. Purdy, John Johnston, Jr., Hobart Chatfield Taylor, J. Edwards Fay, Wm. F. Donovan, Chas. E. Davis, and Jno. W. Norris. The president's report showed satisfactory progress in the past, and very flattering prospects for the future. The new board of directors convened immediately after the stockholders adjourned and elected the following officers to serve for the ensuing year: Jno. W. Norris, president and treasurer; Warren G. Purdy, vice-president; J. Edwards Fay, secretary; Chas. E. Davis, superintendent.

A. L. Day, Eastern manager for the Hoyt Metal Company, St. Louis, Mo., whose office is located at 20 Cliff street, New York, was in St. Louis last week, and reports the outlook very flattering for a heavy spring trade in the territory visited by him.

The St. Louis Metal Company, St. Louis, Mo., whose advertisement appears on page 42, report a heavy trade in their Babbitt Metal and Solder, and find a large and increasing demand for their Anti-Friction Metal. They inform us their sales, especially in this latter metal, are constantly increasing.

A. D. Hall & Son, Charleston District, Boston, Mass., have issued their pamphlet for the present year, in which they illustrate their line of Refrigerators, Ice Chests, &c. It is their eighteenth issue, the business having been established in 1872, and in the opening circular it is stated that they have added several new styles and sizes to meet the demands of their increasing trade. They refer also to the extent of their factory and its complete equipment, and also to the care which is taken in the manufacture of their Refrigerators, and the thorough inspection given to them before they leave the factory. The special features in the construction of their Refrigerators are referred to, emphasis being laid on their Galvanized and Corrugated Wrought-Iron Rack, which is referred to as not rusting nor breaking away, saving the zinc lining, and doing away with wooden racks. From the description given of the Refrigerators it appears that inside the outside case there is a cold dry-air space, the inside case having a felt packing, and being lined inside with zinc. The body of the pamphlet is occupied with a description of their Chests and Refrigerators, which are made in a large variety of sizes with different finish, and adapted for various uses.

We are indebted to Randolph & Clowes, of Waterbury, Conn., for one of their recently issued circulars, illustrating and describing Brown's patent seamless copper house boilers, which they manufacture. On the front of the circular are shown cuts, one representing an exterior view of the boiler, another sectional view, showing the interior and the method of reinforcing it, and the third shows an enlarged section of the joint. An attractive characteristic of the pamphlet is the bronze colors in which the cuts of the boiler are printed. Another feature is a representation of a narrow blue ribbon, with red seal attached, giving the appearance of sheets tied together. Within the circular the boiler is very fully described, and all its principal advantages are pointed out.

The inconvenience endured by merchants on account of the diversity in forms and sizes of their price lists and trade literature generally has frequently been referred to by Hardwaremen in this country, and the same matter has been repeatedly alluded to by English Hardware merchants, with whom, however, owing to the fact that there are much fewer catalogues, circulars, price lists, &c., published there than here, there is less annoy-

ance from this source. The following letter on the same subject comes, however, from New Zealand, which, notwithstanding its distance, seems to be afflicted in the same way:

The present system of producing catalogues of any size to please the eye of the producer is really most prejudicial to his best interests. Much money is often spent in the production of these works, but as many of us have no more room than we know what to do with, we cannot make the use of the catalogues we should like. What we require is a book of decent size, which we can place on our shelves for easy reference at any time. Now, the lists, being of all sorts of shapes and sizes, are simply piled up one on top of the other until they become an almost useless heap.

The catalogue of Studebaker Bros. Mfg. Company, South Bend, Ind., in which they illustrate their Skein and Veneer departments, is an elegantly printed pamphlet. In it their Wrought Steel Skein is given with the revised price list adopted on the 3d inst. Their Cast Thimble Skein is also shown. The latter part of the pamphlet is devoted to an explanation of the construction of their Veneer Seat and the illustration of different Seats, Veneers and Dashes, with something of a description of their works.

The trade will observe the announcement on page 88 by the Van Wagoner & Williams Company, 82 Beekman street, New York, in regard to their Hero and Monarch Spring Hinges, and their right to manufacture the same.

The advertisement occupying page 80, in which the A. F. Pike Mfg. Company, Pike's Station, N. H., call attention to their manufactures, will be observed by our readers, and especially its intimation that low prices may be obtained.

The Russia Cement Company, Gloucester, Mass., make the announcement that their New York City trade, who formerly obtained Le Page's Glues from Tower & Lyon, can now be supplied by Underhill, Clinch & Co., 94 Chambers street, where a full stock of the goods is carried.

Wm. Highton & Sons, 55-63 Charleston street, Boston, Mass., issue a circular relating to their line of Registers, some of which of new design are illustrated. Their object in issuing the circular is to bring the dealer and manufacturer in direct communication. For a number of years their business has been done largely through an agent, but they state that the time has come when they consider that they can sell their goods direct to the dealer to better advantage. Attention is called to the important points of their Registers, such as the vertical wheel and lock nut, adjustable end piece, new ventilator attachments and open or shut indicators, &c., which are their own inventions. A large stock of different sizes of Registers, Faces and Borders in the several finishes is carried.

C. F. Guyon & Co., 99 Reade street, New York, have been appointed sole agents for M. Einwachter, Newark, N. J., and will carry on hand a full line of Tools of his manufacture. This line embraces the following among other goods: Screw-Drivers, Countersinks, Reamers, Punches, Rivet Sets, Scratch Awls, Can Openers, Tack Claws, &c.

Lindsay, Parvin & Co., of Philadelphia, have added to their general Iron business, a new department, which includes Barb Fencing, Plain and Galvanized Wire, Wire Cloth, Nettings, &c. They are also doing a large business in Crimped and Corrugated Roofing, the demand for which they say is steadily increasing.

The works of the Perkins Lock Mfg. Company, Cleveland, Ohio, were nearly destroyed by fire Sunday, January 13. But the company have arranged for new quarters, and, as their castings are made

outside of their old place of business, they expect to be able to fill orders in full within 80 days. They have appointed J. C. McCarty & Co., 97 Chambers street, New York, as their agents, who will carry a full line of the goods in stock, and who are in a position to give the company's list prices.

Underhill, Clinch & Co., 94 Chambers street, have been appointed agents for the sale of Porter's Patent Window and Door Screen Corners, Sticks for Frames, &c., and the Queen City Adjustable Window Screen, manufactured by the Porter Mfg. Company, Burlington, Vt.

The copartnership heretofore existing between John H. Logan and Turner Strobridge, under the firm name of Logan & Strobridge, New Brighton, Pa., was dissolved January 9, and a new partnership formed under the name of Logan & Strobridge Iron Company, which is composed

also issue a pamphlet devoted to Reflector Chandeliers for gas, electric light or oil. A number of attractive styles are illustrated, with list prices. The quality of these goods and the satisfaction which they have given throughout the United States and Canada are referred to.

Arrangement of Stores.

The accompanying illustration, Fig. 306, represents a Bird Cage rack in connection with an arrangement for the display of Japanned Goods. For a description of this arrangement we are indebted to Geo. O. Hart & Son, Paducah, Ky. The Bird Cage rack is made of $1\frac{1}{2}$ inch gas-pipe, bent in the form of an arch, as shown, the extreme height from the top to the floor being 16 feet. Holes $\frac{1}{4}$ inch in diameter are punched 14 inches apart, threads cut in the holes, and hooks 12 inches long are screwed in on both sides. There are two pieces of iron, $4 \times 8 \times \frac{1}{4}$ inch,

Fig. 306.—Bird Cage Arch.

of John H. Logan, Turner Strobridge, Charles C. Robinson and L. R. Strobridge. The officers are as follows: J. H. Logan, president; T. Strobridge, vice-president; C. C. Robinson, secretary and treasurer; L. R. Strobridge, superintendent. The new company announce that, having purchased the business of the late firm, it is their intention to push forward with even greater energy than their predecessors, continuing the manufacture of the full line of goods manufactured by them—Coffee Mills, Farm and Plantation Mills, Building and House-Furnishing Hardware, &c.—while they will also make a specialty of Iron and Brass Castings of all classes.

The Wheeler Reflector Company, 24 Washington street, Boston, Mass., issue a pamphlet describing their system of Reflectors, with a number of testimonials. The different styles of Reflectors are represented, including Street Light Reflectors, Railroad, Porch and Stable Lanterns, Wall Bracket Lamps, Library and Argand Reflectors, and others. A very complete line is thus offered to the trade. They

forming the junction between the floor and the arch. These plates are screwed on the pipe, making feet, and are then lag-screwed firmly to the floor. The whole is painted green, and the tips of the hooks and the couplings are bronzed, making an attractive finish. When this rack is filled with Cages it is described as producing a beautiful and striking effect. The economy of space is one of the points made in connection with it, the floor space being limited only to that occupied by the plates. Beneath the arch are two Japanned Goods stands, which are made of 1 inch poplar boards. At the bottom they are 4 feet 4 inches wide; the second shelf is 2 feet 6 inches wide, and the top or third shelf is 10 inches wide. The legs or uprights are nicely turned and the whole is stained walnut. One of these stands is used for Toilet Sets and the other for Coal Vases. The bright colors of these goods are described as making a very attractive and pretty view from the street. The inexpensiveness of the stands is alluded to, and we are advised that they can be put up for from \$3.50 to \$5, according to the finish and size.

Business Methods.

From the McFadden Company, successors to Tallman & McFadden, Philadelphia, Pa., we have received information in regard to some of the forms which they use in connection with their business, which, embodying as they do some novel features, will doubtless be of interest to many of our readers. One of these to facilitate the sending of inquiries by their customers in regard to prices we reproduce below, reducing its width slightly and omitting the blank space:

McFADDEN COMPANY,

No. 1025 Market Street, Philadelphia.

Please give lowest price at which you will sell the following list of Tools:

HOW MANY.	DESCRIPTION OF TOOLS. <i>Give here name of tool, size, and number, if any given in Catalogue.</i>	PAGE OF CATALOGUE.
.....
.....
.....

At the foot of the sheet headed as above are the following directions to their customers:

Write your name and address in full on the other side of this sheet. Give the name of the express company by whom we can ship, and we will, if possible, quote prices delivered.

And on the back of the sheet is the following blank for the name, address, &c., of their customers:

Name.....
Business of trade.....
P. O.....
County..... State.....

The McFadden Company have also an order blank which has been found exceedingly convenient, and which, in reduced size, is reproduced below. This form is referred to as particularly useful in ordering special goods, and dealers who are called upon to furnish special Screws, Caps, Drills, &c., will see the convenience of the system. The form of the blank given herewith consists, it will be seen, of the order which is sent to the party from whom the goods are purchased, and the stub which is kept on file by the order clerk. The original order is in copying ink, and the copy made therefrom is put in the hands of the stock clerk in order to avoid having invoices go out of the office, a practice which is objectionable for different reasons. The stock clerk is more readily informed as to the disposition which is to be made of the goods by reference to this duplicate than by any other means the company have been able to devise. It is used by him in checking goods when received, and affords him information as to the disposal of the same.

Obituary.

At a meeting of the Table Cutlery Manufacturers, held January 18, the following was adopted:

This association having learned of the death of Mr. A. B. Wetherell, desire to give expression to their feelings of respect to his memory. Mr. Wetherell was the warm personal friend of every member of this body, and we one and all bear tribute to his unselfish friendship and his sterling worth as an honest man. The secretary is directed to spread this vote on the records, and send a copy to his family, and publish it in *The Iron Age*.

"Wholesale and Retail" in the United States.

Under this heading the last issue of the *London Ironmonger* has the following editorial remarks in regard to the discussion which has been carried on in these columns concerning the question as to whether there is an increased tendency toward direct dealings between the manufacturers and the retailers:

An interesting and well-sustained discussion has been in progress for some

size of the United States, and consequent long distances and heavy railway rates, renders any exact comparison between the course of American and of English trade somewhat inexact, yet it cannot fail to be interesting to note the tendencies of the trade in the States. The correspondents of *The Iron Age* have written from various parts of the Union, and the general drift of their letters seems to demonstrate that there is an increasing tendency in the direction of retailers buying direct from the manufacturers. This tendency is so marked in certain lines of goods that it may be said to have become a practice, and that almost all heavy or bulky goods are now generally bought direct from the makers. Such goods as Stoves, Agricultural Implements, Barbed Wire and Nails are included in this category. In the smaller lines of Hardware, "notions" and the like, the large jobbers appear to hold their own, and even do an increasing business in many sections of the country. One firm—Straub & Co., Evansville, Ind.—send a carefully tabulated statement showing the percentages of their purchases from manufacturers and jobbers over a long series of years, and as this table appears to be indorsed by many other firms who have sent their views, we reproduce it here.

[Here follows the table furnished by F. P. Straub & Co., which was published in our issue of October 11, 1888, showing the percentage of bills purchased by them during the years from 1858 to 1888 from manufacturers and jobbers, Eastern and Western.]

According to these figures the tendency toward direct trading with the manufacturers appears to be very marked indeed, although for some reason or other not clearly explained more has been done with the jobbers this year than for some years before. Some of the retailers explain that they are going to the

This, the original order, is written with copying ink and copied in a regular letter-press book.

Above to be delivered on cars without charge for boxing or cartage.

Kindly write us upon receipt of this order, stating when you will probably ship the same to us.

Mention number of order in all communications.

Yours truly,

most important of them are located in New York, so far as the Eastern States are concerned and in Chicago as regards the Central and Western States. With the great and continuous growth of the Northwest and West, the tendency of the centers of distribution to move further West also becomes increasingly pronounced; hence the jobbers of St. Louis, St. Paul, Kansas City and other like places are becoming more serious competitors for the trade of their several districts. The great

manufacturers because they "know what they are getting," because they can get better goods, and because the jobber "cares nothing for any name or brand except his own, only taking care to buy in the cheapest market, and, instead of sending the goods ordered, often puts retailers off with articles which the jobbers say are 'just as good or better.'" Many of the correspondents of our contemporary also complain that the jobbers do not pack so well as the manufacturers, and also that

some of them sell direct to large consumers. The majority of the letter-writers admit, however, that the jobber is often a great convenience, particularly because he can supply goods more promptly than the manufacturers, which is quite natural when the great distance of the West from the Eastern manufacturing centers is borne in mind. On their part, many of the manufacturers are opening out their own agencies in Chicago and other Western cities, consequently it is evident that those who adopt that plan are desirous of promoting trade direct with the retailers and over the heads of the jobbers. It is in evidence, indeed, that the manufacturers are active and energetic in "picking over" the retail trade, selecting the best payers as their own customers, and leaving the others to deal with the jobbers. The plan certainly has the merit of sagacity and enterprise.

Louisville.

From Louisville, Ky., we have the following report under date of January 19:

The Hardware trade of Louisville, Ky., has been remarkably good for the past two weeks. Low prices generally rule, but the consumption continues large, showing that the extremely mild winter permits outdoor improvements to go steadily on, and a trip in any direction along the railroads proves that the country is keeping pace with the cities and towns. The constant demand for builders' supplies has not ceased at all this winter, and some predict that there will be no spring trade in such goods, but a past prosperous year for the farmers promises continued demand on the merchants. The Nail trade from the jobbers is good, making constant calls on the mills, which seems to justify an advance from present prices at next meeting of the mills. The Wire Nail business is also large, with low prices ruling, but the trade expects some extreme cuts to be withdrawn soon. Dealers in Wagon and Carriage Hardware report the state of order books extremely satisfactory, and that they are as busy as they care to be.

Exports.

PER SHIP SEA WITCH, JANUARY 5, 1889.
FOR SIDNEY, N. S. W.

By *McLean Bros. & Rigg*.—21 Fire Arms, 5 Wind Mills, 44 Guns, 77 sets Loading Tools, 255,000 Primers, 34,000 Metallic Cartridges, 5 dozen Locks, 1 dozen Lemon Squeezers, 408 dozen Handles, 29 Air Guns, 4 dozen Lemon Squeezers, 3 cases Plated-Ware, 133 Drills, 11,600 Bolts, 10 dozen Axes, 90 dozen Axes, 35 packages Carriage-Ware, 45 dozen Saws, 121 Plows, 5 dozen Washboards, 6 dozen Hammers, 9 dozen Saws, 18 dozen Locks, 196 dozen Handles.

By *V. Basanta*.—207 dozen Hardware, 300,000 Primers, 24 dozen Hammers, 18 dozen Rakes, 9 dozen Oil Cans, 3 dozen Corn Mills, 2½ dozen Clothes Wringers, 2 1-6 dozen Rifles, 25 cases School Slates, 120 gross Crayons, ½ dozen Air Guns, 2 dozen Velocipedes, 3½ dozen Velocipedes, ½ dozen Perambulators, 2000 Broom Handles, 12 1-12 dozen Lamp Goods, 13 sets Harness, 1 gross Thermometers, 50 gross Lamp Wicks, 1 dozen Clocks, 8 gross Traps, 15 dozen Braces, 27 dozen Cow Bells, 16 dozen Lamp Goods.

By *Arkell & Douglas*.—32,020 pieces Roofing Slate, 9 cases Wringers, 8 dozen Corn Mills, 60 dozen Axes, 2 dozen Corn Mills, 14 dozen Saws, 20 dozen Hatchets, ¼ dozen Scales, 1 dozen Lawn Sprinklers, 20 dozen Hammers, 3 cases Whetstones, 6 cases Mattocks, 40 dozen Axes, 28 dozen Forks, 10 gross Axes, 40 dozen Handles, 96 dozen Corn Mills, 17 dozen Bird Cages, 16 dozen Glass Ware, 12 cases Carriage Ware, 4 cases Castings, 300 pounds Hardware, 200 pounds Hardware, 10 crates Wheels, 96 dozen Bolts, 9 cases Carriage-Ware, 7 dozen Whiffletrees, 13½ dozen Forks, 1 case Nails, 7 cases Castings, 15 dozen Latches, 6 dozen Rakes, 6 dozen Picks, 11 dozen Axes, 21 dozen Hammers, 1½ dozen Guns, 24 boxes Clothes Pins, 13 dozen Hoes, 8 dozen Axes, 2 packages Pumps, 30 gross Wicks, 3 cases Saws, 20 dozen Spades, 6 packages Lamp Ware, 20 dozen Glass Ware, 10 Shellers, 10 dozen Spades, 5 gross Axle Grease, 12 dozen Saws.

By *W. H. Crossman & Bro.*—½ dozen Wringers, 3 dozen Clocks, 9 dozen Wrenches, 3 sets Tools, 24 pairs Roller Skates, 72 dozen Handles, 20 dozen Hatchets, 1 case Hardware, 7 dozen Brooms, 1 case Hardware, 28 packages Carriage-Ware, 20 dozen Axes, 4 Drills, 1 case Hardware, 11 cases Tools, 19 cases Hardware, 1 dozen Paint Mills, 4 dozen Vises, 32 dozen Axes, 3 dozen Store Trucks, 10 dozen Traps, 100 gross Wicks, 24 dozen Hair Brushes, 2 dozen Shot Cases, 48 dozen

Handles, 6 dozen Shot Cases, 24 dozen Guns, 12 sets tools, 50,000 Primers, 10,000 Cartridges, 50 Clocks, 6 dozen Lanterns, 110 pairs Roller Skates, 600 pounds Bolts, 1 case Hardware, 27 dozen Hatchets, ¾ dozen Wringers, 5 cases Tools, 1 case Hardware, 120 dozen Handles, 10 dozen Axes, 12 dozen Handles, 3 cases Hardware, 20 Guns, 18,000 Cartridges, 140,000 Primers, 50 sets Tools, 100 dozen Oars, 4 dozen Mattocks, 1 Saw, 2 packages Pumps, 1 case Carpenters' Tools, 18 Churns, 8 dozen Rakes, 4 cases Hardware, 24 dozen Traps, 33 gross Wicks, 1 case Lamp Goods, 3 dozen Braces, 1 case Tools, 10 dozen Axes, 1½ gross Wood Spoons, 1 case Plow Parts, 23 packages Tools, 23 Vises, 5 packages Hardware, 1 dozen Wringers, 1 case Hardware, 12 dozen Axes, 9 cases Hardware, 2 packages Wringers, 1200 Cartridges, 1 dozen Revolvers, 14 cases Hardware, 94 dozen Traps, 27 dozen Wrenches, 18 dozen Braces, 8 dozen Braces, 1 case Traps, 8 Cages, 10 dozen Wrenches, 4 dozen Scales, 8 dozen Saws, 10,000 Cartridges, 12 Rifles, 12 sets Tools, 12 Guns, 24 sets Tools, 30,000 Cartridges, 24 dozen Axes, 20 dozen Braces.

By *R. W. Cameron & Co.*—840 pounds Glue, 7 packages Bolts, 360 dozen Handles, 19 barrels Iron Pipe, 2 cases Parts, 2 Stationary Engines, 2 cases parts Stationary Engines, 3 Blowers, 6 cases Machinery, 337 packages Iron Wheelbarrows, 43 crates Pulleys, 1 case Hardware, 654 dozen Chimneys, 15 gross Wicks, 5 cases Lampware, 30 dozen Axes, 30 gross Blacking, 225 cases Slates, 3 boxes Machinery, 1 case Hardware, 1039 packages Hardware, 3 boxes Belting, 88 Locomotive Tires, 1200 pounds Nuts and Bolts, 25,000 pieces Slate, 1 case Planes, 10 cases Cartridges, 2 cases Hardware, 2 cases Skate Wheels.

By *Coombs, Crosby & Eddy*.—2 gross Blacking, 20 dozen Axes, 10 dozen Axes, 18 dozen Agricultural Tools, 1 gross Lemon Squeezers, 100 boxes Clothes Pins, 1000 Broom Handles, 10 Stoves, 42 dozen Slates, 100 gross Crayons, 280 pounds Stones, 54 dozen Wringers, 10 dozen sets Irons, 10 dozen Balances, 10 gross Hardware, 12 dozen C. L. Reels, 12 dozen Hardware, 140 pounds Oil Stone, 12 dozen Braces, 41 dozen Tools, 1 gross Hardware, 2 dozen Axes, 10 dozen Picks, 12 dozen Washboards, 8 dozen Tools, 9 dozen Hardware, 350 pounds Hardware, 2 gross Lemon Squeezers.

By *Isley, Doubleday & Co.*—3 dozen Paint Brushes, 12½ gross Axle Grease, 20 dozen Horse Brushes, 18 dozen Horse Brushes, 21 dozen Paint Brushes, 6½ gross Axle Grease, 10 cases Hardware, 4 cases Castings, 4 bundles Hardware, 12 cases Bolts.

By *H. W. Peabody & Co.*—37 packages Stoves, 7 packages Hardware, 8 cases Wringers, 71 cases Lampware, 1500 feet Hose, 4 packages Pumps, 4 cases Lampware, 6 cases Sewing Machines.

By *R. W. Forbes & Son*.—1 package Hardware, 1 dozen Adzes, 2 boxes Hardware, 17 packages Corn Mills, 6 packages Corn Mills, 97 boxes Sewing Machines, 48 dozen Handles.

By *F. Hodiome*.—2 cases Wheels, 1 case Bolts, 8 cases Brooms.

By *Rand Drill Company*.—3 boxes Wire Fuses, 2 boxes Batteries, 1 box Wire.

By *F. B. Wheeler & Co.*—160 cases School Slates.

By *Collins Company*.—91 dozen Edge Tools, 170 dozen Picks, 165 dozen Handled Axes.

By *J. L. Mott Iron Works*.—18,980 pounds Stoves and Parts.

By *W. E. Peck & Co.*—3 cases Powder and Cartridges.

By *Healy & Earl*.—12 cases Wood Working Machinery, 8 boxes Pumps, 11 packages Wind Mills, 6 cases Forges, 1 box Drills, 1 box Emery Wheels, 1 case Saws.

By *Leaycraft & Co.*—30,580 pieces Roofing Slate.

By *Edward Miller & Co.*—73 packages Lamp Goods, 14 packages Lamp Goods, 6 packages Lamp Goods.

By *A. Field & Co.*—12 Stoves, 1 Rifle.

By *Ansonia Clock Company*.—24 boxes Clocks.

By *W. K. Freeman*.—11 cases Agricultural Machinery, 12,305 pounds Axles, 62 cases Edge Tools, 465 pounds bicycles.

By *A. S. Lascelles & Co.*—20 dozen Axes, 38 dozen Axes, 1 gross Oil Stoves, 4 dozen Wrenches.

By *E. W. Harrison*.—1 case Wood Handles, 5 cases Picks, 3 cases Drills, 6 cases Hardware, 14 packages Pumps, 8 packages Pumps.

By *Ansonia Clock Company*.—60 packages Lamp Goods, 16 boxes Clocks.

By *S. H. Payne & Son*.—1000 pairs Roller Skates.

By *Fairbanks & Co.*—1901 pounds Scales, 488 pounds Money Drawers and Parts of Scales.

By *Strong & Troubridge*.—6 cases Tools, 2 cases Saws, &c.; 9 cases Fire Arms and Cartridges, 7 cases Hardware, 3 crates Sad Irons, 3 cases Sad Irons, 1 case Vises, 6 cases Oil Stones, 1 case Nails, 7 cases Handles, 1

case Handles, 3 cases Choppers, 2 cases Clocks, 4 cases Wringers, 4 cases Saws, 1 case Chisel Handles, 10 cases Axle Grease, 17 cases Axe Handles.

By *J. A. Gifford*.—3 cases Perambulators.
By *Morris, Strouse & Co.*—200 boxes Clothes Pins.

By *Barber & Co.*—2895 pounds Iron Castings.

By *Ansonia Clock Company*.—39 boxes Clocks, 36 boxes Clocks, 26 boxes Clocks.

By *H. F. Roberts*.—640 pounds Plated Ware.

By *M. R. Gildersleeve*.—71 packages Lamps and Parts.

By *P. D. Ackerman & Co.*—12 barrels Silver-Plated Ware.

By *Peters & Calhoun Company*.—3 cases Saddlery.

By *Russell & Erwin Mfg. Company*.—8 packages Hardware.

By *Winchester Repeating Arms Company*.—30,000 Cartridges, 60,000 Primers, 2000 Bullets, 20 sets Tools.

By *T. Levering & Co.*—225 cases School Slates.
By *Holmes, Booth & Haydens*.—5 boxes Electric Wires.

By *Welsh & Lea*.—6 cases Iron Bolts.

By *E. N. Welch Mfg. Company*.—36 boxes Clocks.

By *P. D. Ackerman & Co.*—6 cases Plated-Ware.

By *E. K. Al Burtis*.—18 Guns, 15,000 Cartridges, 2 packages Hardware, 45 sets Axes.

By *Meriden Britannia Company*.—12 boxes Coffin Furniture.

PER BARK ELINOR VEMOR, JANUARY 10, 1889,
FOR WELLINGTON, NEW ZEALAND.

By *D. C. Pratt*.—468 dozen Slates.

By *White Sewing Machine Company*.—2369 pounds Sewing Machines and Parts.

By *Ansonia Clock Company*.—14 boxes Clocks.

By *Coombs, Crosby & Eddy*.—6 dozen Axes.

By *Arkell & Douglas*.—85 dozen Handles, 5 boxes Plated-Ware, 26 cases Edge Tools, 6 nests Pails, 1 dozen Ladders, 646 pounds Hardware, 6 5-12 dozen Saws.

By *H. W. Peabody & Co.*—90 cases Edge Tools, 1 bundle Agricultural Implements, 24 dozen Rollers, 8 cases Hardware, 5 cases Hardware.

By *W. H. Crossman & Bro.*—16 dozen Axes, 1 cask Lamp Goods, 240 dozen Handles, 8 dozen Traps, 5 dozen Saws, 240 pounds Tacks, 3½ dozen Wringers, 2 cases Hardware, 8 cases Hardware, 2 packages Pipe Fittings, 1 case Carpenters' Tools.

By *A. S. Lascelles & Co.*—4 packages Lampware.

By *R. W. Forbes & Son*.—18 pairs Axles, 3 packages Hardware, 12 dozen Spade Handles, 1 dozen Wringers, ¼ dozen Mangles, 10 dozen Axes, 50 cases School Slates, 9 Stoves, 8 dozen Spade Handles, 3 packages Hardware, 67 cases School Slates, 17 packages Hardware, 1 case Wringer Rollers, 7 cases wringers, 7 racks Churns, 1000 Hoe Handles, 12 dozen Hoe Handles, 2 packages Hardware, 10 gross Shade Rollers, 1220 pounds Bolts, 1 package Taps and Dies.

FOR AUCKLAND AND WELLINGTON.

By *R. W. Cameron & Co.*—25 dozen Axes, 48 dozen Axes.

By *Mailler & Quereau*.—240 dozen Handles, 160 dozen Brooms, 10 dozen Picks, 200 boxes Clothes Pins, 70 Packages Washboards, 25 packages Sewing Machines, 10 cases Pigeon Traps.

The Buffalo Scale Company, Buffalo, N. Y., who have been in the market for more than a quarter of a century, have recently been furnishing scale outfits for various cotton oil mills throughout the Southern States, and at the same time have been supplying scales to many industries, to numerous railroads and the United States Government, as well as to different branches of the trade in this and foreign countries. Among recent important sales may be mentioned sales of iron frame railroad track scales to the United States Government, Armour Packing Company, Kansas City, Mo.; Edison Machine Company, Schenectady, N. Y., and a number of oil mills in Texas, Arkansas, Georgia, Louisiana and other Southern States, a large number of railroads in different parts of the country, Russell & Co., Massillon, Ohio; American Pulp and Paper Company, Tiffin, Ohio, and many other concerns. They are also supplying the scales used by the Indian Department, United States Government. In all this the trade will find evidence of the progress and position of the company.

The Production of Steel Rails.

James M. Swank publishes in the *Bulletin* of the American Iron and Steel Association the result of complete returns of the production of Bessemer steel rails in this country in 1888, not including a few thousand tons which were rolled by iron rolling mills from purchased blooms, but including all rails rolled by our Bessemer steel works. We give below in net tons the details of the production by these works in the first half and second half of 1888, compared with the production of the Bessemer steel works of the country in 1887, net tons:

States.	First half of 1888.	Second half of 1888.	Total 1888.	Total 1887.
Pennsylvania..	420,101	491,105	911,206	1,221,280
Illinois.....	256,823	228,888	485,706	728,526
Other States...	98,337	82,808	181,145	240,382
Total.....	775,261	782,796	1,558,057	2,290,197

The total production of steel rails in 1888 by the works above mentioned was 1,528,057 net tons, or 1,364,337 gross tons, against 2,290,197 net tons, or 2,044,819 gross tons in 1887—a decrease in 1888 of 680,482 gross tons, a shrinkage which is greater than our total production of steel rails in 1879, when we made 610,682 gross tons. The decreased production of 1888 as compared with the production of 1887 was almost exactly 33½ per cent. It will be noticed that the production in the last half of 1888 was less than in the first half.

Our consumption of steel rails in 1888 was fully 750,000 gross tons less than in 1887, the imports in 1888 having declined about 77,000 tons as compared with 1887. In 1887 they amounted to 137,588 gross tons, and in 1888 to about 60,000 gross tons.

The Societe des Metaux.

The Société des Métaux, or, to give it the full benefit of its title, the Société Industrielle et Commerciale des Métaux (Anciennes Etablissements J. J. Laveissière et Fils et E. Secretan), started business on quite a family footing. Of the 50,000 500-franc shares, comprising its capital, 2000 only were offered for public subscription, the rest being divided equally between Messrs. J. J. Laveissière et Fils and M. Eugene Secretan (acting as liquidator of the Société Métallurgique de Cuivre), as vendors—the first-named of their works at Deville-lès-Rouen, St. Denis and Petit Poigny, the good-will of their business and patents; the second of the company's works at Lalande, Castelsarrasin, Serfontaine, and Givet, the business in Paris, and the stock-in-trade valued at 2,000,000 francs.

The *Financial News* reports that the company was founded in 1881 for a period of 35 years for the purpose, according to the articles of association, of carrying on the business of the before-mentioned works, and of treating and generally dealing in copper and all other metals. It was well started in life, its original board of directors consisting of Messrs. Emile Laveissière, Arbel, Champouillon, G. Girod (of Messrs. André, Girod & Co., bankers; late director of the Comptoir d'Escompte), A. Hentsch (president of the Comptoir d'Escompte), Herpin (late director of the Société Générale), Labelonge, Jules Joseph Laveissière, Puerari (of Messrs. Mirabeau, Puerari & Co., bankers), Eugene Secretan, Théodore Vernes (of Messrs. Vernes & Co., bankers), and Jean Joseph Laveissière.

It has since been modified as follows: Messrs. Arbel, Champouillon, G. Girod, of André, Girod & Co., bankers (late director of the Comptoir d'Escompte), Hentsch (president of the Comptoir d'Escompte), Denfert Rochereau (director of the Comptoir d'Escompte), Labelonge,

Ed. Joubert (vice-president of the Banque de Paris et des Pays Bas), Emile Laveissière, Puerari (of Mirabeau, Puerari & Co., bankers), Eugene Secretan, Jules Lecuyer (banker).

Besides the share capital of the company, which in April last was increased from 25,000,000 francs to 50,000,000 francs, there are 40,000 fully paid-up debenture bonds of 500 francs, bearing interest at the rate of 5 per cent. per annum, and reimbursable in 35 years. The profits of the company, after deducting 5 per cent. for a reserve fund (which may be reduced or suspended as soon as the said fund attains a sum equal to one-tenth of the capital), have first to provide 6 per cent. interest on the paid-up share capital, the surplus being divided as follows:

12 per cent. for the remuneration of the directors.
13 per cent. to be distributed as the directors see fit for the remuneration of the "Committee of Direction and Management," and 75 per cent. as dividend for shareholders.

Surplus dividends have been distributed as under:

Year.	Francs.	Year.	Francs.
1882.....	47.50	1886.....	30.00
1883.....	30.00	1887.....	60.00
1884.....	Nil.	1888 (interim)...	30.00
1885.....	10.00		

National Convention of Builders.

The well-wishers of the National Association of Builders are doing all in their power to make the Philadelphia convention next month a success. The object of the circular recently issued by Secretary Sayward was to induce a large attendance at the coming meeting, and so far as the influence of argument and a clear statement of the work of the association are concerned, the circular left nothing to be desired. The promoters of the organization, however, have wisely recognized the fact that mere argument is not always sufficient to arouse an active interest in a worthy object, and so they have taken pains to insure a thoroughly hospitable reception to the visiting builders. The delegates are to be quartered at the Continental Hotel and Girard House. The lecture-room of the Franklin Institute, opposite the Exchange's newly purchased property, has been secured as a meeting place, and the programme for a three days' session has been mapped out. National President John S. Stevens is to make the opening address on Tuesday morning, February 12, and then the regular order of business is to be taken up. An interesting and also instructive feature of the convention will be addresses by a number of prominent men, among whom we notice the names of Colonel Auchmuty, Mr. O. P. Hatfield, Mr. Sayward, secretary of the association and others, who will speak on special topics appropriate to the occasion. At the close of the convention the guests will be entertained at a banquet to be given in Horticultural Hall. As a further means of bringing about a large gathering, steps have been taken to have certain other meetings and conventions of allied trades occur at Philadelphia about the same time, so that delegates in many instances will be able to attend more than one meeting and thus save themselves both time and expense.

The examination of the pieces of the Hainsworth gun, which was destroyed at the tests made by the Government some weeks since, has been commenced by the officials of the Pittsburgh Steel Casting Company, at Pittsburgh. Superintendent Hainsworth states that the examination will be thorough and will require at least six weeks. He is confident that the tests will prove that the bursting of the gun to a great extent was due to the fact that he had subjected the breach to two temper-

ings, which resulted in making it too hard. The other part of the gun was only tempered once.

NEW PUBLICATIONS.

KRUPP AND DEBANGE. By E. Monthaya. Translated with an appendix by O. E. Michaelis, Ph.D. Illustrated. Thomas Prosser & Son, New York.

This work seeks to compare the two great European ordnance systems—that of Krupp, of Germany, which has been known and practically tested for years, and that of De Bange, of France, which is of comparatively recent origin. Although the writer is convinced that the Krupp system is superior to the other, he has not permitted this opinion to warp his statements, which are based entirely on facts and authoritative writings. The first chapter describes gun metal and its properties, cast and wrought iron, bronze and various steels. The second deals with gun construction—Krupp and De Bange. Then follow ballistic performance and the Krupp system in European States. The second part deals with the weakness of the objections raised by the adherents of the French gun against the Krupp. This part closes with the French and German systems of gun manufacture and their results. Part third is an admirable description of the Krupp works. The appendix is an analysis of criticisms made upon the book. The work will attract attention, especially at this time, when so much interest is manifested in the subject in this country.

PRINCIPLES OF THERMODYNAMICS, WITH SPECIAL APPLICATIONS TO HOT-AIR, GAS AND STEAM ENGINES. By Robert Röntgen. Translated, revised and enlarged by A. Jay DuBois, Ph.D. Illustrated. John Wiley & Sons, New York. Price, \$5.

To this, the second edition, very considerable additions have been made. The work opens with two celebrated lectures of Professor Verdet, on the mechanical theory of heat. In the first lecture observation and theory are placed side by side; every experiment is shown to be the realization of an idea. In the second lecture an opposite course is pursued, the object being to deduce general laws from the study of special phenomena, particularly in those machines deriving their motive power from the action of heat; the subject proper of this lecture is therefore the heat engine. A proper understanding of the lectures and their copious notes will render easier the comprehension of the technical discussion following. Thermodynamics, immediately following the lectures, contains the mathematical treatment, in an elementary form, of heat. To understand this subject a knowledge of algebra and the simplest mechanical principles is all that is required. A feature of the work is the application of the theory of heat to the important cases arising in practice. In the abstract from Pernolet's work, *L'Air Comprimé*, is presented a table, from which the initial pressure and degree of expansion can be obtained for an engine of a given horsepower consuming a given quantity of air. The work also contains Zenner's theory of superheated steam. There is also a valuable summary of the principles which should govern the construction of a steam engine, with a complete calculation of a proposed engine. The work is intended to serve as a foundation for a more thorough course.

The Tilly Foster mine is now producing at the rate of 100 tons a day. A contract has been made, by which 60,000 tons are to be delivered annually for 90 cents a ton, broken, on cars at mine. This would make the cost of the 50 per cent. Bessemer ore to the Lackawanna Coal and Iron Company, delivered at Scranton, Pa., about \$2.30, or less than 5 cents a unit at furnace.

CURRENT HARDWARE PRICES.

JANUARY 23, 1889.

Note.—The quotations given below represent the Current Hardware Prices which prevail in the market at large. They are not given as manufacturers' prices, and manufacturers should not be held responsible for them. In cases where goods are quoted at lower figures than the manufacturers' name, it is not stated that the manufacturers are selling at the prices quoted, but simply that the goods are being sold, perhaps by the manufacturers, perhaps by the jobbers, at the figures named.

THE IRON AGE

THURSDAY, JANUARY 31, 1889.

The Buchanan Magnetic Rolls.

In a paper descriptive of a number of iron ore concentrating plants and machinery published in the *Journal* of the United States Association of Charcoal Ironmakers, John Birkinbine, the editor, furnishes the following data relating to the Buchanan magnetic rolls:

More thorough and systematic work has been done with this machine than on any other. The Edison machine has treated a larger number of ores than any other and

around the magnetic portion, adhering until it passes beyond the magnetic influence, while the non-magnetic particles drop between the rolls.

The Messrs. Cheever have been experimenting with these magnetic rolls to determine the commercial problem of treating the dump-pile which represents the lean material left after sorting out the merchantable ore taken from their impressive tunnel in the Croton hills. In connection with these experiments the Messrs. Cheever have established a chemi-

than to notice the merits of the appliances used. It will be noted in the analyses given above that the sulphur increased in the concentrates of Croton ore, owing to the fact that it passed over with the magnetite.

Hoisting Engine.

Hoisting and conveying material by means of a suspended wire cable has been so widely adopted as to call for machinery more or less particularly adapted for the service. The hoisting engine here

HOISTING ENGINE, BUILT BY THE LIDGERWOOD MFG. COMPANY, NEW YORK.

shown its capabilities under varying conditions, and the Wenström machine has also been operated on several ores. The Buchanan rolls, on the other hand, have been operated practically on one ore—viz., that obtained from the Croton mines in New York. The crushing plant at these mines has been utilized by the Messrs. Cheever to reduce ore from the extensive waste pile at the Croton mines to about 15-mesh size, and this has been passed through the Buchanan magnetic rolls. These consist of iron rolls revolving on journals which are carried on insulated standards wound with copper wire. By connecting these wires with a battery the standards become electro-magnetic of opposite polarity and the rolls are charged thereby, making a magnetic field between the rolls. The ore being fed on the rolls, which revolve toward each other, is carried

cal laboratory, and the following determinations are selected from a larger number of analyses made by Mr. Edwin K. Landis, chemist:

Separation of Croton (Theall) Ore by Buchanan Magnetic Rolls.

	Crude ore.	Concentrates.	Tailings.
Iron.....	37.968	64.594	13.207
Silica.....	29.30	5.350	50.20
Phosphorus....	0.383	0.050	0.492
Sulphur.....	0.522	1.253	0.924
Iron.....	81.28	62.56	4.66
Silica.....	35.50	6.825	58.05
Phosphorus....	0.271	0.058	0.527
Sulphur.....	0.784	1.320	0.945

The analyses given in this article are not necessarily comparative as applied to the various machines used, for with each machine the conditions are different, and the determinations are given to show the possibilities of magnetic separation rather

illustrated was designed to meet the requirements of this character. Both drums are loosely mounted and are entirely independent of each other in operation. They may be thrown in and out of gear with the engines in motion, either separately or together, or one drum may be employed in lowering while the other is hoisting; or both drums may be thrown into gear and the engine used as a regular reversible engine, one load being hoisted while the empty cage is being lowered. This independent construction permits of one drum being thrown into gear to wind up the main rope, while the other drum, being out of gear and loose on the shaft, pays out the tail-rope. Reversing the engines, of course, reverses their operations. The drums are made in one casting, turned off true and spirally grooved for the rope. The friction is of the double-cone type and

is composed of segments of hard wood, bolted fast to spur-wheels and turned off conically to suit the flanges of the drum with which it engages. A very small movement of the drum along the shaft is sufficient to engage it with the friction surface. This is accomplished by means of a powerful lever, screw and nut at the end of the drum shaft, attached to the side stand, and communicating motion to the drum by means of a steel pin, cross-key and collar. The friction is such that a comparatively light pressure on the lever is sufficient to hold the drum firmly in gear against any load the engine can hoist. When the pressure is removed the drum is released by a spiral spring on the shaft between the drum and gear-wheel. The

ingots is considerably behindhand. The *Engineer* reports that Bell Bros. do not intend to adopt the usual cogging mill and hot slab shears for reducing their ingots into blooms of marketable size and shape. They are adopting the hydraulic squeezer system, which has been so successful in making forgings at Manchester, Sheffield and elsewhere. Blooms will be made for the general market, and it is expected they will be purchased by many of the owners of ironworks who do not care to put down a steel melting plant themselves. The situation of the Port Clarence works is exceedingly good for carrying on a trade of this kind. Blooms can be sent thence to any consumer's works situated on the seaboard on the Northeast Coast, in full

tends along the line for instant communication with headquarters in case of accidents or break-downs. The machinery started off very well, and the new line promises to work very satisfactorily.

Butterworth on the Despotism of Labor.

The alleged "Despotism of Labor" was the occasion of a vigorous philippic by Representative Butterworth, of Ohio, last week, the special provocation being an attempt to banish steam printing presses from the Bureau of Engraving and Printing at the instigation of hand plate printers. He wished to go on record as oppos-

Plan.

HOISTING ENGINE, BUILT BY THE LIDGERWOOD MFG. COMPANY, NEW YORK.

brake is a broad iron band, lined with blocks of hard wood, which encircles the flange of the drum. The gearing is the usual spur-wheel and pinion type. The engines are similar to those which are so well known in connection with hoisting machinery of this make. All movements of the hoisting engine are controlled by five levers placed side by side, as shown in the perspective and plan views; the throttle is also within convenient reach of the operator. These engines are made by the Lidgerwood Mfg. Company, of 96 Liberty street, New York.

The new steel works erected at Port Clarence, England, by Bell Bros., of whom I. Lowthian Bell is a member, are ready to commence operations so far as to make ingots; and, indeed, a trial cast has already been made. But, as in the other case, the machinery for dealing with the

craft-loads, for about 2/ per ton. The process adopted by Messrs. Bell Bros. is that known as the "neutral" process, the hearth of the furnace being lined with chrome ore, or other material which is neither distinctly acid nor basic. M. Pourcel, formerly of the Terre Noire Works, in France, occupies the position of responsible adviser to the firm on technical matters connected with the steel melting plant.

A new cable street railway was formally opened for business in Chicago on the 22d inst. It is the Lincoln avenue branch of the North Chicago Street Railway and is about a mile and a half in length, extending a short distance beyond the city limits. The power plant consists of eight boilers of 750 horse-power and two steam engines built by Robert Wetherill & Co., of Chester, Pa. A complete electrical apparatus ex-

ing any change in the presses at the behest or dictation of any combination or society or collection of individuals. Mr. Butterworth said that he approved of the combination of labor, but he did not approve of force being used to exclude any American from any walk of life or any calling. It was needless for members to shut their eyes to the fact that some of these organizations had starved widows and orphans into compliance with their behests. While he in no way objected to organizations in the interests of men, wherever and however employed, he protested against the utilization of those organizations for the purpose of compelling obedience to their high behests except by argument and the influence of moral suasion. All he insisted upon was that members should stand by their deliberate judgment and not yield to the suggestion that it would shorten their political life not to do so. He denied the

right of any association to say to his boy that he should not learn the trade of his father. Against that right he inveighed. "If this House had done its duty," said the speaker, "the children of men who made and kept the republic would not be crowded out of work by the shiploads of lazzaroni from Europe who landed daily on our shores." In brief, Mr. Butterworth's speech was a protest against the bulldozing of trades unions and a contention that every man has a right to the management of his own affairs.

The St. Mary's Canal.

The report of Col. O. M. Poe to the Chief of Engineers, on the commerce of the St. Mary's Falls Canal, Michigan, for the last navigation season, gives fresh illustration of the magnitude of the commerce which comes through the great

cargo of registered vessels in 1888 was 876.6 tons, as against 644 tons in 1887, an increase of 36 per cent.

As to the quantity and value of the respective kinds of freight carried through the canal in 1888, as compared with 1887, Colonel Poe's report gives the following figures: Coal 2,105,041 tons, an increase of 56 per cent., valued at \$7,367,643; flour, 2,190,725 barrels, an increase of 39 per cent., valued at \$10,953,625; wheat, 18,596,351 bushels, a decrease of 19 per cent., valued at \$18,224,428; grain other than wheat, 2,022,308 bushels, an increase of 161 per cent., valued at \$1,981,861; manufactured iron, 48,859 tons, a decrease of 20 per cent., valued at \$2,442,950; pig iron, 14,844 tons, an increase of 5 per cent., valued at \$252,348; salt, 210,433 barrels, an increase of 3 per cent., valued at \$210,433; copper, 28,960 tons, a decrease of 17 per cent., valued at \$5,792,000; iron ore, 2,570,-

vides all that is necessary to render the Government absolutely independent of the world in the matter of building and equipping a navy. There is ample competition among bidders for the construction of engines and machinery, and in this matter American enterprise and ingenuity seem likely to lead the world.

American Patents on Foreign Inventions.—An important decision affecting the life of an American patent has been reached by the United States Supreme Court in the case of the Rate Refrigerating Company, applicant, against George B. Hammond & Co. By the statute of the United States it is provided that when a patent is taken out in a foreign country, and one subsequently is taken out in this country, the patent shall expire in the United States with the expiration of the patent in the foreign country in which it first runs out. Under

Side Elevation.

HOISTING ENGINE, BUILT BY THE LIDGERWOOD MFG. COMPANY, NEW YORK.

lakes. It was valued last season at \$82,156,019, or \$28,000,000 more than in 1885, \$13,000,000 more than in 1886, and \$3,000,000 more than in 1887. The failure to keep up the proportionate increase in 1888 is attributed to the short crop of merchantable wheat, the diminished demand for railroad iron in the Northwest, a restricted output from the Lake Superior mines and shipments of iron by rail. It is assumed that these causes are only temporary and that the percentage of increase will probably be restored next season. As compared with the season of 1887, there was an increase in the registered tonnage of 283,061, or 5 per cent., and in the freight tonnage of 916,776, or 17 per cent. The total freight tonnage was 6,411,423 tons. It is noteworthy, however, that while both the registered and freight tonnage increased, the number of vessels passing through the canal was less by 1552, or a decrease of 17 per cent. The average tonnage of registered vessels in 1887 was 574.2, but in 1888 it was 703, an increase of 22.4 per cent., although the number of registered vessels in 1888 was 216 less. The average

1517 tons, an increase of 3 per cent., valued at \$8,996,809; lumber, 240,372,000 feet, an increase of 45 per cent., valued at \$4,326,696; silver ore, 3385 tons, an increase of 867 per cent., valued at \$520,579; building stones, 33,541 tons, an increase of 150 per cent., valued at \$335,410; and unclassified freight, 345,854 tons, valued at \$20,751,240, or about 5 per cent. of the total freight tonnage.

The condition and prospects of the United States Navy are referred to by the House Committee on Naval Affairs, which quotes the Appropriation Committee as saying that the appropriation of \$625,000 for extending the gun plant at the Washington Navy Yard will be all that is necessary to put three different navy yards in condition to build the hulls of the finest modern vessels, armored and unarmored, as well as for the equipment of a great plant for the assembly of heavy ordnance. Satisfactory progress is being made by the private contractors for supplying heavy gun and armor plate forgings and for rapid-fire machine guns. The bill reported pro-

the Canadian law patents are granted for five years, with the privilege of renewal for two periods of five years each. The question in this case was whether the lifetime of the American patent expired five years from its issuance in Canada or at the end of 15 years, which is the limit to which the life of a patent may be extended in Canada. The Supreme Court holds that the lifetime of an American patent first taken out in a foreign country does not expire until the extreme limit of time for which an extension of patent may be secured in the foreign country. The decision of the Circuit Court of Massachusetts is thus reversed.

Several of the big buildings of Philadelphia have recently had placed in them scales with a hopper receptacle for holding several tons of coal. They are situated under the sidewalk shutters, and the coal is dumped directly into the hopper from the cart and then weighed. The engineer of one of these buildings says that thus assuring full weight in the coal he buys he saves the value of the scale many times during the year.

HUNT'S RAIL SPECIFICATIONS.

The Views of Railroad Men.

We print below the opinions expressed by railroad managers and engineers on the subject brought up by the paper of Captain W. R. Hunt in the columns of the *Railroad Gazette*. One chief engineer of a trunk line writes:

Instead of tests made by the company, we accept a guarantee for a number of years from the manufacturers, which is evidently the simplest way of getting good rails, and no corporation can nowadays exact both. In other words, we must either tell the manufacturers how to make the rail and then stand by the result, or leave it to him and accept his guarantee. Under our contracts we have the right to examine the results of analyses made at the shop, and we see to it that the rail is properly rolled to the standard section, is straight and without flaws.

Mr. Katté concurs generally with Mr. Hunt's views, as given in the paper quoted from. Mr. W. H. Brown, of the Pennsylvania, says: "From our observation and experience we find that the rails now furnished this company improve in the wearing quality and strength. We have very little or no trouble of late years from broken rails, since we keep the amount of carbon within the limits of 0.30 to 0.50 per cent. of the company." Mr. J. T. Richards, Asst. Chief Engineer of the Pennsylvania, speaking of the specifications, says:

These have been formulated gradually and from experience in the wear and breakage of rail, gathered through a long series of years, and if they are not perfect they are the best we can put forth at this time. As you know, there is a great difference of opinion among engineers and managers of railroads on this subject, and, in my opinion, it is right that there should be, as the traffic and also the extremes of temperature are so widely different on the railroads of the United States, even though they be not many miles apart; hence it would be manifestly impossible to establish an absolute rule as to the chemical and physical characteristics of rails to which all the railroads could conform.

Mr. Jas. O. Osgood, Chief Engineer Lake Shore and Michigan Southern, says:

I am not prepared to state just what chemical tests I should recommend, but in my opinion it is very desirable that chemical tests should be made which will secure uniformity of material and regulate the amount of carbon and phosphorus. Rails as ordinarily furnished I have generally found too soft to wear well, and I believe, with proper care in regard to the chemical constituents, that a hard rail can be obtained which will be much more serviceable than the ordinary product of the mills, and which will not be subject to much breakage. In addition to any chemical tests which may be required, much more than ordinary care should be taken in straightening rails and in inspection for surface defects. No doubt physical tests of the material should be had also. I consider the present practice of rail inspection entirely inadequate to secure proper results.

Mr. J. D. Hawks, Chief Engineer Michigan Central, who is known as a careful observer and student of rail wear, writes:

I am entirely at sea in regard to proper specification for steel rails. I am satisfied in my own mind that the difficulties we have had of late years from soft rails are largely owing to mechanical construction. I cannot learn that any less pains are taken with the quality of material than formerly, and never yet have seen a soft rail myself with a thin head, our trouble in that direction having been entirely with the 65-pound rail, which has a head out of all proportion to the size of the rest of the rail. The head is so large that in order to get the rail through the rolls before the neck and flanges get too cold for rolling, the head has to be kept at altogether too high a heat to produce satisfactory results. Our new 80-pound rail* is designed to obviate this difficulty. If it is not a success in this direction, then the rolling mills have got to get up some other excuse for making poor rails. I think the Michigan Central has met

every excuse, except this latter one of the large head, that the steel men have offered. We have shown them that their rails are laid on a good road-bed with an abundance of ties and good joint fastenings, and have also shown them that the excuse they make of heavier and faster traffic is no excuse at all on our road, as we run the heavy and fast traffic over some of our old 60-pound rails with the same conditions as to road-bed. The soft rail that I have had trouble with has always been very coarse grain. A piece taken out of the head, or even the entire head, and forged down under a steam hammer, will show fine grain. There have been, of course, a great many suggestions offered as to manner of inspecting rails. We try to have our rails carefully inspected for flaws, splits at the ends and crooked or lumpy surfaces and lines. The physical tests have not so far amounted to much, and I am at sea as to what really constitutes a proper physical test, especially in view of the fact that where I have undertaken to specify certain physical qualities that the rail should possess, the rolling mill has refused to sign the contract. It is true that it has been my misfortune to undertake to insert these qualifications in the contract on a rising market. If I could catch the market on the drop after the rail contract was as good as closed I might be more successful. I have, of course, great hopes that our new 80-pound section will give us much better results than the 65-pound section. The mill people have only of late years complained about the 65-pound section being too large in the head. This theory of the large head was perhaps good enough at the time the large head was first adopted. I inclose sketch showing how the large head came to be adopted on the L. S. and M. S. You will notice that the section of 60-pound rail is, in the light of the present experience, a very good one. The same distance between flange and head was maintained on the 65-pound rail, and the five pounds were added to the head, except a very small bit on the extreme end of the flange. The rolling-mill people did not object to this at the time, and since then, on many roads, the idea has been carried still further by adding more weight to the head in a 70 and 75-pound rail.

While the theory of this addition to the head is that after $\frac{1}{4}$ or $\frac{1}{2}$ inch of the material is worn off the head there will still remain as good a section as the original lighter section, practice shows altogether a different state of affairs. The 60-pound rail that we still have in track has a thin and light head. It has been subjected to very heavy traffic for 15 or 16 years, and will not show $\frac{1}{4}$ inch worn off the head during all that time. If the 80-pound rail will give us as good service as this old 60-pound it is all that I ask. I do not expect any better service, but shall be very well satisfied with rail that will last under our traffic for 15 years. We certainly have not had anything of the kind since we have adopted a 65-pound section, either of American or English make. The 80-pound rail will be laid with a very much improved joint fastening as compared with the short four-hole splice of the 60-pound rail, and should give better results on that account. In fact, much of the 60-pound rail was laid originally with chairs with only a two-hole splice. It stood this kind of a joint very well, and because it did stand with a chair for an anvil, it shows to me that the railmen are paying altogether too much attention to the style of joint that should be used. The joint being outside of their contract, they have found it convenient to lay a good share of our trouble from soft rail to poor joints and joint fastenings.

Mr. Robert Sayre, second vice-president Lehigh Valley, is another engineer who has given especial attention to rails. He writes:

I have never prepared a specification for the test of rails, for the reason that we obtain almost all our rails from the Bethlehem Iron Company and depend upon it furnishing us with a good rail, and as we are near the mill we can return any failures. The only specification I have is with regard to the carbon. I have raised this from 0.40 to from 0.50 to 0.55, and am considering the propriety of limiting it to 0.60. I believe this right. As we use a heavier rail I think we can use a higher carbon and get better results.

The chief engineer of an Eastern line carrying a very heavy and fast traffic writes:

This company has been trusting the mills that roll the rails, and I do not think they are up to the proper standard. They are considerably inferior to English rails—at least those made some 15 or 20 years ago. We have taken out of this company's main line this summer John Brown rails that have been in the track since 1868, 60 pounds per yard, and they were not so much worn but that they will be good for a number of years yet. I have doubts if our new rails, which have only been in the track a short time, will last 15 years, especially those put in on the main line.

Col. H. S. Haines, general manager of the "Plant" lines, writes:

I have the disposition and I wish I had the time to express my views at length on this subject; they would not be very technical, either. I started out years ago with that end of the investigation, and the further I have gone the less occasion I have found for applying my information either chemically or mathematically to the determination of the qualifications of a good steel rail; or, to put it in a different way, to find out in advance the best rail for our purposes, and to know when we have got it. Of late years the impression has been growing on me that the designers and manufacturers will have to specialize in this branch of railroad engineering, as has been found necessary in other branches. That is to say, that what is wanted in the way of a rail for a rock-ballasted road is not what we want in our territory, where, for instance, in 1000 miles of road in our system there is not one mile of rock or gravel ballast or any probability of obtaining it. When we first began to use steel rail, its cost being so excessive as compared with iron rails led us to use a light section—that is, 50-pound. As our equipment and trainloads increased in weight, we have replaced it in a great measure with a 60-pound section. On taking up the 50-pound rail, we found them bowed at each end, as if the base had become lengthened under the rolling of the trains, and yet very little wear on the heads. For instance, in taking up a number of rails near Savannah, where our traffic was the heaviest and where they had been down 10 years, we found a loss by wear of about 3 pounds per rail of 30 feet. This may be accounted for by our exceptionally low gradients and long tangents, but it is a fact, or at least we consider it one, that the trouble with us is not the wear of the head, but the bending upward of the rails at the ends, which would seem to show that rock ballast will wear off the head of a rail faster than it would wear on an unballasted road, and that in designing a heavier section for our sandy road-beds, we do not need so much metal in the head of the rail, but we must seek to make the rail higher and perhaps broader. With that end in view we have recently designed a section of a 70-pound pattern, 5 inches high and with a base of 5 inches, using the same metal in the head that we now use in our 60-pound rail—that is to say, we are providing for increased stiffness and not for increased wear.

A Western engineer says:

For physical test of rails the Pennsylvania Railroad specification seems to be in the right direction; as to the chemical test I am not prepared to say. The question of the constituent properties of rails is still in doubt. The conditions under which rails are used, laid in track and taken care of vary so much on different roads, and the experience is so different that the matter has scarcely received sufficient attention for any one to say just what is the proper make-up for rails.

Another Western engineer, who is much more than commonly well informed, writes:

I think the drop test for rails a good one, so far, that while it does not prove that a rail is a good one, it does indicate what are worthless ones—that is, those that are quite too brittle to be safely laid in track, and I think the same may be said of chemical analysis of rails. It may show whether a rail contains too high a proportion of an element which is well known to be injurious to the metal, without, however, showing just what proportion of elements constitute a good rail. Our analyses of rails so far have not been very satisfactory, but from the work in that line which we now have in progress, we hope to obtain some valuable results. I would attach more importance to physical tests than to chemical analysis, and perhaps more important than either would be a study of the mechanical treatment of the metal in the manufacture of the rail. Our company prescribe neither physical nor chemical tests in their specifications, but take their rails on the guarantee plan.

I think there has been somewhat of an improvement in the wearing qualities of rails made within the last two or three years, though not yet up to the standard of 10 or 12 years ago. One reason for the failure of rails of recent manufacture is the excessive weight per car wheel which is brought upon them; while old rails which have become "case hardened," so to speak, under lighter rolling-stock are better able to stand the crushing force of the present heavily weighted wheels. An engineer, who has had large experience with English rails, finds those made now much inferior to lighter rails made a dozen years ago. This has been true for several years, and many rails have been taken out of track after 18 months' service. They failed chiefly from flattening at the points. The rails are too soft.

* This rail was shown in the *Railroad Gazette*, December 7, 1888. It has a head $2\frac{1}{2}$ inches wide and $1\frac{1}{4}$ deep, containing about 4.4 per cent. of the total metal. This head is relatively considerably lighter than most modern sections.

A Canadian engineer writes:

I have almost reached the conclusion that the inspection of rails is a useless service, as, under the same specifications and the same inspector, and, I may add, under the same contract, one delivery of rails may turn out hard and brittle, while another delivery may prove to be as soft as lead. My belief is that under the present process of manufacture the makers are unable to insure a specific quality of rail.

Mr. E. P. Hannaford, Chief Engineer Grand Trunk Railway, writes:

First let us look at the position of the manufacture now and as existing some 18 years ago, when steel rails were first introduced on this continent as a system. In 1870 the engineers of railway companies accepted steel rails on the good faith of the manufacturers, with some misgivings and anxiety, it is true; but in those days railway engineers knew but little of the manufacture of steel rails, and, as a rule, everything was left to the good faith and integrity of the manufacturer, and in some cases a guarantee for a term of years was given. The imported English rails of early years, from 1870 to 1875, gave satisfaction; their wearing life under a heavy traffic was put down at 15 years, and time and service have proved their durability to be equal to the anticipation. Even up to the year 1880 the imported English rails were good in quality, although not so good as during the first five years.

From 1880 to the present time there has been a gradual falling off year by year in the wearing quality of imported rails, until their life

1870 to 1875 will outlast in wear and time two-fold rails made by the same makers ten years later.

Now, inasmuch as railmakers of early years under the Bessemer process know all about the cause of the decrease in wearing ability, I approach the point of endeavoring to set them right, with a great deal of diffidence in my ability to do so. It seems to me very much like a patient prescribing for himself and the doctor looking on with placidity, well knowing that he (the doctor) is master of the position. Having given you the task that railway engineers have before them, I will give you what I consider about the best constituent parts for a 65-pound rail, gathered from the reports of the composition of rails that have given good and bad results, bearing in mind I do not run the laboratory:

Carbon.....	0.40	Manganese...	1.10 to 1.20
Silicon.....	0.08	Phosphorus...	0.07

And by increasing the weight of rails, say, to 75 or 80 pounds per yard, the carbon may be increased to 0.50 to 0.55.

Now, as to the falling weight test. I am not a believer in such, aptly called "barbarous," usages as have been sometimes practiced. The great object to arrive at is the toughness of steel at its maximum of hardness. A weight of 2000 pounds from 18 to 20 feet, two or more blows applied will test this; and if the material is tough, that is sufficient; but if it snaps off then there is the presence of too much phosphorus or sulphur in the ore—i.e., when the above quantities of carbon, silicon and manganese are used; and it must always be remembered that the bulk ore should be chosen with a natural minimum percentage of phosphorus

more information than a drop test. The demand for harder rails which has set in within a comparatively recent period will very likely result in some of our leading railroads establishing a test for hardness.

If I were purchasing for a large railroad I would analyze occasionally. I would want to know that phosphorus and sulphur were within bounds, and that the manufacture was systematic; and yet, after all, we find ourselves unable to tell very much about the value of a rail from the record of its constituents. Within the proper limits for the various elements there is room for very wide differences in the actual qualities of the rail.

There are two objects in inspection—first, to see that the rails are mechanically perfect, and, second, to know that they are made of good steel. The first is easily accomplished by a man having such experience as has usually been acquired by the ordinary inspector. To be of much value in the direction of the second requirement, the inspector should be thoroughly familiar with every stage of the manufacture, and conversant with the various conditions that affect the ultimate condition of the steel. To such a man the ordinary physical and chemical tests are useful only as an occasional check.

I believe the average output to be more uniform in quality than formerly. With some mills I know this to be the case. While much has yet to be learned, the years have brought their lessons, and the various processes are now under better control. I think, also, that most of the mills are now turning out harder rails than they were, perhaps, one year ago. Of course such steel will show higher resistance under test. Whether it will be more liable to breakage in the track remains to be seen. There is some danger in going too far in this direction with the light sections generally used.

The Rail Head Described by J. D. Hawks. Chief Engineer Michigan Central.

cannot be depended upon with any certainty. The same experience is applicable to rails made in the United States—the earlier made rails are better than those of more recent years. This falling off in the quality of steel rails has led railway engineers to study the component parts of the rails, with a view of helping the manufacturers in their endeavors to turn out good wearing rails.

Now, why are the rails of late years inferior in quality to those of earlier years? The answer is to be found in the demand for rails increasing the price. Thus, rails in 1880 to 1885 at the mills' mouth, in England, worth from \$80 to \$50 per ton, and in the United States from \$115 to \$80 per ton, are now down to \$20 in England and \$30 in the United States. It is useless for railmakers to say that the same ore is used and the same care in manufacturing Bessemer-steel rails is exercised now as in previous years, because facts prove the contrary. The falling wear of rails of recent years' make is evidence against such assertions.

The manufacturer who was in business in the early years knows all about the reasons of the falling away in quality, but he cannot restore the lost elements of wear. The enormous demand and output exacts his attention, and the competition in price precludes his reverting to what are termed the old-fashioned methods of 20 years ago; but, nevertheless, these original makers know all about it, and the why and wherefore rails are not so good in lasting powers as at their first introduction. Some of the makers have said: "True, the rails of early years wore well; they were hard; so hard that they caused accidents by breakages, which now happily are almost unknown." Not so. Rails did not break more in the early years than those in later years; but the fact is that the rails of late years are not nearly so good as those of earlier date. And my experience goes to show that rails made by the same maker in

and sulphur, and that if ores are used with a natural high percentage of phosphorus and sulphur, then the extraction or reduction of these injurious elements has to be done by what is known as the "basic process," and a good rail cannot be relied upon.

I cannot divest myself of the feeling that much of the failure of latter years is the result of using ores inferior to what were used when Bessemer rails were first introduced, and in closing I desire again to say that while we maintenance engineers can give railmakers results, yet we are only secondary to them in knowing how to overcome the cause of failures. All the engineers' prescriptions and rail inspectors' elaborate reports will not, in my opinion, secure wearing service equal to rails made 15 and 20 years ago. I believe that railmakers are desirous of making good rails, but the market price and tonnage output limits these conditions, and that if a railmaker turns out rails as good as those from his neighbor's mill it satisfies his conscience, and, if they are not as good, then the railway engineer or inspector will possibly come in for a good share of the failure as participating in manipulating the ingredients making up the rails, and the more the patient interferes with the doctor the worse in my opinion it may be for him. Let us look at net results, the doctor to effect the cure or blame him for incompetency.

Mr. W. F. Mattes, chief engineer and manager West Superior Iron and Steel Company, writes:

Physical tests upon specimens cut or forged from pieces of the rail, or forged from sample castings of the heat, have little or no value. The drop test undoubtedly gives some indication of the toughness and safety of the rail, but throws little light upon its wearing qualities. I am inclined to think that a torsional test upon specimens several feet long, recorded by a large Thurston machine, would give much

Our contemporary *Industry* states that Mr. John Heald, proprietor of the machine works at Crockett, Cal., has discovered that rust may be prevented by painting the work with turpentine and white lead. "It is found that when surfaces are coated with finely ground lead thinned with spirits of turpentine no corrosive action or scaling takes place, even when heavy coats of paint are afterward put on the outside. Mr. Heald says that common paint mixed with oil is too thick to penetrate or close the imperfections of the surface and penetrate beneath the scale where it exists, thus leaving places for corrosion to begin beneath the paint. With turpentine and white lead mixed thin the very pores of the iron are closed. The interstices, to so call them, are too minute to receive the body which oil gives, but are closed by the thinner compound. This is the theory, but that is a matter of no consequence so long as the fact is known."

From the New Castle (Pa.) *Guardian* of the 14th inst. we take the following information: "A series of experiments were tried at the Etna Iron Works, this city, Monday, in the manufacture of steel spikes. The object is to make a finished article by rolling the bar so that its width will be the length of a spike and in such a shape that the spikes may be cut from it with shears, pretty much as a cut nail is made, except that the head is formed in the rolling process. The rolls were turned by Charles & James Mathews, of this city, and were set and operated under the direction of Mr. R. Garvin and Superintendent T. M. Sweeney. At noon the first test was made by running through some steel rails that had been slowly heated for two and a half hours. The result was fairly successful, and it is thought that a few changes in the rolls will make the operation entirely satisfactory."

The freight rates from Pittsburgh to all Texas common points have been advanced and took effect on the 20th inst. The new rates are as follows: First class, \$1.63; second, \$1.42; third, \$1.21; fourth, \$1.06; fifth, 85 cents. Class A, 91; B, 82; C, 72; D, 58; E, 50 cents per 100 pounds. Iron and wire are in carloads fifth class.

not improbable that the time will come when they may be able altogether to dispense with supplies even of the finest tool steel, which they now get from Sheffield.

Portable Power Drill.

This drill can be readily and firmly held to the work and will drill in any position, at any angle and at any direction from the power. The construction of the drill is clearly shown in both the accompanying engravings. The larger, or driving gear, is operated by a grooved pulley, with which a clutch is adapted to engage to operate the small or feed gear. The feed is automatic and sufficiently powerful to stand the greatest strain a twist drill can be subjected to. At the base of the drill is a threaded hollow stud for securing the machine to the brace, or jig, after the latter has been properly adjusted for the hole to be drilled. The illustrations show the method of holding the drill to the work by means of the jig and dog. It is evident that with jigs of suitable form the drill

the non-Bessemer ores. From my own notes I am not able to furnish many complete analyses, such being seldom required of me, but I subjoin two which may serve to show the character of the two classes.

The ore always contains a considerable amount of water—sometimes, when it has

in color, very hard, has a glazed surface, from which the hammer rebounds sharply, and occurs in lumps the size of a man's head, attached to other clinkers, but plainly of separate nature. In the mortar it yields a yellowish powder, separable by the magnet into a yellow-gray earth and a sharp, black, glittering sand. The earth contains about 42 per cent. of metallic iron. The black sand contains about 53 per cent. of metallic iron.

Another clinker is apparently also from a single ore lump, but has no evidences of fusion, no glazed exterior, and retains its original form. It is very hard and heavy, presents a glistening black fracture with evidence of sulphur, and often contains 60 per cent. of metallic iron. Another resembles a slag-finger seen at the tuyere of a chilling furnace, or an ore-stalactite formed on the bottom of something and then broken off. These I have occasionally seen forming at the kiln-gates, the fused matter trickling down the wall when the kiln was "in trouble," a condition corresponding to a scaffolding furnace.

PORTABLE POWER DRILL, MADE BY J. J. McCABE, NEW YORK.

may be held in almost any desired position. These drills are manufactured by J. J. McCabe, of 121 Liberty street, New York.

Roasting Hudson River Carbonates.*

BY INGERSOLL OLMSTED, BURDEN, N. Y.

The Hudson River carbonate ores are of two classes, Bessemer and non-Bessemer, existing in separate, though adjoining beds. Both are carbonates, with small admixtures of oxides and other combinations. To prepare them for market they are roasted in kilns 60 feet in height. They have wrought-iron shells 24 feet in diameter; are lined with fire-brick, and supported by cast-iron mantel and columns. As originally built, the draft was wholly from the bottom; but afterward two rows of small circular holes were cut in them, a little short of half way up, and encircling the kila. The kilns are 10 in number, with an estimated roasting capacity of about 100 tons daily each.

The richer of the two classes of ore is a true Bessemer, containing only about 0.035 per cent. of phosphorus. It is uniform in character and unmarked by any specially interesting features. In the present paper I purpose to speak mainly of

been exposed to rain, as much as 8 per cent. It is but fair to say that the sulphur in I is much higher than the average, and that the iron in II is a trifle higher than I have generally found. The form of the roasted ore is varied, but examination shows four main characteristics, which may be classified thus:

- I. A rough, shapeless mass.
- II. A fine-grained, flat slate.
- III. A mixture of white silica-grains with red or black ore-grains, occurring mainly in thick, flat slabs.
- IV. "Clinkers," so-called.

The analysis of many pieces of each class points to the rough generalization that Nos. I and IV are the richest, the others mostly lean, though stray pieces of one class occasionally approach those of another so closely in percentage of iron that the line becomes hard to draw.

Class IV presents the most interesting features. For some reason not yet clear, these clinkers form in the kilns, and, descending to the gates, give trouble by being too large to pass through, and requiring blasting. They are, in the main, roughly rounded masses, from 18 inches to 3 feet in diameter, composed of pieces of ore, rock, coal ashes, &c., cemented together with fused ore or something similar. But there are many of a different nature. One appears as though formed from a single ore lump; it is nearly gray

A prominent characteristic of the "cemented" clinkers is that they often contain pieces of Class III; but such pieces show no evidences of fusion or alteration, and are only stuck to the rest of the mass. In spite of close study with a magnifying glass I have not been able to connect any other particular form of ore—the slate, for example—with this clinker formation, nor have I ever seen any fused or altered rock. Moreover, the lumps of ore never seem to show the beginning of fusion arrested there. All these facts point to complete change taking place in one kind of ore.

The reason for this clinker formation remains an open question. Too much heat has been the cause commonly assigned; but that of itself would not produce the metallic iron visible in them. To test the action of heat upon the ore I placed some, in inch-cube size, mixed with coal, in a Hessian crucible, and exposed it to the full heat of a gasoline furnace, keeping the crucible at an almost white heat for hours, but failed to produce any effect except thorough roasting—this, too, although I varied the conditions, with crucible open and closed, by charging wet ore and coal-dust, &c.

I then considered that there must be some action of oxidizing and reducing gases at the bottom of the trouble; that it might be promoted by the ore remaining longer in or near the fires than is necessary

* A paper read at the Buffalo meeting of the American Institute of Mining engineers.

to completely roast it. This might easily happen, since the drawing of the kilns is regulated by the appearance of hot ore at the gates, the convenience of shipment and other causes, not by the time necessary to roast. I do not know that that length of time has ever been precisely determined here. Clinkering might also arise, I thought, from some of the ore fusing or reducing more easily than the rest, and thus running in the fire necessary to roast the more refractory.

In our non-Bessemer vein there occur constantly seams of black slate, generally narrow. It is very siliceous, fine-grained, nearly black between the gray natural ore, breaks into thin plates, and furnishes my Class II. Besides its carbonate of iron it carries from 1 to 15 per cent. of some other iron combination, insoluble in concentrated boiling acid. May not this fuse readily, and, under some conditions, cause trouble? To follow up the investigation on this line I designed a special apparatus for roasting samples in the presence of different mixtures of oxidizing and reducing gases, but have not been able as yet to carry on the experiment. It is on this point that I invite discussion—namely, the reason for the formation of clinkers described. Perhaps I ought to add that our fuel is good culm, and the charge fixed by practice as best is about 1 ton of fuel to 30 of ore.

At certain times these clinkers form in large numbers and virtually scaffold the kiln, which decreases its output, becomes hot throughout, and is said to be "in trouble." Then they are termed "bad" clinkers, and are thrown out on account of the sulphur they contain. The average of this objectionable element in the ore, including clinkers, is from 0.70 to 0.90 per cent.; but the clinkers alone usually show over 2 per cent. Now, the question which I wish specially to recommend to the attention of furnace men is, What effect will charging these masses among our friable and easily reducible ores have upon the furnace and its work? Would they need more exposure to the reducing gases than the porous ore, and thus, while descending low in the furnace while yet partially unreduced, cause irregularity of working? Would it be advisable to reject them, supposing them to constitute a small portion of the ore only?

The sulphur in our roasted ore has generally been supposed to exist as sulphuric oxide. I think Mr. Sherrerd, of Scranton, holds this view. It is also said to roast off in the furnace and not to affect the iron. Now, would this hold true of the clinkers? Is not the sulphur more likely to be in them as pyrites, and, in such hard masses, to descend into the zone of fusion? I regret that it is impossible to give any complete analyses of these clinkers, which might aid much in the solution of such questions. I have only a few fragmentary tests for iron and silica, which do not show anything.

Apparently, the ore was designed to confound many pet blast furnace theories. For instance, I was once told that it would not make a large percentage of No. 1 or No. 2 iron, because of its manganese (2 to 4 per cent. of the black oxide) and sulphur; but since then I have seen a furnace, running on this non-Bessemer ore alone, make nothing but No. 1 iron for days together. In that iron I found from 1.75 to 2.25 per cent. metallic manganese and only a trace of sulphur. The iron, when raw, was covered with the cloud of sparks, which ordinarily accompanies cold iron, and the slag had a chocolate-colored or nearly black surface, yet contained, nevertheless, only a trace of iron. The fumes at casting were remarkably dense and sulphurous, and I more once noticed in them the odor of cyanides. The iron made exceptionally good castings, and pleased the foundrymen very much.

The variety in appearance and in composition of the samples of this non-Bessemer ore is very striking. Upon my table lie upward of 100 lumps, all tested and tagged, with the percentage of iron at least, often with that of silica and manganese. The silica in many is plainly visible to the eye in pure white grains scattered through the mass, or in narrow veins which under the action of fire become brittle and split the mass throughout, leaving the white crystals upon one face. In others, as in the black slate, the silica is entirely in combination. The percentage of iron varies from 7 to 56, though even to the trained eye there is very little difference in appearance. Some contain so much lime that on mere exposure to the atmosphere they have slacked into a heap of dust, though they carried over 40 per cent. metallic iron. These peculiarities have occasioned much trouble with our customers, and complaints of rock, dust, careless preparation, &c., from those who are ignorant of the originally mixed condition of the ore in the vein, and the confusion unavoidably resulting from the

The experiment has been well confirmed, and seems to show that our leaner, more siliceous, non-Bessemer ore really consists of a mixture of rich ore with veins and lumps of lean, phosphatic stuff. There is no such difference visible in the natural ore, nor do the tests of diamond drill cores and daily drill-samples from the mines encourage the belief. I am, nevertheless, inclined to cling to the theory, in part at least, and to consider the other disagreeing results to arise from the intimacy of the mixture, rendering a drill-core witness only as to the ore it actually contains.

A New Steam Trap.

The steam trap invented by George W. Baird, of the engineer corps of the U. S. Navy, is being manufactured by Watson & McDaniel, of Philadelphia. It was designed to work with the Baird distillery apparatus, and several are being fitted to the fresh-water distillers on board the new cruisers Yorktown, Charleston, Concord, &c. The water from the heaters enters the

NEW STEAM TRAP, MADE BY WATSON & McDANIEL, OF PHILADELPHIA.

roasting and consequent alteration of form. A knowledge of them, together with a laboratory accident, led me to make the following experiment:

A large sample of non-Bessemer ore was reduced to a coarse powder, divided into halves, and these marked respectively Nos. I and II. No. I, without any further preparation, was passed over a 60-inch sieve, and the resulting powder marked A, the fine ore, tailings, &c., being marked B. No. II and A and B were then carefully sampled and analyzed, with the following results:

	II.	A.	B.
Iron.....	39.06	44.51	37.70
Silica.....	23.95	18.40	27.
Phosphorus.....	0.201	0.120	0.270

A partial repetition of the experiment, the analysis of II being omitted, gave:

	A.	B.
Iron....	43.05	36.92
Silica.....	20.53	29.53
Phosphorus.....	0.102	0.183

The samples originally taken did not fairly represent the ore, being leaner than the average; but this did not defeat my intention, which was to learn whether a richer separated ore could be obtained by such screening. If, as my experience goes to show, the soft ore is the rich and desirable, then the difference would have been more marked had the proper proportion of rich ore existed in the samples.

trap through the opening C. In the chamber is the spherical copper float D, which is mounted upon the lever F, fulcrumed to the post H. As the water enters the trap, the rising float opens the valve J, by means of the rod G, enough to bring the portholes in it opposite the holes in the cylindrical case in which the valve works, when the water flows out through the passage I. By turning the valve-wheel A the lever may be raised and the valve opened by hand. Turning the valve-wheel B will close the valve. These wheels are intended only to be used in case the valve J sticks or becomes clogged. It is evident that this trap will operate as freely at one pressure as another. The trap cannot be flooded, as the piston openings are equal to the inlet and discharge pipes. There is an opening in the end of the trap, by which it can be connected direct to the waste-pipe, so as to blow all sediment from the bottom. A board of United States naval engineers examined the trap on the Albatross, and in recommending its use on naval vessels said: "The advantages are the employment of a piston valve perfectly balanced for the discharge, certainty of action, small space occupied, cheapness, lightness, it is automatic, has a large opening for discharge, and can be shut off or blown through by means of the hand attachment on the piston valve."

Universal Grinding Machine.

The machine illustrated is designed for grinding light work, straight or taper, soft or hardened spindles, arbors, cutters, reamers, &c., and also for grinding out rings and hardened boxes by means of a special chuck. The table has both automatic and hand feed, the change being made from one to the other by simply turning a knurled handle in front of the machine. The work can be revolved upon dead center or otherwise, and the wheel is brought to and from the work by means of a screw and hand-wheel, and is arranged to use water to prevent drawing the temper on hardened work. The machine has a swing of 8 inches in diameter by 16 inches long, but is not designed to grind work as large in diameter and length as the capacity given. It is the smallest of

posed for two or three minutes to the action of the vapors of the heated mixture of hydrochloric acid and nitric acid in equal portions, at a temperature ranging from 550 to 650° F. After the objects have cooled, they are to be rubbed over with vaseline and again heated until the vaseline begins to decompose. This treatment with the vaseline has to be repeated once. Should a lighter coloring than bronze be desired it can be produced by mixing acetic acid with the other acids.

Some interesting information respecting the jade of Burmah is contained in an Indian Blue Book, lately received from Rangoon. The jade mining district is a large tract of country, chiefly on the west side of the Uyu River. The Kachins, though acknowledging Burmese authority, regard themselves as owners of the mines. The

UNIVERSAL GRINDING MACHINE, BUILT BY THE DIAMOND MACHINE COMPANY, OF PROVIDENCE, R. I.

the machines made by this company for this class of work. The Diamond Machine Company, of Providence, R. I., the manufacturers of this machine, have a Western office at 51 South Canal street, Chicago, Ill.

Proposals have been invited by the Secretary of the Navy for the construction by contract of an armored coast defense vessel of about 4000 tons displacement, complete, exclusive of armament. Bids will be opened at the Navy Department at noon on February 20, 1889. The material used in the construction of the vessel is to be of American production and furnished and manufactured in the United States. The armor, armor bolts and the accessories are to be furnished by the Government, and the contractor is to fix, place and secure the armor to the vessel.

A German technical journal gives the following method of producing a bronze-like surface on iron or steel, which prevents rust: The object to be acted upon must be cleaned so as to take off all oxidation or other impurity. It is then ex-

posed for two or three minutes to the action of the vapors of the heated mixture of hydrochloric acid and nitric acid in equal portions, at a temperature ranging from 550 to 650° F. After the objects have cooled, they are to be rubbed over with vaseline and again heated until the vaseline begins to decompose. This treatment with the vaseline has to be repeated once. Should a lighter coloring than bronze be desired it can be produced by mixing acetic acid with the other acids.

jade is sold chiefly to the Chinese, the headquarters of the trade being at Mongaung. The best quarries in recent years have been those of Hsimu, Masa, Mopang and Tamukan. It appears that Burmah is the only source whence the Chinese draw their supply of this highly prized mineral. The Chinese Lun Pein, to whom the British Government had farmed the jade-tax, was assassinated a few months ago in consequence of his unpopularity.

The Navy Department, Washington, D. C., will receive proposals until 12 noon, on Friday, the 15th day of February, 1889, for constructing and furnishing the machinery, including engines, boilers and appurtenances, required for the United States armored cruiser Maine, and for erecting and connecting the same on board said vessel at the Navy Yard, Brooklyn, N. Y. All the machinery, including engines, boilers, screw propellers, shafting, pumps and all appurtenances, is to be of the best and most modern design, and to be constructed in accordance with the plans and specifications provided or adopted by the

Secretary of the Navy. The engines must have all necessary appliances for working under forced draft.

The Naval Appropriation.

The only new vessels called for under the new Naval Appropriation bill, apart from four steam tugs, to cost \$140,000 in the aggregate, are the steel monitor of 3000 tons displacement, planned by Representative Thomas, and a second cruiser of the Vesuvius type. For the former the price allowed is \$1,500,000. Her engines are to develop a collective indicated horsepower of 7500 and to produce a maximum trial speed of 17 knots. This is the vessel which has the double interest of novelty in her plan for sinking lower in the water as a means of protection when in actual conflict with an enemy, and in her adoption of a 15-inch 110-ton rifled gun as part of her armament. The maximum appropriation for the second new vessel is larger than that for the Vesuvius, being \$450,000, and this additional margin of \$100,000 will doubtless allow of greater size or more effectiveness in one way or another. The reason for not calling for other new vessels in this bill is doubtless to be found in the fact that there are already several authorized for which the plans have not been prepared. These include two of the most important ships yet proposed, one of them a larger armored cruiser than the Maine, and another a larger a larger unarmored cruiser than any we have, besides the new and fast 2000-ton cruisers.

There has been built at Altoona for Geo. Westinghouse, Jr., a car which will be called the "Instruction Car," designed to exhibit to railroad men the practical workings of all the Westinghouse appliances, consisting of working models of the latest improved air brake for passenger and freight cars, the new friction buffer air signal, steam heating apparatus, electric lighting, and in fact everything pertaining to the mechanical equipment. A 15 horsepower boiler will supply steam to a Westinghouse engine which will operate a dynamo, while a tank with a capacity of 6000 pounds will carry a supply of water under the car.

Invention states that the first instance known of machinery being applied to the making of screws was in France, in 1569, by a man named Besson, who contrived a screw-cutting gauge to be used in a lathe. In 1741 Besson's device was improved by Hindley, a watchmaker of York; and for a long time the watchmakers of England employed the latter's method in making the small screws used in their work. The first English patent appears to have been issued to Job and William Wyatt, in 1760, for three machines—one for making blanks, another for nicking the heads, and a third for cutting the threads. Between that date and 1840 about 10 patents were issued.

The Valley Forge Natural Gas Company are now busy drilling a well for natural gas at Valley Forge, not far from the building known as "Washington's Headquarters." William McCabe, who is performing the work, drilled, so far, about 100 feet. It is reported that strong indications of gas were discovered some time ago when drilling the artesian well for the Hays paper mill.

According to a correspondent of *Industries*, the Russian Minister of Railways proposes asking for a credit of 9,300,000 roubles for the purchase of 300 locomotives. Each engine, according to these figures, will cost over \$23,000. The engines are all to be built in Russia.

THE WEEK.

The recent decision of the United States Supreme Court in the great patent case of the Bate Refrigerator Company *vs.* Hammond & Co. has had a startling effect on the electric lighting business. It is said that it means the gain of many millions of dollars for the Edison company, owing to the fact that a great number of patents which had been thought to be valueless are now found to be worth large sums.

Hippolyte, who opposes Legitime in Hayti, is reported to have come into possession of two gun-boats, one recently purchased in New York and the other in France. The armament received from New York comprises nine Gatlings, which will be manned by American gunners.

Chancellor Bismarck, in a speech before the Reichstag, 26th inst., declared that both in Samoa and on the East Coast of Africa the Imperial policy is thoroughly in accord with that of Great Britain. Respecting commercial prospects in Zanzibar he regarded the enterprise undertaken by the East African Company as one that must be sustained, in order that Germany utilize the products of her own colonies.

The annual report of the New York State Comptroller states that for the current year the State tax is \$9,089,303, the rate being 2.62 mills and the valuation \$3,469,199,945. In one year the assessed valuation of real estate has increased by \$97,358,296, while the increase of assessed personal property was only \$10,913,472. It is believed there is over \$2,500,000,000 of personal property in the State that is not, but ought to be, taxed. There was invested in capital of corporations organized in this State during the last fiscal year the sum of \$145,470,616, which is more than one-third the entire assessed valuation of personal property within the State.

The American Minister to the Court of St. James, Mr. Phelps, was honored by a remarkable banquet by the Lord Mayor of London prior to his departure for America. So good an authority as Robert Browning said in private talk that he believed it to be one of the most notable assemblages Europe had ever seen. Practically the whole Supreme Bench of England were present, with Lord Chief-Justice Coleridge at their head, and the best representatives of science, art, literature and commerce which the country affords.

It is reported from official circles in Ottawa that more stringent regulations than ever are being arranged for promulgation during the coming fishing season, and the entire fleet of fishery-cruisers will make things unpleasant for the Yankee skippers. Orders having gone out for the exclusion of Canadian railway cars from traffic between stations on the American side, annoyance of the skippers will be "tit for tat."

A careful computation of the value of farm products in the United States during the crop year of 1887-88 affords evidence that the money value was in excess of the total realized in the previous year. For grain and cotton alone the gain is supposed to reach nearly \$100,000,000, but the export movement having been retarded to an unusual extent by speculative influences, the total net cash available for expenditures in other lines of industry may be considered yet in reserve.

At a cost of \$2,500,000 the Pullman Palace Car Company have absorbed all rivals, with a single exception, the Wagner Company, which runs cars only on the Vanderbilt roads.

George McKay, deputy State inspector, testifies that he has 17,000 factories to look after, and this statement is made in

extenuation of the fact that at the inquest in the case of the Fifth street factory fire last week it was discovered that the building had no fire escapes. The law regulating this matter had not been enforced, and the question arises which party was most liable to a grand jury indictment, the owner of the building or the inspectors.

The Railroad Commissioners of Minnesota recommend to the Legislature that the "common car stove" should be excluded from all trains.

Over 2000 dwellings have been erected in Pittsburgh within the last year, and prospects are considered better for the year 1889.

City lots in St. Louis valued at \$500,000 have been transferred to the Q road for conversion into railroad yards.

The latest plan for protecting New York harbor is to convert the waters of the bay into an ocean of flame by suddenly releasing a flood of petroleum from submerged iron pipes and applying a match. Somebody pointedly observes that "a vast body of flaming oil sweeping up through the Narrows must be a nice thing for New Yorkers to contemplate."

The resources of Wyoming are destined to make that Territory important among the States of the American Confederacy. Delegate Carey, in a statement before one of the Congressional Committees, said the coal lands in the Territory covered an area of not less than 5,000,000 acres; her oil lands were more than equal to all the oil lands in Pennsylvania, Ohio and West Virginia combined, and she had as fine iron deposits as are found in the United States.

Telephone subscribers are making a demonstration at Albany in favor of reducing charges.

Plans for the improvement of New York harbor have been submitted to Congress by Lieut.-Col. Gillespie, Corps of Engineers, through Secretary Endicott, which contemplate a ship channel between Jersey City and Ellis Island, where now there are only 4 feet of water at mean low stage, except near Port Liberty; also a ship channel or basin between the deep water of Hudson River and Ellis Island, to comprise about 70 acres, and of sufficient capacity to accommodate conveniently 250 vessels at anchor, after allowing an open channel on the north side for convenient communication with the adjacent wharves.

A new tunnel under the Chicago River, to cost \$1,500,000, will be constructed by one of the street railway companies.

The president of the Dock Commissioners explains the delay in carrying out the plans for improving the water front in New York City, arising from difficulty in acquiring and obtaining control of the property of private owners. Until this can be accomplished, private owners are prohibited under the law from improving their property along the water front in accordance with the plans of the commissioners. Simon Stevens, who is attorney for the owners of the greater part of the water front now in private hands, said: "The delay is attributable wholly to the Commissioners of the Sinking Fund and to the city's Law Department. The entire water front of the city is about 60 miles in extent. The title to about one-third of this below Fifty-ninth street still remains in the city. The wharf rights of the other two-thirds have been conveyed by the city to private persons, who now hold them under specific grants. The carrying out of the plans of the Dock Commission involved the demolition of all the existing piers and bulkheads within the prescribed limits, whether public or private, and the building of new ones in their places. In

many cases pending for 13 years no affirmative action has been taken by the Law Department of the city to attain a final decision which would serve as a precedent to govern future action.

The Canadian Pacific and Grand Trunk Railways are reported to have reconciled differences, with the effect of shortening time between Ontario and the Northwest, and they expect to cope more successfully with railways in the United States.

The world's supply of sugar, according to the best authorities, is estimated for the present year at 5,240,000 tons, including 2,808,000 tons of cane and 2,432,000 tons of beet-root sugar. This is an increase of 295,000 tons over the yield of 1887-88, which comprised 2,530,000 tons of cane and 2,415,000 tons of beet-root, thus indicating that the quantity of these two descriptions have changed places in relative importance. The imports into Great Britain last year amounted to 892,518 tons, as compared with 897,760 tons in the previous year, showing a small decrease. Meanwhile, however, a remarkable decrease took place in the relative proportions of cane and beet, the former increasing 134,000 tons and the latter decreasing 139,000 tons as a result of the reduced beet crop in Germany last year. British imports from the United States declined 37,000 tons. The estimated consumption per head in Great Britain is 73 pounds, as compared with 52 pounds in the United States, 28 pounds in France and 20½ pounds in Germany. Russia, Italy and Spain average only about 9 pounds per head. The average per capita in our own country has steadily increased at the rate of nearly 5 per cent. per annum.

Jacob Tome, a millionaire banker of Port Deposit, Maryland, has determined to devote \$2,000,000 or \$3,000,000 to establishing a training institution where poor boys may learn the use of tools and receive instruction in any kind of trade they may select. Workhouses will be erected for 500 children, at a cost of \$500,000. In its general features the scheme resembles that of Mr. Williamson, of Philadelphia, and is a form of practical philanthropy worthy of imitation.

A syndicate has been formed in West Virginia, with ex-Senator Camden among the projectors, to build a railroad on the banks of the Monongahela river, and under an arrangement with the Baltimore and Ohio Railroad Company transport coal and coke to Western markets. The scheme comprises a coal and coke company which will build 500 coke ovens on the line of the railroad. About \$2,000,000 have been raised.

The Florida orange train runs all the year round. After the orange season strawberries, asparagus, garden vegetables, water melons, &c., follow in rotation. If weather permits, ventilators are kept open all the way through.

Italians are now the object of the fierce resentment at first directed against Chinese immigration by representatives of organized labor. The Ford bill in Congress, which imposes a head tax of \$5, is expected to operate as a barrier against the importation of cheap labor from Italy and other parts of Southern Europe, and the steamship companies in the Atlantic trade are much alarmed. Railroad companies, on the contrary, manifest little concern, alleging that even though numerous immigrants destined to the United States might disembark at Canadian ports they would eventually find their way across the boundary. The better class would not be deterred whatever the terms of the bill. Meanwhile excluded laborers of any kind will be welcome in the Argentine Republic to compete with the United States in growing wheat.

MANUFACTURING.

Iron and Steel.

Lemont Furnace, formerly operated by R. Hogsett & Co., in Fayette County, Pa., has been torn down and the machinery is being removed to Alabama.

The steel plant of the Glasgow Iron Company, at Pottstown, Pa., has been closed down.

The Bellaire Nail Works, of Bellaire, Ohio, have recently made some very successful experiments in what is known as the direct process. Instead of running the material from the blast furnace into pig beds, it is taken direct to the Bessemer converters in ladles. By this process there is a slight economy in labor at the blast furnace, and also in the steel department, and in addition there is the saving of the fuel required in the cupola. The chief advantage claimed for the process, however, is the superior quality of the steel made, as it is claimed that it contains less sulphur on account of not having to be remelted, thus avoiding the absorption of sulphur contained in the coke. The greater part of the product of the blast furnace, about 140 tons per day, is now used in the direct process.

Two new double furnaces are being added to the puddling department of the Lochiel Iron and Steel Company, at Logan, Pa.

On Monday, the 21st inst., notices were posted on the plant of the Pottstown Iron Company, at Pottstown, Pa., of a reduction of 25 cents per ton for puddling. This reduction fixes the price at \$3 per ton and affects the puddlers, helpers, rollers and others in that department. The reduction is to go into effect on Monday, the 4th prox. It is thought that it will be accepted by the workmen.

A press dispatch from Philadelphia under date of the 24th inst. says: "The Powell Iron Company was organized to-day to conduct the business of the firm of Robert Hare Powell's Sons & Co., which made an assignment for the benefit of creditors August 29, 1887. At the time of the assignment the insolvent firm owed \$2,000,000, of which \$1,000,000 was unsecured. By the present arrangement the unsecured creditors comprise the new company, whose stock is \$1,000,000.

Sarah Furnace, at Ironton, Ohio, which has been idle for some time undergoing repairs, has again resumed operations.

Wellston Furnace, at Wellston, Jackson County, Ohio, operated under lease by King, Gilbert & Warner, of Columbus, Ohio, has resumed operations after an idleness of some weeks for repairs.

At the annual meeting of the stockholders of the Belmont Nail Company, held in the office of the company at Wheeling, W. Va., on Tuesday, the 22d inst., the old Board of Directors was re-elected as follows: A. W. Kelly, William F. Stifel, Joseph Bell, Edward Reid, George G. Hannan, John G. Hoffman, Jr., and Thomas O'Brien.

A change took place in the membership of the firm of Gabel, Jones & Gabel, of Pottstown, proprietors of the Gabel mine, at Boyertown, and lessees of the Norway furnace at Bechtelsville, Berks County, Pa., on the 1st of January, 1889. The interest of the late Major Griffith Jones, deceased, has been transferred to the heirs of his estate, Mrs. J. C. Jones, Miss Jennie Jones and Capt. F. B. Jones, and Messrs. Henry H. and Jacob H. Gabel continue their ownership as before. Mr. George C. Davis is superintendent of the mines and furnace.

Last week the lining in two of the stacks of the Eliza furnaces, owned and operated

by Laughlin & Co., at Pittsburgh, fell in, and it was necessary to blow out both for relining, which will be done as soon as possible, when they will be started again. This leaves one stack still in operation and one building by this firm. When the new furnace will be completed, which will be about May next, the two stacks mentioned above will probably be dismantled, as the new furnace will have a larger capacity than both of the old furnaces combined.

At the annual meeting of the stockholders of the Benwood Iron Works, held at Wheeling, W. Va., the old board of directors were re-elected, as follows: John G. Hoffman, Sr., A. W. Campbell, L. S. Delaplaine, G. B. Caldwell, L. S. Stifel, Jacob Wise and E. W. Paxton.

A press dispatch from Steubenville, Ohio, under date of the 21st inst., says: "When the Cartwright Iron Works failed last June there were preferred labor claims of about \$3500, which Assignee T. P. Spencer to-day paid in full. The general creditors, to which is owing about \$50,000, will receive nothing from the assets of the concern. The old plant is being rapidly converted into an extensive muck iron mill."

The plant of the Keystone Iron Works, Limited, at Reading, Pa., which has been idle for some time, resumed operations on the 21st inst., giving employment to 90 men.

The Reading Iron Works, at Reading, entered for record on January 4 a mortgage for \$600,000 to the Pennsylvania Company for Insurance on Lives and Granting Annuities, of Philadelphia. This mortgage is to take the place of one for \$1,000,000, executed in 1874 to the American Life Insurance Company, made payable in 15 years. Four hundred thousand dollars of the amount was paid out of the sinking fund of the company and the remainder by the proceeds of the new mortgage. Besides thus reducing its indebtedness, the corporation during the last two years have made extensions and improvements costing several hundred thousand dollars.

Morris, Williams & Bailey, manufacturers of cold-rolled steel at Pittsburgh, have recently embarked in the manufacture of finer articles. They are now building up a larger trade in steel for sewing-machine attachments, springs and general stamping purposes. They have finished steel for watch-springs, and are now making a specialty of springs for clocks. They recently booked an order for 25 tons of steel, to be used in making air chambers for dynamite guns.

Moorhead Bro. & Co., proprietors of the Vesuvius Iron and Nail Works, at Pittsburgh, are now preparing to build an entirely new puddling department of 20 double puddling furnaces, and also a new three-high muck train. It is also stated that the company will manufacture fuel gas, having decided to abandon the use of natural gas as soon as their present contract expires.

Huston & Sons' new steel mill, at Coatesville, Pa., is being rapidly pushed to completion. Mr. Kurtz, who recently purchased the Valley Iron Works, has given the contract for a large new iron mill. Craig, Ridgway & Son, founders and machinists, who now have the largest foundry in that part of the State, will enlarge their works in the spring. The large Brandywine Iron Works, owned by Worth Brothers, will soon be in full operation.

At the annual meeting of the stockholders of the Cleveland Rolling Mill Company, of Cleveland, Ohio, held on Wednesday, the 23d inst., the following officers were elected: President, William Chisholm;

vice-president, W. B. Chisholm; secretary, E. S. Page. Directors, J. H. Wade, H. B. Payne, William Chisholm, J. H. Wade, Jr., and W. B. Chisholm.

Mr. S. T. Wellman has resigned his position as superintendent of the plant of the Otis Iron and Steel Company, of Cleveland, Ohio, and will shortly make an extended pleasure trip to California.

Large quantities of machinery for Claus Spreckels's great sugar refinery, in Philadelphia, are being placed in position. Altogether 800 men are employed in the work.

The Chicago Forge and Bolt Company have secured a very good contract for iron bridges for the St. Louis and San Francisco Railroad. Forty spans will be required, involving the consumption of about 1200 tons of material. The company report a very satisfactory outlook for their bridge department, but the demand for axles and other iron work for cars is quite light at present.

The Nashville Iron, Steel and Charcoal Company, located in West Nashville, made an assignment 23d inst. to Robert L. Morris for the benefit of creditors. Though not fully set forth in figures, the assets are claimed by officials of the company to be about \$450,000, and the liabilities \$170,000. Among the assets are reckoned accounts due the company amounting to \$38,882.31.

Machinery.

The Bouton Foundry Company, of Chicago, some time since sold the site of their Archer avenue works to the Chicago, Alton and St. Louis Railroad Company, who needed the ground for other purposes. The ownership of the buildings and machinery remained with the foundry company, who were given a reasonable time to finish their contracts and effect a removal to some other site. Since then important changes have taken place in this company. E. G. Shumway and C. D. Bradley bought out F. W. Barker, and subsequently Mr. Bradley bought Mr. Shumway's interest, and is now the sole owner of the Bouton plant, which he will remove to a point not yet selected, and will start up in some branch of the foundry business. F. W. Barker has formed a partnership with W. R. Gwinn under the firm name of F. W. Barker & Co., and they will manufacture architectural ironwork and fire-escapes. Their city office is in the First National Bank building, Chicago, and they have secured the Williams Foundry at Grand Crossing. They have placed in charge of the foundry the old foreman of the Union Foundry Company, and have had transferred to them the flasks, catalogues and all other property of the Bouton Foundry Company pertaining to architectural ironwork, including the unfilled contracts.

The Dean Brothers Steam Pump Company, of Indianapolis, Ind., have recently added a new duplex pump to the waterworks at Marion, Ind. It has a capacity of 2,000,000 gallons a day, and when tested recently proved satisfactory. The pump already in service there was put in by the Dean Brothers eight years ago and is in first-class condition, being good for many years to come.

H. O. Whitney, Keokuk, Iowa, agent for New Improved Andrus Brick Press, manufactured at Keokuk, Iowa, reports a number of sales of these machines. During the past week they have shipped one to the Grape Creek Clay Company, Grape Creek, Ill., also one to Cambria Brick and Tile Company, Golden, Col. These machines have been on the market for a number of years, and practical experience has taught the manufacturers the defects and remedy for the same, and they inform us their ma-

chines now give good satisfaction, and mention quite a number of duplicate orders, which they have received as evidence of this fact.

B. W. Goodsell, 139 Lake street, Chicago, is actively pushing the introduction of his rubber-back flax piston-rod packing, which was brought before the trade a short time since. He has received a number of very flattering testimonials from those who have tried this packing. It consists of a wearing body of braided Russian flax, having an elastic rubber back securely attached by vulcanization, which overcomes rigid bearing, reduces friction and increases the durability of the fiber in contact with the rod. It works equally well with either steam or water, and is recommended by the inventor as a packing for air-compressors, elevators, &c.

We note that the Valley Iron Works, of Williamsport, Pa., continue to forge ahead with their Valley Engines. A few of their recent orders are given herewith: Tatum & Bowen, San Francisco, Cal., one 100, one 50, one 70 and one 30 horse-power; Northwestern Machinery Company, St. Paul, Minn., one 100 horse-power; Waterhouse Electric Company, Baltimore, Md., four 50 horse-power; Allen Mfg. Company, Chicago, Ill., one 50 horse-power; William K. Calvert, Altoona, Pa., one 30 horse-power; Lanfield, Davidge & Co., English Center, Pa., one 30 horse-power; Winfield Flouring Mills, Winfield, Pa., one 70 horse-power; Montoursville Planing Mills, Montoursville, Pa., one 50 horse-power; Demorest Fashion and Sewing Machine Company, Williamsport, Pa., one 100 horse-power; S. R. White & Bro., Norfolk, Va., one 70 horse-power. They also report orders for a large amount of general machinery, iron and brass castings, &c.

Some time ago we illustrated and fully described a 100,000-pound screw-power vertical testing machine, built by Riehle Bros., of Philadelphia. The same firm now presents a 60,000-pound machine, arranged somewhat similar to the other and adapted for those who do not wish to use one of larger capacity. The dimensions of the machine are as follows: Height, 6 feet; length, 8 feet; width, 2 feet 5 inches. Its weight is 3500 pounds. It is arranged to take in tensile specimens 8 inches or less with 25 per cent. elongation for 18-inch specimens, or more for shorter lengths. Round specimens, 1½ inches in diameter or less. Square specimens, 1½ inches square or less. Flat specimens, 2½ x 1 inch or less. Transverse specimens, 20 inches or less to 6 inches long. Compression specimens, 8 inches long or less. Compression surfaces, 6 inches in diameter. Motion of pulley head, 23 inches. There are four different speeds with which specimens can be tested, the maximum being 4 inches per minute and the minimum 1 inch in 10 minutes. There are two speeds for driving in opposite directions. Power is applied by levers for starting, stopping, reversing and also for changing the speeds.

The additions and changes to the Pumping Station of the Princeton Water Works, at Princeton, N. J., have been completed and the plant is in successful operation. The improvements were in charge of Frank C. Roberts, C. E., of Philadelphia.

Hardware.

The handle factory of L. C. Gleason, Fenton, Mich., was entirely consumed by fire January 15 with tools and stock. Mr. Gleason advises us that he will rebuild at once, making his factory very completely equipped with the most improved machinery for axe handles, of which he makes a specialty.

The new works now being constructed by the Reading Hardware Company, at Reading, Pa., will be ready for occupancy about March 1 next.

The Bryden Horse Shoe Company, of Catasauqua, Pa., have commenced making shoes in their new works, and when the plant is in full working order the capacity will be very largely increased. The business of the company is constantly increasing.

The Palmer Hardware Mfg. Company, Troy, N. Y., have purchased the effects of the Albany Hardware Mfg. Company, Albany, N. Y., consisting of patents, machinery, tools and stock, and are transferring the plant to their works in Troy, which transfer they state will not cause much interruption in the work, nor retard the filling of orders. The line consists of patented specialties well and favorably known to the trade, in which are included solid steel mining knives, ice tongs, ice picks, ice axes, sidewalk cleaners, transom lifters, &c.

Miscellaneous.

A charter has been granted to the Adams Coke-Oven Bottom Mfg. Company, of Pittsburgh, for the purpose of manufacturing coke-oven bottoms.

The United States Pipe Bending and Coiling Company, of Chicago, have been incorporated, with a capital of \$100,000. Incorporators, M. M. Jamieson, George W. M. Reed and William S. Morse.

New Factory.

The new buildings of S. L. Allen & Co., Philadelphia, for the accommodation of their increasing business, are intended to constitute an extensive plant, a model of its kind, having a capacity nearly treble that of their present works. They are situated in a very eligible site, being at the crossing for the New York branch (four track) of the Pennsylvania Railroad, passing on the North and the Bethlehem branch (two track) of the Reading railroad on the east. This is the only crossing of these two railroad systems on grade within the city limits. A handsome and substantial brick station is just being completed by the Pennsylvania Railroad Company, directly opposite the lot. Both railroads are, of course, available for sidings which can be run directly through the center of the lot lengthwise, a distance of over 500 feet. The whole plot contains over 2½ acres. The main building fronts on Glenwood avenue, is 176 feet long and 59 feet wide, and will be three stories high, and adjoining it on the west is the warehouse, 125 feet long by 43 feet wide, also three stories. These are so constructed as to carry a fourth complete floor in the future, if required; the planking of the floor to be put in position now, and the temporary roof to be constructed to rest directly upon it. The main building contains the stock rooms for castings, for malleables and for wrought steel parts; also the grinding and polishing rooms and the assembling, painting and packing departments. Each floor is connected directly with the warehouse floor. The forge building extends 250 feet in length along the Pennsylvania Railroad front; it is 46 feet wide, single story, with high lantern roof. The boiler and engine rooms are situated more centrally between the three buildings, and are 40 by 35 feet, and 45 by 35 feet respectively. Over the engine room will be the pattern and experimental rooms. Other small buildings for stocks of steel, paints, oils, &c., will be conveniently situated. The sidings will extend to supply conveniently the different departments and to ship the finished goods. The engine will be 125 horse-power, Green or Corliss pattern, and will

be constructed for the most recent and improved plan of rope driving; conduits beneath the level of the ground will furnish roomy accommodations for the ropes and the necessary tighteners, deflectors, &c., with space for passage from the engine room to the perpendicular shafts through which the power is conveyed to the different buildings. Suitable and convenient elevators, surface hand-car railways, overhead tracks and conveyers, with steam heating, electric lighting, &c., will combine to make an ideal plant for the purpose intended. The grinding and polishing machinery will be of special or improved patterns, with exhausts for dust, to make the life of the polisher more enduring. The forging shop will be supplied with special hammers, presses, forges, tempering apparatus, &c., of the most suitable patterns, and with devices for quick handling of stock, whether in bars or in finished parts, or in a partly completed state.

A Great Rail Record.

The South Chicago works of the North Chicago Rolling Mill Company have again broken the record in the production of Bessemer steel ingots and rails. In the 24 hours ending at 6 o'clock on Saturday morning, the 26th inst., their production was as follows:

Blast Furnace Department.			
			Tons.
Furnace No. 5, direct metal.....			197
" " 6, "			183
" " 7, "			216
" " 8, "			205
Total direct metal.....			801
Cupola metal.....			629
Total.....			1430

Bessemer Department.		
	Heats.	Tons of ingots.
Day turn.....	59	693
Night "	60	700
Total.....	119	1393

Rail Mill Department.		
Rolling for Union Pacific Railway, 75 pounds per yard:		
	Rails.	Tons.
Day turn.....	1838	611
Night "	1912	636
Total.....	3750	1247

The production for the month of January will be very heavy. It may seem singular that such extraordinary work should be done in these depressed times when orders for rails are not pressing, but it is in this way that expenses are reduced per ton of product in order to be able to sell for the low prices now ruling.

It has been suggested that a thorough search should be made in this country for a deposit of magnesite, suitable as a raw material for the lining of open-hearth furnaces for the basic process. We are informed that the cost of the foreign material is one of the principal objections in the way of the introduction of the basic process by at least one leading firm of steel makers. Until it is found a good deal of basic steel must be imported.

The total number of immigrants arriving in the United States from all countries save Mexico and Canada during 1888 is 518,518, against 510,058 the previous year.

Taking effect February 1 the following advanced freight rates from Pittsburgh will go into effect to Salt Lake City, Ogden and Utah common points: On classes 1, 2, 3, 4, 5 and A \$2.50, \$2.15, \$1.75, \$1.45, \$1.25, \$1.10. The present rates are \$2.05, \$1.80, \$1.55, \$1.30, \$1.15, \$1.05.

The Iron Age

New York, Thursday, January 31, 1889.

DAVID WILLIAMS, - - - PUBLISHER AND PROPRIETOR.

GEO. W. CORE, - - - ASSOCIATE EDITOR, CHICAGO.
RICHARD R. WILLIAMS, - - HARDWARE EDITOR.
JOHN S. KING, - - - BUSINESS MANAGER.

Pig Iron Statistics.

Nearly two years since *The Iron Age* made a change in the method of collecting and presenting its monthly statistics of furnace capacity in blast, the principal aim being to estimate as closely as possible the actual rate at which pig iron was being produced in the country, and to show this on the first of each month. In this effort we have been favored with the kind co-operation of the great majority of the makers, though we may frankly acknowledge that a certain number do not respond. This, and the occasional delays naturally incident to gathering figures from so wide a territory have introduced elements of error, which are not serious, broadly speaking, but which are keenly felt by every painstaking statistician.

In the review accompanying his annual statistical report, James M. Swank, the Secretary of the American Iron and Steel Association, says: "The extraordinary activity of the furnaces in the last few months in the year brought the total production far above the figures indicated by the statistical results of the first half of the year and by subsequent unofficial statements." What Mr. Swank probably alluded to was the extraordinary estimate, apparently accepted by many, made in the middle of December by the *American Manufacturer*, which reached the conclusion, from its monthly blast furnace reports, that the 1888 production was a little less than 6,000,000 gross tons. In *The Iron Age* of January 10 we put the total output at 6,500,000 gross tons. The official statistics collected by Mr. Swank, just published, make the correct figure 6,490,739 gross tons, certainly a satisfactory showing, though the total was probably a surprise even to Mr. Swank, as his preliminary estimate did not nearly reach that figure.

But the great discrepancy in the estimate of our Pittsburgh contemporary appears in even a more serious light when it is considered that the error was concentrated on the second half of the year 1888, the official figures for the first half being known. On a production of 3,470,647 gross tons the *American Manufacturer* was 534,843 gross tons too low, its premature estimate having been 2,935,804 gross tons.

Let us inquire whether this grave error is possibly confined to any one of the three groups:

	American Manufacturers.	Am. I. & S. Ass'n.	Differ- ence.
Charcoal.....	247,925	246,206	38,281
Anthracite....	688,862	866,322	177,460
Coke.....	1,999,017	2,318,119	319,102
Totals....	2,935,804	3,470,647	534,843

If monthly capacity statistics can lead to so erroneous a result their value cannot be great. Our contemporary stated at the time: "This estimate is based upon

the capacities of furnaces in blast given in our monthly reports. Capacity, as is well known to all furnacemen, is a different thing from actual make, being somewhat in excess. What percentage must be deducted from reports of capacities to arrive at actual make, approximately, may be ascertained with a fair approach to accuracy by comparing what the make would be if capacities were made with what actual make is."

The *American Manufacturer* must be somewhat horrified to find that its "capacity" is a very different thing, indeed, from make; that it is not in excess of the latter, but that it calls for a generous plus factor of safety somewhere in the vicinity of 15 per cent.

By way of contrast we present below the results of the estimate of *The Iron Age*, based, as we frankly stated at the time, on partial, though fairly complete returns:

	The Iron Age.	Am. I. & S. Ass'n.	Differ- ence.
Anthracite....	866,303	866,322	+ 31,981
Coke.....	2,313,216	2,318,119	- 4,903
Totals.....	3,211,519	3,184,441	+ 27,078

We did not put forward any detailed estimate of the make of charcoal pig, but after a rough calculation of the data at hand placed it at 580,000 gross tons at least for the year, or about 282,000 tons for the second half. This, it will be observed, is about 4000 tons out of the way.

The point which we wish to emphasize, however, is that the readers of *The Iron Age* may use its monthly blast furnace reports to estimate, as closely as necessary for all practical purposes, not alone the total output of pig iron, but also the make of single districts and States, without applying any arbitrary factors whatever. Such a computation of the 1888 product of coke and anthracite pig, made on the basis of the monthly figures of *The Iron Age*, shows the following, comparing them with the official returns:

	The Iron Age.	Am. I. & S. Ass'n.	Differ- ence.
Anthracite....	1,701,431	1,680,115	+ 71,716
Coke.....	4,187,110	4,236,705	- 49,595
Totals.....	5,888,541	5,916,820	+ 22,121

We desire to call particular attention to this, because these reports, to be of any service at all, should be useful to the trade. The figures submitted in our January statement furnish an excellent illustration of the direct deductions which can be drawn from such data. We stated then that we were producing at the rate of over 7,500,000 gross tons annually, a rate which was clearly excessive. In fact, including charcoal pig, the rate was close to 7,720,000 tons, or considerably over 1,000,000 tons more than was made in 1888. These reports possess the great value which a prompt revelation of the facts has to all concerned in this great industry. They showed at that time the necessity of caution, and foreshadowed the turn in the markets which has since come.

Mr. Walter C. English, for a number of years connected with the business department of *The Iron Age*, has been placed in charge as manager of the Boston office, which we have just opened at 149 Congress street. Mr. English, who is widely known to our patrons in the New England States, deserves the confidence and support which we bespeak for him.

The Samoa Trouble.

The Samoan difficulty is rapidly becoming critical, the amicable relations heretofore existing between the United States and Germany being seriously menaced. The indications serve to confirm a belief that it is the settled determination of Germany to establish her authority as a dominating influence in the islands, and this in disregard of existing treaties between the United States and Samoa, one formally concluded in 1878, when Wm. M. Evarts was Secretary of State, and a prior treaty negotiated by Commander Meade, U. S. N., in the year 1872, signed by all the Samoan chiefs, expressly ceding the United States Government certain exclusive rights and privileges, including a permanent coaling station at Pago Pago harbor. Touching the question of intervention, the treaty of 1878 stipulates that, should differences arise between the Samoan Government and any other country, the United States would "employ its good offices for the purpose of adjusting those differences." This pledge is the extent of the obligations assumed. The German authorities apparently ignore the existence of these treaties, or at least practically deny their validity. Americans in Samoa represent that on various occasions they have been treated with gross indignity and that the flag has been outraged.

An emergency of an extraordinary character was precipitated a few weeks ago, when King Malietoa was enticed on board a foreign man-of-war and sent into captivity. Much bloodshed ensued, a number of Germans who disembarked from a naval vessel being among the victims. Bismarck's organ at Berlin vindicates German conduct and pretensions in this matter, and, furthermore, repudiates any claim that may be set up as an impediment to the ascendancy in Samoa of the German flag. In consequence of these events the authorities at Washington are constrained to take immediate action. Five United States vessels will soon be concentrated in Samoan waters, and Senator Sherman, who is supposed to reflect the views of the incoming Administration, calls for an appropriation of \$500,000 to be immediately available for the protection and improvement of the coal station at Pago Pago harbor. The possession of this harbor is regarded by Senator Edmunds as an object of primary importance. During the past week he authorized a statement to this effect: "The Samoan Islands are on the highway of commerce across the Pacific Ocean, and are of great importance with relation to the development of the trade via the projected canals across the Isthmus of Panama and across Nicaragua. To a power whose ships are sent on long cruises the establishment of coaling stations is a necessity, and the location of one on the central island of the Samoan group, as provided for in the proposed amendment to the Diplomatic and Consular Appropriation bill, reported by the Committee on Foreign Relations, is looked upon as one of great importance to us." As both Senators Sherman and Edmunds are assumed to speak advisedly, it would appear to be the fixed determination of the Washington authorities to vindicate the rights and interests of the United States in Samoa, whatever they may be.

The situation may become critical. Congressman Thomas, of Illinois, an active member of the Naval Committee, would insist upon the *status quo* as it existed before the expatriation of King Malietoa. Moreover, Admiral Kimberly, commanding the flagship Trenton, is recognized as an officer who will shrink from no known duty, and yet one who will act with calmness and discretion. The American people, not unmindful of the high character of the German nation, will cherish a firm belief that international difficulties, however serious, can be adjusted by some other means than hostile collision. At the same time it is evident that exasperation on either side may proceed to a point where ordinary considerations of prudence and expediency may be lost to view under the pressure of an overwhelming public sentiment.

In the present situation two facts of deep significance come into view: The case as affecting Germany is the war specter hovering in the horizon of French politics, with which is associated the name of Boulanger. Of another character, not less practical as concerns the United States, is the popular conviction, now gaining strength as never before, that many millions of money must be devoted to building up the national defenses and naval armaments.

Railroad Demurrage Charges at Chicago.

The mercantile and manufacturing interests of Chicago have been considerably stirred up of late by the imposition of demurrage charges by the railroad companies. These companies organized a car service association in September last for the purpose of enforcing a uniform regulation imposing a charge of \$1 per day on each car remaining unloaded after the expiration of 48 hours. As a very large amount of freight was being moved at that time, and the business of the railroads would have been embarrassed but for a regulation of this character, it was accepted by shippers generally without much protest. Now, however, the heavy movement of freight is ended, the demand for cars is not so pressing, and shippers are of the opinion that the rules should be relaxed, if not entirely suspended. Some of them, indeed, contend that demurrage charges by railroad companies are illegal, and have carried the question into the courts.

On the 23d inst. a case of this character was tried before a Chicago justice. A railroad company had refused to permit some coal cars to be unloaded until demurrage charges were paid, and the consignees had secured a writ of replevin against the company for the coal. The attorney for the consignees cited cases to show that a railroad had no right to make demurrage charges under any circumstances, as such charges were confined to maritime business, and could only be established by provision in the bill of lading. On the other hand, the railroad company's attorney cited decisions holding that carriers could charge a reasonable amount for demurrage, although the bill of lading did not provide for it. To prove that \$1 per day was a reasonable charge, some nice calculations were submitted, showing that on the basis of the cost of the yard-space

used for the discharge of freight, a single car would occupy room on which interest at 6 per cent. per annum amounted to 77 cents for each working day, while the average daily earnings of the cars was 98 cents when they were in actual use in the transportation of freight. Unfortunately the case was complicated so that it could not be decided on the simple issue of the legality of demurrage charges, and the justice decided against the railroad company on the ground that they should have let the coal firm take their coal and brought suit for the demurrage if payment had been refused. An appeal will be taken, and probably the upper courts will pass upon the important legal question involved.

It is altogether probable that other cases arising under the enforcement of the demurrage regulation will soon be brought up in the courts. Abuses are charged against the railroad companies, which, if true and duly proved, will place them in a very unsatisfactory position in the present state of public sentiment. It is alleged that the companies have been so eager to farm this new source of revenue that even when a car has been accidentally shifted from its proper place before it was unloaded, and several days elapsed until the mistake was ascertained and the car returned, the consignee has been obliged to pay demurrage for the entire time, notwithstanding the fact that he did not know and had no means of ascertaining the whereabouts of the car in the meantime. Numerous instances are reported of consignees being unable to get to their cars to unload them, because they were hemmed in by other cars, until after the expiration of the 48 hours of grace, but the charge for demurrage was imposed promptly, without regard to the circumstances. The protests of suffering Chicago business men have been disregarded to such an extent that it is not at all remarkable that they are now beginning to kick vigorously.

As usual, the small shippers are handled more arbitrarily than the larger ones. Those who receive but a few carloads at a time, which are discharged in the company's yards, are obliged to pay demurrage charges before they can take their goods. Large shippers, who have their own sidings and whose movements are not directly controlled by yardmasters and freight agents, unload the cars consigned to them and lay bills for demurrage to one side to await negotiations. Small shippers pay the charges, and do not sue to recover them, because the cost of litigation would far exceed the amount in question. Large shippers will probably have such an accumulation of bills in time that they can afford to dispute the legality of the charge for demurrage, if the system is not changed.

In considering this matter the fact cannot be overlooked that the railroad companies have good ground for the position they have taken, although they have unquestionably made the time allowed for unloading too short, and have permitted the subordinate officials to introduce abuses which should by no means be countenanced. Quite a considerable class of business men receive coal and other merchandise on consignment, maintain no storage yards or warehouses, and trust to their selling ability to enable them to dis-

pose of such consignments by the time they arrive at their destination. A glut of such merchandise, however, will cause an accumulation of loaded cars that will in a short time fill a railroad company's spare tracks. Such cars have been known to stand for a month or more without being unloaded. Foundrymen have received coke and used the car in which it came for a coke-house until it was gradually emptied, when it was replaced by another full car, which was used in the same way. Some regulation was evidently needed to correct such transformations of rolling stock into store-houses, but not regulations which work hardship all round. The Chicago merchants and manufacturers also believe that they are unjustly discriminated against, as this rule does not apply generally at railroad centers throughout the country. If this is really the case, and shippers at other points are allowed great latitude, the people of Chicago are unjustly treated, and it is no wonder that they protest. Chicago is too important a trade center now for such discrimination.

The Progress of Paraguay.

The war of 1865-1870 between Paraguay on the one hand and Brazil and the Argentine Republic on the other reduced the Paraguayan male population by one-half, 170,000 men perishing by the sword and disease, while 50,000 women and children died from famine and exposure. Gradually the equilibrium between the two sexes has been a little restored, there being at present 130,000 males and 170,000 females, without counting an Indian population, half civilized and wild, of 180,000. Short of hands as the country was, and utterly ruined, recovery from such a blow has been slow, but the fertile soil and fine climate, and the many resources, at length begin to attract immigration of a desirable kind from Europe, stimulated by a free passage and liberal land grants to settlers. To the native population of 430,000, inclusive of Indians, some 10,000 foreign settlers have thus been added and two flourishing colonies founded, San Bernardino and Villa Hayes, named after the American ex-president. German immigration now increases rapidly.

Paraguay is well watered by the Pilcomayo, Paraguay and Paraná rivers, the latter, jointly with the Uruguay, forming the Rio de la Plata flowing into the Atlantic between Buenos Ayres and Montevideo. Although an inland country, Paraguay has thus easy and rapid access to the sea. The capital is Asuncion, with a population of 30,000, and there are a dozen other cities with populations ranging between 5000 and 15,000. The finances are prosperous, the income, including land sales to the amount of \$329,146, being \$1,938,176 in 1887, and the outlay \$1,400,503. In the same year the home debt was reduced to \$1,068,250, \$398,500 having been paid back out of the surplus revenue, while the foreign debt was consolidated into \$4,250,000 2 per cent. bonds, to carry 3 per cent. dating from January 1, 1892, and 4 per cent. from January 1, 1897. The Government owns most valuable lands which it sells on very liberal terms to land companies and *bona fide* settlers; it is furthermore the owner of extensive, valuable so-called "yerbales" or forests, in which the

famous Paraguay tea, "yerba mate," grows spontaneously and abundantly—a tea consumed all the way to the northern provinces of Brazil. It also owns \$500,000 shares of the National Bank, which has a stock capital of \$1,500,000, paying 10 per cent. dividend, and commanding 10 per cent. above par, although only 50 per cent. has been paid in.

The army has been reduced to 628 men file; in the event of war the militia—which is quite numerous—is enrolled. The navy consists of three steamers, two of which are mere revenue cutters. There are 152 km. of railway in running order, and—besides the telegraph wires running parallel therewith—72 km. of line connecting the republic with the world's cable system at Paso de la Patria.

European and Argentine capital is flowing freely into the country. A company, represented by H. A. J. Baiz, has been formed in Amsterdam, under concessions from the Paraguayan Government, for the purpose of tobacco planting on a large scale. The lands have been secured, and quite a number of privileges with them, among others exemption from the tobacco tax. Tobacco grown in Paraguay compares favorably with Sumatra and Manila. The Paraguay Land Company are about to build a railroad from Villa Hayes, near the capital, to Puerto Margarinos on the Pilcomayo River, in Bolivia, a distance of 600 km. At Buenos Ayres the Paraguayo-Argentine General Trading Company have been formed with a capital of \$5,000,000, with a branch concern at Asuncion, chiefly for the purpose of doing a banking business, and the issue of hypothecary cédulas. Three of the managers are appointed by the Government of Paraguay.

At the time the foreign debt was consolidated the bondholders received as part compensation 500 square leagues of public lands, and a land company is now to be formed to utilize this valuable possession, in connection with an agricultural bank with a capital of \$8,000,000. The import increased from \$1,805,741 in 1886 to \$2,221,750 in 1887, and the export from \$1,620,779 to \$1,715,853. The arrivals at Buenos Ayres and Montevideo in 1886 were 320 vessels with cargoes for Paraguay, of 60,408 tons, 223 thereof being steamers, while river navigation carried entries of 343 craft, with 12,239 tons. The export in 1886 consisted chiefly of tobacco, 5306 tons; yerba mate, 4508 tons; oranges, 25,000,000; cabinet wood, 151,281 cubic yards measurement, and 81,000 hides.

Trouble is brewing just at present between Paraguay and Bolivia, the latter having just emerged from a revolution, and a frontier dispute having arisen between these neighbors. Brazil sent to Matto Grosso, bordering on Bolivia, a military expedition under Marshal Fonseca, on December 27, in order to watch events, as matters look threatening. It would be deplorable to see Paraguay, now on the high road to prosperity, engage in a prolonged border war. Paraguay claims the Bahia Negra district, and is dispatching reinforcements to Puerto Pacheco. Bolivia looks upon an outlet on the Paraguay as a necessity of the Republic, national and commercial life, and Puerto Pacheco—lying 7 feet above the highest inundations—is the only naturally available place for a port on the west side of the Paraguay

River. These events coincide with the formation of an American river navigation company for placing a line of steamers between Campana and Asuncion on the Paraná River. Intelligence as to whether peace is to be preserved in that region or not is consequently expected with some anxiety, not only in South America and Europe, but quite as much in this country.

American Pig Iron Warrants.

For some months past a movement has been progressing, under the direct initiative of George H. Hull, of Louisville, Ky. Rumor has seized upon vague hints of the negotiations progressing, magnifying them into some great trust, with special reference to Southern iron interests. As a matter of fact, the undertaking proposes simply the establishment on a sound basis, worthy of confidence, of a company which will undertake the issue of pig iron warrants, a readily negotiable security, against pig iron stored, under certain conditions, at a number of points, broadly on the lines of the great warehouse concerns in Great Britain. The American Pig Iron Storage Warrant Company, whose capital of now \$2,000,000 has been subscribed, has taken the first steps toward carrying out this plan. A considerable number of pig iron producers have entered into contracts with the company, others have promised their support or expressed their general approval of the system. It is stated that these represent an annual capacity of about one million tons. Negotiations, only recently begun in this direction, are still in progress, the principal work accomplished being the creation of the necessary support of influential interests as stockholders.

THE STOCKHOLDERS.

The *personnel* of those who have taken an interest in the American Pig Iron Storage Warrant Company is well calculated to command attention and confidence. The officers of the company are:

President: George H. Hull, the originator of the enterprise, a well-known iron merchant of Louisville.

Vice-president: George F. Tyler, of Philadelphia, a retired capitalist, interested in a number of furnace and coal companies, and prominently identified with the now famous Pocahontas Land Trust.

Treasurer: Logan C. Murray, of New York, who is president of the United States National Bank.

The executive committee consists of the following, in addition to the officers named:

William Libbey, chairman, of New York, a former partner of A. T. Stewart, and identified as a director with a number of large enterprises like the Erie Railroad and the United States Trust Company.

Thomas Rutter, of New York, who is connected with the Consolidated Gas Company, and the Louisville and Nashville Railroad.

George T. Barns, of Philadelphia, prominent in the iron trade of that city.

Samuel R. Shipley, of Philadelphia.

Among the other stockholders are: J. H. Inman, of Inman, Swann & Co., cotton merchants, who are connected with a good many Southern railroad, coal and iron interests, being identified with the Richmond Terminal Company.

Eckstein Norton, president of the Louisville and Nashville Railroad.

H. O. Armour, brother of P. Armour, and New York representative of Armour & Co., of Chicago.

G. Philler and Morton McMichael, of Philadelphia, president and cashier respectively of the first national bank formed

under the Chase law, the First National Bank of Philadelphia.

G. S. Coe, of New York, the veteran president of the American Exchange National Bank.

S. A. Caldwell, of the Fidelity Trust Company, of Philadelphia, the first trust company organized in the United States.

S. R. Shipley and T. Wistar Brown, president and cashier respectively of the Provident Life and Trust Company, of Philadelphia, the company itself also being a stockholder.

S. T. Tyler, of Philadelphia, president of the Fourth Street National Bank and receiver of the Shenandoah Valley Railroad.

Jay O. Moss, of New York, president of the Columbus and Hocking Coal and Iron Company, and secretary and treasurer of the Cotton Seed Oil Trust.

A. Heckscher, of Philadelphia, prominently identified with Pennsylvania industrial interests.

J. C. Bullitt, of Philadelphia, and John J. McCook, of New York, leading lawyers of both cities.

Drexel, Morgan & Co., of New York, and Drexel & Co., of Philadelphia, the well-known bankers.

J. D. Probst, of New York, banker.

W. P. Thompson, of New York, vice-president and active business manager of the Standard Oil Company.

S. Neustadt, of Halgarten & Co., bankers, New York.

Gen. Samuel Thomas, of the East Tennessee, Virginia and Georgia Railroad and other railroad and industrial interests.

George H. Seeley, of New York, president of the Ivanhoe Furnace Company, of Virginia.

J. H. Flagler, of New York, president of the Cotton Seed Oil Trust and of the National Tube Company.

W. R. Hart & Co., leading Philadelphia iron merchants.

Samuel Dickson, of the Crane, Dunbar and a number of other furnace companies.

G. W. Troutman and T. Kitchen, of Philadelphia, president and cashier, respectively, of the Central National Bank of that city.

Henry McCormick, of Harrisburg, the well-known iron manufacturer of that place.

Luther S. Bent, of Steelton, the general manager of the Pennsylvania Steel Company.

Enoch Ensley, of Memphis, Tenn., prominently identified with a large number of Southern enterprises.

Naylor & Co., of New York, the largest iron and steel importers.

H. Wickham, of Philadelphia, president of the Southwest Virginia Improvement Company.

E. B. Leisenring, of Mauch Chunk, identified with large anthracite, coke and coal interests in Pennsylvania and in the South.

We have dwelt upon the *personnel* of the company because it proves a backing which places it in a position where it commands the serious attention of the iron trade, where every producer must thoroughly investigate the question whether or not the scheme is one in which he must co-operate, where every commission merchant must consider to what extent the new methods of business impending are likely to influence his interests.

THE PLANS OF THE COMPANY.

We present below the points brought out in favor of the system proposed, printed in a pamphlet, a few copies of which were privately circulated some time since. We may preface it with the following data:

The company proposes to establish storage yards, first at the furnaces, called primary storage yards, on land leased at a nominal rental from the furnace companies, who

propose to store in it, fence it in, put in tracks, &c. The company makes contracts with furnace companies for a period of years, the obligation entered into by the furnace being that it will not place any iron, against which warrants are to be issued, into the hands of any other warrant company. The producer is at liberty to store any part or none of his make in the yards. For what he does store in it he pays a yardage of 25 cents a ton and 2 cents per ton per month carrying charges. In consideration of these payments the storage company acts as responsible custodian of the iron. To the consumer it guarantees the grading, which is checked by experts. It issues warrants signed by the warrant company and registered by a trust company in New York. The warrants call for 100 tons of pig iron of a specified brand and grade, delivered free on board cars in the yard named in the warrant.

The charges are relatively low, the cost of carrying pig iron a year being 49 cents. In England the yardage charge is 50 cents a ton and a monthly storage charge of about 2 cents a ton.

A result of the introduction on a large scale of the storage warrants is likely to be considerable speculative interest in pig iron. It is probable that the warrants will be listed in the leading exchanges.

The plans of the company contemplate ultimately, as the business develops, to establish "secondary" storage yards at the leading points of consumption, such as New York, Philadelphia, Chicago and other great centers.

THE ARGUMENT.

The following is put forward by the promoters of the company:

Pig iron is the most important of all crude materials that enter into the commerce and manufactures of the country, and it is conceded upon all sides that no other article has such a controlling and disturbing influence on general business, and yet no effort has been made to control its violent fluctuations.

Anthracite pig iron was \$18.75 per ton in Philadelphia in August, 1861, and \$73.62½ in August, 1864. It was \$30.50 in January, 1871, and \$53.87½ in September, 1872. It was \$16.50 in November, 1878, and \$41 in February, 1880. In the Western markets iron reached \$80 per ton in 1864, and, after declining to less than half that price, reached \$59 in 1872. Forge irons, which sold for \$40 in 1880 in the West, declined to \$13 in 1884, advanced to \$20 in 1885, and are now down to \$18 again in the same markets. The causes of these great fluctuations in price are:

1st. The small stock of pig iron carried in the United States.

2d. The great length of time and enormous amount of money required to increase the production, when the return of a prosperous condition of business demands it.

It takes a year or more to organize and build a furnace, and a furnace capacity great enough to supply the country in prosperous times would be double enough to supply it in dull times. The remedy, therefore, cannot come through the increase in furnace plants. The only safe and practicable remedy is in the carriage of large stocks of pig iron, probably equal to the production of one or two years. Last year the United States produced 6,417,148 gross tons of pig iron, and imported 1,997,241 tons of iron and steel. The stock of pig iron on hand December 31, 1887, was 338,142 tons, less than three weeks' production, and but a trifle over two weeks' consumption, which is about the normal condition of affairs. These great fluctuations in price must continue as long as such small stocks of pig iron are

held. Small stocks will be held until some comprehensive system is inaugurated that will transfer the financial carriage of pig iron by certificates or warrants to financial centers, and at the same time leave the actual stock at the point of production, where it can be stored at a nominal cost, and, at the same time, where it can be transported, when needed, to any of the markets naturally tributary to that district.

The Standard Oil Company was organized in 1870. During the nine years before its organization oil ranged in prices between 52 cents and \$7.85 per barrel at the wells, a fluctuation of \$7.33 on a minimum price of 52 cents. For the last nine years prices have ranged from 67 cents to \$1.06 a barrel, a total fluctuation of 32 cents on a minimum price of 67 cents. Before the Standard organization, the largest stock ever carried was 534,000 barrels. During the last nine years the country has carried an average stock of 28,055,662 barrels, and during three years of this time the stock has averaged over 35,000,000 barrels. The small stock carried before the organization was done with great difficulty, the oil business was hazardous and attended with frequent failure; the large stock carried since the organization has been done with ease, and the business has been stable and profitable.

This is exactly the nature of the relief needed by the pig iron business, and a like result will follow the inauguration of such relief. There are not as many obstacles to the carriage of large stocks of pig iron as there are to the carriage of oil or grain. In the place of expensive elevators, tanks and pipe lines, which are subject to damage by fire and many other disturbing causes, pig-iron storage requires only a simple fence in the open air; and there are absolutely no risks of loss from fire, mold, leakage or deterioration in quantity or quality of the iron so stored, yet the United States carries but three weeks' production of iron, against about 12 or 18 months' production of grain and oil.

Elevators and pipe lines are not only profitable to their owners, but have grown to be a necessity to the producer, and money flows to their certificates of property, both as collateral and as a speculative commodity. Storage yards for the physical carriage of iron, and certificates or warrants representing the property in a form readily transferable, and giving absolute security to the holder, thus facilitating, with profit and advantage to all concerned, financial carriage, are the greatest commercial needs of the present day.

As a collateral security for loans no other article is as safe as pig iron, and no other article presents as little opportunity for fraud or loss in its handling. It cannot be injured by fire or flood; it is not affected in quality or weight by years of exposure to the weather. No appreciable amount can be stolen without detection. It requires no insurance. A mob cannot destroy or injure it, and even the destruction of the Government, which would leave valueless the bond that we now regard as the best of all securities, would not injure the ultimate value of a stock of pig iron. There is hardly a bank in Great Britain that does not carry pig iron warrants, which are there regarded as the safest of securities, and if issued here as abroad, by one company of known responsibility, they will soon be regarded here as the safest of all securities for collateral or investment. The large fluctuations in the price of pig iron during the last 50 years would have been even greater if we had not had the stocks of Great Britain to fall back upon in time of need. The foreign stocks consequently will not hereafter be the element of safety that they were when Great Britain made two or three times as much iron as America. Every material increase in the building of railroads is checked by the

enormous advances in iron, and most of the new mileage is laid at a cost of two or three times the normal price of iron. As a consequence, capital becomes frightened, railroad building stops, iron goes unnaturally low, in place of the unnaturally high prices of a few months before; this is always followed by general business depression, and it takes three, four or five years for the country to recover from the result. In fact, it is not until after many of the furnaces have gone through bankruptcy and stopped, and this process of ruin has gone so far that even the small consumption exceeds the production, that the turn comes. Then another enormous advance takes place, and the same process is repeated over another cycle of years. All commodities share more or less in these fluctuations, but iron is the primary and controlling cause.

A comprehensive organization that would make possible the cheap and safe carriage of pig iron would speedily result in the ability to carry several millions of tons with ease; would change the business from one of hazard and frequent failure to one of stability and uniform profit. The large stocks would not only be needed in prosperous times, but would prevent the enormous and unnatural advances in such times, and the facilities for carrying stocks would prevent the ruinous decline occasioned by our present inability to carry them. Some furnaces can afford to, and do, carry many months' production, but others are not able to carry a week's make, and must sell their iron as made. If the market will not take it at one price, it is forced off at a reduction, and the market goes tumbling down in consequence. The strong furnaces do not, therefore, get the full benefit of their ability to hold, but when they do sell must take the prices made by the necessities of the weak ones.

Some system that will enable the weak furnaces to store their iron, and realize money on it, will be of as much advantage to the strong as to the weak. Capital will absorb the warrants just as soon as they are made safe, and just as fast as they are created. We will very soon have a stock of one or two years' make of pig iron, which will be carried with perfect ease.

As the business of the country grows, means must be created to facilitate and handle it, yet up to the present time no means have been devised for adequately handling pig iron, the most important and controlling commodity, while less important interests have been intelligently and successfully provided for. Only a few years ago the country suffered in consequence of the inability of many railroads to provide sufficient cars to handle their freight, and out of this necessity grew car-trust certificates. At first these certificates were regarded with suspicion by both the car manufacturing companies and capitalists. There were few States in the Union whose laws made them a safe investment, but, by a little effort the laws were amended, the business was systematized, and to-day capital readily absorbs them, and the whole business of the country is relieved by the facility with which needy roads can supply themselves with the equipment to do their business.

For years every pig iron agent has been importuned over and over again to know if money could not be borrowed on iron at the furnaces. Occasionally efforts have been made to afford relief, but generally with dissatisfaction and sometimes with disaster; often in litigation to protect the loaner's rights if the iron remained in the hands of the furnace, and in heavy freights and expenses if it was moved and stored at other points.

Warehouse receipts or warrants will not be largely taken as a collateral or negotiable security as long as the property is in the possession of the borrower or producer,

and at the same time the bulk and weight of pig iron are economical obstacles to its movement from the place of its production until needed for consumption.

A storage company should be organized whose signature and seal to a warrant would give that warrant unquestioned standing in all financial centers, and yet a company whose only aim is to create a desirable collateral, and secure loans on same, will fall far short of the commercial need of the present time; a dozen such companies would not meet the demand of the hour. In fact, the needed benefit would be delayed, if not defeated, by a multiplicity of such companies.

Great business advances can only be accomplished through great organizations. Within a very few years the iron and steel product of the United States has increased from 1,000,000 to 10,000,000 tons; great improvements have been made in the modes of manufacturing, while the commercial modes of handling same are almost as crude, expensive and cumbersome as when the product did not exceed 1,000,000 tons. Such storage companies as have existed and do exist have done nothing toward improving the methods of handling and selling iron, and it is not believed that the desired benefits and improvements can be accomplished except through the organization of one powerful company for this express purpose, with which the whole furnace interest of the country will co-operate with confidence, and which will use its power and influence for the advancement and improvement of the interest that it depends upon for its growth.

This company should not only be powerful enough in the names and wealth of its organizers to control vast capital, but through its stockholders should be so allied with other large and active commercial interests as to insure the successful establishment of any economies and improved methods it might inaugurate in the handling and sale of pig iron.

The present cost of selling iron on commission, with some exceptions, is from 35 to 50 cents per ton. This is a severe tax on the profits of the furnace company, and at the same time only a reasonable return to the merchant, on account of the expensive and cumbersome way in which the business is now necessarily done.

It is believed that with the success of a National Pig Iron Storage Association will come the organization of metal exchanges in the important iron consuming centers, and that iron will soon be marketed at an expense not to exceed 5 cents per ton to the producer, and at the same time be much more profitable to the merchant, on account of the great increase in the actual tonnage in sales and the diminution of business expense in handling certificates in place of the actual property.

The sale of oil certificates in the New York Board alone is from 100 to 150 times as great as the actual product of the whole country. A commission of 5 cents per ton to the merchant or broker on iron sales by certificate or warrant will yield a much larger revenue than the present system.

There is no obstacle to the practical carrying out of this plan. Its success is believed to be insured in advance, from the certain benefit it offers to every branch of business that it depends on for its growth.

The regulation of the discrepancies in grades and weights of iron will not be as difficult to accomplish as they were with flour, wheat, oil, &c., and the difference in the chemical quality of iron made by the different furnaces can easily be provided for by naming the brand on each warrant. Such facilities are more urgently needed for pig iron than for oil, grain or any other commodity, and if properly con-

ducted would excel them in usefulness. Capital would soon seek and prefer this security, on account of its visible, stable and indestructible character; the interest rates on the same would soon be among the lowest, and it would absorb the speculative capital of the country more largely than almost any other commodity.

The company should acquire ground sufficient for a storage yard at the various furnaces by long lease, so as to have actual physical and legal possession of the iron stored. This company should be elastic enough in its organization to permit of its expansion to national proportions and with rapidity, as the demands upon it would be great as soon as understood. Secondary yards should ultimately be established at the principal points of consumption, to which sufficient stocks of iron can be moved, particularly in times of low freights. Warrants should be issued as iron is stored, which would guarantee weight, grade and brand of iron, deliverable at the primary yard on return of the warrant, or equivalent delivery at secondary yards on reasonable notice. But the establishment of the secondary yards should not be attempted until after the sale of iron by warrant has been adopted.

The primary yards at furnaces should be a part or continuation of their present yards, so that iron could be stored in the storage company's yard from the pig bed without any addition to the expense of handling. The expense of loading on cars from storage company's yard when shipped would be the same, and no addition to the present expense of loading from furnace yard—in fact, any plan that involved an extra handling of the iron would not be admissible, the storage company would be a permanent success only on the basis of its being a benefit and saving to the furnace companies.

At the present time pig iron is sold largely on four and six months' time, and even when sold for cash a period of from 30 to 60 days usually elapses between the shipment and actual payment for the iron. Iron sold by warrant is paid for on delivery of the warrant. It is believed that this storage facility is so much needed that it will grow rapidly, as soon as understood, and that iron will not only soon be sold by warrant, in place of the present slow, risky, expensive and cumbersome manner, but that the saving to the furnace in the delay and risk on even their cash sales over the present custom will alone pay the storage fee of the company, leaving as a clear gain to the furnace companies all the advantages and savings in commissions, risks, freight and other economies that might be brought about through the efforts and experience of as comprehensive an organization as is proposed.

The furnace business has for years been suffering for the want of some such organization, and in the absence of the needed relief have devised various plans to save commissions and correct existing irregularities; but in many cases these efforts have not been successful. Most furnace companies object to the present custom of selling for long future deliveries, but are compelled to so sell to insure prompt disposition of their iron as made; under the proposed system, furnaces can abandon the one-sided system of the future delivery sales as soon as there is an assured daily sale on exchange boards. As the heavy purchases for future delivery are made on the eve of anticipated advances, the furnaces rarely get much benefit from the unnatural high prices, as the reaction sometimes comes before they have filled their old sales. On the other hand, however, furnaces are apt to get the full disadvantage of the unnatural low prices, as consumers rarely buy for future delivery while the tendency of prices is down or stationary. Any system, therefore, that will prevent

the unnatural fluctuation in iron will be of great benefit to the furnaces, and large stocks will alone accomplish this end. It is not expected that the needed accumulation of stock will result from the amount of iron that will be stored to secure advances. As soon as a sufficient number of warrants have come into existence to justify their sale on metal exchanges, it is expected that the furnace companies will then store the bulk of their iron, because it will be the simplest and cheapest way of disposing of it, whether it is taken for consumption or speculation. The small amount of speculation directed toward pig iron in the past has had the effect of increasing its great fluctuations, while a large and systematic dealing by speculation would have the effect of confining the fluctuations to reasonable and natural figures, as has been the case with oil and other commodities that have been intelligently provided for. There may be opposition to such an organization and the changes it aims to bring about, as there have been to every movement to facilitate business, but all well-directed innovations that have had for their foundation the regulation of inequalities and saving of expense and time have been of permanent success.

The Stove Association.

The annual meeting of the National Association of Stove Manufacturers occurs in Chicago on the first Wednesday in February. To this meeting not only are the members of the association invited, but also stove manufacturers in general. It will be the eighteenth annual convention of the association, and is expected to be one of the most interesting and profitable meetings ever held. The headquarters are to be the Palmer House, and ample arrangements have been made for the accommodation of members and friends. The proceedings open at 11 a. m. of the day named. The subjects which are to be brought before the meeting through reports of committees appointed by the president are: 1, Revised Constitution for the Association; 2, Co-operation Among Stove Manufacturers; 3, The Method of Ascertaining Costs; 4, The Permanence of a Paid Secretary; 5, Overproduction; 6, Prices for 1889; 7, Traveling Salesman; 8, Consolidation or Trusts; 9, A New Bankrupt Law; and, 10, The Apprentice System. In a notice of the meeting issued by the secretary, D. M. Thomas, all these subjects are prominently set forth. The following is the substance of a circular letter issued to the trade by Mr. George H. Barbour, president of the association:

An earnest desire to carefully protect the interests of our organization, and to ascertain the real condition of business as it exists to-day, which appears anything but satisfactory, leads me to request that each manufacturer strenuously endeavor to ascertain for himself and communicate to me the cause of the existing depression. It may be truly said that to discover the evil is much less difficult than to prescribe the remedy, but as correct ideas must necessarily precede successful action, compliance with my request and the intelligent co-operation of members of our craft will supply such a fund of information as will prove an invaluable aid in determining our future course.

The annual meeting of the association occurs at Chicago on the first Wednesday in February. To this every stove manufacturer, whether member or not, will be invited. The usual notice will be given by the secretary. It is of the utmost importance that there be a numerous attendance; indeed, I hope for the largest representation we have ever had. The subjects to be discussed are of great interest, es

pecially those upon which the committees have been at work since the Pittsburgh convention, such as the "Cost Formula," the "Revised Constitution," the "Bankrupt Law," &c. We are all affected by these, more or less, and they cannot be too thoroughly considered.

Let us come to this convention prepared to give careful attention to every subject introduced, not acting as though our organization were valueless because it does not palpably accomplish all that we think it should. No one can really know all that it does effect, or how great its actual value is, as a large part of its influence and much of its work is indirect and unseen; but there can be no doubt that were it dissolved it would be very sadly missed, and great injury to the trade result in less than a year's time. I therefore urge that every member and each of those invited should attend the convention and take such part in the discussions as he feels competent to do, thus advancing his individual interests by promoting the general interest of the trade.

I invite you, whether a member of the organization or not, to correspond with me between now and the date of the convention, communicating fully and freely your views upon all trade topics. Such a correspondence cannot but open up new lines of thought and enable me to formulate plans and offer suggestions valuable to all concerned. A free interchange of opinions and suggestions is always productive of beneficial action, and our trade really needs all the stimulation that can be given it. Particularly valuable and correspondingly prized will be communications from and correspondence with the smaller stove founders, especially such as have not usually visited our conventions and whom I do not have the opportunity of meeting personally; their experience, needs and wishes will have my most careful attention, and it will be a great pleasure and afford me considerable satisfaction if I can aid in conserving their interests; no effort on my part to this end will be wanting.

David Wetmore, the well-known iron merchant and friend of the public school system, died at his residence, 119 Lexington avenue, Thursday afternoon. The immediate cause of his death was paralysis, but he had been ailing ever since Christmas Day, 1884, when he was run over and severely hurt by a wagon near his home. Mr. Wetmore was born in Liberty street, this city, December 31, 1823, and when a very young man entered the firm of Wetmore & Co., one of the oldest houses in the iron trade, in which his uncle, the late A. R. Wetmore, was senior partner. He was made a School Commissioner by Mayor Havemeyer, and served in the Board of Education for 13 years, during the greater part of which he was chairman of the Nautical School Committee.

The first steel postal car ever constructed has just been finished at the railway shops at New Albany by the American Fire-Proof Steel Car Company. It is built of plates of steel, lined with asbestos, and is admirably braced by means of steel rods running the entire length of the car, the rods being fastened by an ingenious device into the steel posts. The floors are of steel, as are the platforms and steps, and there is no wood whatever about the car except the timbers of the trucks.

The Passaic Rolling Mill Company, of Paterson, N. J., have decided to add two 20-ton open-hearth steel furnaces to their plant, at a cost of about \$100,000.

Among experts employed by a committee of the Legislature to examine the Assembly ceiling at Albany are several prominent architects from New York City.

Washington News.

(From Our Regular Correspondent.)

WASHINGTON, D. C., January 29, 1889.

It is now conceded on all sides that no action will be taken on tariff matters in the House which will lead to concurrence between the upper and lower branches of Congress. An effort was made when the Senate substitute reached the House a few days ago to waive the usual parliamentary routine of reference to the Committee on Ways and Means. The majority members of that committee, led by Chairman Mills and Representative McMillan, opposed the programme of asking a conference without a reference, while Representatives Reed and McKinley, of the minority, urged its adoption as a cross-cut to bringing the question down to a basis of negotiation with a possible prospect of a solution through a mutually acceptable proposition of compromise.

It was thought by the conservative members of both sides that there might be features in both measures, the House bill and the Senate substitute, which might afford an opening to a fusion bill which would be satisfactory to the conference, and in which the two Houses would concur.

Pending this debate, Representative McKinley submitted views on the subject which were interpreted to represent the position of General Harrison. He urged the compromise plan as a way to a settlement, and which would avoid an extra session, as there would be no chance of agreement if the bill was thrown into Committee on Ways and Means. It was also urged that this would put a stop to industrial agitation for some time. The Ways and Means majority, seeking to cover themselves from the chagrin of the Tobacco bill reference to the Committee on Appropriations, insisted upon the reference to their committee, promising a report forthwith. The bill and amendments were so referred, and the question now is as to the action of the committee.

The Cowles Tobacco bill, referred to Mr. Randall's Committee on Appropriations, may be regarded as abandoned. Chairman Randall is not disposed to antagonize his own party by widening the breach on the tariff issue, and he has discovered that it would be impossible to secure a majority of the committee on any measure.

The Committee on Appropriations are sadly broken up. The nine Democrats are not a unit on the Cowles bill, and the six Republicans are a unit on the Senate substitute, which they will put forward with a minority report if Mr. Randall undertakes to make a move on the Cowles measure. The death of Mr. Barnes, of the committee, would add to the complications. If the chairman should make an attempt to report back the bill he would find himself in a hopeless minority. A poll of the committee by friends of the Ways and Means shows that if the issue were made seven Democrats would oppose a favorable report of the Cowles bill, the six Republicans would favor the Senate substitute, which would leave Chairman Randall in favor of the Cowles Bill without any following. The chairman appreciates the situation and will not take any steps. Therefore, the spurt of the tobacco men comes to naught.

The question, therefore, reverts to the Committee on Ways and Means, with a promise that the bill and amendments will be reported back in time to receive action by this Congress. The carrying out of this purpose will in all probability close up the tariff agitation of the Fiftieth Congress with a lively display of parliamentary skirmishing. The Republicans are not willing to permit the Democrats to secure

any prestige from tariff action, and without them the tobacco men are powerless, as they represent but a mere squad as compared with the strength of their party on the other side.

A subject of greater importance than the defunct tariff issue in Congress is the selection of a Secretary of the Treasury for the new Cabinet. The preference of the President-elect and the choice of the Republicans generally is Senator Allison, of Iowa, but the Senator himself wisely feels great reluctance, and his friends are outspoken in their opposition to his acceptance. The Senator has never even entertained the thought of leaving the Senate with any degree of complacency, and he has only regarded it at all in the light of a personal sacrifice to relieve the new President of an embarrassment arising from two causes: (1) his desire to make the selection of his fiscal minister from the West, and (2) the factional hostilities in New York, which would preclude a selection from that direction should he desire to look that way.

The friends of Senator Allison assert with great force that he is the representative man of the Western idea of the tariff. He has done more to build up a protective tariff sentiment in the West than any other person of that section in public or private life. During the transition stage of public sentiment from war tariffs and taxation to revenues based upon the requirements of peace, he held his State in line in favor of the protective policy. The West has followed the course of Iowa until we find that great section as strongly allied to the American idea as the Middle States, and as much or more so than some sections of New England. William B. Allison was the chief instrumentality in bringing about this condition of public opinion in the West on economic questions.

Senator Allison, ever since his interview with General Harrison *en route* to Washington after the election, has felt that his place would be in the Senate. He despaired of concurrent action on the tariff, and therefore felt the importance of remaining in the Senate to co-operate in legislation which would be certain to come up in the next Congress. Although the diurnal grist of speculation from Indianapolis puts him down as having accepted the Secretaryship of the Treasury, his closest friends are still confident that he has not and will not accept the position, but that he will remain where he is, with a prospectively upward promotion in 1892, instead of downward promotion now. The declination by Senator Allison would leave McKinley, of Ohio, as the most available man for the West for the portfolio of the Treasury. It is expected before another week rolls around that something tangible will have transpired on the question of the Chief of the Department which regulates the revenues, recommends tariff legislation, and interprets tariff schedules.

The talk of the Pittsburgh Steel Casting Company about turning out another steel gun creates some discussion in ordnance circles. The army and naval experts, however, discourage the step until the Thurlow gun, which will be of open hearth steel shall have been tested. While the projectors of this style of ordnance have not lost faith in their projects, the officers and men who would be compelled to risk their lives in using such guns do not show any degree of enthusiasm in that direction.

Shipbuilding revived remarkably in Great Britain during the year 1888, reaching 903,687 tons, against 687,000 in the previous year, and, except in two previous years has never been greater than in the year just expired.

TRADE REPORT.

Chicago.

Office of *The Iron Age*, 95 and 97 Washington street, CHICAGO, January 28, 1889.

Pig Iron.—The tonnage of the market has not improved in the past week. The very low level which prices have struck has, however, induced a number of consumers to place contracts who would otherwise have hesitated longer. Efforts were made, without success, to buy special brands for long deliveries at present prices, the makers being willing to sell only for early shipment and taking their chance for a better price later in the year. This will not happen unless production has been sharply curtailed and consumers realize that the supply is not greater than the demand. In the meantime it will be remarkable if prices do not go lower. Consumption is decreasing rather than increasing, and stocks in foundrymen's yards are shrinking very slowly. Still it does not seem possible that much more of a decline can take place at this particular point than has already been experienced. But the fact must not be overlooked, in considering the situation, that if the coke strike threatened on the 1st of February in the Connellsville region actually takes place an immediate restriction of production, and much greater than if caused by the mere condition of the Pig Iron market, will be made. Should the strike last from two to three months the price of Pig Iron would advance considerably, to the benefit of Southern furnacemen and others not dependent on the Connellsville region for their fuel. Lake Superior charcoal shows no change in price, being apparently as firm as ever. Several contracts for round lots are pending. It is understood that some sales of high numbers recently alleged to have been made at other points were not consummated and the parties are now in the market. Cash quotations on ordinary lots are as follows, f.o.b. Chicago: Lake Superior Charcoal, Nos. 1, 2 and 3, \$20; American Scotch (Blackband), No. 1, \$19 @ 19.50; No. 2, \$17.50; Jackson County Silvery, No. 1, \$17.50 @ \$18; other Ohio Soft Irons, No. 1, \$17 @ \$18; Lake Superior Coke, No. 1, \$16.50 @ \$17; No. 2, \$15.50 @ \$16; No. 3, \$14.50 @ \$15; Southern Coke, No. 1 Foundry, \$16 @ \$16.50; No. 2 Foundry and No. 1 Soft, \$15.25 @ \$15.75; No. 3 Foundry, \$15; No. 2 Soft, \$14.25 @ \$14.75; Gray Forge, \$14 @ 14.50.

Bar Iron.—While a fair volume of business is reported for the week, prices have been barely sustained. Values are tending downward, but the decline seems to be stubbornly resisted by the manufacturers, who are acting very conservatively and yield only when they must. The prices which some of them are quoting indicate that they are either indifferent about new business or that they have strong faith in an early recovery from the prevailing depression. They name 1.75¢, half extras, f.o.b. Chicago, for mill lots, and will take no less. Others quote 1.70¢, and this appears to be the going price for ordinary specifications for good Common Iron, shaded, of course, for desirable orders. Small lots continue to sell at 1.90¢ @ 2¢ from store, according to quantity and quality.

Structural Iron.—Business is quiet and prices are easier. In the case of Beams, however, the situation seems to have changed and rumors are current of an advance to be made to 3¢. Mill lots are quoted as follows, f.o.b. Chicago: Angles and Sheared Plates, 2.12½¢ @ 2.15¢; Universal Plates, 2.20¢; Tees, 2.45¢

@ 2.55¢; Beams and Channels, 2.90¢; Small lots from stock sell at the following rates: Angles, 2.25¢; Tees, 2.70¢; Beams, 3.50¢ for domestic.

Plates, Tubes, &c.—A number of contracts for considerable quantities of Plates are pending, but the parties seem to be in no hurry to close. Current trade is very light. Small lots sell as follows from store: Sheet Iron, Nos. 10 to 14, 2.50¢; Sheet Steel, 3¢ @ 3.50¢; Tank Iron, 2.40¢; Tank Steel, 2.60¢ @ 2.75¢; Shell Iron, 3¢; Shell Steel, 3.12½¢; Flange Iron, 4¢; Flange Steel, 3.50¢; Fire-Box Steel, 4.75¢ @ 5.75¢; Boiler Rivets, 4¢ @ 4.25¢; Ulster Iron, 3.75¢. Boiler Tubes, 62½¢ off.

Sheet Iron.—Both Black and Galvanized are in very moderate demand at present. Prices are unchanged, small lots of Black being quoted at 3.10¢ for No. 24 to 3.80¢ for No. 27, and Galvanized at 65¢ off for Juniata and 65¢ and 2½¢ off for Charcoal.

Merchant Steel.—Prices of Tool Steel are slowly settling to their old basis of values before the formation of the association, with but little business offering. Quotations are as follows: Bessemer Bars, 2.30¢; Tool Steel, 8¢; Specials, 13¢ @ 25¢; Crucible Spring, 3.75¢; Open-Hearth Spring, 2.25¢ @ 2.50¢; Open-Hearth Machinery, 2.30¢ @ 2.40¢; Tire, 2.25¢ @ 2.50¢; Sheet, 7¢ @ 10¢.

Steel Rails.—The sales on account of the local mills during the week aggregated about 10,000 tons. Other contracts are pending. The situation is still unchanged, a light year's business being indicated. Prices are firm, however, at \$30 for large lots and \$30.50 for small quantities.

Old Rails and Wheels.—Old Iron Rails are very dull. Nothing has transpired during the week to establish prices, but dealers quote them nominally at \$21 @ \$21.50. Some inquiry is noted for Old Car-Wheels, and a small lot was sold for \$19.50. This, however, could not be obtained for any considerable quantity, buyers offering \$19.

Scrap.—Trade is very limited. Mixed Country is worth \$14. Carefully Selected is offered at the following rates by city dealers, per ton of 2000 lb: No. 1 Railroad Wrought, \$20 @ \$20.50; Track, \$19; No. 1 Mill, \$14 @ \$15; No. 2 Mill, \$10; Horseshoes, \$18.50; Axles, \$26.50; Machinery Cast, \$13.50 @ \$14; Stove Plate, \$10 @ \$11; Cast Borings, \$8.50 @ \$9; Wrought Turnings, \$10.50 @ \$11; Axle Turnings, \$12.50 @ \$13; Coil and Leaf Steel, \$15 @ \$16; Tires, \$16; Mixed Steel, \$10.50 @ \$11.

General Hardware.—An excellent demand is reported in every branch. The Shelf Hardware jobbers state that their trade is increasing steadily. The Heavy Hardware jobbers are doing a much better business than last year at this time. Those who handle specialties also report a very encouraging influx of orders from every section reached by them. Aside from this there are no special features to note.

Nails.—Manufacturers' agents for Steel Nails are expecting an advance of 5¢ or 10¢ in the factory price to be declared this week. Pointers have been freely given to customers, and the placing of orders has thus been stimulated to some degree, but not enough to make trade very active. The charge having been made that the Calumet Iron and Steel Company are cutting prices, they state that although they do not belong to the association they are as deeply interested as any of the members in keeping prices up, and that they are doing so, relying upon the quality of their product to give them their share of orders. Jobbers are doing a very good business, but their prices are still un-

settled. In view of the anticipated advance by the manufacturers, some of the jobbers are now taking a firm stand against anything less than \$1.95 for carloads and \$2 for small lots. Wire Nails show no improvement in price, although some manufacturers have declared themselves out of the market, having orders which will absorb their capacity for two months, and others are endeavoring to make \$2.40, Chicago, the bottom rate for large lots. With one or two concerns naming lower figures, and as low as any thus far made since the break, an actual advance is decidedly retarded. Jobbers quote \$2.50 as the regular price from stock, with \$2.45 for mixed carloads.

Barb Wire.—The demand is still improving, but prices are not better. In fact, large lots can now be bought from the manufacturers at lower rates than those named in December, but it is not likely that this condition of affairs will continue any length of time. A heroic remedy is being administered to cure a very stubborn disease. Jobbers quote Painted at 2.90¢ and Galvanized at 3.50¢, with 10¢ per 100 lb off for carloads.

Philadelphia.

Office of *The Iron Age*, 220 South Fourth St. PHILADELPHIA, Pa., January 29, 1889.

Pig Iron.—A considerable amount of business has been done during the past week, the larger proportion, however, being at what may be called "cut rates." Some brands still command firm quotations, but in the majority of cases the lots are small, or under a guarantee of protection in case of any general reduction in prices before deliveries are completed. This, of course, shows a great want of confidence, and is almost equivalent to a decline, although there is still a possibility that such a contingency may be avoided. Much will depend on developments the next two or three weeks. A great deal of Iron is being consumed, and so far as this section is concerned there is no serious overproduction, but the market cannot take the large offerings from other sources without displacing similar quantities of the home product. Price, therefore, becomes an important factor. Some fair-sized lots of Southern Irons have been taken within the past month or six weeks, probably 15,000 tons in all, besides a considerable amount of Western Foundry Iron in small lots. This in addition to the usual accumulations during the holiday season has caused steadily increasing stocks in this vicinity, and brings furnacemen face to face with the question whether they will meet the prices made for outside lots, or limit their output and maintain prices and lose a portion of their trade. Some leading concerns will undoubtedly accept the former alternative; others cannot do so without involving serious loss, and will probably "blow out" their furnaces. Meanwhile the feeling is very unsettled, with a probability of its continuance until some adjustment is made to meet the conditions which we have endeavored to define. For the near future, prospects are not at all encouraging, although it is claimed that some of the more urgent sellers having placed their product, prices are likely to be somewhat steadier. There may perhaps be a slight reaction from the pressure of the last week or two, but, at the moment, the chances are that it will be only temporary, until some of the accumulations are absorbed, and that is hardly likely until there is a much better demand or a considerably reduced production, either of which involves time. In regard to current prices, there is variety enough to satisfy the most exacting, the extremes for good to choice brands being \$15 to \$17 at tide for Gray Forge, and \$17 to \$19 for

No. 1 Foundry, with the majority of sales at from 50¢ to 75¢ per ton above the inside quotations. Several lots of 1000 tons each of Gray Forge, including both local and Southern brands, were taken at \$15 @ \$15.25 delivered in consumers' yards, and No. 1 Foundry at \$17.50 @ \$18, although Southern No. 1 could be had at \$17, rail or steamer, for February and March shipments. Smaller lots of local brands have been taken at \$15.50 @ \$16 for Gray Forge and \$18 @ \$18.50 for No. 1 Foundry, but, as already stated, buyers will not take large lots unless guaranteed against a decline.

Foreign Iron.—Prices are too high to permit of business being done in this market. Asking rates are as follows: Bessemer, \$20, c.i.f., duty paid; Speigeleisen, \$27.25.

Blooms.—There is a good demand at prices quoted for some time past—viz.: Steel Nail Slabs, \$28.50 @ \$29, at mill; Billets, from \$32 to \$36, according to analysis; Run-out Anthracite, \$42 @ \$44; Scrap Blooms, \$32.50 @ \$34 per "bloom" ton of 2464 lb.

Muck Bars.—Market unsettled. There is more disposition to buy, but bids are not over \$26.50 @ \$27 at mill for good Bars, while sellers ask about 50¢ more.

Bar Iron.—The market has been somewhat more active, but without any indication of improvement in prices. The chances in this respect seem to be a shade more favorable, however, and as the mills get more orders on their books a little stiffening in values will naturally follow. It is not known that any large orders for Bars have been placed, although some of the mills claim to have had the offer of lots aggregating over 2000 tons, which they declined, more on account of dates for delivery than because of prices. A few large Skelp orders have been distributed around (about 2000 tons among local mills), so that things are more active, if not more remunerative. Prices, as already stated, are no better, and range from 1.75¢ to 1.85¢ for good to best quality of Bars, and 1.8¢ for Grooved Skelp, although large buyers expect to shade even these low prices, and have done so in cases in which new business was urgently needed.

Plate and Tank Iron.—Business in Plates is very disappointing. Some of the largest orders given out within the past month or six weeks were taken by Western mills, so that local concerns have been able to secure only small orders, and are therefore always on the lookout for new business. The result is low prices, with no immediate prospect of improvement. Prices are nominally unchanged, but on large lots concessions are not unusual. Quotations about as follows: 1.95¢ @ 2.1¢ for Ordinary Plates and Tank Plates, 2.1¢ @ 2.2¢ for Universal Plates; Shell, 2.4¢ @ 2.5¢; Flange, 3.5¢; Fire-Box, 4¢; Steel Plates, Tank and Ship Plate, 2.2¢ @ 2.3¢; Shell, 2.7¢; Flange, 3¢ @ 3½¢; Fire-Box, 3½¢ @ 4½¢.

Structural Iron.—The market is very quiet, with nothing but small orders coming on the market at present. Some of the mills are busy on old contracts, but there are more that are running close to the end of their order books, hence prices are irregular and somewhat weak, although quoted as before—viz.: Bridge Plate, 2¢ @ 2.1¢; Angles, 2¢ @ 2.1¢; Tees, 2.4¢ @ 2.6¢; Beams and Channels, 2.8¢ for Iron or Steel.

Sheet Iron.—A fair amount of business has been done, some pretty large lots having been taken on private terms. The market is steady at the following quotations:

Best Refined, Nos. 26, 27 and 28....3 @ 3½¢
Best Refined, Nos. 18 to 25....2¼ @ 3 ¢
Common, ¼¢ less than the above.
Best Bloom Sheets, Nos. 26 to 28....4¼ @ 4½¢
Best Bloom Sheets, Nos. 22 to 25....3¾ @ 4 ¢

Best Bloom Sheets, Nos. 16 to 21....3¼ @ 3½¢
Blue Annealed.....2.8 @ 2.8¢
Best Bloom, Galvanized, discount.....62½¢
Common discount.....67½¢

Merchant Steel.—There is a good demand at about the following quotations: Tool Steel, 8½¢ @ 10¢; Machinery, 2½¢ @ 2½¢; Crucible Spring, 3½¢; Crucible Machinery, 5¢; Best Sheet Steel, 10¢ @ 12¢; Second Quality 8½¢; Third Quality, 6½¢.

Steel Rails.—Business is very quiet and orders for fair-sized lots appear to have been taken at something less than quoted rates. In Eastern Pennsylvania \$28 at mill is claimed to be an inside rate, but orders from some of the Southern roads have been worked from Pittsburgh at what appears to be about \$27 at mill, unless special rates have been made with the transportation companies. The feeling is unsettled, with \$27.50 @ \$28 quoted for large orders.

Old Rails.—There is no change from last week, the market being quiet, but at firm quotations. Shipments would command about \$23.50 for T's or \$24 for spot lots, but sales have been chiefly for interior delivery, at about \$24.50 laid down at mills. Stocks are light, and holders very firm. Spot lots, \$24.25 bid to-day.

Scrap Iron.—The market is a little quiet, but there is no quotable change in prices, which remain as follows: \$20.50 @ \$21 for cargo lots; \$21.50 @ \$22 for carload lots, delivered, or for choice \$22.50; No. 2 do., \$14 @ \$15; Turnings, \$18 @ \$14; Old Steel Rails, \$20 @ \$21; Cast Scrap, \$15 @ \$16; do. Borings, \$9 @ \$10; Old Fish Plates, \$25 @ \$26; Old Car-Wheels, \$17 @ \$18, Philadelphia, or its equivalent.

Wrought-Iron Pipe.—There is a good deal of business doing, but prices are still irregular and unsatisfactory. Discounts are nominally unchanged, but on desirable orders concessions are frequently made. Quoted discounts nominally Black Butt-Welded, 52½¢; Galvanized do., 42½¢; Black Lap-Welded, 62½¢; Galvanized do., 52½¢; Boiler Tubes, 60¢.

Nails.—The demand is very light, as is usual at this season. Prices are unchanged, but very irregular, varying from \$1.75 to \$1.90 at mill for carload lots. Store prices remain at \$1.90 @ \$2. The agreement to restrict production is likely to be consummated shortly; meanwhile there are more Nails being made than can be sold at quoted rates.

J. W. Hoffman & Co., Philadelphia, who have for the past 17 years been located at 208 South Fourth street, will remove their offices to 333 Walnut street, and will have larger facilities for handling their increasing trade in Iron and Steel of all descriptions. J. Ogden Hoffman has been appointed Philadelphia agent for Carnegie, Phipps & Co., Limited, and Carnegie Bros. & Co., Limited, Pittsburgh, Pa. H. will also be located at 333 Walnut street.

Birmingham.

BIRMINGHAM, ALA., January 28, 1889.

Pig Iron.—There is absolutely nothing new in the Iron situation as regard prices, and trade is quiet. Stock on hand is light at all the furnaces, there having been quite a diminution since the first of the month filling orders ahead. There are two causes which operators believe may tend to make an improvement in the situation—viz., the Hull storage scheme and the sliding freight scale.

There is a much better feeling over the financial situation since the last report. Birmingham's greatest burdens—obligations on real estate speculation—are being very appreciably lightened, notably with-

in the last few days. As reported in *The Iron Age*, the depression in the business generally is attributed to the dullness in railroad building and the demand for such supplies.

Louisville.

LOUISVILLE, KY., January 28, 1889.

Pig Iron.—There have been a number of sales effected during the last week for delivery through the year. Prices continue low, with little prospect of an advance. Some of the leading furnaces are accepting orders for the year's delivery, believing that they cannot hope for an important change, and that, until the weaker furnaces are forced to go out, the market will continue depressed. The buying during the week has been largely among stove foundries and machine companies, and for future delivery, though their purchases for a year's supply are not as large as usual, as from the present depression there is a decided falling off in orders. We quote as follows:

Southern Coke, No. 1 Foundry, new classification.....\$14.75 @ \$15.25
Southern Coke, No. 2 Foundry, new classification.....14.25 @ 14.75
Southern Coke, No. 3 Foundry, new classification.....13.75 @ 14.25
Gray Forge.....13.25 @ 13.75
White and Mottled, different grades.....12.75 @ 13.25
Silver Gray, different grades.....13.00 @ 15.75
Southern Charcoal, No. 1 Foundry.....16.25 @ 16.75
" " No. 1 Mill.....14.75 @ 15.25
Southern Car-Wheel, standard brands.....21.75 @ 22.75
Southern Car-Wheel, other brands.....15.00 @ 19.50
Hanging Rock Coke, No. 1 Foundry.....15.50 @ 16.00
Hanging Rock Charcoal, No. 1 Foundry.....19.50 @ 21.00
Hanging Rock, Cold Blast.....20.75 @ 23.75

Cincinnati.

Office of *The Iron Age*, Fourth and Main Sts., CINCINNATI, January 28, 1889.

Pig Iron.—Very low prices have been made for Pig Iron in the local market during the past week, even lower than those reported in our last review. But sales have increased materially, some very large contracts having been closed during the past few days. These purchases have been made not alone by actual consumers, but some large amounts have been taken for speculative account. An analysis of the present market is no easy task. The tone is unsettled, and interested parties modify their views with each new report, giving prices an unstable character. Of course all agree that a reaction is bound to come sooner or later, but there is no unity of opinion that the bottom has been touched. Those buying upon speculative ideas admit the possibility, and even the probability, of lower prices, but the fact that the market is at a lower point than for many years gives them courage to buy for "long" account. Large consumers, especially Pipe works, which have large orders ahead, have shown confidence, to some extent, in making contracts for large amounts, but they have secured the benefit of time, the length of which gives some assurance of a profit upon purchases, as well as upon their manufactured article. A few sellers announce their belief that the market is at bottom, and that they prefer to wait awhile before parting with holdings; but it is noteworthy that these gentlemen have just sold liberal amounts of Iron. The majority of producers, if their sentiments are reflected with accuracy, will not be surprised to see a further material decline. One of the largest producers in the South, and one credited with unusual foresight, is reported to have said that the present demoralization will continue and prices will decline until furnaces which ought not to make Iron—those which have little or no capital of their own, but are operated on borrowed capital—are compelled to blow out. This means a war of extermination, or a natu-

ral weeding out process, a "survival of the fittest," according as it is viewed. The sales made here or consummated through Cincinnati agents during the past week aggregate about 50,000 tons, for delivery ranging from two to six months, some contracts being reported made extending throughout the year, but a majority of the transactions cover about four months; of this amount speculators are said to embrace nearly 20,000 tons, the remainder being made up of lots ranging from 1000 and 2000 to 7000 tons. No. 1 Southern Coke Foundry Iron is reported at \$14.50 @ \$15; No. 2 do. at \$14 @ \$14.50; No. 3 do. at \$13 @ \$13.50, but the inside prices are not openly named. Forge Iron at \$12.50 @ \$13 and Mottled at \$12. Many mixed lots, too, have been sold at varying rates. Dealers as a rule adhere to old "list" prices in their published reports. Northern Iron has sympathized more with the Southern product, and even Wheel Iron has ruled easier under less liberal orders. The following are the approximate prices current here at the close for cash, f.o.b.:

Foundry.	
Southern Coke, No. 1 (new classification).....	\$14.75 @ \$15.00
Southern Coke, No. 2 (new classification).....	14.25 @ 14.50
Southern Coke, No. 3 (new classification).....	13.50 @ 14.00
Ohio Soft Stone Coal, No. 1.....	15.00 @ 16.00
Ohio Soft Stone Coal, No. 2.....	14.50 @ 15.00
Mahoning and Shenango Valley.....	16.50 @ 17.00
Hanging Rock Charcoal, No. 1.....	21.00 @ 22.00
Hanging Rock Charcoal, No. 2.....	19.00 @ 22.00
Tennessee and Alabama Charcoal, No. 1.....	18.00 @ 18.50
Tennessee and Alabama Charcoal, No. 2.....	17.00 @ 18.00
Forge.	
Strong Neutral Coke.....	13.00 @ 13.50
Mottled Neutral Coke.....	12.00 @ 12.25
Gray Forge.....	12.50 @ 13.00
Car-Wheel and Malleable Irons.	
Southern Car-Wheel.....	20.00 @ 25.00
Hanging Rock, Cold Blast.....	22.00 @ 25.00
Lake Superior Car-Wheel and Malleable.....	21.00 @ 22.00

Manufactured Iron.—Has been moderately active and steady, without new features of prominence.

Nails.—The market has been without animation, and easy in tone: 12 @ 40d sell at \$1.90 @ \$1.95 $\frac{3}{4}$ keg, with 10¢ rebate in carload lots at the mills. Steel Nails sell at \$1.90 @ \$1.95, and Steel Wire Nails at \$2.60 @ \$2.65 $\frac{3}{4}$ keg.

Old Material.—There has been little trading, and prices have been nominal. Old Rails are difficult to sell at \$21.50 @ \$22, and Old Wheels are quotable at \$18 @ \$18.50, cash, here.

Kroger, Redway & Co. announce that, having succeeded to the business of R. J. Kroger & Co., they will continue to occupy the old office, Room No. 1, Allen Building, Fifth and Main streets. They are agents for the Schoonmakers Connellsville Coke, best grades of West Virginia and Ohio (Soft) Coke, and (Barton Mine) Piedmont Smithing Coal, favorably known as Cumberland Blossburg. They also deal in Iron Ore, Mill Cinder, Scrap Iron and Rails.

Chattanooga.

Office of *The Iron Age*, Carter and 9th Sts., CHATTANOOGA, January 28, 1889.

Pig Iron.—A correct report of the condition of the market at the present time would result in an "unknown quantity," and all the algebraic rules ever invented would not give a correct solution of the problem. Rumors of sales of large round lots at distressingly low figures are flying around in every direction, but careful inquiry of the alleged sellers results in the fact that no such sales have been made. The Tennessee Coal and Iron Co. were reported to have offered Nos. 1 and 2 Foundry at very low prices, but got no takers, when the truth of the matter is that

they have not a pound of No. 2 to offer for delivery under 60 days and No. 1 under 90 days at any price. A party from the North visited the Southern districts prepared to buy 25,000 to 50,000 tons for spot cash, and expected to get No. 1 for about \$12 @ \$12.50, and Gray Forge for about \$10 @ \$10.50, but has left the field without buying a pound. The fact is there is no such priced Iron for sale in the Southern districts. Many of the furnaces are all sold up and those that are not are realizing profitable figures on what sales they are making, or are stacking their output. It cannot be denied but what prices have receded, but the statements made by many that prices have gone to the figures reported cannot be substantiated by facts. \$13 @ \$14 is the basis at which No. 1 can be bought for now, about 50¢ @ 75¢ less for No. 2 Foundry, and there are some who will not sell at these figures. The failures at Nashville and Sheffield have been discounted for a long time by those who were on the inside and have created no surprise.

Miscellaneous.—The past week or two has developed quite an active stir in business, and the future is looked upon as a period that will develop an active season in all mercantile lines.

Cleveland.

CLEVELAND, January 28, 1889.

Iron Ore.—The local representatives of the big mining companies in the Lake Superior district steadfastly maintain that no steps affecting the prices for Ore for 1889 have yet been taken. While asserting that the opening prices for Ore will, in all probability, be about 25¢ or 50¢ above those of 1888, it is confidently claimed that active inquiries from the furnacemen are not expected for at least three weeks to come. This feeling on the part of the Ore dealers is due in no small measure to the fact that many Eastern furnaces, especially those along the line of the Lehigh Valley road, are determined to buy their supplies of Ore on this side of the Atlantic. Their determination to substitute domestic for foreign Ore means, it is claimed, a total output in the Lake Superior region of at least 6,000,000 tons of Ore in 1889. The Ore receipts at Buffalo in 1887 were but 30,700 tons. Last year they were 247,000 tons. With the increased dock facilities, prepared by the Lehigh Valley Company, and with the furnaces at Syracuse, Troy, Ironton and elsewhere demanding native Ores, the Buffalo trade this year is not unlikely to reach 600,000 tons. This phase of the situation in a measure accounts for the apparently disinterested position of the mine owners who now claim that they can well afford to await the demands of the furnacemen. The little stacks of unsold Ore on the docks are being rapidly disposed of, less than 35,000 tons now remaining in the possession of the dealers. Fully 30,000 tons of Ore were shipped to the furnaces last week.

Pig Iron.—The tone of the market is slightly improved, Ohio Coke Irons, at a reduction of 50¢ $\frac{3}{4}$ ton, being in fair demand, and Car-Wheel Irons, at about the same sacrifice, finding quite a number of purchasers. As long, however, as the furnacemen are not compelled to enter the market the demand is bound to continue light, and substantial orders will be few and far scattered. The sacrifice in prices is far from universal, many furnacemen declining altogether to make concessions for the sake of orders. Buyers, in looking after current needs, are less solicitous than might be expected about obtaining low prices, and few sales of small lots have occurred below 50¢ reduction from the long-prevailing quotations for standard

Irons. Many foundries are looking forward to good orders for Iron in the architectural line.

Scrap Iron.—Old American Rails are selling in small lots at \$24.25. The market as a whole is dull, and sales of all kinds are scattering.

Nails.—Steel Wire Nails at \$2.40 are about the only articles in the market enjoying any degree of demand. Business with both jobbers and store men is limited.

Manufactured Iron.—A majority of the dealers are firm in the belief that Bars, Plates and Sheets will be selling freely before March 1. The market at present is lifeless, and Common Bar does not command prices in advance of 1.60¢.

[Later by Telegraph.]

Interviews with the principal consumers in the Mahoning and Shenango valleys reveal their willingness to pay last season's opening prices for new Ore. A dozen different mining companies are following the established custom of waiting for the Republic mine to fix prices before announcing their schedule of rates. Not a pound of new Ore has been sold. A representative of the Carnegie interests said this morning that letters had been received from several mining companies relative to new Ore, and that replies were sent indicating the Carnegie company's readiness to buy at the mine-owners' prices. It is rumored to-day that the Republic will announce \$6.25 as its opening price. The depression in the Rail and Bessemer-Pig markets will, it is said, operate against high prices for Bessemer Ore at the beginning of the season. Representatives of the large Pig-Iron interests in Ohio and Pennsylvania go to New York to-night to protest against the increased freight on Pig Iron ordered for February 1.

Detroit.

WILLIAM F. JARVIS & Co., under date of January 28, 1889, report as follows: There has been an absence of any large dealings in this market during the past week. On account of the low offers recently made here by some Southern furnaces and the very low prices at which these Irons have been sold in other sections, buyers are inclined to wait until values are more settled and they can feel sure prices have reached the lowest point. Most Coke Irons are lower in sympathy. While Lake Superior Charcoal is being held at prices asked a month ago, it is a question whether they will not also be affected. Makers of this grade claim that consumption will be fully up to the production, and, therefore, no cause exists for lowering quotations. We quote for the present as follows:

Lake Superior Charcoal, all numbers.....	\$20.00 @ \$20.50
Lake Superior Coke, all ore.....	19.50 @ 20.00
Lake Superior Coke, cinder mixed.....	18.00 @ 18.50
Southern No. 1.....	17.25 @ 17.75
Southern Gray Forge.....	15.25 @ 15.75
Southern Silvery.....	17.00 @ 17.50
Jackson County (Ohio) Silvery.....	18.50 @ 19.00
Old Wheels.....	20.00 @ 20.50

Pittsburgh.

Office of *The Iron Age*, 77 Fourth Ave., PITTSBURGH, January 20, 1889.

There has been no important change in the general Iron and Steel industries during the week under review; trade is still reported dull and unsatisfactory. It is believed that tariff agitation has contributed as much as anything to the dullness that has prevailed of late. Another matter that tends to depress business in the two great industries of Pittsburgh, Iron and Steel, is the fact that a large number of natural gas contracts expire shortly, and if the advanced prices for gas are insisted

upon it is probable that a number of manufacturers will drop the gas and go back to coal.

Pig Iron.—The market continues in a depressed and unsatisfactory condition, but it is hoped that there will soon be a change for the better. Consumers have little or no stock, and just as soon as they begin to think that prices have touched the lowest point they will want to contract for future delivery. Furnacemen argue that the point in question has been reached already, and one of the strong points advanced, in view of their position, is that present prices scarcely cover actual cost, with but little prospect of much, if any, reduction in the production. We quote prices as follows:

Neutral Gray Forge.....	\$14.75 @ \$15.25,	cash.
All Ore Mill.....	14.00 @ 14.50,	"
White and Mottled.....	15.50 @ 16.00,	"
No. 1 Foundry.....	16.75 @ 17.00,	"
No. 2 Foundry.....	15.75 @ 16.25,	"
Charcoal Foundry.....	21.00 @ 24.00,	"
Cold Blast Charcoal.....	25.00 @ 28.00,	"
Bessemer Iron.....	16.50 @ 16.75	"

Best brands of city-made Forge Irons are to be had for immediate delivery at \$15, cash; it is doubtful whether furnacemen would contract for future delivery at the price quoted. Foundry Irons continue very dull; Bessemer continues weak; sale 600 tons at \$16.75, cash, and 1000 tons for delivery next month at \$16.50, cash; in the latter there has been a decline of 25¢ to 50¢ per ton within the past few weeks.

Muck Bar.—Continues very dull, and prices have further declined; we now quote, in the absence of sales, at \$27 @ \$27.50, cash. We are reliably informed of an offer to sell at \$27. The quotations above noted show a decline of \$1 per ton within a few weeks, and no demand at the decline.

Manganese.—Sale of 80 % Ferromanganese at \$55.50 @ \$56, cash; and Spiegel at \$28 @ \$28.50, cash, for 20 %. Demand is chiefly for small lots.

Manufactured Iron.—Orders continue to come forward sparingly, but it is hoped and expected that there will be an improvement in the demand before long, and there is every reason to believe that there will be. Prices continue weak and irregular, in sympathy with the raw article. Bars, 1.75¢ @ 1.80¢; Plates, 2.10¢ @ 2.20¢; No. 24 Sheet, 2.80¢ @ 2.90¢, all 60 days, 2 % off for cash. Skelp Iron, 1.75¢ @ 1.80¢ for Grooved, and 1.90¢ @ 2¢ for Sheared.

Nails.—There is nothing doing in the Nail trade here; no change in prices. Pittsburgh manufacturers continue to quote at \$1.90 for 12d @ 40d, 60 days; 2 % off for cash, but Wheeling continues to sell at a \$1.80 base, and, while there is difference, Pittsburgh has but little show for business. The Wheeling manufacturers will hold a meeting to-morrow, one of the main objects of which, it is said, is to advance prices. Pittsburgh makers say there is but little margin at the \$1.90 card, and, if so, it is not strange that Wheeling wants to advance prices.

Wrought Iron Pipe.—There is a fair business for the season, and but for the manner in which prices are being cut there would be but little room for complaint. A few large concerns are doing the bulk of the business; some manufacturers are not anxious for business at present prices, and but for a desire to hold their trade they would shut down. We quote discounts on Black Butt-Welded Pipe at 55½ @ 57 %; on Galvanized do., 50 and 5 %; on Black Lap-Welded, 65 % @ 67½ %; on Galvanized do., 55 and 2½ %; 2-inch Tubing, 11½¢ per foot, net; 5½-inch Casing, 35¢ per foot, net; Boiler Tubes, 65 % off.

Old Rails.—The dullness noted for some time continues, and in the absence of sales it is difficult to give reliable quotations. We hear of offers to sell Amer-

ican Tees at \$24, and it is fair to infer that if offered at the price quoted they could be bought for less. The work of "lifting" has not this winter had to be suspended in consequence of the weather, and the supply has been kept up much better than expected thereby. But for the open winter the course of the market would have been very different from what it has been. Old Steel Rails quoted in absence of sales at \$18 @ \$18.50 for short and \$19.50 @ \$20 for long lengths.

Steel Rails.—Are still quoted at \$28 cash orders at mill here, but for a desirable order there is little doubt but what the price quoted would be discounted, as the mills are all anxious for business. While there are those who believe that there will be as many Rails wanted this year as last, others are of a different opinion.

Billets, &c.—There is but little inquiry for Bessemer Steel Billets and prices are weak; quoted at \$28, cash, at maker's mills; Nail Slabs \$27.50 @ \$28; Domestic Blooms and Rail Ends, \$18.50 @ \$19, with but little inquiry.

Railway Track Supplies.—There is not much inquiry just now, but an improvement in demand is looked for next month. Prices remain unchanged. Spikes, 2.05¢ @ 2.10¢, 30 days, free on cars here; Splice Bars, 1.80¢ @ 1.85¢; Track Bolts, 2.80¢ with square and 2.90¢ with hexagon nuts.

Merchant Steel.—No change in prices. Best brands Tool Steel 8½¢; Crucible Machinery, 5¢; Open Hearth do, 2½¢.

Old Material.—Is less active and weaker; sales No. 1 Wrought Scrap at \$20.75, net ton; Old Car Axles, \$24.75; Cast Scrap, \$14.75 gross; Old Car-Wheels nominally \$19 @ \$19.50 gross.

New York.

Office of *The Iron Age*, 66 and 68 Duane street, New York, January 30, 1889.

From every department of the Iron and Steel trades come complaints of a most unsatisfactory state of affairs. Prices, almost without exception, are down to cost for the most favorably situated concerns, and in some instances are decidedly below it. Importations have practically ceased, except in some specialties. Already the number of sellers in many lines is narrowing down to a small number. Among them there is a sharp rivalry, in which ordinary business prudence is often thrown to the winds, and personal antagonism, retaliation and spite are allowed full sway. Such a condition of affairs certainly cannot last long. When more prudent councils prevail, when those so eager for tonnage have been filled, a reaction is sure to set in which will cause a very rapid advance to more reasonable figures. We see no immediate prospect for this change, but all interested in the trade should keenly watch for the slightest indication, since the recovery to at least living rates is likely to come with a rush. It is in the nature of the business that the adjustment to present circumstances is least likely to be very prompt in the case of the Pig Iron manufacturers. A rolling mill or foundry can generally be closed down at short notice and without serious direct loss. It is different with a furnace. Blowing out involves future heavy outlays, without considering that generally furnaces must have long-time contracts for raw materials. One point deserves special mention, and that is the heavy consumption of last year. In spite of the fact that the production slightly exceeded that of 1887, the stocks at the end of the year were only 336,161 net tons on December 31, 1888, as compared with 401,266 net tons on June 30,

and 338,142 net tons on December 31, 1887. Leaving out of account imports, the statistics indicate that our consumption during the second half of 1888 was 3,528,777 gross tons, or, considering accumulations of Bessemer Iron as an offset to lessened imports, at the rate of 7,000,000 gross tons per annum. This was in spite of the heavy falling off in the production of Steel Rails.

Foundry Pig.—The market is stagnant, waiting for developments. Low offerings do not appear to tempt buyers, and it is difficult to form any definite conclusions what prices could be realized if an attempt were made to force sales, even of standard brands. Southern Iron has been offered at \$16.50 for No. 1 without having found any takers. As yet no announcement of opening prices has been made by the leading Lehigh company, events being watched closely before any course of action is decided upon. A determination to hold trade is, however, freely expressed. An event, so far as the northern part of this State and certain sections of New England are concerned, is the blowing in of one of the Troy furnaces on Foundry Iron. With a capacity of close upon 1000 tons a week, a cheap Ore mixture, Coke as fuel, and thoroughly modern plant, the furnace will be able to produce good Iron cheaply and make a serious struggle against the Mahoning Valley and Shenango Valley Irons which have secured so strong a hold in that section. We understand that experiments with different mixtures are now being made before the product will come into the market. In reference to the delays in the delivery of Southern Iron, alluded to recently, we are informed that they apply only to the Savannah line, that shipments are prompt via Norfolk, and that the rates are the same—viz., \$3.75 from Chattanooga and \$3.86 from Birmingham to Philadelphia and New York, and \$4 from Chattanooga and \$4.11 from Birmingham to Boston. Southern furnaces have also low freights to a number of interior points in Central and Eastern Pennsylvania. We quote nominally for Standard brands \$17.75 @ \$18 for No. 1, and \$16.50 @ \$17 for No. 2 Foundry.

Scotch Pig.—The market continues very dull. The Anchor and State lines have each taken off two steamers, so that now there are only two instead of four monthly from Glasgow; the freights, however, remaining 4/. Coltness, \$20.50 @ \$21; Shotts, \$20 @ \$20.50; Langloan, \$20 @ \$20.25; Summerlee, \$20.25 @ \$20.50 and Dalmellington, \$19.25 @ \$19.50.

Plates.—We quote Iron Tank, 2¢ @ 2.2¢; Shell, 2.25¢ @ 2.4¢; Steel Tank and Ship Plate, 2.15¢ @ 2.25¢; Shell, 2.35¢ @ 2.5¢; Flange, 2.6¢ @ 2.75¢, and Fire-box, 3½¢ @ 4¢.

Structural Iron.—The market is quiet, dull and weak. We quote Sheared Plates, 1.9¢ @ 2¢; Universal Mill Plates, 2¢ @ 2.1¢; Angles, 2¢ @ 2.10¢; Tees, 2.4¢ @ 2.6¢, and Channels and Beams, 2.8¢ on dock for all sizes.

Bar Iron.—We quote: Carload lots on dock, half extras, Common, 1.65¢ @ 1.75¢; Medium, 1.75¢ @ 1.8¢, and Refined, 1.8¢ @ 2¢.

Steel Rails.—During the past week facts have come to the surface which have again considerably unsettled the Steel Rail Market. There has been a sharp struggle over Southern business, the majority of the contracts having been secured by a Pittsburgh mill. The lack of business in the West and Southwest, the inability to obtain work in the Northwest, have apparently, coupled with a desire for a large tonnage, led to an eagerness

to secure Southern orders in territory in which mills further East are supposed to have a commanding position. It is reported that sales have been made on the basis of about \$26 at Pittsburgh mills, rumor having even brought out lower figures, which, however, are not to be credited. The result has been a weakening on the part of some of the Eastern mills, and \$27 is now freely named where \$28 was formerly nominally quoted. One Eastern mill has sold 12,500 tons, Norfolk delivery, at \$28.25, and it is rumored that a Pittsburgh mill has taken 20,000 tons for a new enterprise in North Carolina. An unusual transaction also reported is the sale by an Eastern mill of 2500 tons for Chicago delivery, the price given being \$30.60, equivalent to \$27 at the mill. We note in addition a sale of 1500 tons by an Eastern mill, at private terms. The order for a Virginia road, alluded to in our last report, turns out to have been for 5000 tons with an option of 5000 tons more. It was taken by a Pittsburgh mill. We quote nominally \$27 @ \$27.50 at Eastern mill, with the market in buyers' favor.

Merchant Steel.—The market continues demoralized. Spring Steel has sold at \$43 gross ton flat, delivered, 3% off, ten days; Tire, delivered, without extras, 2.05¢, $\frac{1}{8}$ x $\frac{1}{4}$ square edge at 2.25¢, delivered.

Track Material.—The market is very weak. The sale is reported to a road in this vicinity of 8000 kegs of Spikes, delivered at Albany and Buffalo, at a figure which is below cost and which other makers decline to meet, quoting \$2 @ \$2.05. The same road has purchased 50,000 sets of Steel Angles at private terms. Angles are freely quoted 1.80¢ @ 1.85¢, delivered.

Axles.—A circular has been issued by a leading Pittsburgh mill, quoting Axles, master car builders' standard, Iron or Steel, at 2¢, at mill.

Wire Rods.—Only a very small business has been transacted, although stocks of Eastern Wire mills are running low. The situation in Germany is peculiar. The large works, which make their own Steel, are indifferent sellers, because they claim to be able to make more money by turning their material into other channels. They either let their Rod mills remain idle or make Bars or light Rails on them. The small works would be glad to sell at present prices if they could get Billets at anything like reasonable prices. The result is that 108 marks @ 110 marks is being asked at shipping port, with freights to this country at 11/ @ 12/. This it is claimed makes it impossible to sell here at less than \$42, while \$41.50 is the highest bid. Direct cable offers have been made of Basic Rods at \$39.50, but they excite suspicion and would only be taken to meet contingencies. Eastern domestic mills are doing something in the larger numbers, No. 0, No. 1, &c., for which there is quite a demand in the aggregate. The higher rate of duty on them forces importers to demand \$44.50, so that the home mills have a good chance to take the business.

Old Rails.—On the seaboard Old Rails continue scarce, with some demand, but no sales. We quote \$23 @ \$23.50 for Tees, with the majority of holders very firm.

Frank D. Moffatt & Co., 100 Beekman street, this city, have been appointed exclusive sales agents for the State of New York and the Northern part of the State of New Jersey for the Pig Iron made by the Brier Hill Iron and Coal Company. The well-known Softener, Brier Hill Scotch, is made by this company.

Coal Market.

The Coal trade is extremely dull in all departments, and stocks at tidewater are accumulating despite efforts to restrict work at the mines. In the Wyoming region the mines are worked on short time only three days in the week, and in the Lehigh region several collieries have suspended altogether. Although Reading has a number of idle collieries the company report a stock of fully 130,000 tons of Port Richmond. For the week ended January 26 the production was 543,392 tons, which is a decrease of 100,000 tons compared with the week ended January 12, but 114,000 tons in excess of the corresponding week in 1888. Since January 1 the production is 83,000 tons larger than for the same time last year. Prices are cut by outside operators to the extent of 25¢ @ 40¢ per ton, and sales are reported at even lower figures. The Lehigh and Schuylkill Coal Exchanges decided to maintain present prices during February. D. B. Duncan and Nelson J. Gates were appointed receivers of the Coal firm of M. J. Gaffney & Co., of Brooklyn.

Bituminous Coal is depressed from the effects of excessive production, and occasional sales are reported at the lowest figures, say about \$2.90 alongside. Beech Creek is still outside of the Seaboard Association.

Cumberland production for 1888 amounted to 3,671,067 tons, an increase of 295,000 tons compared with 1887.

The Commissioners of Charities and Correction have given David B. Duncan the contract for furnishing the department with 28,000 tons of Coal during the coming year. His figure was \$3.92½ per ton, or 6½¢ per ton cheaper than he filled the same contract for last year.

Metal Market.

Copper.—At the time of our last week's report Spot Chili Bars and Good Merchantable still stood £77½; futures, £78 and Best Selected, £79. 10/. Since then a sudden demoralization and weakness have overtaken the London market, and yesterday spot only brought £73 and futures £75. To-day quite a sudden recovery is cabled, spot being worth £77. 10/ for Chili Bars and Good Merchantable, but futures remain £78. While this change occurred, Best Selected declined from £7.10/ to £77. The first intimation that there was something wrong reached us by cable from Paris, under date of 25th inst., when Rio Tinto shares dropped 67 francs, there being a rumor on the Stock Exchange there that contracts bearing on the formation of the English Copper Company in connection with the French syndicate had fallen through. It is pretty certain that the French syndicate has latterly abstained from buying either futures or spot Copper, but whether its collapse is near at hand or distant is altogether problematical. Of course if Copper were sold on its proper merits, the enormous accumulation of stock on hand would probably not bring more than about £30 @ £40, but experience has taught us that it is dangerous for any speculators to assume that the downfall of the big companies is approaching and sell futures on such assumption. This situation causes hesitation not only to a certain extent in London, but also on this side. What has caused the sudden recovery to-day may possibly be that the syndicate has come to the rescue after perfecting its financial arrangements. Yesterday 25,000 lb of March were sold as low as 16¢, while to-day the same amount sold for 16.40¢. The only bid that can be got for the coming month is 16.25¢, and under these circumstances the spot quotation is practically nominal. For the first 11 months of

last year there was shipped from Spain 756,941 tons of Pyrites, against 701,841 tons in 1887 and 61,884 tons in 1886; of Precipitate it was 26,458 tons, against 25,500 and 24,794 respectively. James Lewis & Son, of Liverpool, in their annual report, say: "The increased production cannot be considered excessive, considering the high price of Copper, but what has surprised the trade is the great falling off in the deliveries of Copper, pointing to a diminished consumption of 87,478 tons in England and France. These reduced deliveries are, however, misleading, and do not represent the actual consumption, as a considerable quantity of old Copper lying in England and France has been worked up during the year—probably 5000 tons; and it must also be borne in mind that smelters and consumers bought largely during the rise toward the close of 1887, and so commenced the year 1888 with considerable stocks, while at present they are holding as little as they possibly can. This difference we estimate at about 15,000 tons. The actual consumption has, therefore, probably been 20,000 tons more than the apparent consumption, making the falling off only 17,478 tons. One of the disadvantages the syndicate labor under is that they have to carry the stock of Copper usually held by the trade."

Tin.—The London market has again slightly given way with Spot Tin since our last report, the same declining from £97 to £96. 15/ in the London market, futures remaining unaltered at £97 sterling. There has been some increase of activity in our own market, 10 tons of January selling at 21.80¢; 50 tons February at 21.55¢ @ 21.65¢; 35 tons April at 21.60¢ @ 21.70¢; 10 tons May at 21.80¢; 10 tons, spot, 21.50¢, and this morning 10 tons, spot, at 21.60¢. As the day after tomorrow the statistics for January will be cabled, the market closes to-day quieter and in an expectant attitude. **Tin Plates.**—The market has been quiet, but steady, with more inquiry for both spot and futures, which will probably lead to business in the near future. We quote large lines per box: Siemens-Martin Steel, Charcoal Finish, \$4.75 @ \$5.50; Ternes \$4.12½ @ \$4.25; Coke Tins, \$4.22½ @ \$4.30, and Wasters, \$4.12½ @ \$4.15. Liverpool Coke rules 18/ to 13/3. The Board of Trade returns for Tin Plates exported to the United States last year were 292,623 tons, as compared with 268,355 tons in 1887.

Lead.—A featureless state of affairs has prevailed during the week, sales not exceeding 400 tons at 3.75¢ @ 3.80¢, the closing quotation being 3.75¢, at which the market winds up with a dull feeling. Out West the quotation was 3.52¢ @ 3.55¢, with quite a dull state of affairs. In London Soft Spanish has remained steady at £12. 17/6, while English Pig receded from £13. 5/ to £13 sterling. The Lead exportations during the last 11 months of last year from Spain amounted to 118,737 tons, against 121,637 tons in 1887 and 103,149 tons in 1886.

Spelter.—Although inactive, our own market remains firmly sustained at 5¢ for Common Domestic, but in London quite a break seems to have occurred in Silesian, which fell from £18. 7/6 to £17. 15/, but this latter quotation lacks confirmation, and seems doubtful, unless there should be some hitch in the negotiations about the renewal of the syndicate to date from July next. But however this may be, for the moment the quotation of Spelter is altogether nominal. The export of Calamine from Spain during the first 11 months of last year was 24,643 tons, against 21,873 tons in 1887 and 25,009 tons in 1886.

Antimony.—A cable from England states that Ore has become extremely scarce, causing an advance in Hallett from £45 to £46, while here there was little

Antimony available and a good demand. We quote Hallett 11.25¢ and Cookson 13.25¢.

Everett & Post, dealers in Lead, Spelter and Copper at Chicago and St. Louis, have opened a branch office at 104 John street, New York, where they will be represented by Henry F. Salyards. With offices in these three important centers of the metal trade, their facilities for the transaction of business in the lines in which they operate will be very great, and will doubtless be duly appreciated by their customers.

New York Metal Exchange.

The following sales are reported:

THURSDAY, January 24.	
10 tons Tin, February.....	21.55¢
10 tons Tin, May.....	21.80¢
10 tons Tin, February.....	21.65¢
66 tons Lead, March.....	3.85¢
25,000 lb Lake Copper, March.....	17.00¢
FRIDAY, January 25.	
10 tons Tin, spot.....	21.50¢
10 tons Tin, April.....	21.70¢
16 tons Lead, January.....	3.80¢
SATURDAY, January 26.	
10 tons Tin, January.....	21.80¢
30 tons Tin, February.....	21.55¢
MONDAY, January 28.	
16 tons Lead, spot.....	3.80¢
25 tons Tin, April.....	21.60¢
TUESDAY, January 29.	
25,000 lb Lake Copper, March.....	16.00¢
WEDNESDAY, January 30.	
25,000 lb Lake Copper, March.....	16.40¢
10 tons Tin, spot.....	21.60¢

Financial.

Among current events bearing on business relations generally the meeting of railroad presidents in Chicago probably has most weight. After several days' deliberation the conclusions reached are believed to be in all respects favorable touching the general question of railroad management, settling of disputes, paralleling roads, &c., with the special object of preventing ruinous competition. The agreement, it is presumed, will be immediately ratified and put in force, thus consummating the measures proposed at the initial meeting of bankers and presidents held in this city at Pierpont Morgan's. Chairman Judge Cooley, of the Interstate Commerce Commission, says, in so many words, that rate-cutting must stop and the law be obeyed. Referring to the Chicago meeting, he remarked: "The question of maintaining rates resolves itself into a question of maintaining the law. The presidents know this, and any doubt by them as to whether they will pass and live up to an agreement is simply a doubt as to whether they will obey the law. Take the case of the so-called rate war between St. Louis and New York City. * * * Law and right were put aside until the fray was over. Now, the presidents know such actions as these must be stopped. There is no question to the Commission as to how it shall be done. It simply must stop."

The Stock Exchange markets have been generally dull, but strong, with considerable buying on foreign account, and Atchison most conspicuous. Reports from the conference at Chicago were anxiously awaited from day to day, and on Thursday the bearish demonstrations were renewed, and the grangers were attacked, in the expectation that they would suffer because of the decision of Judge Brewer, which sent to the State courts the cases of violation of the Iowa railroad laws. The market opened strong on Saturday, but free selling of Atchison, of Texas Pacific and of Richmond Terminal had an unsettling effect. On Monday stocks opened strong, influenced by better markets in London, indicating that the Boulanger election in Paris had little dis-

turbing effect, but a fall in Atchison, Topeka and Santa Fe in Boston encouraged free selling here. At a later hour news came that the railroad presidents at Chicago had satisfactorily ended their labors. Upon this the market advanced sharply and closed strong. On Tuesday there was an improved movement. At the close news came that the Chicago, Burlington and Northern had made a new demand at the presidents' meeting, and might cause a delay in signing the agreement.

The bond market was buoyant, under a heavy investment demand, and United States bonds are strong at quotations as follows:

U. S. 4½, 1891, registered.....	109
U. S. 4½, 1891, coupon.....	109
U. S. 4½, 1907, registered.....	123
U. S. 4½, 1907, coupon.....	123
U. S. currency 6s.....	12

The bureau report of foreign commerce for December shows the exports of merchandise to have been of greater value than during any previous month since December, 1884. Merchandise to the value of \$85,755,481 was exported, in comparison with \$78,229,551 in December, 1887. The December imports of merchandise were valued at \$60,488,104, also the largest record for any December of recent years. At the close of November the excess of merchandise imports over exports for the year had been \$58,700,000, but the December returns reduce the adverse balance to \$33,458,000. This excess of merchandise imports over exports is more than counterbalanced by the excess of our exports of coin and bullion over our imports.

Accounts respecting general trade are variable. Wagon roads in the West and other sections of country have been abominably bad for several weeks past. On the other hand, mild weather has permitted navigation on the Hudson and on the lakes to an extent rarely experienced for many years, and railroads have been free from obstruction. Taking all in all, winter trade has been disappointing, and in several descriptions of merchandise the full prices reasonably expected at this season of the year have not been realized. In breadstuff: there is no life, and holders of flour have been compelled to accept lower prices, despite the curtailment of production. Cables from Europe, too, are dispiriting. The decline in wheat was about 1½¢. For corn shippers manifest little urgency. Stimulated by lower prices exports of provisions from the seaboard last week comprised 8,500,000 pounds of bacon, a gain of 1,000,000 pounds on the corresponding week last year, and freight room is wanted for cotton. In dry goods business is more extended, but conservative, and the tone exceptionally strong. As the week closes, the great tie-up of nearly all the horse-car railways in New York and Brooklyn tends to embarrass local movements in every direction.

The total clearings of 39 cities last week show an increase of 17 % over the corresponding week last year. In New York the gain was 18.9 %; outside of New York 13.7 %. At no point is there a noticeable decrease, while in the Northwest there is almost uniformly a large increase, ranging as high as 56.5 % in Denver City. A very fair increase is noted at the principal seaboard cities, including Boston, Baltimore and Philadelphia, in the order named.

The weekly statement of the New York banks was again favorable, if the continued accumulation of funds at this center can be so regarded. The increase of reserve was \$1,985,250, making the present surplus \$20,012,360, against \$23,258,825 at the corresponding time last year, and \$22,298,250 in the fourth week of January, 1887. The gain of only a few weeks past has been considerably in excess of 100 per cent. In loans there was an expansion of

\$3,496,400. Specie increased \$2,881,500, and legal tenders increased \$975,500. Deposits increased \$7,487,000, and circulation decreased \$90,300. Some of the savings banks were desirous of placing money on government security at 2½ % for four or five months. Commercial paper was dull. Rates are 4 % for 60 to 90 day indorsed bills receivable; 4½ to 5 for four months' acceptances, and 5 to 6 for good single names having from four to six months to run.

The Secretary of the Treasury on Saturday purchased \$521,000 4½ % bonds at 109. The total amount of bonds purchased to date under the circular of April 17 is \$108,917,800, of which \$51,396,650 were 4 % and \$57,521,150 were 4½ %. The total cost of these bonds was \$128,284,759, of which \$66,101,877 was paid for the 4 % and \$62,182,882 for the 4½ %.

Sterling exchange was firm at \$4.87 @ \$4.89½, and a shipment of \$1,000,000 in gold was made on special order. The Bank of England and the Bank of France reduced their sales of discount from 4 to 3½ %. In the present state of the market gold exports from New York as an ordinary exchange transaction yield no profit.

The new Ganesvoort Bank, Fourteenth street, junction Hudson and Ninth avenues, opened for business on Monday.

Henry S. Ives and George H. Stayner, the Cincinnati, Hamilton and Dayton financiers, were lodged in the Ludlow street Jail, being unable to obtain \$250,000 bail each.

The eastbound shipments from Chicago by the trunk lines last week amounted to 56,509 tons, against 61,840 the previous week and 45,047 tons for the corresponding period in 1887.

British Iron and Metal Markets.

[Special Cable Dispatch to The Iron Age.]

LONDON, WEDNESDAY, January 30, 1889.

The Copper market has been very irregular and unsettled. Up to Saturday last the syndicate agents were bidding £77. 5/ for Chili Bar and G.M.B. prompts and £75 for futures, at which prices very little supply came out. Subsequently they withdrew as buyers of spot stock, but kept standing offers of £75 for futures. Coupled with the decline in price of Rio Tinto shares from 22 to 19½ francs, which was attributed to free selling on orders from Paris, the withdrawal of syndicate support led to a decline to £72. 15/ on prompts, and a considerable amount of G.M.B. was thrown over by outside holders. The decline in Rio Tinto shares led to rumors that the syndicate was on the verge of collapse, and the possibility of that being the case was strengthened by the announcement that negotiations between the Copper Bank and the mining companies were meeting with greater trouble than had been anticipated, more particularly in the instance of the dealings with American companies. To-day the syndicate agents came to the relief of the market and bid up to £87. 10/ for prompts, while not going above £75 on futures; but transactions were reported at as low as £73 for spot and £70 for futures between operators who refused to trade with syndicate agents. Sales of Best Selected were reported at £76 and under. There is no improvement in the demand from consumers, and deliveries continue surprisingly small. Old Copper is offering in larger quantities, and at somewhat lower prices, in the face of announcements

latterly that the supply had been pretty well cleaned up.

Block Tin has depreciated somewhat in value, mainly under the influence of the decline in the price of Copper. The feeling, however, is that the market is in better form, the demand for consumption being fair and the offerings by large operators moderate.

The demand for Tin Plate has been rather slow, owing in part to the refusal of makers to grant concessions on prices. A meeting of makers has been called for the purpose of combining with a view of bringing about a more satisfactory adjustment of railway freight rates. A new works at Langenneck has been projected.

Welsh Steel makers, who have been most prominent in connection with the proposed Steel Rail combination, have advanced their prices and declare that the syndicate will soon fix a uniform price of £4. 15/ for standard sections. The railway companies manifest unmistakable displeasure at the project and threaten to discontinue purchases. Some extensive contracts are under negotiation at the present time.

Speculation in Pig Iron Warrants has been brisker, and the market has shown more tone, although prices have fluctuated somewhat irregularly under the contest between "bulls" and "bears." The "bear" interest seem determined to resist any advance in view of the large stocks in store. The "bulls" express confidence, claiming that the oversold accounts are heavy and the stocks in makers' hands diminishing. Steamer freights from Glasgow to New York are held higher, the steamship agents now quoting 5/. There have been very few and only slight changes in prices for makers' brands, or on Mid-dlesboro' Pig or Hematites.

Steel of all kinds is held very firmly, and a fairly good business is reported in most lines. Makers ask 2/6 advance on last week's prices for Billets and Wire Rods.

An improved demand for Old Iron Rails is reported, but buyers and sellers are considerably apart on prices.

Scotch Pig.—A fair business reported, with prices steady for most brands:

No. 1 Coltness, f.o.b. Glasgow	51/
No. 1 Summerlee, " "	50/6
No. 1 Gartsherrie, " "	48/
No. 1 Langloan, " "	49/8
No. 1 Carnbroe, " "	48/8
No. 1 Shotts, " at Leith	49/
No. 1 Glengarnock, " Ardrossan	47/6
No. 1 Dalmeilington, " "	48/
No. 1 Eglinton, " "	47/6
Steamer freights, Glasgow to New York, 4/	
do 5/; Liverpool to New York, 10/.	

Cleveland Pig.—More activity in this branch and prices very steady. No. 1 Mid-dlesboro', G. M. B., 36/8; No. 3 do., 33/9 @ 34/.

Bessemer Pig.—There continues to be a good business and prices remain steady. West Coast brands, mixed numbers, 45/, f.o.b. shipping point.

Spiegeleisen.—The market very firm and demand fairly active. English 20 % quoted 80/, f.o.b. N. W. England shipping point.

Steel Rails.—The demand less active than last week, but makers firm on prices. Heavy sections quoted at £4, and light sections £4. 2/6 @ £4. 12/6, f.o.b. at N. W. England shipping point.

Steel Blooms.—A fair business passing at steady prices. We quote £3. 18/6 for 7 x 7, f.o.b. at N. W. England shipping point.

Steel Billets.—The demand fairly active and prices firm. Bessemer, 2½ x 2½ inch, £4. 3/9 @ £4. 5/, f.o.b. at N. W. England shipping point.

Steel Slabs.—Only a moderate business and prices nominal. Bessemer, £3. 18/6, f.o.b. at N. W. England shipping point.

Old Rails.—There has been a very fair demand. Holders are firm. Tees quoted at £3. 5/ @ £3. 6/, and Double Heads, £3. 8/ @ £3. 10/, c.i.f., New York.

Scrap Iron.—The market steady but quiet. Heavy Wrought quoted at £2. 2/6 @ £2. 5/, f.o.b.

Crop Ends.—Moderate sales and prices unchanged. Bessemer quoted £2. 10/ @ £2. 12/6, f.o.b.

Tin Plate.—Very little change, buyers and sellers being apart. We quote, f.o.b. Liverpool:

IC Charcoal, Allaway grade	15/3 @ 15/6
IC Bessemer steel, Coke finish	13/6 @
IC Siemens	13/9 @
IC Coke, B. V. grade	13/3 @
Charcoal Terne, Dean grade	12/ @ 12/6

Tin.—A very fair business during the week, and the market showing better tone. Straits quoted at £96. 15/, spot, and £97. 7/6 @ £97. 10/ for three months' futures.

Manufactured Iron.—The market firm all through and fairly active. We quote, f.o.b. Liverpool:

Staff. Ord. Marked Bars	£ s. d.	£ s. d.
" Common	8 2 6	5 15 0
Staff. Bl'k Sheet, singles	7 15 0	6 17 6
Welsh Bars (f.o.b. Wales)	5 0 0	6 2 6

Copper.—The market has been irregular and unsettled, but showing more firmness to-day, though quieter. Chili Bars nominal at £77. 10/, spot, and £75 three months' futures. Best Selected, £76.

Lead.—Market very slow, and prices rather weak. Quoted at £12. 7/6 for Soft Spanish.

Spelter.—The demand light and prices weaker. Quoted at £17. 15/ for ordinary Silesian.

ARGENTINE REPUBLIC.

BUENOS AYRES, December 13, 1888.—*Dynamite.*—A company has been formed in this city for the manufacture of Dynamite, the Fabrica Nacional de Dinamita, with a capital of \$1,000,000, the manager to be Umberto della Casa, and the chairman of the board of managers Augustin Silveyra. Nitric Acid and Chemicals generally will also be made—*La Tribuna*.

CHINA.

HONG KONG, December 4, 1888.—*Steel.*—Sir R. Hart, the Inspector-General of Customs in China, has fixed the duty on Mild Steel at 0. 1, 2, 5 taels per picul to date from January 1, 1889, the same as on Finished Iron, while hitherto the duty was twice that much. *Argenti-ferous Lead.*—The two important mines at Jeho, 150 miles north of the Chinese Wall, in Mongolia, have been vigorously taken in hand by orders received from Li Hung Chang, and are now successfully being worked by American mining engineers for Government account upon modern principles.—*Argus*.

AUSTRALIA.

SYDNEY, N.S.W., January 9, 1889.—*Metals.*—The December shipments from Australia to England comprised 1500 tons of Tin, and 9000 tons of Copper Ore.—*Per cable via London*.

EAST INDIES.

SINGAPORE, December 17, 1888.—*Tin.*—Our last report was dated 4th inst., since when only

a moderate business has been done at down to \$37, and the market closes weak with sellers at this price. Buyers offer \$36.75. Supplies have been kept back by rains up-country. Tin has been booked at 30/, via Cape. The Flora P. Stafford sailed. No further feature is reported. *Boston*—The Antioch and Penobscot are both loading for this port. *Exchange* is steady at 3/2½ for six months' sight credits. There were shipped from the Straits Settlements to the United States during the first 11 months, 55,072 piculs of tin, against same time in 1887, 60,570; in 1886, 66,873; in 1885, 37,068; in 1884, 55,279; and in 1883, 106,231. P. S. per cable January 17, 1889: Tin shipments to the United States during the first fortnight of the month have been from Singapore and Penang 300 tons, against 150 in 1888; to England, 600, against 1400.—*Giffman, Wood & Co.*

PENANG, December 12, 1888.—*Tin.*—Receipts during the fortnight amounted to 9500 piculs, of which Europeans took 5340 and Chinese 4000. Opening at \$37.55, the market closed after a few fluctuations at \$37.55, after some purchases at \$37.25. *India-Rubber.*—A small lot was paid \$69.50 per picul. *Exchange.*—We quote four months' sight, bank, 3/1½ @ 3/1¼.—*Schmidt, Kusterman & Co.*

COLOMBO, CEYLON, December 13, 1888.—*Plumbago.*—A steady, moderate demand has been noticeable at following quotations: Large Lumps, ½ ton in rupees, 145 @ 170; Ordinary ditto, 125 @ 160; Chips, 80 @ 95, and Dust, 40 @ 65. Plumbago shipments to England, 15,434 tons; to Hamburg, 851; to Antwerp, 1027; to India, 21; to Australia, 88, and to the United States, 22,209; together 39,630, against 51,026 in 1887; 55,066 in 1886, and 34,550 in 1885. *Exchange.*—Six months' sight, 1/4½.—*Volkart Brothers, through their agent, Mr. John W. Greene, 82 Wall street, New York.*

MANILA, January 21, 1889.—*Hemp.*—There are buyers at \$15.15-16 per picul against same date 1888, \$9½, equaling ½ ton cost and freight £54. 15/ against £33. 5/; clearances for the United States since last cable amount to 4000 tons, against 7000 in 1888; since January 1, to 24,000, against 13,000; loading for do., 28,000, against 7000; cleared for England since January 1, 11,000, against 5,000; loading for do., 3000, against none; cleared for all other ports, 2000, against 3000; receipts at all ports since last cable, 10,000, against 13,000; do. since January 1, 29,000, against 26,000 in 1888 and 27,000 in 1887. *Freight.*—\$7.50 against \$5.50. *Exchange.*—3/8½, against 3/8.—*Ker & Co., per cable direct, to their agent, Mr. Charles Nordhaus, 89 Water street, New York.*

SWEDEN.

STOCKHOLM, January 17, 1889.—*Machine Made Nails.*—Swedish makers have formed a syndicate for the control of output and prices, and a sales office is opened in this city under the management of the firm of L. L. Liberg. *Iron Ore.*—The Government has resolved not to acquire the Lulea-Ofoten Railroad, taking umbrage at the demand of the latter that no export duty be imposed on its Iron Ore in the future.—*Dagbladet*.

GERMANY.

HAMBURG, January 19, 1889.—*Iron.*—All sorts of Pig Iron have been in active request, and the home and export demand for Spiegel is such that the price has advanced uninterruptedly, 10 @ 12½ now being worth 59 marks per ton. Forge Pig is also tending upward, and makers decline naming a figure for the second quarter. The Rhemish-Westphalian syndicate raised the price on the spot 1 mark, so that Thomas is now held at 46 and German Bessemer at 55. Foundry is also better, the range being 54 @ 61; Luxembourg, 35.70 @ 41; Finished Iron has followed suit and improved 2½ marks. A good spring trade seems to be in prospect throughout the Iron and Steel branches. The American demand for Wire Rods has also revived; the same may be quoted 106 @ 107 marks; Steel Rails, 120 @ 125; ditto for mines, 110 @ 115.—*Borsenhalle*.

BELGIUM.

BRUSSELS, January 19, 1889.—*Iron.*—The Belgian Iron market generally remains in good position. Although the orders dropping in might be larger, they nevertheless sum up a decent aggregate—sufficient to keep all things going. Orders for Steel Rails have been on the increase. The number of blast furnaces in operation is the same as it was during December. Out of 50 in Belgium 19 remain blown out. December production has been large. Pig, 54,870 tons; Foundry ditto, 4185; for Steel making, 16,585 tons—together 75,640 tons. Pig Iron consumption in November was 79,354 tons. During the first eleven months of 1888 we exported 62,749 tons of Steel Rails, against 65,323 in 1887.—*Moniteur des Interets Matériels*.

Wages have been reduced by many boot and shoe makers in New England during the last six months.

Hardware.

There is an evident improvement in business, of which there is a fair amount doing in a quiet way. Travelers' reports indicate a good condition of things throughout the country generally, and it is expected that a good business will be done in the near future. Prices are without material change, and while concessions are being made on some lines, in others there is an improved tone. The general situation is regarded as promising well for the season's business, the principal complaint on the part of manufacturers being the very narrow margin of profit on most lines.

Cut Nails.

The official report of W. E. S. Baker, Philadelphia, Secretary of the Atlantic States Nail Association, shows the following figures for the monthly production of Nails in the 27 mills of the association, whose aggregate number of machines is 1880:

Months.	1887. Kegs.	1888. Kegs.
January.....	268,748	179,411
February.....	271,290	193,367
March.....	292,145	233,216
April.....	221,139	199,151
May.....	147,463	219,888
June.....	201,631	216,410
July.....	131,497	180,300
August.....	211,646	208,585
September.....	244,750	206,478
October.....	247,170	248,743
November.....	239,284	195,539
December.....	222,829	174,382

Totals..... 2,699,592 2,405,470

These figures compare as follows with previous years:

	Kegs.	Kegs.
1884.....	2,253,917	1887..... 2,699,592
1885.....	2,743,318	1888..... 2,405,470
1886.....	2,863,268	

The stocks were for a series of years:

Stocks of Cut Nails.

January 1, 1885.....	245,550 kegs.
January 1, 1886.....	306,556 kegs.
January 1, 1887.....	241,864 kegs.
January 1, 1888.....	330,986 kegs.
January 1, 1889.....	389,834 kegs.

The report of the product of the Atlantic States Association, given above, does not include several small works with an estimated product of 68,000 kegs, making the total output 2,473,470 kegs. Last year, with allowance for mills not reporting, the total was made 2,727,734 kegs for the Eastern mills.

Business is moderately active in the New York market, with quotations unchanged at \$1.80 @ \$1.90 for carload lots and \$1.90 @ \$1.95 for small lots from store.

The regular monthly meeting of the Western Cut Nail Manufacturers' Association is being held at Wheeling, W. Va., to-day.

Wire Nails.

The market remains in substantially the same condition as at our last report, with a further improvement, as the extreme prices recently prevailing have been quite generally withdrawn. A large amount of orders has been placed, and the mills are consequently not as solicitous of making sales. Quotations remain as before on a basis of about \$2.30 at mill, with the usual advances for small lots from store.

Barb Wire.

The New York market presents no new features, prices being pretty well maintained, but to a large extent nominal, as transactions are limited.

Advices from the West make it questionable as to whether the recent understanding reached by the St. Louis manufacturers, as referred to in our last issue, will result in securing regularity in prices,

as it is reported that one of the parties has practically withdrawn from the arrangement.

An important fact has just been made public in connection with the pending and apparently interminable litigation over the Barb Wire patents. Some time since, in a suit with the Washburn & Moen Mfg. Company, the Beat-em-all Barb Wire Company, of Cedar Falls, Iowa, were victorious, establishing by testimony the use of Barbs on Wire used for fencing prior to the date of the patents. It now transpires that one of the witnesses, whose testimony largely aided in establishing prior use, has signed an affidavit that his statements were incorrect. This affidavit is in the possession of the Washburn & Moen Mfg. Company's attorneys. Several members of the family of another witness have made affidavits that his statements also were incorrect, though he has refused to make such an affidavit. Sensational as these statements are, we are assured of their truth by those in a position to know all the facts. An aggressive movement on the part of the owners of the patents is looked for at an early day, as it is not likely that they will lose much time in following up the opportunity which these disclosures give them to have the verdict against them set aside. When that is done they will vigorously prosecute their suits for infringement.

Miscellaneous Prices.

It was decided by the manufacturers of Picks and Mattocks, to whose conferences with a view to advance in price we referred in our last issue, to hold their meeting at an earlier day than was first intended, in order that they might effect the change in prices without too great an accumulation of orders. The meeting was accordingly held last week, instead of this week, as originally intended, and prompt action was taken, forming a strong combination and advancing prices from 15 to 25 per cent. on the different lines of Picks and Mattocks. It is understood also that the new prices will as far as practicable, apply to orders received since January 1, so that the manufacturers may be unembarrassed by the presence on their books of orders at the old figures, which would tend to give a good deal of irregularity to the market. As it is, it is thought that less than the usual quantity of orders were placed at old prices in anticipation of the advance. The wisdom of the manufacturers in this action is generally conceded by the trade.

The combination on Iron Rivets does not on the surface develop striking irregularities, but concessions beyond the regular prices are made by some of the manufacturers, and there are other indications of irregularities.

Another advance has been made in the prices of Rope, the manufacturers' quotations now being subject to a discount of 1 1/2 % for cash in 10 days:

	Per pound
Manila, 1/4 inch and larger.....	15 1/4c
Manila, 3/8 inch.....	15 1/4c
Manila, 1/2 and 5-16 inch.....	10 1/4c
Manila, Tarred Rope.....	14 1/4c
Manila, Hay Rope.....	15 1/4c
Sisal, 1/4 inch and larger.....	13 1/4c
Sisal, 3/8 inch.....	13 1/4c
Sisal, 1/2 and 5-16 inch.....	12 1/4c
Sisal, Hay Rope.....	14 1/4c
Sisal, Tarred Rope.....	12 1/4c
Sisal, Medium Lath Yarn.....	12 1/4c

Both Cast and Wrought Butts are in an unsatisfactory condition and prices are irregular and low. In Wrought Butts there is an animated competition between two of the manufacturers, the other manufacturers not being so active participants.

The Screw market is in a very satisfactory condition and prices are well adhered to by the manufacturers. They report that the indications are that the stocks

purchased by the jobbers at the old prices are pretty well broken, as most of them are purchasing goods at the new prices. That the old stocks have lasted to the present time is a striking evidence of the great quantity of Screws that was purchased previous to the advances.

The Skein manufacturers, at a meeting held in Chicago January 3, 1889, adopted a revised standard list, as follows:

Standard Steel Skein List with Either Nuts or Linch Pins.

To fit size.	Per set.	To fit size.	Per set.
2 1/4 x 7.....	\$3.60	3 1/4 x 11.....	\$8.50
2 1/4 x 7 1/2.....	5.70	3 1/4 x 12.....	9.00
2 1/4 x 8.....	5.80	3 1/4 x 11.....	10.00
2 1/4 x 8 1/2.....	6.10	3 1/4 x 12.....	10.00
2 1/4 x 9.....	6.20	4 x 12.....	12.00
2 1/4 x 9 1/2.....	6.30	4 1/4 x 12.....	13.00
3 x 9.....	6.50	4 1/4 x 12.....	17.00
3 x 10.....	6.70	4 1/4 x 13.....	18.00
3 1/4 x 9.....	7.40	5 x 14.....	23.00
3 1/4 x 10.....	7.50	5 1/4 x 14.....	25.00
3 1/4 x 11.....	7.60	6 x 15.....	27.00
3 1/4 x 10.....	8.30	6 1/4 x 18.....	30.00
3 1/4 x 10 1/2.....	8.40		

From the above list the Columbus Mfg. Company, Columbus, Ohio, announce the following discounts:

Rocky Mountain brand, 40 per cent.
Columbus brand, 40 and 10 per cent.

The following is their price list of Hub Boxes, seamless and interchangeable, which is subject to a discount of 50 per cent.:

To fit size.	Per set.	To fit size.	Per set.
2 1/4 x 7.....	\$0.66	3 1/4 x 11.....	\$2.18
2 1/4 x 7 1/2.....	.75	3 1/4 x 12.....	2.25
2 1/4 x 8.....	.84	3 1/4 x 11.....	2.37
2 1/4 x 8 1/2.....	.90	3 1/4 x 12.....	2.40
2 1/4 x 9.....	1.05	4 x 12.....	2.49
2 1/4 x 9 1/2.....	1.20	4 1/4 x 12.....	2.70
3 x 9.....	1.32	4 1/4 x 12.....	3.66
3 x 10.....	1.50	4 1/4 x 13.....	3.93
3 1/4 x 9.....	1.62	5 x 14.....	4.11
3 1/4 x 10.....	1.74	5 1/4 x 14.....	5.46
3 1/4 x 11.....	1.83	6 x 15.....	6.60
3 1/4 x 10.....	1.92	6 1/4 x 18.....	10.20
3 1/4 x 10 1/2.....	2.01		

The following are revised quotations of the Boston and Lockport Block Company, Lockport, N. Y., on their line of Faucets:

	Discount.
West's Lock, Open and Shut Key.....	50 %
Star, Metal Plug.....	40 %
Lockport, Metal Plug.....	60 %

They call attention to the fact that their lists are lower than those of some other makers, new or revised lists having been also recently adopted for some of the goods. They have discontinued making their Anchor Lock Faucet.

The Freeman Wire Company, St. Louis, Mo., are quoting the following prices on their Wire, Barbed Wire, Staples, &c.

2 or 4 Point Painted Barbed Wire, in Cattle or Hog.....	\$2.90
2 or 4 Point Galvanized Barbed Wire, in Cattle or Hog.....	3.50
In less than car lots, the price is \$3 for Painted, \$3.60 for Galvanized.	
No. 9 Annealed Smooth Wire.....	\$2.40
Nos. 10 and 11 Annealed Smooth Wire...	2.50
No. 12 Annealed Smooth Wire.....	2.60
With 60 cents advance for Galvanized.	
No. 14 Annealed.....	2.90
No. 15 Annealed.....	3.05
No. 16 Annealed.....	3.20
With 75 cents advance for Galvanized.	
Annealed or Plain Staples.....	2.75
Galvanized Staples.....	3.50

The Super-or Saw Sets, manufactured by the American Tool Company, Canton, Ohio, are listed at \$15 per dozen, and are subject to a discount of 50 per cent.

Accuracy in Tape Measures.

Referring to a paragraph which appeared in a recent issue of this paper in regard to inaccuracies in a well-known line of English Tape Measures, we have the following communication from George M. Eddy & Co., leading American manufacturers of these goods, in which it will be seen that they maintain the correctness

of the position of their English competitor, insisting that minute accuracy cannot be expected in woven Tapes under the many conditions in which they are used, and the different influences of moisture, temperature, &c., to which they are subjected. As giving the judgment of an expert in this line our correspondent's views are entitled to weight and the trade will be enabled to judge intelligently of the degree of accuracy which is to be expected from common Tapes, looking for exactness in measure to the Steel and other high-priced Tapes in which this is secured:

Our attention has been called to a paragraph in *The Iron Age* of the 10th inst., page 65, on the subject of the inaccuracy of some English Measuring Tapes. The English manufacturer was entirely correct in his remarks. Although the Tapes are printed from a correct standard it is impossible to expect that they will remain so under all conditions. The variations of the weather affect all woven Tapes. If printed in damp weather they will shrink more than when it is dry. Again, if used in damp or wet weather they will stretch and contract again when dry. If used for some purpose, as, for instance, measuring green timber or wood, then will shrink remarkably as they absorb the tannic acid in the wood. Have found them to shrink as much as 8 inches in 50 feet, after being used sometimes for that purpose. No woven Tapes can be relied on for standard measure. The only standard of considerable length is the Steel Tape under all conditions. The only variations are the differences of temperature, which are uniform and well known to engineers and others accustomed to use them. The steel Tapes are graduated to a standard of 62 degrees, and the variations are 0.08 inch in 100 feet for every 10 degrees F. above or below that standard. They are standard measures and will remain so in use. If broken can be mended at small expense. A spring balance for uniform strain with level attachment can be used when great exactness is required. They have become indispensable for a great variety of purposes and the demand for them is constantly increasing. Our experience of over 40 years in this business enables us to speak with confidence on the subject.

Items.

The Chicago Spring Butt Company have just issued their catalogue for 1889, in which they continue their usual yearly improvements in their line of specialties and their habitual addition of new goods. They have taken a step in advance in giving list prices for Japanned, Common Bronzed, Nickel-Plated Springs and Tips, Bronze-Plated Springs and Tips, Ground Opal Bronzed, Nickel-Plated, Bronze-Plated, Iron Oxidized Antique, Bower-Barff, Iron Oxidized Silver, Bronze Metal, Polished Brass, Bronze Metal Antique, and Bronze Metal Oxidized Silver. These are all subject to a regular discount, thus avoiding the confusion and perplexity experienced when some uncertain net amount has to be added for odd finishes to the discounted amount of an ordinary list. This extra amount for finishes is also usually obtained by writing specially for it, which is another troublesome matter obviated by the company's catalogue. Their new Double-Acting Door Check Latch is decidedly novel, and their new Screen Door Hold-Back Hinge has the Spring placed behind the Hinge, so that it hardly appears to be a Spring Hinge. The telegraph code of their leading goods will undoubtedly prove convenient, as a variety of goods can be ordered in a ten-word telegram. As their Fire-engine House Hinge is not kept in Stock by the smaller trade, a full-sized cut of it is pasted in the catalogue, which will be found a useful aid in selling the hinge without having to keep a sample of it.

Rockford Cutlery Company, Keokuk, Iowa, formerly of Rockford, Ill., at the election held January 15th, elected the following officers: C. E. Phillips, president, C. J. Stegmaier, vice-president; W. S. Phillips, secretary and treasurer. C. H. C. Burlingame, the retiring manager, held that position for nearly five years, and is

succeeded in that capacity by W. S. Phillips. The company have made some alterations in their plant, and inform us they are in a position to fill all orders in a satisfactory manner.

M. McKercher & Co., 106 and 108 Wabash avenue, Chicago, have succeeded the Miller Mfg. Company in the manufacture and sale of Curd's Patent Brace Splice. They will also represent a full line of the Enterprise Mfg. Company's Rosettes and Harness Specialties. The new firm is composed of three young and enterprising men of ability and business experience.

The Vaughan & Bushnell Mfg. Company, 89 to 95 South Clinton street, Chicago, have issued a revised price list on their Special Wrought Goods, comprising Nail Grips, Nail Claws, Floor Hooks, Grappling Hooks, Sash Weight Rings, Eye Bolts, Swing Bolts and Rings, Well Wheel Hooks, Heavy Hasps, Ice Tongs, Hitching Rings, Leader Hooks, Post-hole Augers, &c. It is a handsomely illustrated and finely printed pamphlet of 16 pages.

The annual meeting of the stockholders of the Wheeling Hinge Company, of Wheeling, W. Va., was held on Tuesday, the 22d inst., at which the old Board of Directors was re-elected.

The Grand Rapids Refrigerator Company, Grand Rapids, Mich., are preparing a new art catalogue, which is intended for general distribution. In it they give a very interesting series of pictorial sketches. It is not simply an illustration of different patterns of their Refrigerators, though these are given, but there are a number of sketches artistically designed of subjects connected with their Refrigerators, the formation, gathering and making of ice, which are effectively printed in color, and embody in the legends connected with them something of a love story. The pamphlet is intended for distribution by the trade to their customers, and will doubtless serve its purpose well, as it is so gotten up as to be of real interest, while it calls attention on its alternate pages to the Leonard Refrigerators. The back page in the copy before us is left blank and is intended to receive the card of the merchant. It is accompanied by a circular in which the company request the merchant to whom it is sent to indicate the number of copies which he can distribute, which will be furnished free of charge. As an instance of advertising enterprise this departure on the part of the company is deserving of commendation, and will doubtless result in bringing their Refrigerators in a very attractive manner to the attention of a largely increased number of purchasers of such goods.

The Chattanooga Tool Company, Chattanooga, Tenn., issue a neat catalogue describing their line of Rakes, Drain Cleaners, Mallets and Handled and Eye Hoes, of which illustrations and list prices are given. They allude to the purchase, to which we have already referred, of the entire equipment, machinery, tools, patterns, dies, &c., together with the good-will, of the Hoe manufactory of M. Bare, Hamilton, Ohio, and the removal to Chattanooga of the skilled labor that operated it, as giving them, with the enlargement of their factory, greatly increased facilities for manufacturing their old line of goods, together with the full line of Eye Hoes made by Mr. Bare.

Paine, Diehl & Co., Philadelphia, Pa., are calling attention to their Keystone Culinary Whips and Mixers, a line which they are preparing to put on the market in large quantities.

The late firm of N. T. Bushnell & Co., New Haven, Conn., was dissolved January 1 by the retirement of Edward A.

Todd. The business will be continued under the same name by N. T. Bushnell, Arthur Griggs and William H. Burchell, who will settle up the business of the old firm.

The Avery Stamping Company, Cleveland, Ohio, issue a convenient pamphlet relating to their Patent Seamless Steel Elevator Bucket, of which a full description is given.

Among the special notices on page 47 will be observed one signed "A. K. J.," in which a desirable stock of Hardware, valued at \$9000, together with a Hardware business desirably located in the Indiana gas region, is offered for sale. Those desiring to engage in such an enterprise may obtain further particulars by addressing the advertiser.

Barrows-Savery Company, Philadelphia, Pa., in addition to their regular line of Hollow-Ware, are now making Enameled Maslin Kettles with patent lip.

Simmons Hardware Company, St. Louis, Mo., have issued their annual catalogue for the present year, in which they illustrate Children's Carriages, Wagons, Velocipedes, &c., Bicycles, Wheelbarrows, Refrigerators, Churns, the Perfection Vapor Stoves and other specialties. The Perfection Oven is also described, with illustrations showing its construction.

The Iowa Farming Tool Company, Fort Madison, Iowa, have issued their illustrated catalogue for the present season. It is characterized by the same elegant typographical features which have been found in their former issues, and shows their large line of Steel and Wood Goods in an attractive manner.

Ausable Horse Nail Company, 4 Warren street, New York, have appointed Duncan K. Major their Western representative.

Henry Hopkins & Co., publishers of Hopkins' "Handy Notes and Queries," 99 Reade street, New York, issue a small pamphlet in which many Hardware houses allude to its interest and utility.

The business heretofore conducted by A. J. Harwi, Atchison, Kan., has been incorporated, and will hereafter be carried on by the A. J. Harwi Hardware Company. The officers are as follows: A. J. Harwi, president; W. P. Mallory, secretary, and E. C. Harwi, treasurer. This is the commencement of the 15th year of the business, and the company will have the best wishes of the trade for their success.

The trade will observe the advertisement on page 46, in which Haydock & Bissell, No. 12 Murray street, New York, call attention to their sale of Hardware, House-Furnishing Goods, Edge Tools, Shovels and Spades, &c., on the 5th prox. Its importance will evidently justify the attention of the trade.

The Russia Cement Company, Gloucester, Mass., manufacturers of Le Page's Liquid Glue, announce that they have severed their connection with the firm of Tower & Lyon, and have secured the services of Maltby, Henley & Co., 20 Warren street, New York, by whom these goods will be supplied to wholesale Hardware dealers at manufacturers' prices. They also state that they have just completed an entirely new plant for the manufacture of Le Page's Glues, and are now able to fill all orders without delay. These works, which are referred to as the largest of the kind in the world, are capable, we are advised, of consuming 35 tons of raw material per day, the process employed having been recently improved under patents controlled by the company. The company have just issued a very neat display stand for the exhibition of their goods, which will doubtless be appreciated by the trade.

Rector & Wilhelmy Company, Omaha, Neb., are sending out a very neat and convenient pocket memorandum book. On the inside covers and the pages facing them they call attention to their specialties, including Jefferson Steel Nails, Austin and Crack Shot Powder, Cartridges, Wads, &c., Fairbanks' Scales, Western Washers, Indurated Fiber Ware, Peerless Handles, Jackson Steel Goods, Lane's Hangers and others. The body of the book is without any printed matter, rendering it admirably adapted to its purpose. They send it out with a courteous and business-like circular.

The Eco Magneto Clock Company, 105-111 Summer street, Boston, Mass., issue a convenient pamphlet describing their Eco Magneto Watchmen's Clock. This Clock is for the purpose of registering visits of the watchman to each station independent of all other stations, similarly to other electric Clocks, but contains the novel feature of being without a battery, as the electricity is generated from a small magneto at each station, similar in principle to a telephone call except that only one-fourth of a turn is necessary to make a record. This method of operating a watchman's clock is referred to as possessing important advantages from the fact that the record can only be made from a station, and that no other means of interfering with the circuit exists by which the record can be falsely made. A full description is given, with testimonials from parties who are using it.

The Penn Lock Works, Philadelphia, formerly located at No. 142 North Fourth street, have moved to No. 146 same street. Their facilities are now increased for the manufacture of Locks, Key Blanks, Locksmiths' supplies, Ice Creepers, &c.

The Nason Mfg. Company, 71 Beekman street, New York, prepared a convenient pocket book for containing papers and memoranda, which was sent out with the compliments of the season, and called attention incidentally to the fact that they are dealers in Pipes, Valves, Fittings, Boilers, Steam Engines, &c.

Pushing German Trade.

The English manufacturers are keeping a watchful eye upon their German competitors and note with natural jealousy any advances made by them in foreign markets. The enterprise shown by the German manufacturers of Iron and Hardware goods is acknowledged by their more conservative neighbors, and there is evidence that the fact that in several lines the Germans have stolen a march on their competitors and are using in all departments much skill and vigor in the extension of their trade is having its effect upon the English makers, and stimulating them to new efforts to hold the markets which they now occupy. The following editorial from the London *Ironmonger* refers to recent efforts made by the Germans in the way of gathering information in foreign markets with the intention doubtless of utilizing it for the extension of their trade:

The Germans are certainly to be credited with almost sleepless energy in their efforts to develop their foreign trade. Many of their methods of procedure have been already touched upon in these columns, but the latest of their efforts comes before us from Constantinople. At that place the German Consul-General has issued a circular and a series of tabulated sheets, with blank spaces to be filled in, in order to ascertain the amount of business done in German goods by the different merchants, &c., to whom the circular is addressed. The circular is in French, while the list of goods is in German and French, printed in parallel columns. The list is most exhaustive, and comprises almost every kind of merchandise, including Iron and Steel of all kinds, Hardware of every variety, Machinery and Machine Tools, Cutlery, Nails, Agricultural

Implements, Locks, Oils and Colors, Needles, Lamps, Copper, Zinc, &c., work, Guns and Ammunition, &c. The circular and list have been sent out in a thoroughly systematic manner, and as the information asked for is certainly of the most confidential character, the Consul-General promises *la plus grande discrétion* shall be observed in dealing with it. The precise object of the German Government in thus obtaining the information direct from the traders, instead of from the Turkish authorities, does not appear, but as it is pretty certain to be used for the purpose of pushing German trade with Turkey, we in this country should lose no time in looking after our interests in that market.

Business Methods.

Hirsch & Co., retail Hardware merchants, at 327 South Clark street, Chicago, have introduced a novel feature in connection with their business. They have established a free carpenters' employment bureau, and will keep a list of carpenters desiring work, for the convenience of builders and contractors. The scheme has been tried for a sufficient time to prove its desirability. The carpenters who procure work through the friendly offices of the firm are not likely to forget the favor when they are in need of tools. A further stroke of enterprise is the publication of a monthly paper for free distribution called *The Carpenters' Journal*. It is devoted to illustrations and descriptions of new and popular tools. Price lists accompany the descriptions. Hirsch & Co. are live Hardware merchants and have original ideas about the arrangement of their hardware store which will be described in these columns in a future issue.

The McFadden Company, 1025 Market street, Philadelphia, Pa., use a form which is not generally adopted in making quotations from their catalogue. It is of a size somewhat smaller than the pages of their catalogue, so that their patrons may paste it inside their book if they so desire. Under the heading of the firm name, address, &c., and the address of their correspondent, the form is in this wise:

We will be pleased to receive your orders at the following discounts from standard lists, as given in our catalogue. Prices subject to market changes without notice. Terms....

The blank which follows has one column for the catalogue page, a wide space for the description of the goods, and another column for the discount.

Randolph & Clowes, Waterbury, Conn., have adopted a novel method of calling attention to their Seamless Drawn Brass and Copper Tubing. It has the appearance of a legal document, the form being boldly printed in type and the blanks filled in in *fac-simile* of handwriting. The substance of the document is as follows, the filling of the blanks being indicated by italics:

UNITED STATES OF AMERICA.

To all to whom these presents shall come, Greeting:

Know ye that Randolph & Clowes, of the City of Waterbury, County of New Haven, State of Connecticut, have supplied for the use of the United States Government sundry and divers Seamless Drawn Tubes of Brass and Copper, and have delivered the same with commendable and extraordinary promptness, and of a quality equal to, if not superior to, any heretofore received by the Departments.

And, further, the said Randolph & Clowes have entered into a contract with *The Calumet and Hecla Copper Mining Company*, of Lake Superior, State of Michigan, for a full supply of pure Copper, &c., which well-approved brand only will hereafter be used by said Randolph & Clowes to the exclusion of all and every kind and sort whatsoever.

Wherefore, full confidence and reliance may hereafter be placed on the perfection of workmanship and excellent quality of material in all goods, wares and merchandise supplied by

Randolph & Clowes to all citizens and customers whosoever they may befound.

Now therefore, it is strongly urged and recommended that all good citizens of the United States wanting Seamless Drawn Brass and Copper Tubing do order the same forthwith from the said Randolph & Clowes, of the City of Waterbury, County of New Haven, in the State of Connecticut, in the United States of America.

By order of

T. U. BING,
Officer in Charge.

W. H. H. Bonebrake, who is now with Gittings & Porter, Little Rock, Ark., writes us with reference to the convenience of the remittance form of the Towers Hardware Company, Birmingham, Ala., of which we gave a description in a recent issue. Its convenience in checking up is especially referred to.

Prices in England.

A recent issue of the *Iron and Coal Trade Review*, London, contains some prices of Hardware and heavy Iron goods produced in Birmingham and the Midlands district, from which we make some extracts, which will be of interest to some of our readers not familiar with the trade in England, as showing not only the prices ruling, but more especially as illustrating some differences in the way in which goods are designated, listed, &c.:

ANVILS.—Common, 15/3 per cwt.; Best Anvils, not warranted, 18/9 per cwt.; Best Warranted Anvils (bicks tied in 1 to 5 cwt.), 19/9 per cwt.

AXES.—Ship Carpenters', 0/3 to 0/7 per pound; Kent and House Carpenters' ditto, 0/4 to 0/8; ditto, Steel Polished, 0/4½ to 0/8½; Felling Axes, 0/4 to 0/6½; Bright and Blued, Solid Steel, 0/6½ to 0/7½; American Felling or Wedge Axes, Steel Polished, 0/5 to 0/9½ per pound.

AXLE PULLEYS.—Iron, 7/9 to 26/, 1½-inch; Brass Face ditto, 22/6 to 46/, 1½-inch.

BOLTS AND NUTS.—Black, ½ and 5-16 to 2-inch and under, 2/9 and 3/3; ¾-inch, 4/5; 7-16-inch, 5/8 per gross. ½ and 9-16-inch, 19/; ¾ and 11-16-inch, 16/; ¾ to 1½-inch, 15/ per cwt. 2½ to 3½-inch, 3/3; 1-16-inch, 5/; ¾-inch, 5/9; 7-16-inch, 7/1 per gross. ¾ and 9-16 inch, 17/; ¾ and 11-16 inch, 15/; ¾ to 1½ inch, 14/3 per cwt. Square Heads, Round Necks, Square Nuts, 2½ and 3-inch x ¼, 4/; 5-16-inch, 4/7; ¾-inch, 6/; 7-16-inch, 7/4 per gross. ½-inch, 20/; ¾-inch, 17/6; ¾-inch, 16/6 per cwt.

CHAIN.—Machine-made, Wire, single link, "Iron," 65 p. c.; double link ditto, 62½ p. c.; Machine made Wire Chain, single link, "brass," 55 p. c.; registered ditto, 50 p. c.; close link brass Chain, 52½ p. c.; oval link brass Chain, 55 p. c.; brass clock Chain, 52½ p. c.; short link tested (rigging) Chain, 8-16-inch, 16/3; ¾, 13/9; 5-16, 12/; ¾, 11/6; 7-16, 10/9; ¾, 10/3; ¾, 9/9; ¾, 9/6; 1-inch, 9/3 per cwt.; Well Chain, twisted or straight link, ½-inch, 20/6; 3-16, 16/6; ¾, 14/6; 5-16, 12/ per cwt, delivered; japanned Pillar Chains, 1 yard, 16 x 6, 5/9 to 6/9 per dozen; japanned Manger Chains, 1½ yard, 18 x 6, 6/9 to 8/; japanned Rack, 1 yard, 18 x 6, 5/6 to 6/3; japanned Dog, 1½ yard, 12 x 7, 5/9 to 6/9; 2 yards, 14 x 6, 10/9 to 11/9; Cowties, 6/9 to 8/9; open ring, 6/9 to 8/9; close ring, 5/9 to 6/9 per dozen; japanned Watering Chains, 14 x 6, 4/3 to 5/3; tinned ditto, 4/9 to 5/9; Bullock Chains, ¾-inch hook at each end, 13/6 to 14/3.

HORSESHOES.—Fullered fore, 14/6 to 16/6; fullered hind, 16/6 to 18/6; stamped fore, 15/ to 17/; hind, 16/ to 18/.

1½-inch, 23/; 2-inch, 21; 2½-inch, 17/6 per cwt. Best Fine Swedish Iron, Countersunk Horse Nails, Stamped, 6 lb, per m., 46/ per cwt.; 8 lb., per m., 43/; 10 lb, per m., 40/ per cwt.: 12 lb., per m., 38/6 per cwt., or subject to 55 p.c. Derby list; Wrought Rose and Deck Head Spikes, 4-inch, 11/9; 5-inch, 10/3; 6-inch, 9/6; 7-inch, 9/3 per cwt.; Galvanized, 5/6 per cwt. extra; Wrought Rose Nails, flat or sharp points, 2-inch, 18/3; 2½, 17/3; 3, 16; 3½, 14/6 per cwt. Wrought Nails, May, 1886, list, 42½ p.c.; Composition Sheathing and Slatting Nails, ½-inch, 0/8½ per lb.; Copper Slatting Nails, cut, 1 to 1½ inch and upwards, 0/11½ to 1/ per lb.

PICKS.—Iron and Steel Excavators, 0/2½ to 0/3½ per lb.

SHOVELS.—Common Iron, round back dust, 4-inch to 8-inch, 1/9 to 6/ per doz., less 25 p.c.; socket handles, 1/ per doz. extra; Ball mouth Shovels, 7-inch to 10-inch, 2/ to 4/ per doz., net; ditto japed, with wood handles, 3/4 to 5/6 per doz., net; Shovels, all Steel, crutch handles, No. 2, 14/; No. 3, 15/; No. 4, 16/ per doz.; No. 5, 17/ per doz.; eye handles, 1/ per doz. extra; riveted ditto, 2/ per doz. extra; Spades and Shovels, common, 60 p.c.; second, 55 p.c.; best, 50 p.c. to 40 p.c. discount off the list.

STEVES.—Brass and Iron, 50 p.c. off list.

STEEL TOYS.—25 to 45 p.c. off the list.

TACKS.—Fine cut, in 1 and 7 lb. parcels, ½-inch, 30/; ¾-inch, 22/; 1-inch, 17/; 1½-inch, 16/; 2-inch, 15/; 3-inch, 14/; 4-inch, 13/ per cwt.; tinned, 7/ per cwt. extra; in ½-cwt. bags, 1/ per cwt. less.

VISES.—Best warranted "black" staple, solid box, 22/6 per cwt.; best warranted "bright" staple, solid box Vises, 26/ to 27/ per cwt.; Vise Boxes and Pins, 55/ per cwt.

WASHERS.—Light Iron, 7½ p.c.; heavy Washers, 13 to 6 W. G., 11/3 per cwt.

WIRE.—Best best Iron or Steel, bright, No. 0 to 6, 7/8; 7, 7/6; 8, 7/9; 9, 8/; 10, 8/3; 11, 8/9; 12, 9/; 13, 9/6; 14, 10/; 15, 10/6; 16, 11/; 17, 11/6; 18, 12/6; 19, 13/6 per cwt. Galvanized, No. 0 to 6, 3/6 per cwt. extra. Best annealed drawn Fence Wire, oiled, No. 0 to 6, 4/7; 7, 4/7; 8, 4/7; 10/9; 9, 4/7; 15/ per ton. Galvanized, No. 0 to 6, 10/10; 7, 10/15; 8, 11/15; 9, 11/15; 15/ per ton. Steel Fence Wire, round or oval, 5/ per ton extra. Black Rolled Fence Wire, 4 or 5, 16. 5/ per ton. Tinned Bottling Wire, No. 22, 30/; 23, 31/3; 24, 33/9 per cwt., cut in lengths and made up in 7-lb. parcels. Fine Galvanized Iron Wire, No. 23, 32/6 per cwt.; Cast Steel Wire, 0/4 to 0/8½ per lb.; Charcoal Iron Wire, 3/6 per cwt. extra; tinned ditto, 8/6 per cwt. extra, delivered in London; 7/6 per ton extra in Liverpool.

Exports.

PER BARK JOHN BAILEY, JANUARY 10, 1889, FOR BRISBANE, AUSTRALIA.

By R. W. Forbes & Son.—6 dozen Pick Handles, 1 case Hardware, 10 dozen Hatchets, 22 sets Axes, 6 sets Wheels, 26 dozen Axe Handles, 10 dozen Picks, 5 boxes Picks, 12 packages Corn Shellers, 30 dozen Shovel Handles, 2 cases Hardware, 22 dozen Pick Handles, 2 dozen Mallets, 12 packages Stoves, 8 dozen Axes, ½ gross Axle Grease, 82 dozen Axe Handles, 10 dozen Hatchets, 8 packages Hardware, 18 dozen Handles, 1 dozen Meat Cutters, 19 dozen Hatchets, 54 dozen Handles, 4 packages Hardware, 1 tierce Hardware, 2 dozen Snaths, 4 dozen Mattocks, 73 packages Stoves, 16 packages Stoves, 20 dozen Axe Handles, ½ dozen Meat Cutters, 1½ dozen Cutters, 27 boxes Belt Studs, 12 packages Stoves, 60 dozen Axes, 1014 dozen Handles, 45 dozen Shovel Handles, 30 packages Stoves, 1000 Broom Handles, 12 packages Corn Shellers, 9 dozen Forks, 30 dozen Axes, 20 gross Shade Rollers, 20 dozen Axes, 1½ gross Axle Grease, 15 packages Hardware, 7 cases Hardware, 1 case Dashers, 7 crates Corn Shellers, 1 case Pencils, 1 case Hardware, 300 Carriage Bolts, 9 crates Stoves, 12 boxes Axes, 12 dozen Picks.

By A. S. Lascelles & Co.—39 packages Lampware, 1 case Wicks.

By F. B. Wheeler & Co.—13 cases Clocks, 40 dozen Brushes, 4½ dozen Brushes, 36 Clocks. By Winchester Repeating Arms Company.—24 Guns, 3000 Cartridges.

By New Haven Clock Company.—26 cases Clocks.

By Ansonia Clock Company.—150 Clocks, 2.3 Clocks.

By Crane & McMahon.—5 cases Carriage-Ware.

By G. P. Patterson.—2217 pounds Cordage.

By H. W. Peabody & Co.—35 packages Carriage-Ware, 1768 pounds Nails, 5550 pounds Bolts, 18 cases Hardware, 6 cases Mattocks, 32 packages Agricultural Implements, 5 crates Emery Wheels, 7 crates Agricultural Implements, 316 dozen Handles, 1 case Edge Tools, 9 cases Carriage-Ware, 1 case Wheelbarrows, 50 cases Edge Tools, 66 packages Hardware, 3 dozen Blacking, 6 packages Lampware, 1050 feet Hose, 119 packages Hardware 89 packages Lampware, 5 pack-

ages Lawn Mowers, 81 sets Axes, 13 crates Agricultural Implements, 4 cases Iron Mills, 4 cases Castings, 2 cases Tacks, 31 cases Hardware, 5 cases Pumps, 1 case Lampware, 4 cases Fire Arms, 12 packages Machinery, 3 packages Blacking, 1 case Hardware, 14 packages Shellers, 2 packages Ironware, 5 cases Toys, &c.

FOR HOBART.

By W. H. Crossman & Bro.—6 dozen Axes, 12 dozen Hatchets, 6 dozen Mattocks, 337 Clocks, 5 cases Tools, 5 dozen Churns, ½ dozen Coffee Mills, 11-12 dozen Meat Choppers, ½ dozen Sausage Stuffers, 3 cases Hardware, 4 dozen Bench Screws, 5 cases Hardware, 1 case Skates, 60 gross Wicks, 30 gross Shade Rollers, 24 boxes Clothes Pins, 1 dozen Store Trucks, 2 dozen Miter Boxes, 1 dozen Mangles, 1 dozen Wringers, 18 dozen Rat Traps, 2 cases Hardware, 1 gross Mop Handles, 6 dozen Pruning Shears, 56 dozen Axes, 12 dozen Hatchets, 6 dozen Mattocks, 36 dozen Axes, 18 gross pounds Blacking, 200 Oil Stoves, 2 dozen Meat Cutters, 12 cases Jacks.

By R. W. Forbes & Son.—1 packages Lampware, 1 package Wringers and Parts, 1 box Boring Machine, 1 package Blocks, 1 package Hardware, 3 packages Feed Cutters, 9 Velocipedes, ½ dozen Carpet Pullers, 2 cases Toys, 80 kegs Cut Nails, 12,960 pieces Roofing Slate, 26,070 pieces Roofing Slate, 150 dozen Axe Handles, 15 dozen Axes.

By F. H. Odiome.—14 cases Brooms.

By Arkell & Douglas.—10 dozen Axes, 5 dozen Blacking, 68 dozen Axes, 1 dozen Wringers, 12 dozen Falls, 2 cases Barrows.

By D. C. Pratt.—408 dozen School Slates.

PER BARK MABEL, JAN. 15, 1889, FOR DUNEDIN, NEW ZEALAND.

By Edward Miller & Co.—9 packages Lamp Goods.

By Ansonia Clock Co.—15 boxes Clocks.

By W. K. Freeman.—41 gross Hardware, 8,400 lbs. Grease, 950 lbs. Wringers, 6050 lbs. Horse Nails, 70 Scales.

By A. S. Lascelles & Co.—1 case Barometers, 1 case Razor Strope, 4 packages Lampware, 4 dozen Cradles.

By R. W. Forbes & Son.—25 dozen Axes, 150 dozen Axe Handles, 52 dozen Brooms, 100 boxes Clothes Pins, 64 dozen School Slates.

By Arkell & Douglas.—6 dozen Wrenches, 280 lbs. Nails, 1½ dozen Braces, 6 dozen Handles, 4 dozen Cotton Hooks, 12 dozen Handles, 1 gross Handles.

By Mailler & Quereau.—200 cases Clothes Pins, 125 dozen Brooms, 36 cases Sewing Machines, 1 case Harrows, 1 case Castings.

By W. H. Crossman & Bro.—34 packages Lamp Goods, 24 gross Wicks, 6 dozen Traps, 1 case Hardware, 2 bundles Washboards, 75 dozen Brooms, 1 case Tools, 950 lbs. Nails, 1 dozen Traps, 12 cases Hardware, 4 cases Tools.

By R. W. Forbes & Son.—12 dozen Sad Irons, 6 dozen Washboards, 12 dozen Oilers, 1 case Toy Banks, 1 case Stamped-Ware, 12 packages Stoves, 25 pounds Staples, 16 packages Washboards, 2 Mangles, 1 dozen Lemon Squeezers, 5 dozen Hatchets, 5 dozen Axes, 12 dozen Spades, 5 dozen Axes, 6 dozen Axe Handles, 5 packages Hardware, 59 pounds Sand Paper.

By R. W. Cameron & Co.—1 Churn, 1 Butter Worker, 20 Dairy Machines, 77 dozen Handles, 7 dozen Hammers, 2 dozen Braces, 100 dozen Hardware, ½ dozen Store Trucks, ¾ dozen Churns, 1 dozen Sad Irons, 40 pounds Sash Cord, 1 dozen Hoes, 8 dozen Axes, Hatchets, &c., 6 dozen Hardware, 5 dozen Saws, 100 pounds Oil Stoves, 3 reams Sand Paper, 350 pounds Nails.

By Strong & Trowbridge.—1 case Wringers, 1 case Tools, 1 case Hardware, 2 cases Hatchets, 1 package Traps, 1 case Traps, 1 case Wringers, 1 package Tools, 1 case Saws, 1 case Hay Knives, 1 case Tools, 2 barrels Lampware, 1 Package Tinware, 6 cases Axes, 36 dozen Axe Handles, 2 cases Rake Handles, 2 cases Shade Rollers, 1 case Hammers, 3 cases Choppers, 2 cases Pumps, 2 cases Wringers, 3 crates Churns, 3 boxes Hardware, 1 crate Churns, 6 cases Matches, 1 case Carpet Sweepers, 1 case Bludge Forks, 20 dozen Small Brooms, 1 case Forks, 2 cases Wringers, 1 case Clocks, 8 cases Axes, 2 cases Rivets, 12 cases Tools, 1 crate Falls, 21 crates Stoves and Ranges, 1 bale Rubber Springs, 1 case and 2 cases Pumps, 10 cases Axes, 1 barrel Blocks, 2 cases Wood Working Machinery, 57 packages Falls, Tubs, &c., 1 case Spirit Levels, 2 crates Stoves, 1 case Clocks, 1 case Hardware, 1 case Tools, 7 cases Hardware, 11 bundles Oars, 6 crates Trucks and Parts, 7 cases Hardware, 4 cases Wringers, 7 cases Clothes Pins.

By H. W. Peabody & Co.—39 packages Hardware, 4 packages Agricultural Implements, 24 dozen Shade Rollers, 3 cases Lampware, 55 packages Stoves, 8 cases Glue, 12 cases Nails, 380 dozen Handles, 6 sets Axes, 125

gross Fire Arms, 26 gross Blacking, 1 case Eyelets, 1 bundle Hardware, 300 pounds Twine, 10 packages Hardware, 2 packages Lampware, 700 Bolts and Nuts, 24 packages Stoves, 1 case Mills, 11,200 pounds Barb Wire, 40 dozen Handles, 1 case Carriage-Ware, 2 cases Agricultural Implements, 3 crates Churns, 3 cases Hardware, 36 Car-Wheels, 1 bale Hose, 2 barrels Lampware, 2 cases Wringers, 1 case Hardware, 1 case Axle Arms, 2 dozen Wringers, 1 case Fan Mills, 2 cases Agricultural Implements, 4 dozen Wringers.

By Chas. Brewer & Co.—5 cases Handles, 22-400 pounds Wire, 2 cases Tools, 8 cases Nails, 1 case Hardware, 2 cases Trucks, 12 cases Handles, 1 case Hardware, 1 case Carriage Woodware, 16 cases Tools, 8 crates Stoves, 4 cases Hardware, 1 bale Rubber, 3 cases Agricultural Implements, 14 packages Creamery Goods, 6 packages Creamery Goods, 57 cases Handles, 6 cases 3 bundles Carriage Woodware, 46 cases 1 barrel Tools, 31 crates Stoves, 8 packages Hollow-Ware, 16 cases Hardware, 35 cases Nails, 1 bale Rubber, 2 cases Flint Paper, 1 case Blacking, 6 crates Falls, 9 cases Handles, 2 cases Brooms, 3 cases Tools, 21 bundles Carriage Woodware.

PER BRIG STELLA, JANUARY 17, 1889, FOR LITTLETON, NEW ZEALAND.

By D. C. Pratt.—440 dozen School Slates.

By A. S. Lascelles & Co.—4 packages Lampware.

By A. Field & Co.—593 pounds Hardware, 10 dozen Wood Handles, 32 dozen Handles, 3 Drills.

By Edward Miller & Co.—28 packages Lamp Goods, 21 packages Lamp Goods, 15 packages Lamp Goods, 9 packages Lamp Goods.

By F. B. Wheeler & Co.—24 dozen Axe Handles.

By Coombs, Crosby & Eddy.—25 dozen Lamp Goods.

By Hoadley & Co.—10 cases Hardware, 18 Churns.

By W. H. Crossman & Bro.—1 case Hardware.

By R. W. Forbes & Co.—40 dozen Whip Handles, 1 case Saddlery, 712 pounds Carriage Bolts, 2 packages Carriage Woodwork, 3 packages Hardware, 10 packages Lawn Mowers, 26 packages Lawn Mowers, 1 dozen Wringers, 30 dozen Axe Handles, 24 dozen Axes, 1 dozen Drills.

By Arkell & Douglas.—6 dozen Axes, 12½ dozen Axes, 4 dozen Braces, 9 dozen Wrenches, 2 dozen Saws, 1 dozen Scales, 110 pounds Cordage, 10 gross Shade Rollers, 4 dozen Hatchets, 6 dozen Hammers, ½ dozen Wringers, 46 dozen Handles, 2 dozen Latches, 1½ dozen Churns, 1 dozen Trucks.

By Mailler & Quereau.—36 dozen Handles, 6 dozen Snaths, 1 case Shade Rollers, 1 case Oil Stones, 1 case Wire Goods, 1 case Egg Beaters, 12 sets Axes, 1 case Oilers, 3 cases Hardware, 6 cases Wringers, 1 case Traps, 1 case Printing Presses, 120 dozen Brooms, 100 cases Clothes Pins.

By H. W. Peabody & Co.—1 ton Wire, 1 case Tools, 12 cases Wringers, 15 cases Tools, 80 dozen Handles, 7 packages Lampware, 25 dozen Brooms, 4480 pounds Horse Nails, ½ gross Blacking, 108 dozen Tools, 9 cases Handles, 30 packages Sewing Machines, 12 packages Hardware, 8 packages Lampware, 8 packages Machinery, 9520 pounds Nails, 30 cases Blacking, 1 package Razors, 12 packages Hardware, 50 dozen Brooms, 5 cases Handles.

PER BARK OKONOM, JANUARY 23, 1889, FOR PORT NATAL, SOUTH AFRICA.

By Coombs, Crosby & Eddy.—6 Pumps, 12 dozen Handles, 34 dozen Picks, 6 dozen Agricultural Implements, 4 dozen Tools, 11 dozen Picks, 2½ dozen Step Ladders, 1 gross Brooms, 48 Plows, 20 Agricultural Implements, 4 dozen Picks, 4 dozen Forks, 2½ dozen Step Ladders, 1 dozen Bench Screws, 12 Wringers, &c., 1 dozen Churns, 6 dozen Sewing Machines, 40 Plows, 4 dozen Picks, 32 dozen Handles, 1 case Slates, 25 dozen Brooms, 12 Washers, 1 case Tools, 2 Scales, 2 dozen Axes, 120 Plow Parts, 25 dozen Brooms, 24 dozen Handles, 6 dozen Spades, 48 Plows and Parts, 12 Wringers, &c., 6 Store Trucks, 1 case Plow Handles, 6 Corn Shellers, 120 dozen Handles, 12 gross Stove Blacking, 6 dozen Washboards, 10 boxes Clothes Pins, 12 Washing Machines, 6 Corn Shellers, 25 packages Carriage-Ware, 66 Plows, 378 pieces Agricultural Implements, 12 Corn Shellers, 6 Hand Carts, 2 dozen Meat Cutters, 1 dozen Churns, 250 Handles, 10 boxes Clothes Pins, 28 Washing Machines, 2½ dozen Tools, 6 Mangles, 28 dozen Edge Tools, 18 Ladders, 3 Pumps, 5 cases Hardware, 6 Saws, 5 Pumps, 20 crates Axes.

By Woodhouse & Stortz.—60 barrels Hardware.

By M. Berliner.—30 Carts.

By W. H. Crossman & Bro.—26 packages Stoves, 36 cases Plow Parts.

The Burgett Safety Whiffletree Hook.

The illustration given herewith represents a new whiffletree hook, now being offered to the trade by Michael Greenbaum's Sons, 9 and 11 North Canal street, Chicago, who have secured the exclusive sales agency. In the illustration the trace-

lines leading to the West was held at the Monongahela House, Pittsburgh, on Friday, the 25th inst. The object of the meeting was to discuss freight rates, the companies having advanced rates on January 1 from 10 to 25 per cent. Considerable dissatisfaction was expressed by the pig iron manufacturers at the advance, and it was decided to ask the railroad repre-

sentatives to meet them and hear their arguments on the subject, which they claimed would show that the advance was unwarranted. After hearing the arguments made by the pig iron manufacturers it was decided to bring the matter before the meeting of the presidents of the trunk lines to be held in Pittsburgh on the 31st inst. It is the general impression that a reduction in the rates will be made.

The Burgett Safety Whiffletree Hook.

loop, or cock-eye, is shown in position on the whiffletree, with the hook standing vertically, thus, as will be seen, effectually preventing the trace getting free from it accidentally. The hook is made of one piece of metal with the socket by which it is secured to the whiffletree. It is of great strength, has no springs or other devices to get out of order, but is simple of construction and thoroughly durable. These hooks are offered by the sales agents at a very low price. The device was patented December 20, 1887.

The Perfection Key Holder.

This article is manufactured by the Ames Sword Company, Chicopee, Mass. It consists of a spring padlock $\frac{1}{4}$ inch in

The Perfection Key Holder.

diameter, with a small chain attached to the eye in the shackle. The keys are to be strung on a chain, the end of which is passed over the shackle and the latter closed. It can readily be opened with a common pin. The whole is handsomely nicked, and is tasteful, useful and durable. The advantage of a chain instead of a ring for holding keys is especially alluded to as conducing much to the ease and comfort of carrying them.

The new freight tariff on iron and steel between Chicago, Peoria and Mississippi River points on the Rock Island railroad and St. Paul and Minneapolis is as follows: Railway supplies, $11\frac{1}{4}$ cents; iron or steel rails, \$2.25 per ton; street railway yokes, &c., 15 cents; pig iron, per ton, \$2.50; bar iron and similar commodities, nails, &c., 15 cents; cast-iron pipe, 15 cents; wrought iron-pipe, $17\frac{1}{4}$ cents. The rate given is per 100 pounds, except in the cases noted, and is for straight carloads.

A meeting of the pig iron manufacturers of the Mahoning and Shenango valleys and the managers of the various railroad

lines leading to the West was held at the Monongahela House, Pittsburgh, on Friday, the 25th inst. The object of the meeting was to discuss freight rates, the companies having advanced rates on January 1 from 10 to 25 per cent. Considerable dissatisfaction was expressed by the pig iron manufacturers at the advance, and it was decided to ask the railroad repre-

New Gravity Push and Pull Hinge.

This article is put on the market by William P. Kellogg, Troy, N. Y., for whom Fuller Bros., 33 Chambers street, New York, are agents. It is represented in the accompanying illustration, from which it will be seen that it embodies new features. The points claimed for it are: That it is operated by pushing and pulling, and not lifting a dead weight, as in other hinges; that there is no danger of lifting the blind off the pintles and dropping it, as sometimes occurs with those in use; that it locks the blinds open, and also locks them when closed, and that for this reason no inside fasteners are required; and that they are provided with a back stop that positively prevents rattling of the blinds. Having these features, the point is also made that in their use there is a saving of fully one-fourth of the labor

New Gravity Push and Pull Hinge.

and one-fifth of the screws required in putting up blinds with the ordinary hinges. The manufacturer also calls attention to the fact that there is no loss of security in dispensing with inside fastenings, such as are used with other hinges, inasmuch as the function of such fasteners is to keep the blind in place when closed, they not being a protection against burglars, as they are easily opened by inserting the

will carry 300 saloon, 150 cabin and 750 steerage passengers. Electric lights illuminate every part of the ship, and instead of four masts with square yards she has three pole masts.

A stock company is being formed at Decatur, Ill., to bore for natural gas at that place, a former attempt having been unsuccessful.

Steel Pocket Tape.

This article, which is represented in the accompanying illustration, is put on the market by the Lufkin Rule Company, Cleveland, Ohio. It is a steel tape made in 3, 4, 5 and 6 foot lengths, self-winding and operated by the slide shown, the case being nickel plated. This is the most re-

Steel Pocket Tape.

cent addition by the company to their line of steel measures.

Dr. Gatling, of Hartford, has invented a torpedo boat which he thinks has solved the problem of harbor defence. Four of them can be built for \$100,000. Its action is controlled wholly by the intelligence of operators in it, and the boat moves at extremely high speed. Until patents are secured Dr. Gatling gives no further information.

The new White Star steel steamship Teutonic has been successfully launched from the yard of Harland & Wolff, her builders, at Belfast, Ireland. She is the longest ship afloat, measuring 582 feet. Her beam is 57 feet 6 inches, her depth 39 feet 4 inches, her gross tonnage 10,000. Triple expansion engines will drive her twin propellers with manganese bronze blades, and she is so fitted that 12 guns can be mounted on her in 48 hours. She

CURRENT HARDWARE PRICES.

JANUARY 30, 1889.

Note.—The quotations given below represent the Current Hardware Prices which prevail in the market at large. They are not given as manufacturers' prices, and manufacturers should not be held responsible for them. In cases where goods are quoted at lower figures than the manufacturers' name, it is not stated that the manufacturers are selling at the prices quoted, but simply that the goods are being sold, perhaps by the manufacturers, perhaps by the jobbers, at the figures named.

THE IRON AGE

THURSDAY, FEBRUARY 7, 1889.

The Railroad Presidents' Agreement.

In the amended document, which is now given to the public, the original agreement of the railroad presidents, known as the agreement of January 1, is taken from the body of the contract and placed at the head, as a prelude or introduction. This is followed by the articles of agreement, the first of which defines the objects of the association and the second the construction of the board of managers.

Article 3 is amended to read as follows: A rate committee appointed by the board of managers for the freight and passenger

alike by all lines; "provided, however, that when one road has a proprietary interest in another, the divisions between such roads shall be what they may elect, and shall not be the property of the association." * * *

Article 13 defines territory to be covered by the association as follows: The business to be covered by this agreement shall be all the State and interstate traffic, both freight and passenger, which is competitive between the parties hereto, or any two or more of them, when business has origin or destination in the States of Illinois, Iowa, Missouri, Kansas, Nebraska, Colorado, Wisconsin and Minnesota, and the

Open Side Planer.

The accompanying engravings show an open side planer, fitted with special extra post and bed. This addition, in combination with the advantages peculiar to the open-side machine, presents some very valuable features. The extra post is adjustable to and from the main bed, giving a horizontal travel of tool from 4 to 10 feet, as the piece of work demands. The head on the special post can be brought close up to and used if necessary on work of any width within the range of the 10 feet, the post, as before stated, being adjustable. The

OPEN SIDE PLANER, BUILT BY DETRICK & HARVEY, OF BALTIMORE, MD.

departments shall be constituted, whose province it shall be to establish rates, rules and regulations on the traffic subject to this association, and to consider changes therein, and make rules for meeting competition with outside lines. Their conclusion, when unanimous, shall be made effective when they so order; but if they differ, the question at issue shall be referred to the board of managers; and if they disagree, it shall be arbitrated by the executive board, as hereinafter provided. Notwithstanding the decision of the arbitrators, the company claiming the right to make any particular rate may, after such decision, make such rate on ten days' notice.

Article 4, relating to divisions of through rates, is also amended. It provides that divisions of through rates shall be arranged through the association, the intention being that bidding for business by means of private concessions shall cease, and that the divisions on corresponding traffic shall be opened to and

Territories of Utah, Wyoming, Dakota, New Mexico, Montana and the Indian Territory; except Pacific Coast business, now covered under the present agreement of the Transcontinental Association lines; Texas business, now covered under the present agreement of the International Association lines, and business between points north of the Ohio River and points south of the Ohio River, both of which are east of the Mississippi River.

The duration of the agreement is to be absolutely 90 days from January 1, 1889, subject to 30 days' notice thereafter of the desire of any party to withdraw from or amend the same, and in case any such notice shall be given, the chairman of the Executive Board shall forthwith call the presidents together to consider the matter. A special article provides that the Wabash becomes a party to this agreement only for that portion of its road from Chicago to East St. Louis and Hannibal, via Toluca, Ill.

The signatures have not all been made.

heads on the beam have automatic feeds in all directions, and the heads on the main and special posts have automatic vertical feed. Where the special post is used, as shown in the cut, a special rolling table is employed as also shown. This post and special bed can be removed and the tool used as an open side planer, with the standard supplemental rolling table, in the usual manner. The extra wide travel of tool across the table sometimes necessary is here accomplished without the very wide platens and beds which go to make up the planers of the regular style. The beam is counterbalanced at two points and is raised and lowered by power. The heads on the posts have also each a counterbalance. The saddles of the heads are in the form of a quadrant, thereby giving to the tool slide at the top a rigid support and making the head stiff and well adapted for heavy cuts. The feed mechanism is new and embodies simplicity of construction with great power, the four heads being operated at one time when necessary. It

requires power only when feeding. The platen is cored in a novel manner to adapt it for the rapid chucking of work. The holes are made square and tapering to use cast plugs for stop pins, and are adapted for the heads of standard machine bolts, not requiring those specially forged and fitted. These holes are so formed that they will not fill up with chips. The machine here shown planes 20 feet long and weighs 40,000 pounds. These planers are manufactured by Detrick & Harvey, of Baltimore, Md.

THE ROBERT PROCESS.

Some very extraordinary claims are being made for the process invented by G. Robert, a French engineer, whose method is experimentally at work at Springfield, Ohio, under the auspices of J. W. Bookwalter. With the disappointments of the Clapp-Griffiths process still lingering in the memory of many in the iron trade, this latest modification of the Bessemer method is received with some skepticism. We have received a number of communications from manufacturing concerns, to whose attention the merits of the new process have been called, asking for more detailed information. The promoters have promised *The Iron Age* an opportunity to investigate the process at Springfield, which has, however, been tempo-

marks a new departure in both the making of steel and wrought iron, and in the qualities they secure in the various uses to which they can be applied.

All this has been proven in the manufacture of thousands of tons at Stenay, France, during the past two years on contracts from the French Government, from various railways and manufacturers in that country. The works are run day and night, including Sundays. Since May 1 another works has been in operation in

days, exhaustively examining into the entire subject, he ordered a converter to be sent to his works in Wales; also several tons of the material of various kinds and forms were ordered by him for trial by various manufacturers of differing products.

The report that Mr. Kennard makes is, that "the Stenay material leaves nothing to be desired and was highly approved by several makers to whom the bars were sent. The tin plates for stamping purposes

rarily deferred, to allow of the consummation of some matters still pending. From documents in our possession, however, we are enabled to convey some idea of the claims made for the new process, a study of which will be interesting, without any comment on our part. We quote as follows from the paper in question: This process secures great advantages in the cost of plant for producing the metal, in the very superior quality of that metal and in its cheapness. It is wonderfully perfect for steel castings, for rolling into bars or plates of any thickness, and the quality of all these is phenomenal in fluidity when poured, in ductility, in tensile strength, in elongation, in elasticity, in the ability to weld without flux, &c. This process

Paris and most successfully. The process is being secured by other French manufacturers and some of these have been and will be soon started. It is also in operation in Belgium, and works are being established in Italy by an Italian company, which has purchased the patent for that country. Lately the patents for Great Britain have been secured by one of the most eminent and distinguished manufacturers of Bessemer steel in that country, whose works produce about 2000 tons per week. This gentleman, Mr. H. J. Kennard, was president of the International Steel and Iron Association in Europe, and is chairman of the Steel and Iron Association for Great Britain. After visiting Stenay with his manager, and remaining three

made from the Stenay bars were equal to the best charcoal iron, if not superior." His converter has been put in operation in Wales with complete success as to its operation and product. Mr. Kennard remarked to a gentleman now in this country "that never was such magnificent steel made before; that for tubing, tin plates, wire, screws, bolts, &c.—in fact, for everything where perfect quality is required—this is the thing."

A converter has been started in Ohio and it has been operated in the presence of scores of practical men to their complete satisfaction. Samples of the product show wonderful qualities in physical and chemical tests. Many applications for licenses have been made, agreements for which have

been given in only three instances for special purposes or reasons, it not being fully settled as to the manner in which the business will be conducted for the entire country, hence delay till a policy is decided upon.

It may be reckoned that using a fair quality of pig metal, for in this system greater latitude in the quality of the metal employed can be enjoyed over the requirements of the Bessemer system, the cost of the steel or wrought iron in the ingots or in the molds will be at the present price of pig inside of \$20 per ton. The time needed to convert the molten metal into steel of any quality or wrought iron is seven to ten minutes. The cost to mold where castings are to be made may be reckoned on an average at 1½ cents per pound of steel used. No annealing is required. The cost to roll ingots into bars may be reckoned at ¼ cent per pound, and to put into plates for horse-nail and such like forms ½ cent per pound additional. Also the same to put into rods. The cost to roll ingots into boiler plate, including waste, may be reckoned at 1 cent per pound. Having made these statements on which to base an opinion as to a feasibility of a manufacturing industry being entered upon with profit, the following named products and the figures connected therewith will indicate the industries proposed and their practical working out as commercial transactions. Having in view an admirable works, well fitted in respect to buildings, power, machinery and appliances, with abundant space for extension, it is proposed to confine these calculations to products suited to the existing plant, and to such a variety, though few, as will, it is expected, insure a continuous demand for each. Also to a small volume of business in each, compared with what can be done as the developments of the business may progress.

Castings.—Product, 20 tons per day, or 6000 tons per year, would leave a net profit per ton of \$50. \$300,000
Horse-Nail Iron.—Say product one-third of the estimated amount used, which is 15,000 tons—viz., 5000 tons a net profit of, say, per ton \$20. 100,000
Norway and Swedish Shapes.—The consumption of these is considerably larger than that for horse-nail iron, but reckoning the product the same—viz., 5000 tons per year, giving a net profit of \$20 per ton. 100,000
Bar Steel and Wrought Iron.—As the rolling capacity of the works in view would easily produce 100 tons per day, and 35 tons are only reckoned on above, it is quite safe to reckon 50 tons per day for bar metal, or 15,000 tons per year, with, say, a net profit of \$5 per ton. 75,000

Total......\$575,000
Deductions.—Less royalty for castings, at \$7.50 per ton, 6000 tons.\$45,000
 Less royalty for 25,000 tons of ingots at \$1. 25,000
 Less salaries. 20,000
 Less extras of all kinds, say. 40,000
Total......\$130,000
Net profit per year \$445,000

To enter upon this manufacture would cost, if the works in view are taken, as follows:

Real estate, buildings, machinery, &c. \$75,000
 To put in order, say. 10,000
 To establish steel plant, say. 10,000
 To pay for molds, &c. 2,500
 To pay all extra costs. 7,000
Total......\$105,000

Accepting that the cash capital provided should be \$250,000, there would be remaining in the treasury in cash. 145,000

Total......\$250,000
 For outlays before any returns, say, for 52 days, 108 tons per day, 5356 tons pig iron at \$20 per ton, say. 107,000
 For coal same period. 13,000
 For labor same period and salaries. 25,000
Total......\$145,000

After two months, and undoubtedly before, receipts would begin to come in. In these calculations the figures are confined to comparatively small products and comparatively small profits. In the items of castings this could be very largely increased according to the space at command and the molders employed. The profit also could be very much larger. It will be noted that the price reckoned on is 5 cents per pound, leaving a profit of 2½ cents, or \$50 per ton. Ordinary malleable iron castings now sell for from 6 cents to 25 cents per pound, and these are most difficult to be obtained. In the items of horse-nail iron and Norway and Swedish shapes, about 2 cents per pound is reckoned on as the cost. The price at which these are now sold is, horse-nail iron 3½ cents to 5 cents per pound. The price of 3 cents is reckoned on, and it may be suggested that if a better article can be supplied at the same or slightly less price, a much greater quantity can be sold than one-third of the present estimated consumption, and at a better profit than reckoned on. Norway and Swedish shapes sell for from \$60 to \$70, and cost a little less than 2 cents, or \$40 per ton. The demand for these exceeds 15,000 tons per year. They or the material are wholly imported. As to the bar steel or wrought iron, the cost would vary according to the size of the bar. So would the selling price, and this metal being far superior to any bar metal known in commerce for a very great many purposes, will be preferred at the highest price of such metals. Fairly speaking, \$10 per ton should be reckoned on. As to the demand, that will be far greater than the amount estimated. There is a product which may be mentioned as the legitimate outcome of the starting of the works referred to, where there is abundant space, and to which the metal itself is admirably adapted. It is that of boiler plate. The softness and ductility of this product makes it especially valuable for that purpose. The demand is a large one, and the question of quality enters very largely into the price. There are very common grades which are sold for \$50 or \$60 per ton, but as by this only superior metal can be produced with a fair quality of pig metal, it could be safely reckoned that from \$75 to \$100 could be easily commanded. This would cost, reckoning largely for waste in the squaring and cutting of plates, about \$45 per ton.

An outlay for a first-class plate mill, including the steel plant, it is estimated, would be \$150,000. This would produce 100 tons per day of 24 hours; but, reckoning on 50 tons per day, and a margin of \$20 per ton, there would be an income from this source of \$300,000 per year. There is ample room for such a mill on the premises referred to. This branch of the manufacture could wait for the experience to be gained in the smaller branches which it is proposed to enter upon, or till the earnings supplied the needed capital for this enlargement.

In commencing this industry it is proper to remark that the tendency in mechanical work is to substitute, where it is possible, steel for iron, to secure by its use far greater strength and safety, to lessen the weight of railway carriages, vehicles of every kind, and of machines in general. All these are accomplished by the employment of this metal, and, in addition, for very many purposes, castings can now take the place of forgings, with their diminished cost.

The process does away with the puddling furnace, with its severe labor, its expensive repairs, and the delay of several hours to produce wrought iron, and accomplishes the making of a better product in from seven to ten minutes.

It will annihilate the annealing furnace, with its eight to fifteen days' loss of time, for castings made of this metal are ready

for the machine which is to finish them the moment they are cold.

These are some of the results of the utilization of air in the purification of iron, which was the splendid invention of Bessemer, but, unlike Bessemer, Roberts has found the way with about one-tenth of the air-pressure, and differently applied, to produce a metal which, in purity and fluidity, when poured, has never been approached commercially, and which, in strength and ductility, is phenomenal.

Railroad Rates and Trade Centers.

In deciding a recent case of alleged discrimination on coal traffic in Illinois, Interstate Commerce Commissioner Walker makes the following remarks on discrepancies between rates to trade centers and through them to points beyond: "Various considerations have heretofore entered into the making of through rates between railroads; when such rates involve a reduction from the sum obtained by adding together the local charges, carriers have not been inclined to make such contracts unless business reasons exist why the higher rate cannot be maintained. Another feature of the situation, which may properly be alluded to in this connection, is this: Upon other commodities Chicago merchants have been and are exceedingly jealous of through rates less than the added locals upon traffic between points east and west of that city, being apprehensive that any change in the existing system which shall encourage the movement of traffic through or around that city, without stopping there for redistribution, will work to their serious injury. Chicago traders would regard the general establishment of such through rates as are here claimed as a commercial calamity; yet, if conceded by the roads to Eastern coal, similar proportionate divisions might possibly be claimed upon eastern shipments of dry goods, groceries and other commodities. Such through rates were common upon long-distance traffic in many parts of the country before the passage of the act to regulate commerce, and the commission has held, in the Danville and Omaha cases, that the law did not make them illegal; but it is for the interest of Chicago as a distributing point that their adoption upon traffic passing through that city should not be pressed. And the roads themselves have been more than willing to preserve the system of generally routing freight to Chicago, and thence again forward to its destination in both directions, practically making a break in the billing at the line of Chicago and the junction points in its vicinity; this system enables the lines each side of the division to escape from rate wars and other complications which from time to time arise among the roads on either side of Chicago; and it also makes it possible for the lines on both sides of that city to secure better revenues from the business which they respectively handle."

Mr. J. H. Bartlett, of Montreal, well known in connection with the Canadian iron trade, has been at Pictou (N. S.) in the interest of the Pictou Coal and Iron Company, of Montreal, and has obtained from the County Council a cash subsidy of \$20,000, as well as remission of all taxes for 20 years. Mr. Bartlett has made a contract with R. G. Reid, of Montreal, for the construction of a branch railway, 10 miles long, leading to the iron mines, and the Dominion Government have arranged to operate the branch as a part of the Intercolonial and provide all the rolling stock. It is estimated that iron ore can be easily and cheaply mined from the Pictou Coal and Iron Company's mines, which are only 7 miles from the Pictou coal mines and 10

miles from Atlantic tidewater. The location of the blast furnaces has not yet been definitely settled.

Valves of the Wheelock Engine.

The valve used in the Wheelock is a multi-ported slide working on a flat seat formed within a skeleton plug or shell,

rocking spindle having bearings in the ends of the shells. Motion is communicated from the spindle to the valve by a toggle joint, which is clearly shown in Fig. 3. Upon the outer ends of the spindles are keyed cranks driven direct from the eccentric in case of the exhaust-valves, the admission valves being operated from the others by latch links, which

required to raise it decreases, until the full opening is reached. The valve shells being simply driven into place in the cylinder, have no joints to pack, and, furthermore, they can be instantly removed by simply driving them out. A duplicate set of valves may, if considered necessary, be kept on hand to be used at a moment's notice if required. This valve insures

Fig. 1.—Valve Open.

Fig. 2.—Valve Closed.

Section.

Section.

Fig. 3.—Perspective.

VALVES OF THE WHEELOCK ENGINE, BUILT BY THE WHEELOCK ENGINE CO., OF WORCESTER, MASS.

through which are cored passages forming the ports, as shown in the sections of Figs. 1 and 2 and in the perspective, Fig. 3. The valve and operating parts are mounted upon this shell. The shell is turned slightly tapering to fit corresponding holes in the steam-chest (Fig. 4), and is ground to a steam-tight fit, so that when lightly driven into place it will be securely held without the need of other means of fastening than that afforded by the tapered driven fit. The valve is operated from a

alternately hook on and let go through the action of a curved finger engaging with trip cams adjusted by the governor, thus accomplishing cut-off in an obvious manner. Several advantages are apparent from this method of operating the valve. At the first part of the throw of the valve, when it is heated by the full steam pressure, the movement is comparatively slow, and the maximum power of the toggle joint is brought into play. As the valve moves its speed increases, and the power

small clearance and large port areas with correspondingly large pipes and directness of steam passages. It is claimed that this system will admit of a port area one-fifth of the piston area, and yet have less clearance, less valve travel and friction, and an easier running-valve system than any other. The toggle movement permits proper timing of the movement without extra travel and lap, and gives the shortest possible travel. It also gives the power of the toggle, as before stated.

The engines fitted with these valves are built by the Wheelock Engine Company, of Worcester, Mass.

The Dominion Canals.—Statistics of traffic on the Dominion canals during the year 1888, as prepared by the Minister of Inland Revenue, show a slight decline in the volume of business as compared with the previous year. The total freight transported was 2,452,063 tons, against 2,470,744 tons in 1887, and vessel tonnage 3,433,242 tons, against 3,461,330 tons. Of the total tonnage passing through the Dominion canals during the year 2,823,202 tons was of Canadian and 610,040 tons, or 17.7 per cent., was of American register. Of the total tonnage passing through the Welland Canal American registered vessels represented 39.3 per cent. The total freight tonnage moved on the Welland Canal last year was 809,291 tons, of which 16 tons was farm stock, 119,354 tons the products of the forest, 24,423 tons of manufactured goods, 245,686 tons of merchandise, and 419,812 tons vegetable food and other agricultural products. Freight tonnages over the St. Lawrence canals amounted to 570,323 tons, of which 1091 tons was farm stock, 151,194 tons forest products, 64,825 tons manufactures, 219,760 tons merchandise, and 133,453 tons of vegetable food and agricultural products.

A Stockholm correspondent of the *Vossische Zeitung* states that a meeting has recently been held at Oerebro, at which there were present representatives of most of the iron works of Central Sweden, representing collectively a production of about 200,000 tons annually. After a short discussion it was agreed to form a syndicate for the regulation of the prices of iron, and another meeting will be held at which to arrange the details. In the meantime efforts are being made to include in the agreement those works which were not represented at the first meeting.

The Miller Duplex Pump.

In this pump the piston rods are made in two parts and connected at the cross-heads, thereby permitting the removal of either the steam piston or the water-plunger without in any way interfering with the other parts. The piston rods on the steam end are of cold rolled steel, while those on the water end are of non-corrosive composition metal; the cylinders on the water end are also of composition metal. The crossheads which drive the levers can be quickly removed if necessary. The bearings of the latter are chilled and case-hardened, and all wear can be taken up centrally while the pump is running. As the position of the levers is not changed by adjusting, the stroke always remains the same. The cylinders on the water end can be quickly removed and replaced, thus facilitating repairs and reducing the cost of the same. By a convenient arrangement, the packing in the water cylinder can be adjusted to wear, or the plunger repacked without trouble. The valves on the water end can be easily and quickly removed when found desirable while the pump is in motion, as can also the valve seats without disturbing the other parts. These pumps are particularly designed for boiler feeding, brewing, mining and fire purposes. They are manufactured by the Canton Steam Pump Company, of Canton, Ohio.

The Duty on Crop Ends.—The Supreme Court of the United States has delivered an opinion in the case of William H. Robertson, Collector of the Port of New York, plaintiff in error, against the executors of Charles L. Perkins, in error to the Circuit Court for the

claimed that the crop ends were dutiable at 20 per cent. as "unwrought metal." The court below gave judgment for the importer on the ground that the crop ends were a mere excess of material

left over after the making of steel rails, and that as they were not fit for use in their present form they were properly dutiable as "unwrought metal." This court reverses that decision and sustains the action

Separable Wood Pulley.

In these pulleys the rim is built up of a series of rings of wood. The line of separation is between the arms, and the

SEPARABLE WOOD PULLEY, MADE BY THE TAPER SLEEVE PULLEY WORKS, OF ERIE, PA.

center of the pulley is at the middle of this line, at which point a square orifice is made by the mortising of two blocks in each arm. Into this orifice are fitted the bushings, the form of which is clearly shown in the lower part of the engraving. Each bushing consists of two parts, each of which has a semi-circular groove cut into it, so that when the two parts are adjusted in place between the arms of the pulley a circular hole will be formed to receive the line shaft. By setting down on the bolts the arms are brought together, the bushings are forced against the shaft and the pulley held fast. By loosening the bolts the pulleys may be moved along the shaft and secured at any point. By reversing the half-bushings—face for face—the pulley may be fitted to a shaft of different diameter, and by ordering bushings to suit the pulley may be fitted to any desired size of shaft. These pulleys are made by the Taper Sleeve Pulley Works, of Erie, Pa., with two or four arms (the latter in sizes above 48 inches) or with solid webs.

MILLER DUPLEX PUMP, BUILT BY THE CANTON STEAM PUMP CO., CANTON, OHIO.

Southern District of New York. This is a customs suit brought to determine the rate of duty on crop end of Bessemer steel rails. The collector assessed a duty of 45 per cent. on the importation under the tariff provision for steel not specifically enumerated or provided for. The importer

of the Collector. In an opinion by Judge Blatchford the court holds that Bessemer steel rail crop ends are none the less steel because they are an excess of material and not fit for use without being remelted or reheated, and that, therefore, they are dutiable as "steel not especially enumerated."

Pickands, Brown & Co., 117 Dearborn street, Chicago, are distributing a dainty little pamphlet calling attention to the "progress made in producing in the United States a pig iron in every respect equal to the imported Scotch." In confirmation of the statement just quoted, they give comparative analyses, as follows, of some well-known brands of imported Scotch, and the No. 1 Dexter sold by them and made by the Ohio Iron and Steel Company:

	Colt- ness.	Glengar- nock.	No. 1 Dexter.
Metallic iron.....	90.26	90.70	91.52
Silicon.....	3.39	2.83	3.13
Manganese.....	1.77	2.13	1.41
Graphitic carbon....	3.27	2.69	3.34
Combined carbon....	0.60	0.85	0.06
Phosphorus.....	0.44	0.54	0.46
Sulphur.....	0.04	0.04	0.02

The Queen and Crescent route announces a reduction of 15 cents on pig iron rates, as effective since December 1 in accordance with Tariff No. 10.

Collieries and Iron Mines Between Chattanooga and Birmingham.

Passing Chattanooga the first iron ore that is to be found is in thin runs near Wauhatchie, and for a considerable distance it is not workable. At Rising Fawn the ore is worked for use in the furnaces. There it is poor in iron and rich in lime. It is mixed with brown hematite and makes an excellent iron. After a series of years of bad management and failures, this furnace, under Mr. Collier, has been made one of the most successful and profitable in the South. It is about one mile from the main line and connected with it by a standard gauge railroad. The stack is 63 feet high with 16-foot bosh, and is equipped with 5 Whitwell fire-brick stoves. The coke used is brought from Dade mines on the Nashville, Chattanooga and St. Louis Railroad. Mines were opened on the company's land many years ago, but the coal was too full of slate to make a coke at all fit for use.

From Rising Fawn to Attala no large mining operations are now carried on. At several points the coal in Lookout Mountain has been opened, but after a few months of work abandoned. It is contended by many that there is good coal in this mountain and it is at least possible that such may be the case. One thing is certain, that no properly organized company with ample capital has ever explored or operated in this field. Near Gadsden a small seam of good coal is worked for local use.

Near Reese's Station, on the railway, the Etowah Mining Company have opened the iron ore and have just commenced shipping. The company own $3\frac{1}{2}$ miles on the vein and have a contract with the new Collier Furnace at Attala to supply 100,000 tons of ore.

The Rome and Decatur Railroad, which is not likely to go beyond Attala for many years, will eventually be a great thoroughfare for the transportation of iron ore, and a valuable feeder to the Cincinnati, New Orleans and Texas Pacific Railway. On its line is the famous Dirtseller Mountain, the ore of which is said to be of quality superior to any red fossil ore in the South.

Gadsden, six miles from the line of railway, is a thriving place. It has now two iron furnaces, with good prospect of a third. One is run with charcoal and owned by Cranford & Sons, of New Castle, Pa. The wood is chiefly brought to the furnace, and the charcoal made there in kilns. It will eventually be turned into a coke furnace.

The Gadsden and Alabama Furnace Company have only lately commenced operations, with Ellis Collier as the directing head and John Dowling as furnaceman. The furnace is calculated for 100 tons per day, and has Whitwell fire-brick stoves. The ore used is obtained from Attala and in the immediate neighborhood, and coke from Pratt Mines, at Birmingham.

The Attala Steel and Iron Company is the title of an operation commenced about one mile from Attala Station, at which place a stack 50 feet high, with 12-foot bosh, has been erected. It is intended, at least for a time, to use charcoal as fuel. It is expected that all will be ready to go in blast April 1, 1889.

As a feeder to the Cincinnati, New Orleans and Texas Pacific Railroad, likely to forward much freight and also give access to an important region of country, the lately completed railroad called Anniston and Cincinnati, from Anniston to Attala, is a connection of great possible value to the Cincinnati, New Orleans and Texas Pacific, and its managers will not be slow to appreciate the advantages thus offered them. Connecting with this railway to Attala, its other terminus at present, is the thriving

city of Anniston, where there are now four iron furnaces and many other manufacturing establishments. It is proposed to extend it to Montgomery, and thus the Cincinnati, New Orleans and Texas Pacific will reach that field of traffic.

The great mining operations around Attala and Gadsden are conducted by Messrs. Stewart & Hammonds, who operate two mines near Attala and one or more in the iron ridge northeast of Gadsden. At their No. 1 mine, near Attala, they work 100 miners and 25 outside men, and the average product is 200 tons per day. They have control of a length of 4 miles on the ore vein, which is from 2 to 4 feet thick. The ore is here in hills, the long, flat top of which averages 400 feet above water level; the lowest place they are working is 200 feet above water level. An incline drops the ore cars to a branch line, which reaches the main line of railway in 450 yards. The ore dips at an angle of 28° . The product could be doubled if cars could be had.

No. 2 mine is $1\frac{1}{4}$ miles from the main line in a similar hill, the thickness of the vein being the same; the number of miners and outside hands about 65, the product 100 tons per day. The ore is sent from both mines to Dayton, Chattanooga, Rising Fawn and Gadsden.

Stewart & Christopher also mine in the ridge at the southeastern foot of Lookout Mountain. They employ here about 100 miners, and get out 200 tons of ore per day, which is sent to the Gadsden furnaces. A standard gauge track runs immediately at the foot of the mountain, and the ore is dumped directly into the wide gauge cars from the mine mouth. They have a lease of 4 miles of this ore. The dip is vertical at the top, but begins to flatten slightly at a depth of 150 feet. The Rome and Decatur road skirts the foot of this ridge for 20 miles.

It is seen from these statements that the amount of ore in the vicinity of Gadsden and Attala is large. It is probable that Stewart & Co. have taken from their mines 600,000 tons of ore, and, as is stated, they are still 200 feet above water level. The supply is not confined to that at Attala, Gadsden and up the Rome and Decatur Railroad. The ore mentioned is all in what is called Big Mills Valley. Parallel to this is Little Mills Valley, and in it is also a long line of ore, and it is only 4 miles distant from the railway line. Further, the Attala ore dips to the southeast; that at the eastern foot of Lookout Mountain dips to the northwest, and there is every reason to infer that the two seams are one, forming a basin of ore under Lookout Mountain and the Big Mills Valley. This should be demonstrated by a boring with a diamond drill.

The great need of this Attala and Gadsden region is a conveniently accessible coking coal. The writer is satisfied that such exists in Sand Mountain, 10 miles west of Attala, on the surveyed line of the Rome and Decatur road, but whether it will ever be made accessible by that line is doubtful. The large amount of iron ore around these two places and on the line to that coal demands that a cheap and convenient fuel be obtained. The low-priced ores cannot last forever, and going to Birmingham for Pratt Mines coke, with equally as good or better so near, is an absurdity which should be remedied as soon as possible. Attala and Gadsden will never be what they should be until they have accessible and cheap coke of their own.

The great lead of iron ore continues parallel with the railway from Attala to Springville, but is not now worked at any point. Hugh Carlisle formerly carried on large operations near Springville, but while the ore is abundant, of good quality and with system can be cheaply mined, yet no work is now done there.

At Trussville a furnace has been erected about $\frac{1}{4}$ mile from the railway line. It uses ore from Murphrees Valley and coke made from coal from the Little Warrior field.

The Little Warrior coal field alluded to is an area of country which has not received the attention it deserves. It contains a number of valuable coal seams, among them one which will make good coke. It is accessible to the C., N. O. and T. P. above and near Springville.

This coal field is on the west of the railway, on the east from near Springville by Trussville to Red Mountain Gap; the Cahaba coal field is within a few miles of the railway line on the east side. There are several streams down which branch roads could be built reaching into it, especially down Little Cahaba from Trussville, where good coal can be reached in 3 miles' distance.

In Red Mountain, from 1 to 2 miles off the railway line, are several mines, which belong to and are operated by furnace companies in Birmingham. A considerable traffic is done in shipping sand, from the decomposed white sandstone in Red Mountain, to the furnaces in Birmingham. Large quantities of limestone are also shipped from quarries near Trussville.

Birmingham, the great center of the coke-made pig iron of Alabama, was directly created by the avarice of certain landowners in Elyton, when the Alabama Great Southern was built. The depot of that road was located in the old sedge-field, which is now the site of elegant residences and of large business houses, because Elyton people asked an exorbitant price for their land. The depot located, the South and North Railroad came to the same place, and from that time Elyton was doomed and Birmingham was to be. In 1869 the writer slept on the site of the magnificent Union Depot in a rough board shanty 10x12 in size. It was then the only house for miles around. No one can now visit the place without wondering at its rapid and substantial growth.

In and around Birmingham, in what might be called the Birmingham district, are mines, manufactories and public institutions which employ 22,011 persons and pay out \$834,241 monthly as wages. Immediately in the city are eight iron furnaces, and in the region classified as the district are 12 more and three more projected. In 1870 the total coal mined in the State was stated at 11,000 tons, and it is probably an over-estimate. A very small part of it was mined around the present site of Birmingham. For the year 1888 this amount has undoubtedly risen to fully 2,225,000 tons. And the combined product of pig iron from all the furnaces now running in the Birmingham district is very near or quite 1600 tons per day.

The largest mining and iron-manufacturing operation in and around Birmingham is that of the Tennessee Coal, Iron and Railway Company. This company own the Pratt Mines, the Ensley City Furnaces, the Alice Furnaces, and large areas of coal and iron land.

The Alice furnaces are immediately on the line of the C., N. O. and T. P. Railway, just on the edge of the city of Birmingham. The combined average product of these two furnaces is about 180 tons per day.

The largest furnace operation around Birmingham, and in fact in the South, is the Ensley furnace plant, owned by the Tennessee Coal, Iron and Railway Company. These furnaces are about 17 miles from Birmingham, on a branch of the C., N. O. and T. P. Railway. The plant is designed for four stacks, each 80 feet high by 20 feet bosh, but only three of them are finished. The three which are in full working order make an average of 125 tons of iron per day, using five-eighths

hard ore and three-eighths soft. The average analyses are:

	Hard ore.	Soft ore.
Metallic iron.....	38.78	48.87
Silica.....	11.60	21.48
Carbonate of lime.....	29.29

The furnaces are equipped with 12 Weimer blast engines, with air cylinders 84 inches diameter by 54 inches stroke, and the steam is furnished by 64 boilers, 84 feet long by 48 inches diameter, with two flues. The stack house is 700 feet long by 100 feet wide, in which are two lines of trestles. The cast houses are 175 x 60. Each stack has four Gordon fire-brick stoves, 65 feet high by 21 feet diameter, and the air is heated to 1500°.

Ground was broken for the foundation of these furnaces November 12, 1886, and the first one was blown in and made first cast April 10, 1888. The second was blown in June 4, 1888. Ores from Red Mountain are used solely. The coke is from Pratt Mines. About 600 hands are employed about the furnaces, and the whole construction and operation has been,

to 225 tons per day. It is an excellently located plant.

The Morris and other mines in Red Mountain are on the east side of the railway and are connected with it by branch roads. The Morris Mining Company is the largest iron mining operation in the South, their daily shipments averaging about 1200 tons, about half of which goes over the C., N. O. and T. P. Railway. There are four slopes and drifts and considerable surface stripping is still done. About 400 men are employed at all the works. The iron is full 21 feet thick and dips to the Southwest at an angle of about 28°. The surface or outcrop ore is stripped of the overlying slates and shales to a depth of about 18 to 20 feet; from thence slopes have been driven down. On these outcrop strippings all the ore is taken out and it is gotten at a very low cost, while in the slopes seldom over one-third can be taken out from the impossibility of holding up the roof. At No. 1 mine an air compressor has been erected and drives a number of drills. A wide-gauge road connects to

The Cahaba Coal and Coke Company's mines at Blocton, nine miles from Woodstock Station, on the main line of the C., N. O. and T. P. Railway, is the second largest coal mining operation in Alabama, and bids fair to come up to or even exceed the output of the Pratt Mines. These mines are connected to the main line by a wide gauge track, well constructed and laid with heavy steel rails. The mines are operated in two different coal seams, in which there are six slopes. No. 1, the lower seam, makes the best coke, and good steam or domestic coal is taken from No. 2 seam. About 1000 hands are employed by the company. Over 300 coke ovens are now used, and more will be erected, as the two coke furnaces at Anniston are to be supplied from these mines. The coke shipments now average 200 tons per day, and the coal over 2000 tons. Of the latter, 300 tons per day go to the Southern Pacific Railroad in Texas, and the coal for making coke is also supplied to the Thomas Furnace Company. The whole operation is under the management of Col. C. Cadle. The capital invested is almost entirely Northern.

At Woodstock Station is the stack of the Edwards Iron Company, now out of blast. It will be remodeled and modernized. About 2 miles distant a considerable operation is carried on in mining brown hematite iron ore, which is shipped to the furnace at Bessemer.

There is a valuable area of coal land south of Woodstock which was once operated extensively, but was abandoned. The seam to be worked was not judiciously selected. This area centers at Dudley Station, and it contains some very valuable seams of coal. The iron ore is in this region found some distance to the east of the line of railway.

This completes the industrial development and mining operations now existing on the line of the Cincinnati, New Orleans and Texas Pacific Railway. Within the limits which have been traversed from the Cumberland River to the Tombigbee are many opportunities for investments which will yield a good profit from rise in value, and also many localities where operations in mining and manufacturing can be conducted with a return for labor and capital expended.

JOURNAL BOX LUBRICATOR, MADE BY THE INDUSTRIAL MACHINE TOOL WORKS, CINCINNATI, OHIO.

and is, under the superintendence of Mr. Harry Hargraves, a well-known furnace manager.

The Pratt Mines, near by the furnaces, now have an output of 3600 tons per day, which is shipped off, in addition to which there is 600 to 700 tons of slack which is made into coke at the mines; 1000 convicts and from 1600 to 1700 free men are employed. There are 1000 coke ovens and more are being built. Coal is furnished to the Sloss and Alice furnaces, which make their own coke, and coke is furnished to the Mary Pratt Furnace, and to the coke furnace at Gadsden.

On the branch of the C., N. O. and T. P. Railway going to Ensley is the Thomas Furnace, called the Pioneer Coal and Iron Company. The stack is 75 feet high with 17-foot bosh and averages 100 tons per day of pig iron. The houses for hands erected by this company are of brick and present a very neat and substantial appearance. This furnace uses one-half Red Mountain red fossil ore and one-half Green Pond brown hematite, and coke from Blocton mines.

The Woodward Furnaces are 10 miles below Birmingham on a branch of the C., N. O. and T. P. Railway, about 1½ miles from the main line. There are about 300 men employed by this company around their furnaces, coal mines and coke ovens, and the pig iron product ranges from 200

Hillman Station on the C., N. O. and T. P. Railway.

J. R. & C. J. Smith operate a mine on land belonging to the Tennessee Coal, Iron and Railroad Company, the product of which all goes to the Ensley furnaces.

The Woodward Iron Company also operate mines for their furnaces, employing about 130 men and getting out about 500 tons per day. The Sloss Iron and Steel Company also get out ore for their furnaces from ore land which they own. Their output is about 600 tons per day, and about 200 men are employed.

A few months ago Bessemer was in the woods; now there are large business houses, two large iron furnaces and three more projected, a fire-brick works and a rolling mill. It may be said to be a creation of the magic hand of H. F. De Bardeleben. The furnaces are located near the railroad. The plant consists of two stacks, 75 by 17, equipped with three Whitwell stoves. The coke is made in ovens at the furnace from coal mined at the Blue Creek Mines, which are in a detached part of the Marion coal field called the Little Basin. The coal is of excellent quality, but the vein pitches steeply. Five slopes have been opened, and while the present output is only 700 tons per day, it is evident that very soon the capacity of the mines will largely exceed that amount.

Journal Box Lubricator.

A new form of self-oiling journal box is being introduced by Mr. Walter L. Haldy, proprietor of the Industrial Machine Tool Works, Cincinnati, Ohio. In the lower part of the box are placed the plungers C which move in the cylinders L and are held against the shaft by coiled springs. The wheels D revolve with the shaft, in the engraving the right-hand one being in action while the other is idle. The wheels, when revolving, carry the oil from the reservoir to the shaft. In the cut F represents grooves in the upper and lower boxes provided to convey the surplus oil back to the tank after it has been used. In the upper cap are grooves G by means of which the oil is distributed. The patentee of this device states that this box will lubricate perfectly with any kind of oil or grease, using the same over and over. In places where the oil is apt to become stiff or frozen, the turning wheels will, after a few revolutions, carry the oil with them.

The National District Assembly of Machinery Constructors, Molders, Pattern-makers and Boiler-makers has decided to withdraw from the Knights of Labor. The assembly had 20,000 members 18 months ago, but since then it has been steadily on the decline until not more than 8000 members are now in the organization. It is the intention of the members to form what will be known as the Independent Order

of Machinery Constructors of the United States. The order will be attached to the American Federation of Labor, but will be independent in the control of the affairs of its own members. They favor the eight-hour movement of the American Federation of Labor in May, 1889.

Hunt's Rail Specifications.

CAPTAIN HUNT'S REPLY.

To the Editor: Permit me to thank you most heartily for the interest you have shown in the matter of rail specifications. Notwithstanding the kind terms with which you refer to me, I feel that your appreciation of the importance of the sub-

among my old friends and former *confrères*, the manufacturers, *seriatim*, and while so doing I am relieved of all embarrassment by being in absolute ignorance as to the individuality of any of them.

Naturally I cannot take any exceptions to the first gentleman's remarks.

To the second I would say that, as stated in my paper supplementary of my specifications, the proposed system of test pieces is one which I had successfully used at Troy for many years, not only in making rail steel, but with various other kinds, ranging from 0.05 to 1.0 per cent. of carbon. I fully appreciate the effect on these test bars of different modes of treatment, and also the results obtained by greater or less work; hence I provide that: "These test ingots shall be 3 x 4 inches, and not less than 4 inches long. From these bars at least $\frac{1}{4}$ inch square shall be drawn at

only adopt it as a safeguard against steel so hard as to be dangerous. In defence of Section 10, I respectfully submit the following photographs (see plate), taken of ingots which had been kept in an upright position until the interior steel had solidified, and of others which had been placed on their sides as soon as possible after casting. For these I am indebted to Mr. Robert Forsyth, general manager Union Steel Company, Chicago. He had two ingots from several heats treated in these two ways. These ingots stood next each other in the pit, and had been cast under as nearly the same conditions as possible. When cold they were broken under a drop. Of course had they been cut in two a better exhibit would have been made; but they tell the story as they are, and cutting would have been much more expensive.

FRACTURE OF STEEL-RAIL INGOT.

ject rather than any merit of mine has induced you to devote so much time and space to the subject. In preparing my specifications I realized that I would not present any new or startling theories or discoveries. I did not attempt it. It happens that I have devoted many years to the manufacture of iron and steel, and that steel rails have formed a large percentage of such product. I have made some very good rails, and some of which I was not so proud. Naturally I have given considerable thought to the causes which produced the different results. I know that the rails of the present are not giving as good service as many which were made some years ago. I believe by following the rules which I have presented under the head of my "specifications" many of the failures can be avoided. And this can be accomplished without necessitating the alteration of existing plants or materially increasing the cost of manufacture. Each section is based on ascertained facts, proven by practice. There is not an unsustained theory in the whole 21 sections.

With your permission I will now reply to your various correspondents from

one heat by hammering." I provide that tests shall be made from ingots representing different parts of each heat, so as to detect any irregularity in the steel, should it exist. I do not propose that these bars shall be prepared by anybody, but assume the mills, for their own protection, will detail suitable men.

I prefer this plan to drop tests made of rail ends because I believe it to give equally accurate results and to have the advantage of checking the work before the steel is in a finished rail. To use the drop test under the system pursued at several of the American mills would seriously interfere with their present system. At these the rails are loaded on the shipping-cars as fast as they leave the drills, both day and night. It will be easily seen that if they were to be held until rail ends from the first and last ingots had become cold enough to test under the drop serious interruption would occur. Then, again, neither railroad engineers nor rail makers are perfectly in accord as to which drop test is the proper one.

I do not offer my test bar as a means of determining the "wearing qualities." I

It is true Mr. Forsyth was fully convinced of the error of too hurriedly placing ingots on their sides, and no doubt these specimens may be exaggerated examples. Granting this to be true, they nevertheless show what can happen and a danger to be carefully avoided.

To prove that such things do happen in actual practice, I submit the section of a rail which broke in the track, Fig. 6. The ingot from which this was made had most evidently been too quickly removed from a vertical position. Railroad men have seen hundreds of such rails. They may not have actually broken in service, but have failed by crushing. A few months since I happened to be in one of the yards of the St. Paul, Minneapolis and Manitoba Railroad, near St. Paul, when they were putting in a siding, and were using for the purpose old rails which had failed in service, by cutting from them whatever lengths of sound steel were possible. Among some 50 rails so treated I saw at least six showing such cold sheets. Some of them did not come so near the surface as the one illustrated, because the chilled wall of the ingot had been thicker. In

FRACTURES OF STEEL RAIL INGOTS THROWN ON SIDE BEFORE COOLING.

FRACTURES OF STEEL RAIL INGOTS THROWN ON SIDE BEFORE COOLING.

other words, the ingot had not been disturbed so soon after casting. These are what may be called the worse cases. The following etchings of rails, some of which had been in service, others fresh, from the

seen service, but is nearly sound, and was rolled at another American works.

My third critic sets me a greater task, and I can best answer him by referring to my paper, explanatory of and preceding

the rail company which produced in 1887 the largest tonnage of any of the American mills. In this connection let me remind my friend that my specifications do not provide any chemical composition. On the contrary, in view of the test bars and the guarantee, I leave that to the makers, and so distinctly state in Section 8. This statement also answers critic number four on the carbon question. And my previous remarks in defense of the test bar also apply here, adding that I prefer bending by the blows of a sledge, because it gives just the kind of a shock wanted to make the test of the most value. I can successfully bend steel over a former which will break if treated the other way.

The photographs of broken ingots give the information desired in reference to Section 13. Mr. Forsyth's ingots were

mill, and for all of which I am indebted to Mr. Delano, of the C., B. and Q. R. R., plainly exhibit the same interior defects, but in a modified form. It may be said that, even though the interior of these rails is not absolutely solid, it will not affect their wear. Perhaps not, but you are near the danger lines, and I should much prefer a rail showing such a fracture as the following, also given me by Mr. Delano, the first illustrating one which had yielded good service in the track of his road; and I am happy to say it is an American rail. The other one has not yet

my specification, when presented to the American Institute of Mining Engineers, excepting in reference to the five years' guarantee clause. In defense of that I can only say that it is taken almost verbatim from the one given for many years past by

taken out of the molds and pits the very instant they were set sufficiently to be handled, and were cooled in the air. Again, the desire to so treat them caused too much haste in finishing the pouring. In other words, the casting ladle was not

used long enough as a sink-head; hence the cavities at the upper ends of the vertical ones are exaggerated. But that defect is always there to a greater or less extent. This is also largely controlled by

each ton, but making good wages by a large aggregate.

The weaknesses of human nature are well known, even when observed in its most cultivated forms. I know that the

I have no right to complain. You have received answers from five makers. Two of them give me strong indorsement. Another "heartily subscribes to most of what" I recommend. Another disagrees with many of my points, and the other does not see much good in me. I think I can at least claim a "plurality." Calm discussion should lead to good results and I am certain that both rail makers and users have cause to thank *The Iron Age* and the *Railroad Gazette* for their great services in securing the attention and views of so many distinguished representatives of both sides

W. R. HUNT.

ROOKERY BUILDING, CHICAGO,
February 2, 1889.

No. 5.—From Straight Part of No. 4.

Mechanical Test of $\frac{3}{8}$ -Inch Turned Specimen from Head :

Ultimate strength, 85,950 lbs. per square inch.
Elastic limit, 42,780 lbs. per square inch.

Elongation, 15.62 per cent.
Reduction of area, 43.40 per cent.

the chemical character of the steel. An ingot is a steel casting. Any maker of such castings in finished form can tell you of the character of their top ends. In their practice they make these ends sink-heads, and cut them off. I know of mills where other than heavy rail sections are also made, and it has been their custom to cut off the top end of their ingots with as little waste as possible, and then let any surplus which may exist after cutting the regular rail lengths go into short blooms for light rails. They cut them 12-inch or "greater length preferred" from the bottom or roundest end of the ingot. Perhaps they may never have had trouble from failed ends of their rails. If so, somebody has been pirating their brands.

I thank my friend for his complimentary indorsement of my capacity as a Bessemer steel man, but cannot see that anything but correct eyesight and common sense, added to familiarity with rail making, would be necessary to fit a man to know whether or not rails were being produced in accordance with my specifications. I am certain I do not propose asking any works to train a "new young man" for me. I know of a good many already qualified, and if the railroads should think well of my specifications, and of putting their inspection business in my hands, several of them will be employed by me for them. Let me state most distinctly that I do not propose interfering in the manufacture—do not propose to "run" anybody's works. If it is decided that certain things are not to be done, I propose to assist the makers in carrying out their contract by calling their attention to every time they are done. And I believe a person independent of the mill's personal influence, the pressure of which cannot be realized by any one who has not had personal experience with mill operatives, can do this best. Rails are produced in America at about the rate of one a minute. The men are paid by the ton or piece—quite a small amount for

rail manufacturers desire to give their customers good rails, and I know they always have to sell at the bottom of the market. I know that the railroads want

The elevated railroads during the strike of street-car conductors and drivers in this city last week demonstrated their ability to transport 646,501 passengers in a single day. On three consecutive days

No. 6.—Rail Broken in Track.

the best rails possible for the least money. I desire to assist both sides.

My last friend honors me with a pretty strong indorsement of my specifications, for which I thank him, and hope the others will modify their views on the points of difference between us. However, I think

the total number carried was about 1,900,000, and in no instance is it known that any individual suffered personal injury. The comparatively little inconvenience that was experienced from the interruption of travel on the horse-car lines was due to the prevalence of fine weather.

New Filter Press.

The Smith & Vaile Company, of 112 Liberty street, New York, are introducing a new Filter Press, of which we herewith present an illustration. The feed is central, the filtering medium being formed of specially woven cloth, held between cast iron plates, supported by legs to slide along the frame. In the machine shown, power is obtained by a worm and gear attachment, operated by a hand-wheel. Great power can be secured by this arrangement, and a perfectly tight joint can

FILTER PRESS, BUILT BY SMITH & VAILE, DAYTON, OHIO, AND NEW YORK.

be obtained against a pressure of 500 pounds or more per square inch on the press plates. In cases where a maximum pressure of 150 pounds per square inch is required, but a greater number of plates than 86 are used, the gear attachment is necessary to secure tight joints, as there is not sufficient power in the end wheel. The same company also build various styles of presses to suit the work for which they may be required.

Another Rolling Mill Projected at Chicago.

The depression in the iron trade does not discourage the projection of new enterprises for the purpose of adding to the production. Our industrial items show an activity in this respect which is quite remarkable. The low prices now ruling for iron and steel are regarded as affording a safe basis on which to calculate the probable success of such a venture. If a profit can be figured under the circumstances and conditions now existing, it is argued that no hesitation need be felt about engaging in the trade and taking the necessary risks. Then, too, a plant can be built and equipped with the very best machinery and most modern appliances far cheaper when iron is low and times are dull than when business is brisk, machine shops are pushed with work and material is dear. Those who have the capital at command and can obtain good locations for the assemblage of materials and the sale of their products are wise in building works in times of depression. They are then ready, with a minimum expenditure for their plant, to compete on an advantageous footing for the business offering, while a resumption of activity gives them greater profits than competing works can secure which have been built at much higher cost.

With such a purpose in view the erection of a new rolling mill at Chicago is contemplated. It will be operated by a corporation under the name of the National Forge and Iron Company. The capital of the company will be \$250,000. The president and principal stockholder is Marks Swarts, senior member of the firm of Swarts & Nathan, well-known dealers in scrap iron. Mr. Swarts is familiar with the operations of machinery, and his ex-

perience in the scrap-iron business will enable him to purchase the necessary material for the company's use with rare judgment, but he will have associated with him Wm. J. Quailey and other practical rolling-mill men to insure the success of the mechanical department. Seymour Swarts, his son, is secretary and treasurer, and is well qualified for such a position by his business training and natural aptitude. The exact location of the proposed works will be made public shortly, but the site selected is in the immediate vicinity of Chicago, so as to save freight on the scrap

used, which will be obtained from local sources, and also to save freight on the finished product, which will be marketed mainly in Chicago. The office is located at 557 State street for the present.

The machinery will comprise two trains of rolls, one 10-inch and one 18-inch, operated by one 500 and one 250 horse-power engine; a lever shear, with engine, to cut 5-inch rounds cold; five other shears, to cut small iron, scrap, &c.; two large steam hammers; one rotary squeezer, weight

DUPLEX HYDRAULIC PRESSURE PUMP, BUILT BY SMITH & VAILE, DAYTON, OHIO, AND NEW YORK.

95,000 pounds, to take a 250 to 275 pound ball; six busheling furnaces, three double heating furnaces, one extra shingling furnace, and three heating furnaces for the forge. The works will make a specialty of iron for railroad cars, car axles, &c., but will also make all sizes of merchant iron and fish plates. Oil will be used for fuel. It is the intention of the company to make their mill complete in all its appointments, and they expect to have it in operation inside of six months.

A disastrous fire in Buffalo on Saturday destroyed 40 buildings, including several large business houses and the Broezeel House, and the entire loss will probably

amount to \$3,000,000. The fire originated in the Root & Keating building. Directly opposite was the five-story brick and iron stove warehouse of Sherman S. Jewett & Co., supposed to be a fire-proof building, and also the new six-story candy manufactory of Sibley & Holmwood. Both were soon a blazing ruin. The hardware store of Fowler & Son shared a similar fate. Sidney Shepard & Co. are to be congratulated that the fire stopped just before reaching their building, contrary to the telegraphed report. The loss sustained by Fowler & Son is estimated at \$90,000, while that of S. S. Jewett & Co. is reported to be as high as \$200,000. Chief Harmon, of the fire department, speaks of defective construction. He says: "Roofs here are laid directly upon the walls, and it was in this weak spot that the flames gained entrance to the Jewett building. If the roof had been battlemented and the walls built above the roof a foot or two, the building could have been saved."

Duplex Hydraulic Pressure Pump.

Several marked improvements have been made in these pumps by the makers, the Smith & Vaile Company, of Dayton, Ohio, and 112 Liberty street, New York. These changes are mainly confined to the water end, the steam end being the regular duplex arrangement. Each pump cylinder is divided into two parts by a central partition, so that there are practically four cylinders, in each of which works a plunger. Each of the rear plungers is operated by a piston rod united to a crosshead connected by rods with the forward crosshead. The upper of the two parallel rods rests in half bearings placed on top of the cylinder. Two of the plungers are constantly working on the discharge and two on the suction, making the flow even. Connected with the dis-

charge-pipe is a safety valve which, by operating the governing throttle, obviates all danger that might be caused by too great pressure. An accumulating reservoir is used with small-sized pumps, the object being to work the pumps continuously in cases where the demand is intermittent.

President F. J. Kimball and a party of officials and gentlemen representing railroad, manufacturing and financial interests have left New York on a prospecting trip through the coal and iron fields of Southwestern Virginia and the mines of Pocahontas. Andrew Carnegie and other large iron manufacturers are with the party.

THE WEEK.

The United States Government has chartered two clipper ships to carry 5000 tons of anthracite coal to the harbor of Pago Pago, in the Samoan Islands, which is to be used as a Government coaling station for vessels plying in the Pacific waters. The freight rate will be \$13 per ton and discharged. It is expected several other ships will be chartered for the same destination in a few days.

Gen. James W. Husted's bill appointing commissioners to represent the State of New York at the Centennial celebration in New York City, on April 30, of the inauguration of President Washington, is now in the hands of the Governor. The commissioners are Brayton Ives, Walter Stanton, D. O. Mills and Gen. Louis Fitzgerald. By the bill \$200,000 was appropriated, of which \$125,000 goes to pay the transportation, maintenance and service of the National Guard of the State.

The foreign relations of China are liable to be put in jeopardy and the introduction of a modern civilization be retarded by the accession to power of the young Emperor, who is now 17 years old, and who is expected to make Ung Tung Ho head of the Grand Council. The North China *News* says: "The Emperor, the three Princes and the Empress Dowager are all pure Manchus, but Ung Tung Ho is a Chinese. and comes of a very ancient and renowned family. He is strongly opposed to foreigners and foreign ways, and his great influence with the Emperor will probably lead to a vigorous attempt to retard the introduction of railways and all Western innovations. It will also, in all probability, lead to strained relations between the Chinese Government and the representatives of foreign powers, which will bring about a very critical state of affairs not at all unlikely to end in war."

The wages of Chinamen on the Pacific Coast have doubled since the stoppage of Chinese immigration.

A St. Louis dispatch says: "An American company with a capital stock of \$5,000,000, D. W. Dewey, of Pontiac, Mich., president, have secured a contract, signed by President Diaz and others, conceding to them the exclusive privilege of furnishing water gas to all the cities in the Mexican Republic."

A \$500,000 hotel will be built in Brooklyn on Washington and Concord streets. The walls will be nine stories high, of brick and brown stone.

The Italian Minister of the Treasury announces a deficit of \$40,000,000, and higher taxes will be necessary.

The Manual Training School in Cleveland, Ohio, which has 185 pupils, gave an exhibition at the commencement exercises last week of an interesting character. The institution is supplementary to the education of the public schools. On the occasion referred to about 500 spectators witnessed the forge and cabinet shops in full operation, and among the articles manufactured were chains, which were pronounced equal to the productions of an accomplished artisan. The same is true of the wood-turning shop, where a large number of boys were engaged. They handled their lathes like men who were accustomed to the business, and excited applause by their skill. The work of the boys was complimented on every hand, and Professor Anderson came in for his full share of praise.

It is said that a contract for a new bridge at Niagara Falls has been let to the Rochester Bridge and Iron Works. New suspenders will be attached to the present

cables, and the bridge will be nearly the same as the former one. The work will be conducted from both sides of the river toward the center. Engineer George McNulty, of New York City, will be in charge, and the present estimate is that May 15 will show the bridge complete.

A large bridge across Newark Bay will be necessary to complete the proposed connection of the Lehigh Valley road with a new terminus at the Morris Canal in Jersey City.

The *papier maché* ceiling for the State Assembly was made in New York City by J. M. Sinclair, for John Smith, the contractor. Mr. Smith thinks he is much abused, and is embarrassed while waiting for \$40,000 claimed to be due from the State. To a reporter he said: "People think I have made a fortune out of the contract, while I have not yet got out the money I paid for the work. It cost me \$54,000 to remove a staircase and \$80,000 more for machinery, staging, &c., before one scrap of the old ceiling was removed. Now, where was the vast amount of profit? The old stone that was in the ceiling, and which there has been so much talk about, I will give to any one who will pay for carting it away. I'll sell it to you for \$2500 this minute."

An ex-Prime Minister of Hawaii, C. C. Moreno, who is remarkably well informed respecting commercial affairs in that part of the world, argues that Samoa is the key of the Pacific trade, and that San Francisco on the west, Honolulu in the center and Shanghai on the east ought to be the clearing-houses for all the islands of "an American-Asiatic lake."

The American Shipping and Industrial League concluded its sessions in Washington, D. C., on Friday night. General Wheeler presided. Representatives Farquhar, Thomas, Money, Boutelle and Spindola and ex-Congressman Ellis, of Louisiana, delivered addresses. Subsidies or bounties to American-built ships were advocated by all, and the French bounty scheme, which proposes an allowance of 20 cents per ton for every thousand miles, was strongly urged as being the most feasible means for the revival of our decaying merchant marine. An appeal will be made by the league to every board of trade and chamber of commerce throughout the country in furtherance of this proposition. The following officers were elected for the ensuing year: President, Joseph Wheeler, of Alabama; first vice-president, Ambrose Snow, of New York.

A million-dollar amusement hall will be erected on the site of Madison Square Garden in this city.

Merchants in St. Louis are making an earnest effort to capture Mexican trade by establishing agencies at central points in that country, and they profess to be able to transport merchandise by rail, direct, at one-third of the charges on freight via New York.

Boston spends from \$12,000,000 to \$15,000,000 a year on new buildings. Among the latest additions are the Mutual Life, costing \$500,000; Fiske Building, \$700,000 to \$800,000; Albion Building and Miliken House, costing about \$400,000 to \$500,000 respectively. A syndicate is about to erect a structure on the old post office site which will cost \$3,000,000, making one of the finest buildings of the kind in the country. The Chamber of Commerce will soon put up a building.

San Francisco is doing a thriving business with Australia, and expresses much satisfaction over the statistics of traffic for 1888. Imports amounted to \$1,414,000, which differs little from the previous year, but exports nearly doubled, the total valuation for 1888 being \$1,822,054, as com-

pared with only about \$1,000,000 for 1887. The increase is principally in the exports of lumber and grain. Of machinery, 2413 packages, valued at \$178,820, were shipped from San Francisco during the year, and of hardware the exports were \$50,000.

The new Chamber of Commerce at Cincinnati, dedicated last week, cost \$625,000, and the whole property is valued at \$1,000,000.

The New York aldermen peremptorily deny the application for permission to build a tunnel under the East River.

A committee of business men of Birmingham, Ala., sent North to select a place for a permanent exhibition of the mineral, manufacturing and agricultural products of their region, called on Mayor Grant. They are John T. Patrick, Dr. W. R. Capehart, Col. Julian Allen and Prof. F. S. Packard. They said they would prefer to locate the exhibition in this city. They had looked at the American Institute building, but thought it scarcely big enough for their purpose.

The grandest railway station in the world is said to be the terminal station in Bombay, India, of the Peninsular Railway, known as the Victoria Building, which was completed in last May and named in honor of the Empress of India. The execution of the work occupied ten years, and the cost is estimated at \$18,800,000. The total length of the principal elevation is over 1500 feet.

The importation of hog products into Holland is prohibited, refined lard excepted, unless accompanied by a document from the Dutch Consul showing that no disease to which hogs are subject prevailed at the time and place of shipment.

Further successful tests were made with the Zalinski gun. A shell weighing 980 pounds, the heaviest yet put into the gun, was loaded with 500 pounds of nitro-gelatin and dynamite. In military circles it is said Captain Zalinski will get the appointment as Assistant Inspector General.

The net income of the United States Patent Office last year was \$144,408 and the number of original patents issued was 20,000. The patent fund amounts to \$3,400,000.

Another of Jay Gould's formidable railway projects has been consummated, being nothing less than an alliance with the Richmond Terminal Syndicate for the protection of his Missouri Pacific branches in the Southwest by building a new section of road through the Indian Territory at the northeastern corner. The general design takes within its scope a route that shall extend from Kansas City to the Atlantic seaboard. The advantages of this important alliance are, it is explained, that the Missouri Pacific will obtain a large amount of traffic from the great provision-producing regions of the West that is now distributed through the South by way of St. Louis. It will also offer a short haul to the seacoast at Brunswick and other Southern ports.

The railway connections between the Poughkeepsie bridge and the new center at Campbell Hall will be completed by June 1st, opening traffic in that direction.

Chancellor Bismarck informs his minister at Washington that the German military authorities in Samoa "have gone too far," and M. Knapp, the German consul at the islands, is ordered to withdraw his command. Secretary Bayard informed the Government at Berlin that no declaration of martial law in Samoa could extend jurisdiction over American citizens, nor would such jurisdiction be recognized.

A new field for American enterprise is opening in Persia, if reports are correct. Frank H. Clergue, of Bangor, Me., has

petitioned the Legislature of that State for railway and bank charters to cover various projects in the domains of the State, including a railroad 500 miles long, from Teheran to the Persian Gulf. The nature of the work will require the assistance of American engineers. It is said that the equipment of the railway will also be sent from this country. The locomotive and heavy rolling stock are to be built in Philadelphia.

The views of business men in Michigan respecting the Interstate Commerce law have been gathered by a Detroit editor, but the result only shows a wide divergence of opinion. The majority speak reservedly, some approving of the law if it were enforced without discrimination, while others heartily condemn it and are clamorous for repeal. Hardware dealers nearly all either condemn or approve with reservations.

Major David Essex Porter, who was on General Grant's staff and served in the Egyptian campaign against Abyssinia, has contracted with the Haytian minister, Mr. Preston, to act as chief of staff under Légitime, taking entire charge of the forces, and he has already taken from New York a number of field pieces and howitzers. Collector Magone has been instructed to enforce the neutrality laws.

The International Company, of Mexico, which originated in Hartford, Conn., claims to have had good success in efforts to colonize Lower California, and to have formed several Swedish settlements on the coast. The company's grant extends from the boundary line between Mexico and the United States, 15 miles south of San Diego, southward between the Pacific Ocean and the Gulf of California for a distance of 300 miles, comprising a region described as comparing well with the region around Los Angeles or Santa Barbara. All industries are exempt from taxation for some years to come. The Mexican Government, probably to the disappointment of the projectors, shows no disposition to alienate any part of this territory in favor of the United States.

To show the magnitude of the canning business the fact is mentioned that in this country last season there was packed of a single kind of vegetable nearly 80,000,000 cans, costing at the point of production about \$6,000,000.

The population of the United States at the present time is believed to be very nearly 64,300,000, allowing an addition of upward of 500,000 during the last 12 months, indicating a probable increase equal to 67,000,000 for the census year 1890.

Writers in Cleveland and Pittsburgh evince a deep interest in the completion of the South Pennsylvania Railroad, by which a new route will be opened between the lakes, and the coal beds and iron furnaces of Pennsylvania. Confidence is expressed that the project will be pushed forward as soon as possible in the spring.

A private banking house in this city forwarded to Sweden last year more than \$1,000,000, the earnings of Swedes who immigrated to this country. Of 44 Swedish cabinet-makers who came over here about 1878 under contract to work for the Bridgeport Organ Company, 15 now own their own homes in Bridgeport, which they have paid for in these ten years.

The business of the largest post offices in the country increased 9 per cent. during the quarter ended December 31 over the corresponding quarter of the previous year.

The Master Car Builders' Association will meet in Buffalo next June, when a committee will report on "car heating and lighting."

MANUFACTURING.

Iron and Steel.

Williamson Furnace, of the Williamsson Iron Company, at Birmingham, Ala., has been thoroughly overhauled. The Massick & Crook hot-blast fire-brick stoves, for which McClure & Schuler, of Pittsburgh, are the agents, have been introduced, and the furnace has been partially relined. With the new attachments, the capacity of the furnace will be increased from 60 to 75 or 80 tons per day. The furnace went into blast last week.

The Brierfield Coal and Iron Company, of Brierfield, Ala., are repairing their rolling and nail mills, and will, it is said, put them in operation.

The Beaver Falls Iron Company, of Beaver Falls, Pa., have decided that, for the present at least, they will not rebuild their plant destroyed by fire some weeks ago. The reason advanced for this determination is, that with the present low price of sheet iron it will not pay to operate the works. Should an improvement in this line take place, it is probable that the company will rebuild their plant.

As announced in these columns some time since, Carnegie Bros. & Co., Limited, of Pittsburgh, have decided to build a large foundry adjacent to their present plant at Braddock, Pa. With this in view Tonsten Berg, head draftsman at the Edgar Thomson Steel Works, has gone East to visit the foundries at Bethlehem and Philadelphia in the interest of the firm, and to inspect the methods which are used in their operation and construction. Work will be commenced soon after Mr. Berg's return. Some of the machinery has already been ordered for the foundry, which they expect to have in full operation in the course of three months.

New machinery and new furnaces are being added to the old butt weld mill of the plant of the National Tube Works Company, at McKeesport, Pa., the company having decided to manufacture a large size of the butt weld tubing. The largest size now made is 2 inches. The new mill will be ready for operation in about a month.

Recent large orders at the Philadelphia Bridge Works, Pottstown, Pa., necessitated the starting of a double turn and the putting on of about 100 additional men. Many of the Pottstown Iron Company's nailers have secured employment there.

Hunnewell Furnace (charcoal), at Hunnewell, Ky., has blown out for repairs.

Thomas Furnace, of the Thomas Furnace Company, at Niles, Ohio, which was recently considerably damaged by fire, will be ready to make iron about the 20th inst. Wm. Tod & Co., of Youngstown, Ohio, have received a contract to erect an iron hoisting-house at the furnace.

The Atlantic Iron Works of P. L. Kimberly & Co., Limited, at Sharon, Pa., are being operated to their utmost capacity. The puddling department cannot work up enough muck iron to supply the finishing mills, and the firm are compelled to import muck bars from the Etna Iron Works, Limited, at New Castle, Pa.

The nail factory of the Belmont Nail Company, at Wheeling, W. Va., has been closed down on account of some trouble with the workmen. It is not known when operations will be resumed again.

The French Creek Forge, near the falls of French Creek, Chester County, Pa., operated by Thomas Warner, went into operation last week, after lying idle some time. The proprietor has now orders on hand which will keep the works going for

two months or more. French Creek Forge manufactures blooms from scrap and is one of the few charcoal forges still in operation in that part of Pennsylvania.

A press dispatch from Cincinnati, under date of the 30th ult., says: "The Newport Iron and Steel Works, formerly owned by E. L. Harper, were sold for the second time to-day under legal proceedings to C. J. Helm, representing the sureties for the former purchasers, Schriver & Wagner, for \$70,000."

A report was circulated in Pittsburgh last week to the effect that some capitalists were endeavoring to lease the Millvale Rolling Mill, in that city, and would put it in operation if successful in procuring a lease of the property. This mill was formerly owned and operated by Graff, Bennett & Co., but has been idle since the failure of that firm some months ago.

Preparations have been completed for the starting of the converting department of the new works of the Allegheny Bessemer Steel Company, located at Duquesne, Pa., a few miles from Pittsburgh, on the line of the Pittsburgh, Virginia and Charleston Railway. The entire plant is completed. The buildings as they now stand are entirely of iron. The converting and blooming mills are in one building, the dimensions of which are 75 x 200 feet. The rail mill is 68 feet span and 380 feet in length. The building covering the hot-beds is 80 feet span by 200 feet in length, while the wing inclosing the finishing machinery is 48 x 64. There are two Bessemer converters with a capacity of 7 tons each. At the commencement of operations natural gas for fuel will be supplied by the Philadelphia Company, but in the near future the plant will be supplied from an independent line to be laid to wells located in Versailles township. To supply the steam for the rail mill there are 20 boilers, 44 inches in diameter and 24 feet long, and for the converting department 16 boilers, with similar dimensions. These were all furnished by James McNeill & Bro., boiler and general machinery manufacturers, of Pittsburgh. The company will have a general office at Duquesne, and will also continue their present branch office in the Hamilton Building, at Pittsburgh.

The Fishbach rolling mill of the Pottsville Iron and Steel Company, at Pottsville, Pa., was again closed down on the 30th ult. for an indefinite period. It will be remembered that this plant suspended operations in December last, but resumed several weeks since. It is stated that operations may be resumed again within the next 30 days, but this will depend entirely on the amount of orders that are received in the meantime.

Announcement is made that the interests of the Warren Rolling Mill, at Warren, Ohio, under the management of Henry Wick, have been consolidated with those of the Trumbull Iron Company, at Girard, Ohio, under the management of George Wick, and that the main office will be located at the latter-named place. The consolidation went into effect on the 1st inst.

At the annual meeting of the stockholders of the Cambria Iron Company, of Johnstown, Pa., held in Philadelphia last week, the following officers were elected: E. Y. Townsend, president; Powell Stackhouse, vice-president; John W. Townsend, formerly assistant to the president, second vice-president; William S. Robinson, secretary and treasurer, formerly secretary and succeeding John T. Killé as treasurer; Harvey Ellis, assistant treasurer. The board of directors chosen is composed of E. Y. Townsend, I. V. Williamson, Samuel Welsh, James McMillen, Josiah M. Bacon, R. Francis

Wood, David Reeves, Henry Lewis and Robert F. Kennedy. The board has since elected Charles F. Butler assistant treasurer at Johnstown and A. P. Robinson assistant secretary at Philadelphia.

It is expected that the large new plate mill now in course of erection by the Maumee Rolling Mill Company, of Toledo, Ohio, will be ready to commence operations about the middle of March.

The *Bulletin* of the American Iron and Steel Association announces that the Union Steel Nail Company, of Omaha, Neb., has abandoned its works at that place. It will continue its corporate existence, however, for the purpose of caring for its real estate interests, which are centrally located in the city of Omaha and are very valuable. The officers of the company, last October, organized the Union Steel and Iron Company at St. Joseph, Mo., receiving from the citizens of that city a cash bonus of \$50,000. A donation of four blocks of ground was also received from the South St. Joseph Land Company. The buildings for the new company are now being erected, and it is expected that active work will be commenced early in the coming spring. New machinery has been purchased, and merchant bar iron, wire nails and cut steel nails will be manufactured. The company will make its own muck bar.

The new Bessemer addition to the Crescent Steel Works of Miller, Metcalf & Parkin, at Pittsburgh, which has been in course of erection for some months, is almost completed, and will probably be put in operation during the present month. The engines, converters and hydraulic cranes are all in place. With this addition to their works completed the above-named firm will have one of the most complete and best-arranged plants for the manufacture of steel.

Morehead, Brother & Co., proprietors of the Vesuvius Iron and Nail Works, at Pittsburgh, have closed down their entire plant for an indefinite period, on account of the high rates for natural gas asked by the Philadelphia Company, which have been supplying the firm with fuel for some years. According to a member of the firm, their contract for gas expired on the 31st ult., and the Philadelphia Company demanded an advance of \$6000 over the rate paid for the previous year, which was refused. This firm remodeled two of their double-puddling furnaces some time ago, and have since operated them very successfully on fuel gas made from slack coal. The work was done by Wm. Swindell & Bros., engineers and contractors, of that city, who have since closed a contract with the firm for the remodeling of all their puddling furnaces on the same plan. Whether the firm will allow their plant to remain idle until this work is done has not as yet been determined.

The Colorado Coal and Iron Company have refused an offer of over \$1,000,000 for their lands in and around South Pueblo. The company's output of pig iron at Bessemer in 1888 amounted to 20,800 tons; steel rails, 8040 tons; merchant bars, 5800 tons; cast-iron water-pipe, 1340 tons; nails, 45,080 kegs; railroad spikes, 1380 kegs.

The Lucinda Furnace Company, of Norristown, have placed with Messrs. R. S. Newbold & Son, of the same place, a contract for one 27-pipe Durham hot-blast stove, together with other changes and additions. The improvements are in charge of Frank C. Roberts, C. E., of Philadelphia.

Floodwood Furnace B, at Floodwood, Ohio, built by Riter & Conley, and owned by the Ohio and Western Coal and Iron Company, is 17 feet in the bosh and 75

feet high. It runs on a mixture of 80 per cent. native ores, 50 per cent. Lake Superior ores, and 25 per cent. mill cinder. The fuel consumption is 2800 pounds coke to the ton of iron made. The following is the iron made by this furnace during the month of January:

No. 1 foundry.....	4,175 tons.
No. 2 "	237 "
No. 3 "	97 "
Total.....	4,509 "

R. C. Porter is manager and Gen. James A. Hall superintendent.

The Cambria Iron Company, of Johnstown, Pa., are increasing the blast pressure of their furnaces, and this affords a greatly increased output of Bessemer pig metal. They have also a new Bessemer steel plant nearly completed, which will afford a much increased output of steel. It is expected that this new work will go into operation about the 1st of March next. The company are also extending their open-hearth furnaces and enlarging their Krupp metal washer. They are also active in their Gautier department, where they make a large variety of steels and other products for the market.

The Birmingham Rolling Mill Company of Birmingham, Ala., have issued a neat little pocketbook giving the standard Western list in bars, bands, angles and sheet iron, elaborate tables of weights of flats, rounds, squares, tire, ovals, spikes, sheets, plates, angles, tees, hoops, bands, &c. They present, in addition, a variety of useful information, and submit a cipher code for ordering their goods for the convenience of their customers.

The Ramel, Conley Iron and Steel Company, of 290 Broadway, have made a contract with Delameter & Co. for the iron work for their new plant at Brewsters, N. Y., and are arranging for the brickwork, &c. The process is not a modification of the Blair, as erroneously stated recently, but is based on the Conley patents. The company contemplate the erection of a 15-ton open-hearth furnace, with gas producers, in the near future.

In referring lately to the great record of No. 1 Andover Furnace, of the Andover Iron Company, at Phillipsburg, N. J., we stated that we did not know to what extent the use of Lake Superior ore influenced the splendid results. Joseph C. Kent, the superintendent, informs us that not a pound of Lake ore was used. The product made during the week in question (824 tons), was produced with 90 per cent. of New Jersey ores and 10 per cent. of Mokta. The week following the make was 826 tons with all New Jersey ores.

Machinery.

A strike has occurred at the works of the Springfield Mfg. Company, at Springfield, Ohio, caused by some of the men demanding an increase of wages, which was refused by the firm. The strikers attacked a workman who had taken the place of one of their number, and he was quite severely injured. Policemen were at once placed on guard at the shops and no further trouble is anticipated. The firm expect to have no trouble in filling the places of the strikers.

The Pittsburgh Locomotive Works Company, of Pittsburgh, have secured a contract for three locomotives for the Louisville, Vandalia and Terre Haute Railroad Company.

The Benjamin Machine Company, whose works are at South Evanston, Ill., and general offices in the Home Insurance Building, Chicago, have just issued a very complete catalogue of their wood-working machinery. The book comprises 74 broad pages, is finely illustrated and well printed, and is bound in flexible covers.

The illustrations are of such a character that the internal as well as external structure of the various machines is shown. The leading machines illustrated and described are the Corporation Triumph planer and matcher, the New Triumph planer, the Special Triumph planer and matcher, the Old Triumph planer and matcher, the patent all roll double cylinder surfacer, the patent improved Triumph dimension planer, the Triumph timber planer, the Improved endless bed surfacer, panel planers, automatic knife grinders, re-sawing machines, band saws and band saw mills, together with a variety of planing and saw-mill supplies. The descriptions given are very clear, setting forth the special character of work to which each machine is adapted. Full price lists for special machines and general mill supplies are given, as well as a great deal of information of value to millwrights and users of machinery. The company have recently removed their works to a new location at South Evanston, where they occupy buildings specially adapted to their purposes. They have four special departments—namely, machine shop, blacksmith shop, foundry and wood-working shop, including paint shop. These departments are supplied with tools of the latest design, enabling the company to make all parts of their machines on the premises. A railroad track enters on the side of the works, affording facilities for the receipt of material or shipment of goods without cartage.

Hooker Colville Steam Pump Works, St. Louis, Mo., are very busily engaged, and among the orders lately received mention the following: A vertical pumping engine for the water works at Canton, Ill.; also two 500 horse-power boiler-feed plunger pumps, one to St. Louis Illuminating Company, and one to Anthony & Kuhn Brewing Company, St. Louis, Mo.

Fifty-four men were discharged at the New York, Pennsylvania and Ohio Railway shops, in Meadville, Pa., on the 31st ult. This is in compliance with a general order reducing the shop force on the entire Erie system 10 per cent. It will affect about 100 employees on the New York, Pennsylvania and Ohio, and about 300 on the other branches. The reason assigned is lack of business.

The Westinghouse Electric Company, of Pittsburgh, recently made a shipment to Havana, Cuba, of over 12,000 of the glass globes containing the incandescent electric burners. They were securely packed in casks made of heavy tin.

At a meeting of the Directors of the Union Switch and Signal Company, of Pittsburgh, held last week, it was decided to declare a 6 per cent. dividend on the preferred stock of the company. The company have a capital stock of \$1,500,000, of which amount \$500,000 is preferred stock. The latter is entitled to a dividend of 6 per cent. before the common stock receives any; and it is also entitled to a further dividend of one-half of 1 per cent. for each one 1 per cent. paid on the common stock until all the stock receives 12 per cent. The total amount of profits of the company during the last year amounted to \$80,000, of which sum \$30,000 was used to reduce the company's indebtedness.

The Innis Mfg. Company, of Oil City, Pa., have sold their works and property to the Oil Well Supply Company. The latter will continue to manufacture the Innis engine at the old place, with Mr. P. H. Kane as superintendent. Some of the manufacturing now done at the Oil Well Supply Company shops will be transferred to the Seneca street branch, the capacity of which will be materially increased.

The Iron Age

New York, Thursday, February 7, 1889.

American Pig-Iron Warrants.

We believe that we are correct when we make the statement that, broadly speaking, the men interested in the American iron and steel trades are adverse to any extraneous influences. The first impulse of a good many makers, dealers and consumers appears to be to assume an attitude of hostility to the plans of the American Pig Iron Storage Warrant Company, whose plans we outlined in the last issue of *The Iron Age*, and whose argument in favor of their scheme we placed before the trade.

The primary object of the company is to create a medium for speculation by the general public. The larger the quantity of pig iron in their storage yards the greater will be their income, and the larger their profits. The quantity will be measured by the capacity of the speculative public to pay the relatively low cost of carrying the stock and by the success attained in securing the co-operation of furnace companies. The former will be dependent upon the magnitude and frequency of the chances of securing a profit by betting on the right side of the market. The latter will be measured by the advantages which might accrue to them from steadier work and cheapened cost of marketing. Speculators and their brokers will be indifferent to everything which is not connected with the prospect of a "lively market." Brisk fluctuations, a large volume of transactions, with the occasional excitement of a corner, is all that they ask. The interest of the projectors of the enterprise lies with these, aside from any schemes which some of those identified with the movement may or may not cherish in connection with individual speculative operations. The general public is to pay for the privilege of taking a flyer in pig iron, the cost of storing and carrying it, plus a profit to the American Pig Iron Storage Warrant Company. While the latter have no intention to take any action to make operations in warrants attractive to speculators, it is clear that the impetus must come from some source, if pig iron is to have greater success than silver. Whether, by whom, how and when this work is to be performed, is not apparent yet. Possibly a protracted period of "wash sales" may be necessary, possibly not, because pig iron has always possessed a high standing in the speculative community as the "barometer of trade." The first step in the direction of success, from the standpoint of the projectors of American pig-iron warrants, has been taken by coupling with the enterprise a number of men whose financial position is above all question.

Success is dependent, secondly, on the co-operation of the furnaces. Much is made of the fact that until now the stocks of pig iron in this country are out of all proportion to the quantity produced. They represent only a few weeks' con-

sumption. It is argued that this fact is one of the greatest sources of danger to the American iron trade, an argument the force of which few will be willing to deny. For some time to come the accumulation of pig iron through the operations of the warrant system would be without any danger to the American iron trade. It would benefit it by allowing of continuous and steady work, even during a depression, and would thus afford some relief. But, if history repeats itself, and the experience of Scotland has any value as a guide to us, a point would be reached when the accumulations would be unnecessarily large and might become a serious burden and a menace to the trade.

To those furnaces which have a small working capital and limited resources, and who therefore have been unable to carry themselves over periods of depression without making serious sacrifices, the chance to run pig iron into store and quickly realize on it will be welcome. Their rivals, more securely placed, may view the scheme with indifference, unless, indeed, they regard as an injury to them everything which aids their competitors. The position of commission merchants to the warrant system appears to affect its success or failure only in so far as their opposition would render it much more difficult to interest the general public. It is the natural impulse of every man doing business, whether it be speculative or not, to seek an expression of opinion from those among his friends and acquaintances who have long been identified with the particular trade affected.

We are in receipt of a number of letters from pig-iron makers, commission merchants and consumers, which we shall print in the next issue of *The Iron Age*. They will furnish ample evidence to gauge the position of the trade on a momentous question. One view, frequently expressed, is that it is only a question of time when the methods in vogue in Great Britain will be introduced here. It is urged that however widely opinions may differ on the ultimate effect of extensive speculation in pig iron, the matter is bound to come, and that he is wiser who swims with the tide than he who exhausts himself in vain efforts to stem it.

Production of Pig Iron in the West.

The development of the pig-iron industry in the South has received so much attention in recent years that the growth of the West has been somewhat ignored. Yet this section of the country has been making very steady progress, and it is now contributing a larger share than ever of the total amount of pig iron annually consumed in the United States. In considering the relative importance of the various sections in which the pig-iron industry has been firmly rooted, it will not do to overlook the influence of the States lying north of the Ohio River which derive their supply of iron ore mainly from the Lake Superior mines. Ohio, Indiana, Illinois, Michigan and Wisconsin form a cluster of Western States whose combined annual production of pig iron is now 28 per cent. of the total output of the country. As the nation's requirements have grown, these States have expanded their production, each recent year, in fact, having shown a slight gain over what had been the pre-

vious annual contribution. This expansion has been largely the result of better work by existing plants or by the substitution of improved furnaces for old ones, the number of entirely new works entering the field having been quite limited. This is forcibly shown by the following table, giving the number of furnace stacks in each of these States in condition for ore at the close of each of the past four years:

States.	1885.	1886.	1887.	1888.
Ohio.....	81	75	77	77
Indiana.....	2	2	2	2
Illinois.....	16	16	16	16
Michigan.....	27	26	27	27
Wisconsin.....	13	14	14	12
Total.....	139	133	136	134

Although a positive decrease in the number of furnace stacks is thus shown, the production of pig iron in these States, according to the statistics of the American Iron and Steel Association, has almost doubled in the same period. In 1885, which was, however, a year of depression, the output of pig iron was 1,056,327 net tons, and in 1888 it was 2,027,673 net tons. Prior to 1885, the largest production in any one year was in 1882, when 1,865,861 net tons were made. These Western States now turn out more pig iron than the whole country did in 1871, and very little under 1876. The heaviest gains have been made in Ohio and Illinois. The following table shows the progress made by each of these States since 1885:

States.	1885.	1886.	1887.	1888.
Net tons.	Net tons.	Net tons.	Net tons.	Net tons.
Ohio.....	553,933	903,094	975,599	1,103,818
Indiana..	6,634	16,660	13,211	15,390
Illinois...	827,977	501,795	565,453	579,307
Michigan.	143,121	190,734	213,543	213,251
Wisconsin	24,522	65,363	133,508	116,037
Total.	1,056,327	1,683,216	1,901,254	2,027,673

In 1885 these States made 24 per cent. of the total pig-iron production of the country; in 1886 they made 27 per cent., in 1887 they made 26 per cent., and in 1888 they made 28 per cent. Indiana contributed but a small amount, the State not being conspicuous as a producer of pig iron, despite its location within easy reach of Lake Superior ores and Connellsville or West Virginia coke. All the other States make a very good showing. The production in 1888 would undoubtedly have been considerably larger if the demand for steel rails had been as heavy as it was in 1887. Under the circumstances the gain made in the production of pig iron in 1888 over 1887 is quite remarkable, as in view of the lessened demand for steel rails a falling off in pig iron would not have been unnatural.

Should the present depression in the pig-iron trade continue for any length of time it is very probable that the production in these States will be curtailed, and that 1889 will witness a smaller output than that of 1888. The large majority of the plants are owned by companies in excellent financial condition, who will not sell their product below its actual cost, and who will blow out their furnaces when they have accumulated as much stock as they wish to carry. With them the restriction of production is not a matter of much difficulty, and does not entail embarrassment. But when their furnaces are blown out they will be repaired and perhaps remodeled and improved, and will be in shape to make a larger output than before when the demand revives. A number of new furnaces are also in course of erection, which will be ready for operations during the year, and whose influence

will be felt in the next period of activity, if not before it. The West will continue to be an important factor in supplying the pig-iron wants of the country.

State and Interstate Commerce.

When our United States Constitution was adopted there were long and sharp debates in the convention over very many of its provisions, but the section granting to Congress the power to regulate commerce between the States seems to have been passed without discussion. In the eighteenth century there was no commerce between the States which would now seem worthy of the name. Hence no need of dispute over a part of the Constitution which seemed precautionary rather than applicable to any existing danger. But how different now! Transportation of goods and passengers has become the greatest of our industries, the one wherein the acceptance of right or wrong principles affects the greatest number of our citizens. And since, by the decisions of our Supreme Court, the regulation of any thing or matter implies also the regulation of all the instrumentalities by and through which that thing or matter is carried on, we arrive at the powers and duties of Congress over the carriers of our goods and persons. But in theory the limit of this power is clearly defined. It concerns only such commerce as passes the boundary of a State.

All our early railroads may be said to have been built for local needs. A road was required from some port or city on a watercourse to some interior point, or to give some prominent place connection with canal or lake or river. The local Legislature granted a charter for the local work. It was purely a domestic matter with which other States had little concern. But later lines have not been chartered generally with so simple an end in view. What was before a local road becomes now a link in a vast chain in which many States and vast numbers of people are interested, and yet a local Legislature, by refusal of a local charter, may stop the carrying out of a vast system whose construction is a national necessity. Rigid State rights as far as local lines are concerned are well enough, but do they properly include the granting or refusing of charters to railways which, when completed, will be used almost wholly, or even partly as highways of interstate commerce? This is a new question in American political economy which before long may compel discussion.

Let us suppose the charter granted and the railroad built and running. The same distinction between State and interstate commerce, clear enough in theory, but impossible in practice, is disclosed. How shall the line be drawn? A Buffalo manufacturer selling in New York city and a Pittsburgh merchant, looking also for a market there, find no difference in trade, because the former's shipments need not leave the State, while the latter's must. No railroad official thinks of such imaginary lines as State boundaries in fixing competitive rates, while the traffic, which at first sight may seem free from this competition, will be found upon analysis to be subjected indirectly to the same relentless commercial rivalry in trade. Nothing can in the long run escape this. We also see the same cars, engines and tracks used for

State or interstate traffic indiscriminately, without any thought of theoretical differences; the same expenses are borne by both, the same officers manage both, the same stockholders earn dividends from both, and, what is of more consequence, the charges imposed upon the one kind must be the measure of the charges which can be collected from the other. In truth, then, it may be said that Federal and State regulation of railways are based on opposing theories. There is, and there must be, an "irrepressible conflict" between them. This will become more and more evident as our commercial conditions become more and more complex.

In what manner we can best solve this problem cannot be predicted. If we assume that never again will railroads be without some form of regulation by Government (and the present appearance of things gives that impression), we may also assume that the powers of the Federal Government may in the future be enlarged so as to include in some fashion the regulation of part at least of the traffic—and perhaps the charters—of roads now considered exclusively under State control. This would be centralization, it is true, but of the sort which could be defended. It might better be called an extension of the power of the Federal Government, required by the growth of the matter demanding supervision. A bridge across the Ohio River would require Congressional permission, but this once granted, neither Ohio nor Pennsylvania could obstruct the building, though each approach would be exclusively in one State or the other. So in railway traffic; what is necessary for the common good of many States should not be the exclusive property of any one of them.

Late Events in Mexico.

President Porfirio Diaz has been re-installed, after re-election on July 1 last, for another term of four years, much to the satisfaction of Mexicans generally and his numerous admirers abroad. During the past four years Mexico has made great strides in progress and improvement in pretty much all departments. A good share of it has been due to Diaz's personal initiative, wisdom and energy, but to a great extent also to the advisers who surround him. This capable cabinet has been retained. To a considerable degree the advancement of the sister republic has also been promoted by the large share which both American and European capital continues to take in developing the enormous resources possessed by Mexico. From a financial point of view the Mexican exchequer has been particularly clever and successful in consolidating the foreign debt at 40 per cent. through an agreement with British bondholders. Most of the outstanding bonds were old, dating from the time prior to Maximilian. Many of them were issued under circumstances which even the holders themselves must have admitted to be hard for the present generation to assume in full with accumulated interest. Hence the arrangement made about the sterling debt at the percentage named, and a moderate interest was willingly submitted to. This was at the time when Diaz had resumed power four years since. Order was brought into the chaos in which the Gonzalez admin-

istration had left the finances. Gradually the payment of subsidies to American railroads was resumed, the interest on the public debt began to be promptly paid, and finally, last year, the conversion at 40 per cent. was perfected through the floating of a 6 per cent. loan in Berlin, through the banking house of S. Bleichroder, to the amount of £10,500,000. The foreign debt of \$70,000,000 has in this manner been reduced to \$28,000,000, while the home debt, including the floating debt, does not exceed at present \$20,000,000. This is certainly a moderate indebtedness for a nation that has a population of 11,000,000. This population, it is true, is composed of some inferior elements, the whites not exceeding 19 per cent., while the pure Indians constitute 38 per cent. and the mixed races 43 per cent. But, with the exception of perhaps 10,000 wild Indians in Yucatan, the latter two classes are all peaceful and laborious. The majority are engaged in agriculture, while the silver mines employ 100,000. To suppress brigandage and repress revolutionary attempts, the Diaz administration has been precisely what Mexico wanted, robbers, railroad wreckers and traitors being summarily dealt with. The result is general quiet, protection to all, the return of confidence and increasing industry and trade.

On July 1 last 7500 km. of railroads were in operation, and there are quite a number of important projects of new lines to be carried out without unnecessary delay. The most important is the Inter-oceanic Railway, which is to link Vera Cruz to Acapulco. A new company has bought the 494 km. of finished sections, and has undertaken to supply the missing links. C. De Murrieta & Co., of London, did the financing in July last. Another important enterprise is the Sierra Mogada Railroad to be built by an American-European syndicate, originating at St. Louis, Mo. This line is to bring the San Felipe coal region in the State of Coahuila in communication with the Sierra Mogada mines, and is to join the Mexican Central at Ximenes in that State. This railway will be 400 miles long and will connect the Mexican National, the International and the Central by means of a track running from east to west. The City of Mexico has succeeded in floating a 7 per cent. loan for \$400,000 for the completion of the Tesquisquiac tunnel, which is to drain the City of Mexico. In September the new International and Mortgage Bank of Mexico went into existence through the purchase by American and European financiers of the Mortgage Bank of Mexico, which had been incorporated in April, 1882, and has been paying 9 per cent. dividend since. The authorized capital of the new bank is \$5,000,000. It is based on the charter obtained by its predecessor, in its turn based on the concession of the Crédit Foncier de France, the bank having the right to issue mortgage bonds or cédulas on real estate, which mortgages in no case can exceed 50 per cent. of the value of property mortgaged. The bank can issue mortgage bonds for ten times the amount of its capital. By the modifications granted mortgages can be extended to works of public improvement and general utility.

The Mexican army has an effective strength of 30,017 men, commanded by 1915 officers, while the navy consists of 5 gun-

boats. The postal service is attended to in 800 offices, and 724 minor branches, employing, altogether, 1528 men. The number of letters and postal cards handled in 1887 was 22,885,092 in the interior, together with 1,845,720 international letters. There were in operation last year 339 telegraph offices belonging to the Federal Government, the total length of lines of the latter being 21,458 km.; those of States, 6887; those of railroads, 6183; private lines, 4098; Mexican cable, 2926, constituting a grand total of 41,507 km.

The import of merchandise into Mexico in 1886 was \$38,715,000; the export of merchandise, \$13,741,316, and of silver, \$29,906,401; together, \$48,647,717. The export in 1887 was \$15,636,000 of merchandise and \$38,561,000 silver; together, \$40,197,000; the United States receiving \$12,007,000; England, \$2,397,000; France, \$717,000; Germany, \$891,000; Spain, \$409,000, and the other countries, \$125,000. Of the silver shipped, \$16,576,000 went to this country and \$11,122,000 to England. The products shipped were: Sisal hemp, \$3,901,000; coffee, \$2,627,000; hides and skins, \$2,211,000; cabinet and dyewoods, \$1,849,000; tobacco, \$851,000; vanilla, \$694,000; isle fiber, \$349,000; cattle, \$471,000; argentiferous lead, \$323,000; other merchandise, \$2,360,000; and silver as indicated above.

The American trade has been as follows:

Fiscal year.	import.	Domestic export to Mexico.
1886.....	\$17,329,889	\$9,242,158
1887.....	14,719,840	7,267,129
Increase..	\$2,610,049	\$1,975,059

There entered Mexican ports in 1887, 1240 sea-going vessels of a joint tonnage of 1,032,725, of which 653 steamers measuring 877,518 tons. The Mexican merchant marine consists of 421 sea-going vessels and 847 coasting craft.

The building of the Tehuantepec ship railway remains in abeyance till the company shall have succeeded in procuring the capital necessary for it. The parcel post between the United States and Mexico has proved a great blessing for both nations, and cannot fail to aid American trade in a most remarkable manner. From what precedes it will be perceived that everything goes on satisfactorily in Mexico and in connection with that country. There is, indeed, every prospect that from now forward our business relations with it will multiply and become established on a most satisfactory basis, whether a reciprocity treaty be concluded or not. Perhaps the incoming Administration will take in hand the latter, and thereby contribute its share toward the desideratum just alluded to.

Irregular Distribution of Silicon in Pig Iron.—In analyzing samples taken from every other bed of a cast of pig iron, Mr. J. W. Thomas finds the silicon to vary considerably, the iron coming first from the furnace having the highest percentage of silicon. The following are the silicon results, beginning with the first bed that is filled:

First Cast.	Second Cast.
First bed.....3.328	First bed.....2.021
Third bed.....2.058	Third bed.....1.732
Fifth bed.....1.890	Fifth bed.....1.741
Seventh bed.....1.800	Seventh bed.....1.765
Ninth bed.....1.834	Ninth bed.....1.722
Eleventh bed....1.834	Eleventh bed....1.783
	Thirteenth bed...1.853

The percentage of silicon varies in each pig, being higher at the point of the pig than at

the butt. This is shown by the following results:

	Point of pig.	Butt of same pig.
1.....	3.328	2.157
2.....	2.058	1.960
3.....	1.890	1.808
4.....	1.800	1.751
5.....	1.834	1.787

The data given above are from the last volume of the "Transactions" of the Iron and Steel Institute.

OBITUARY.

SAMUEL M. FELTON.

Mr. James M. Swank, Secretary of the American Iron and Steel Association, has published in the *Bulletin* a very interesting sketch of the life of Samuel M. Felton, from which we quote:

Very rapidly the men whose enterprise, courage and skill have built up during the past quarter of a century the iron and steel industries of this wonderful country, so that, to all intents and purposes, these industries are now the first in the world, are passing away. It was a remarkable era in our industrial history which produced these men, and they were themselves remarkable men. There were giants in those days. The list of those who have died within the past few years is a long one. Their places are being taken by young men. We trust that they will not forget to honor the memory of the pioneers, or to do full justice to their mighty achievements.

The last to pass away of the great men above referred to is Samuel M. Felton, the president of the Pennsylvania Steel Company since its organization in 1865. He died at his residence in Philadelphia on Thursday night, January 24, 1889, aged nearly 80 years. Mr. Felton had been in poor health for several months, owing to the weight of years, but it was not until about a month ago that his condition became alarming. Thenceforward his strength gradually failed until the end. He was buried in Woodland Cemetery, on Monday, January 28.

Samuel Morse Felton, civil engineer, was born in West Newbury, Mass., July 17, 1809, was graduated at Harvard in 1834, studied civil engineering, became superintendent and engineer of the Fitchburg Railroad in 1843, and left it in 1851 to become the president of the Philadelphia, Wilmington and Baltimore Railroad Company, which position he occupied until 1865, when he resigned, owing to the great strain which its arduous labors and great responsibilities had imposed on him during the war.

The Pennsylvania Steel Company, of which Mr. Felton was the president from its organization in 1865, was the first company in this country to make the manufacture of Bessemer steel rails a commercial success. This was in 1867. The late J. Edgar Thomson, the president of the Pennsylvania Railroad Company, and Mr. Felton were the leading spirits in its organization and the principal subscribers to its stock. It required great courage to risk what they risked.

Mr. Felton was a commissioner of the Hoosac Tunnel in 1862, and a Government commissioner of the Union and Central Pacific Railroads in 1869. He was a member of the Centennial Board of Finance, and a director of the Northern Pacific Railroad Company from 1870 to 1873, and of the Pennsylvania Railroad Company from 1873 to 1883. He was also one of the original members of the Union League of Philadelphia, and occupied various other positions of honor and usefulness.

From authentic resources the *Bulletin* of the American Iron and Steel Association has compiled the following detailed account of Mr. Felton's services to the loyal

cause during the civil war: As president of the Philadelphia, Wilmington and Baltimore Railroad Mr. Felton planned and directed the secret passage of Mr. Lincoln from Philadelphia to Washington previous to his inauguration as President in 1861. He received information that a deep-laid plot existed to seize the Capital with its archives and records, and then declare the Southern conspirators to be the Government *de facto* of the United States. At the same time all communication between Washington and the North by way of the Philadelphia, Wilmington and Baltimore Railroad was to be cut off by burning the railroad bridges. If Mr. Lincoln was found he was to be put out of the way. Mr. Felton organized and armed a force of trained men, who, while apparently whitewashing the bridges, were in reality a guard that could be summoned instantly. He also established a secret police force.

The advertised route of Mr. Lincoln was from Harrisburg to Washington by way of the Northern Central Railroad. Mr. Felton secretly changed this plan and sent Mr. Lincoln from Philadelphia to Washington by delaying a regular train on his road for the nominal purpose of forwarding an "important package." When Mr. Lincoln was safely on the train the telegraph wires in all directions between Harrisburg, Philadelphia, and Washington were cut, and not united again until 8 o'clock on the following morning. After they were joined the first message announced the safe arrival of the "important package." The package was merely a bundle of old reports, carefully sealed and directed, and sent by special messenger, but its arrival meant the arrival of Mr. Lincoln at the Capitol. To Mr. Felton's alertness and good management this happy termination of Mr. Lincoln's perilous journey to Washington was entirely due.

The opening of the Annapolis route to Washington in 1861, as the result of Mr. Felton's foresight, was a service of great importance to the country. As early as December, 1860, he warned General Scott of the danger that menaced the Philadelphia, Wilmington and Baltimore Railroad by the destruction of its bridges over the Gunpowder and Bush rivers, near Baltimore, and urged him to provide against it by adopting the alternative route by way of Annapolis. When the news of the riot in Baltimore, on the 19th of April, 1861, and the burning of his bridges reached Mr. Felton by telegraph, even while the conflict was in progress, he instantly prepared to carry into execution the plan he had previously formed of using the iron ferryboat Maryland, employed on the Susquehanna ferry, to transport troops from Perryville to Annapolis, and thus open a new route to Washington. To this end he telegraphed to Washington for orders to send troops to Annapolis, but the authorities there urged him to forward troops to Baltimore. He was thus thrown on his own resources, and was obliged not only to organize the work of transportation by way of Annapolis, but to charter vessels and to convince the commanders of the various regiments arriving in Philadelphia of the necessity for a change of route. He took the sole responsibility of adopting a new route.

Almost simultaneously with the burning of bridges on the Philadelphia, Wilmington and Baltimore and the Northern Central railroads, Virginia troops to the number of several thousand seized Harper's Ferry, thus controlling another important direct route to Washington. With Baltimore in arms, and the Potomac closed by rebel batteries, Washington was in grave and imminent peril. In all probability the Capital would then have fallen but for the vigilance, foresight and energy shown by Mr. Felton in hurrying troops to Washington by way of Annapolis.

Not only did Mr. Felton direct in every detail the management of the Philadelphia, Wilmington and Baltimore Railroad at this time, but he prepared plans for the consolidation of all the railroads centering in Philadelphia, the telegraph and the Adams Express Company, and their employment as a unit in the service of the Government. In all that Mr. Felton did he was most ably and vigorously seconded by Mr. J. Edgar Thomson and by Admiral Dupont, then commanding the Philadelphia Navy Yard. From the morning of April 18 until after 6 o'clock on the evening of the 20th he scarcely allowed himself time to eat and did not close his eyes in sleep.

The authority for these statements is to be found in the official records of the war, the telegraphic dispatches sent by Mr. Felton, other documents relating to these events, which will soon be deposited with the Pennsylvania Historical Society, and in a narrative written by Mr. Felton, portions of which were printed in Schouler's "Massachusetts in the Civil War." The service to the country rendered by Mr. Felton was of the utmost importance, and it was given with all the determination and unhesitating assumption of responsibility that the crisis demanded. The result of the adoption of the Annapolis route in saving Washington is a matter of history, but the details have never been generally understood.

GUIDO PFISTER.

Guido Pfister, of Milwaukee, Wis., died on the 2d inst., after an illness of two weeks. Mr. Pfister was one of Milwaukee's foremost and wealthiest citizens. He was born at Hechingen, in the principality of Hohenzollern, Lower Germany, in 1818. He went to Milwaukee in 1847, when 29 years old, and immediately established himself in the leather business. The firm of Guido Pfister & Co., was formed in 1853. In 1857 Messrs. Pfister and Vogel merged their interests and proceeded to build up the enormous business now conducted by the Pfister & Vogel Leather Company, incorporated 1872, and of which Mr. Pfister was president. The company do the largest business of the kind in Milwaukee, and occupy first rank among the leather manufacturers of the country. Mr. Pfister's business interests were remarkably extensive. Compared with the aggregate of his other holdings, his interest in the Pfister & Vogel Leather Company was really small. He was one of the principal owners of the Milwaukee and Northern Railroad, and he was largely interested in the North Chicago Rolling Mill Company. He was a member and director of the Northwestern National Insurance Company, the Northwestern Mutual Life Insurance Company, the Merchants' Bank and the Mechanics' Fire Insurance Company. He held stock in the Wisconsin Telephone Company, in the Metropolitan Land and Iron Company, who operate the Norrie Mine, and was vice-president of the Johnson Electric Service Company. He owned a great deal of real estate in Milwaukee, especially in the Kinnickinnic and Menominee valleys. At an early day he invested a great deal of money in lands in Northern Michigan and Northern Wisconsin, and at the time of his death he owned many thousand acres in those regions. Much of the land is located along the line of the Milwaukee and Northern Railroad. He was a member of the Chamber of Commerce and Merchants' Association. In his charitable deeds he was extremely unostentatious. The Little Sisters of the Poor are said to have been largely supported by him. For ten years past he had entirely maintained an asylum for the aged poor near his birthplace; he set aside quite a large sum for the purpose, and the interest is used to maintain

the institution. There are two or three other charitable institutions on the other side of the ocean to which Mr. Pfister made regular contributions.

CORRESPONDENCE.

The Economy of Heating Furnaces.

To the Editor.—In your issue of the 17th inst., alongside of my letter of the 9th, is a reply from Messrs. Alexander Laughlin & Co. On the last line of my letter there is a slight error, namely: "product per ton" should read "product per turn." To properly decide which is the best of any two given systems of heating for any given person or persons to employ, all the circumstances attending each system must be well considered; the one having the balance in its favor will be, of course, considered the best.

Upon comparing the regenerative gas-heating furnace with an ordinary well-managed coal-fired heating furnace the following points present themselves for consideration, namely:

1. The kind of work to be done.
2. Constant or intermittent.
3. Locality where furnace is to be erected (price of coal).
4. Total amount of coal strictly on account of heating.
5. Cost of labor operating furnace.
6. Waste, or loss by oxidation.
7. Product.
8. Repairs.
9. Quality of work turned out.

Now, after some two and a half years' experience with a regenerative gas-heating furnace, built originally to Mr. Smith's plans, but since slightly altered, and for the purpose used (that of heating bar iron for an 18 inch train) we can safely say that, considering all the points enumerated, and comparing with the old style furnace, there is, in our case, an advantage in using the gas furnace; but that this advantage is not so great as would appear to be the case with others. As may be gathered from the tone of my last letter, others seem to get along with very much less coal than we do. But let us see if there is not a mistake somewhere. I do not agree with Messrs. Laughlin that a manufacturer would consider that the coal used on any kind of furnace for heating would be that used in "actual working hours" only; for, if he did not figure on all the coal weighed to the furnace over a period and divide by the 2240-pound tons made in the same period he would soon find that he was running behind. Nor do I agree with these gentlemen that 2000 pounds is a ton of finished iron. Manufacturers sell and dealers buy by the 2240-pound ton, and all tonnage labor is paid by the same ton. Again, one of the disadvantages in using a regenerative gas heating furnace on single turns only is that *proportionately* more coal is needed to keep up over night and get hot for next day's work than is needed on a well-managed coal-fired furnace, capacity considered. This is not to be wondered at when one considers the large amount of heating surface of the regenerators, which must be kept to their heat for efficient work. Now, let us allow that 255 pounds of coal was used to 2000 pounds of finished iron, though the amount of coal used was got at in rather a crude way—by counting the hoppers, as would appear from the statement given on the 8d inst. If 255 pounds were used for 2000 pounds of iron, 285 pounds would be used for 2240 pounds, or one ton; and if we add 115 pounds more per ton for keeping up, getting hot, and heating up Sundays for Monday's work, we have 400 pounds per ton of iron heated. I do not think 115 pounds per ton for this work too high,

amounting, as it does in the case referred to, to 1874 pounds per night on the average, and this average includes coal burned Sundays.

As hinted by Messrs. Laughlin, the amount of coal used is governed largely by the amount of the product. This is probably often overlooked. But with us, as at Zanesville, the product is bar iron, and we, of course, cannot get so large a product on that class of work as we could on nail-plate for instance, although we cannot blame the furnace or the rolls for it. Again, on nail-plate, the crop ends are proportionally smaller than on bar iron; thus, again, we see that item 1 should be well considered. Your correspondents refer to the consumption of coal for heating for a 9-inch mill, single turns, all told 400 pounds per ton. If by this is meant net tons, figured on gross tons it would appear as 448 pounds per ton—quite a difference. I think, too, it will be allowed by all that the consumption should be quite small for iron heated for a 9-inch mill, on account of the piles or billets being small and rapidly heated, compared with the larger piles heated and rolled on larger mills as at Zanesville and others. Here item 1 is again considered.

On a modified coal-fired furnace, heating for a 10-inch mill, we have for a week (double turn) heated a gross ton of finished iron with 560 pounds of Cumberland coal, all the coal being weighed, and made steam in large quantity with the waste heat. The product in this case was 9 to 10 gross tons per shift, and the waste by oxidation 6 per cent. The product was rounds, flats, &c., as usually rolled on this sized train.

I have figures from several sources, showing the coal consumption over a period on gas-heating furnaces, but even with those running double turn, and on nail slabs (steel) they do not claim to do upon the average anything like 300 pounds per gross ton of finished iron. It is right to say, though, that these furnaces have not been constructed recently, some being three to five years old. I think it would hardly be doing justice to Mr. Smith (who is entitled to great credit for having so energetically pushed the regenerative furnace in the United States) to at present say how much coal per gross ton we are using for heating, because I have reason to think that the furnaces he is now constructing are much improved since the time he furnished the plans for ours. If this correspondence should be the means of showing (by the replies elicited) how we can reduce our coal consumption I shall only be too glad to apply the remedy here, where coal costs "something."

I did not refer to the question of oxidation in my former letter, because we were well satisfied on that point. In fact, coal consumption is at present our weakest point. We have, I may say, heated heavy iron piles with a total loss of 4.5 per cent. in the gas furnace. The amount of coal needed to make steam (which is made from the waste heat on the coal-fired furnace system) must be added to the coal used on the gas furnace, capacity considered, to get total consumption, and is no small item where coal is expensive.

Yours respectfully, S. PETERS.

PORTLAND, ME., January 28, 1889.

To the Editor: In connection with the recently published correspondence relating to the economical work of the Smith Gas Furnace at Zanesville, Ohio, I beg to submit the following: Suppose two (2) coal heating furnaces are working to a 16-inch train, having boilers overhead generating steam sufficient for power, is the less fuel consumption in their gas furnace sufficient to equalize the coal consumed in separate boiler for power, and also pay the wages

of man on the producer? The above comparison seems to me the only proper one to make, at least for the question of coal consumption, even though the difference in loss from oxidation will serve as an offset to a certain percentage.

W. G. MORGAN,
Phoenix Horse Shoe Company.
POUGHKEEPSIE, N. Y., January 25, 1889.

Demurrage Charges at Chicago.

To the Editor: In your issue of January 31 is an article on railroad demurrage charges at Chicago. In any general discussion of this subject one material point is often overlooked, and was not mentioned in your editorial. It is this: If delay is a commercial offense, and as such to be paid for, then delays on railroads should be included. In Germany the law distinctly allows the railways to charge demurrage for overtime, but it as distinctly allows the merchant to collect compensatory damages for every day's delay to goods under shipment beyond a maximum time fixed for terminals, and one day for every so many miles of distance. If this fixed limit is passed by 15 days the railroad must pay for the goods, then technically considered lost.

T. L. G.

NEW YORK, February 1, 1889.

Washington News.

(From Our Regular Correspondent.)

WASHINGTON, D. C., February 5, 1889

The Committee on Ways and Means held another meeting to-day, during which they continued the reading of the Senate substitute. The Republican members of the committee are giving very little attention to this preliminary form, as any opposition on their part would simply cause delay without accomplishing anything. To-day Mr. Breckenridge, of Arkansas, made a motion to strike out the sugar clause, which led to some discussion between the majority and the two Republican members present, which consumed a large share of the time and lasted until adjournment. It is now conceded by Sub-Committee Chairman Allison on the one hand, and Chairman Mills on the other, that neither the House bill nor the Senate substitute can pass. A new idea has been suggested on the part of the Democratic leaders of the House in the shape of a selection of such features of the Senate substitute as come within range of the House bill, and upon that to build up a compromise measure. The only features which would come within that range are:

1. Repeal of the tobacco tax.
2. Repeal of tax on alcohol used in the arts.
3. Adoption of the administrative features.

This would relieve the redundant revenues of about \$30,000,000. The committee will not agree to any of the customs features of the Senate substitute. The Ways and Means Committee have not yet received the figures from the Treasury Department which will exhibit the operations of the Senate substitute, and they are unwilling to proceed until they can have that information, in order to know what they are doing. The members say that otherwise they would be groping about in the dark.

As this Congress will terminate by limitation in another month, the tobacco and protection Democrats have notified the Committee on Ways and Means that they will give them a reasonable time to report, but if not heard from very soon they will move ahead on their line, following the leadership of Mr. Randall. If the tariff controversy in the House should reach this point the contest will be inter-

esting. The tobacco wing under Randall will be supporting tobacco tax repeal, while the tariff reform wing will stand out for customs reduction. The Republicans meanwhile will support their Senate substitute. With these clashing interests and opinions complicating the issue the prospects of doing anything by this Congress are not bright.

There is a powerful influence in both Houses which is opposed to urging an extra session on the grounds of tariff revision. The surplus bugbear has lost much of its force. The increased pension allowances and an enormous deficiency in the appropriations for pensions under existing statutes alone gives rise to some doubt as to the expediency of endangering the financial status of the government by any material reduction of revenues. The possibility of large appropriations to meet any sudden emergency in the Samoan situation is another check to revenue-reducing legislation.

Taking all these things together, the more conservative members of both Houses of Congress think that a session before the regular time would be unwise, unless Samoan complications should compel a declaration of war with Germany, or require legislation to give the President additional authority.

There is considerable agitation in political circles growing out of the mention of the name of Senator Evarts for Secretary of the Treasury. Senator Allison and others of equal weight in Republican counsels think that this would be a satisfactory way out of the New York dilemma. The venerable Senator, however, is not disposed to view the situation in that way. He is very well satisfied where he is.

The warlike flurry in the South Sea islands has stimulated a decided disposition to increase the appropriations for ships and guns. It is proposed, when the Naval Appropriation bill reaches the Senate, to add large items for the building of ships and construction of ordnance. Members of the Senate Sub-Committee on Finance, speaking of the changed condition of things which may be imminent, and the prospective increased necessities of the Government, are inclined to regard the delay in the passage of measures proposing a reduction of revenue as rather a fortunate circumstance. With legislation putting a protective duty on tin plate, and specifically determining the duties upon and classification of cotton ties and wire rods, they would be satisfied to allow matters to rest, while the proposition in the House to prepare a composite bill, making a reduction in the revenues which might be regarded as experimental, would enable the ultra men who train after Chairman Mills to reclaim some of the ground lost during the heated tariff contests of the last campaign.

The Bethlehem Iron Works, at Bethlehem, Pa., will soon make their first delivery of steel forgings for large guns, under their contract with the Navy Department. The company have erected a new plant at an expense of \$1,000,000, and will soon be able to keep the Ordnance Foundry at Washington supplied with forgings for 6, 8, 10, and 12 inch guns. The foundry has used up about all the material on hand, and will be ready to go to work on the forgings as soon as they are delivered. The first 8-inch material received will be used for the two 8-inch guns for the new cruiser Charleston at San Francisco. The four 6-inch guns for the gunboat Petrel are now being finished at the foundry, and will be ready for shipment when that vessel is completed.

An iron shed 600 feet long will be erected in Hoboken for the Delaware, Lackawanna and Western Railroad.

The Threatened Coke Strike.

From present appearances the threatened strike of the coke workers in the Connellsville coke region will not become general. Notwithstanding the fact that at a number of the works in the region the men have gone out, a sufficient number are still at work to more than supply the demand for coke, which for the past two months has been on the decline. In fact, so great has been the falling off that very few ovens in the region are being operated more than four days per week. In view of these circumstances the operators feel that an entire shut-down of all the ovens in the region for a period of several months would be in the nature of a blessing, and for this reason they are indifferent, to an extent, as to whether the men continue at work or not. The report published in the Pittsburgh papers last week that the H. C. Frick Coke Company had signed the scale is without foundation. On Thursday, the 31st ult., this firm posted a notice on their various works that present wages would be continued until otherwise ordered, but did not sign the scale. This firm are paying 6½ per cent. more wages than is paid at the other works in the region. Some time ago the workers outside of those employed by the Frick Company prepared a scale, which is practically the same as that now in force at the Frick Works, and announced that unless all other operators in the region signed it before February 1 there would be a strike. The men claimed that if the Frick Company could afford to pay the wages asked for by this scale, the other operators could do so. On the other hand, the operators state that the Frick Company are able to pay higher wages from the fact that they have a number of old contracts on hand, some of which are based on coke at \$1.50 per ton. As is probably well known, the H. C. Frick Coke Company are closely related to the firms of Carnegie, Phipps & Co., Limited, and Carnegie Bros. & Co., Limited, and the greater part of the coke produced by the Frick Company is used in the nine blast furnaces operated by the above-named firms. Had the Frick concern decided to stand with the other firms, and refused to continue the present rate of wages, it is probable that a general strike of the coke workers would have been the result, and in a short time the Carnegie firms would have been unable to procure coke to operate their blast furnaces, and, as a consequence, they decided to authorize H. C. Frick, who occupies the position of chairman of the H. C. Frick Coke Company, and also Carnegie, Phipps & Co., Limited, to continue to pay the wages called for by the Frick scale, which expired on the 31st ult. A majority of the operators in the region have expressed themselves as being willing to continue present wages, but they will not concede any advance. They further state that should an advance in the price of coke occur, they will be willing to take the question of an advance in wages into consideration. It is believed that the close of the present week will witness a resumption of work at the few works now idle, and also a settlement of the threatened trouble.

The prices for furnishing iron water-pipe to the city of Milwaukee by the Addyston Pipe and Steel Company (the lowest bidders) were: 30-inch, \$24.75; 16, 12, 8 and 6 inch, each \$24.93; 4 and 3-inch, \$25.93 each.

The Edison Iron Concentrating Company, of Chicago, have been incorporated under the laws of Illinois, with a capital of \$115,000, to carry on a general mining business. The incorporators are Walter S. Mallory, Justin B. Stanley and Jeremiah Leaming.

TRADE REPORT.

Philadelphia.

Office of *The Iron Age*, 220 South Fourth St.,
PHILADELPHIA, Pa., February 5, 1889.

Pig Iron.—The market shows but little change from the condition reported a week ago. Prices may possibly be a trifle steadier, but there is no life or activity in the market, and nothing to warrant very strong hopes of such a turn in the immediate future. A bottom appears to have been reached, however, and at, say, \$15 delivered for Gray Forge, \$16.50 for No. 2 and \$17.50 @ \$18 for No. 1 there is not only no disposition to make concessions, but there are very few willing to accept those figures, even from the very best class of buyers. Some orders were placed at those prices recently, but the more necessitous sellers appear to have unloaded, so that the market stands more on its merits than it did a week or two ago. Fair average quotations to-day would be \$15.50 @ \$16, delivered, for Gray Forge, \$16.50 @ \$17 for No. 2 Foundry, and \$18 @ \$18.50 for No. 1. Some brands command a little beyond these figures, while others, under special circumstances, might not command as much; all depends on circumstances. A careful review of the entire position would lead to the impression that, notwithstanding the dullness, there are some indications of improvement. There is, for instance, less disposition to force sales. Makers of Pig Iron appear to have concluded that they may as well call a halt at present prices, and if the iron cannot be placed the furnaces will be "blown out." This feeling is so universal that even consumers begin to see that there is no danger in taking good Iron at current rates, although such a thing as an advance is hardly taken into account. There is a very careful discrimination, however, in regard to the selection of brands, and while one, such as consumers might have a preference for, would command the highest quotation, others might be neglected at comparatively very low figures. The market is well enough supplied to permit plenty of choice to the buyer, and for the same reason it is very difficult to place Irons that are not fully established. As regards this market, we repeat that while there is very little change from last week, the position is so sensitive that it would be easily influenced by advices from the South and West. Buyers and sellers therefore both seem inclined to wait developments before entering into heavy engagements, the general impression being that the demand will improve during the current month, and prices be somewhat more settled than they were during January.

Foreign Iron.—Bessemer nominal at \$19.50 @ \$20, c.i.f., duty paid, and 20 % Spiegel \$27.50 @ \$28, with no demand at these rates.

Blooms.—The market is dull and irregular, although sales appear to be at about the figures quoted below—viz.: \$28 @ \$28.50 at mill for Nail Slabs; \$29 @ \$30 for Sheet Iron Billets; \$30 @ \$31 for Soft Tank, and \$35 @ \$36 for flange purposes; Charcoal Blooms, \$52 @ \$54; Run-out Anthracite, \$42 @ \$44; Scrap Blooms, \$32.50 @ \$34 @ "bloom" ton of 2464 lb.

Muck Bars.—There is rather more inquiry, but the outcome has not amounted to much actual business so far. Prices at mill are from \$27 to \$27.50 asked, or \$28 to \$28.50 delivered; but buyers talk materially lower figures before they can do anything.

Bar Iron.—There is not much room for comment under this heading. Manufacturers say they are refusing orders

daily because prices are too low to cover first cost for a good quality of Iron. Somebody takes the business, however, but whether the quality stipulated for is delivered is another thing. A good deal of business of this kind is taken at \$1.70 @ \$1.75 for specifications, which leading mills claim they could not meet at less than \$1.80 @ \$1.85. This is the talk among manufacturers, and is said to be the only reasonable explanation that can be given for such low prices. But in any case the volume of business is not large, otherwise cutting would be less frequent. Skelp Iron is moving at about \$1.75 for grooved, although the demand is confined to one or two large concerns, who have taken it in 1000-ton lots. The general tone of the market is called fairly active, but at weak and irregular prices for both Bars and Skelp.

Plate and Tank Iron.—Business continues dull, without the slightest indication of an early improvement in price. The volume of business is by no means small, but the immense capacity for production keeps many of the mills in a chronic condition of hunger. The large Steel works West are the most serious competitors, and, until there is a better demand in that section of country, the East will have to continue doing business at low prices, which, to-day are about as follows: 1.90¢ @ 2¢ for Ordinary Plates and Tank Plates, 2.1¢ @ 2.2¢ for Universal Plates; Shell, 2.4¢ @ 2.5¢; Flange, 3.5¢; Fire-Box, 4¢; Steel Plates, Tank and Ship Plate, 2.15¢ @ 2.25¢; Shell, 2.7¢; Flange, 3¢ @ 3½¢; Fire-Box, 3½¢ @ 4½¢.

Structural Iron.—A little more activity may be noted in this department, although no very large orders have been placed. The general demand is better, however, and some of the mills have gained a little, without being at all crowded with work. Prices are still very much unsettled, with something of a tendency toward lower prices on Plates and Angles. Nominal quotations as follows: Bridge Plate, 2¢ @ 2.1¢; Angles, 2¢ @ 2.1¢; Tees, 2.4¢ @ 2.6¢; Beams and Channels, 2.8¢ for Iron or Steel.

Sheet Iron.—A better demand is reported, and a large amount of business could be taken at prices slightly below quoted rates. Manufacturers consider that current prices are already lower than they ought to be, and are not disposed to meet buyers' terms for first-class qualities. Small lots are quoted as follows:

Best Refined, Nos. 26, 27 and 28.....	3 @ 3½¢
Best Refined, Nos. 18 to 25.....	2½ @ 3¢
Common, ¼¢ less than the above.	
Best Bloom Sheets, Nos. 26 to 28.....	4½ @ 4½¢
Best Bloom Sheets, Nos. 22 to 25.....	3½ @ 4¢
Best Bloom Sheets, Nos. 16 to 21.....	3½ @ 3½¢
Blue Annealed.....	2.6 @ 2.8¢
Best Bloom, Galvanized, discount.....	62½¢
Common, discount.....	67½¢

Steel Rails.—The market is not active by any means, but there is a fair inquiry and some sales at quoted rates, including one 5000-ton lot for March and April delivery at \$28, f.o.b. cars, Eastern mill. Report says that relatively lower prices have been accepted in the West, but there is an undoubtedly firm feeling in this market, and \$28 is said to be a minimum quotation.

Old Rails.—Nothing doing in this market, the lots here being held at upward of \$24 in store. There are buyers at \$23.50, f.o.b. cars, with one sale of 1000 tons at that price, f.o.b. cars Jersey City.

Scrap Iron.—Market quiet and easy, although quotations remain as before, viz.: \$20.50 @ \$21 for cargo lots; \$21.50 @ \$22 for carload lots, delivered, or for choice \$22.50; No. 2 do., \$14 @ \$15; Turnings, \$13 @ \$14; Old Steel Rails, \$20 @ \$21; Cast Scrap, \$15 @ \$16; do. Borings, \$9 @ \$10; Old Fish Plates, \$25 @ \$26; Old Car-Wheels, \$17 @ \$18, Philadelphia.

Wrought-Iron Pipe.—Considering that this is the dull season, the demand is very fair. There are two or three inquiries in the market for very large lots, and manufacturers expect that a great deal of work will be given out this spring. Meanwhile the smaller class of trade are supplied at about the following discounts: Butt-Welded Black, 55 %; Lap-Welded Black, 65 %; Butt-Welded Galvanized, 45 %; Lap-Welded Galvanized, 55 %; Boiler Tubes, 62½ %.

Nails.—The market is dull and unchanged. Standard brands command \$1.90 @ \$2 from store, but outside Nails are irregular and hard to move in large lots, unless at concessions from quoted rates. Manufacturers are still hopeful that united action will be taken with a view of restricting production and advancing rates to fair living prices.

Chicago.

Office of *The Iron Age*, 95 and 97 Washing-
ton street, CHICAGO, February 4, 1889.

Now that the month of January has passed, it is interesting to note how different the course of the Iron trade has been from that anticipated quite generally during the dullness of December. Predictions were then freely made that "the turn of the year" would bring better business, and that the middle of January, at the furthest, would see a resumption of activity and decided firmness in prices. Instead of this the greater part of the month was exceedingly dull, buying was spasmodic, prices gave way, and February opens with a cheerless aspect. Coke Pig Iron has fallen from \$1 to \$1.50 @ ton, Bar Iron shows fully as great a shrinkage, Tank Iron and Steel have lost \$3 @ ton, Tool Steel is ¼¢ @ lb lower, Old Rails are \$2 @ \$2.50 @ ton cheaper, and the demand for Scrap has not been so light at this season for years. The cut of ¼¢ @ lb in Beams and Channels, though brought about by special influences, emphasizes the prevailing tendency toward lower prices. Steel Rails held their own during the month, as did Steel Nails, but these commodities had sounded the lowest depths of depression in the fall, and their exceptional position of firmness in the midst of general weakness is due to the appreciation of remedial measures found necessary by the manufacturers to avert complete demoralization. The time has evidently not yet come for the adoption of similar measures in other branches of trade, which are now drifting in a sea of uncertainty, with no beacon light to indicate where a haven is to be found. In agreeable contrast with the unsatisfactory condition of the primary branches of the Iron trade, the Hardware merchants are enjoying an excellent demand for all classes of goods.

Pig Iron.—Dealers report a little more activity during the past week, but nothing has occurred to show any special tendency in the market. Those who need Iron are buying it, and those who do not need it are not inclined to speculate. The low prices now current are not being met by all manufacturers, and it is noticeable that those who are willing to do so seem to have no trouble in disposing of as much of their product as they care to sell. Some of the largest Southern furnace companies are reported to have withdrawn from the market, with contracts covering their entire production for a considerable part of the year, which causes a restriction on the supply of Mill grades. In Lake Superior Charcoal no change has been made, moderate sales being reported at full prices. Cash quotations are as follows, f.o.b. Chicago: Lake Superior Charcoal, Nos. 1, 2 and 3, \$20; American Scotch (Blackband), No. 1, \$18.50 @

19.50; No. 2, \$17.50; Jackson County Silvery, No. 1, \$18; other Ohio Soft Irons, No. 1, \$17 @ \$18; Lake Superior Coke, No. 1, \$16 @ \$17; No. 2, \$15 @ \$16; No. 3, \$14 @ \$15; Southern Coke, No. 1 Foundry, \$16 @ \$16.50; No. 2 Foundry and No. 1 Soft, \$15.25 @ \$15.75; No. 3 Foundry, \$15; Gray Forge and No. 2 Soft, \$14 @ \$14.50; A reduction of 15¢ per ton was made on the 1st inst. in the rate of freight on Pig Iron from the South.

Bar Iron.—With a limited demand nominal quotations are still maintained at 1.70¢, half extras, f.o.b. Chicago, for mill lots of good Common Iron. Close figuring is done on good specifications, each transaction carrying its own price, which is seldom made public, unsuccessful bidders not knowing how much they were beaten. The market is unsettled from this cause, and an attempt to give actual prices would be a mere piece of guesswork. Jobbers report a very light demand from the small manufacturing consumers, showing a dearth of business among them. Quotations from store vary from 1.90¢ to 2¢, according to quantity and quality.

Structural Iron.—There is nothing of interest to report, and prices are nominally unchanged. Mill lots are quoted, f.o.b. Chicago, as follows: Angles and Sheared Plates, 2.12½¢ @ 2.15¢; Universal Plates, 2.20¢; Tees, 2.45¢ @ 2.55¢; Beams and Channels, 2.90¢; Small lots from store are held at the following rates: Angles, 2.25¢; Tees, 2.70¢; Beams and Channels, 3.50¢.

Plates, Tubes, &c.—Much more than the usual volume of business has been done in Plates, in consequence of the closing of contracts for large quantities upon which bidding has been in progress for some time. As the competition was very strong the prices made were very low. One order taken was for 420 tons of Tank Steel to be used in the construction of the new water works. There was a difference of over \$25 per ton between the highest and lowest bids. Small lots from store are quoted as follows: Sheet Iron, Nos. 10 to 14, 2.50¢; Sheet Steel, 3¢ @ 3.50¢; Tank Iron, 2.40¢; Tank Steel, 2.60¢ @ 2.75¢; Shell Iron, 3¢; Shell Steel, 3.12½¢; Flange Iron, 4¢; Flange Steel, 3.50¢; Fire-Box Steel, 4.75¢ @ 5.75¢; Boiler Rivets, 4¢ @ 4.25¢; Ulster Iron, 3.75¢. Boiler Tubes, 62½¢ @ 65¢ off.

Sheet Iron.—No change is reported of any consequence, except that manufacturers' prices for Galvanized are slightly firmer and for Black Sheets a little weaker. Prices from store continue at 3.30¢ for No. 27 Common Black, and 65¢ off for Juniata Galvanized and 65¢ and 2½¢ off for Charcoal.

Merchant Steel.—The volume of business is small at present, with buyers shopping vigorously before placing their orders. Quotations are as follows: Bessemer Bars, 2.30¢; Tool Steel, 7½¢ @ 8¢; Specials, 13¢ @ 25¢; Crucible Spring, 8.75¢; Open-Hearth Spring, 2.25¢ @ 2.50¢; Open-Hearth Machinery, 2.30¢ @ 2.40¢; Tire, 2.25¢ @ 2.50¢; Sheet, 7¢ @ 10¢.

Steel Rails.—A number of small lots were sold during the week, but orders for any considerable quantity are scarce. Prices are asked by some of the leading railroad companies, and it is expected that they will want large lots, but they do not state what they will need nor how much they expect to contract for at this time. Prices are firm at \$30 @ \$30.50, according to quantity.

Old Rails and Wheels.—Several thousand tons of Old Iron Rails have been sold at various prices, ranging from \$21.50 to \$20. The drop in prices induced rather free buying, but consumers now seem to be well stocked, and probably not over \$19.50 could be realized. Old Car Wheels

are very quiet and are nominally worth \$19. Old Steel Rails are quoted at \$14.50 @ \$17.50, according to length.

Scrap.—There is no demand at present. Dealers say that not for years has the market been so dull at this season. Midwinter usually brings an active demand for Scrap, but this has been an exceptional winter in almost every respect. In the absence of transactions, prices are wholly nominal for most classes of old material. Mixed Steel was sold at \$16.75, gross ton, delivered at Pittsburgh, and Heavy Cast Iron at \$13.60, net ton, Chicago. Some Axle Chips sold at \$12.50, net ton, Chicago.

General Hardware.—In this line business is going on very satisfactorily, and the outlook is most promising. Agricultural commodities, such as Steel Goods and other articles used by farmers, are in active request, while staple goods, and particularly Builders' Hardware, are moving freely. An indication of the condition of affairs in the Northwest is shown by the activity in the local building trade, more permits for buildings having been issued in this city in January than in the corresponding month in any of the past five years. Collections are excellent for the season.

Nails.—The advanced card adopted by the manufacturers of Steel Nails last week was immediately followed by an advance of 5¢ per keg by the local jobbers. The price here is now \$2 in carloads or mixed carloads, and \$2.05 in small lots. Wire Nails are a little weaker, notwithstanding the efforts of manufacturers to stiffen the prices of these goods. Small lots are now quoted in a regular way at \$2.45, with 5¢ off for carloads or mixed carloads. Both kinds of Nails are selling very freely from stock, but comparatively few straight carloads of either are now called for, such orders being for mixed lots, usually half and half, with a slight preponderance in favor of Steel Cut Nails.

Barb Wire.—Nothing new has occurred in this branch of trade. The demand continues exceptionally good for the season, stimulated, doubtless, by the mild weather, which enables farmers to do more outdoor work than usual, but prices are no higher. Jobbers quote 2.80¢ for Painted and 3.40¢ for Galvanized in mixed carloads, and 2.90¢ and 3.50¢ respectively for small lots, but these prices are shaded to best buyers. Manufacturers' stocks are being reduced rapidly, and for this reason an improvement in prices is expected before very long, as, at present rates, very few of them are realizing cost.

Pig Lead.—The market is quiet, the sales of the week footing up about 300 tons only, for which 3.60¢ was paid. Bids of 3.50¢ have been made, but sellers ask 3.55¢. The consumption is heavy and dealers do not anticipate much lower prices.

H. R. Durkee & Co., 115 Dearborn street, Chicago, have been appointed agents for the sale of the Brier Hill Iron and Coal Company's Pig Iron.

The Pottstown Iron Company, of Pottstown, Pa., have established Western offices at 95 Fifth avenue, Pittsburgh and 115 Dearborn street, Chicago, for the sale of their Universal and Sheared Plates for all purposes. Charles E. Billen is agent.

The Hinkle (Charcoal) Furnace, at Ashland, Wis., made 100 tons of pig iron on the 2d inst. This beats the record made by any other charcoal furnace very considerably.

One of the Sheridan furnaces of Kaufman & Co. has chilled.

Pittsburgh.

Office of The Iron Age, 77 Fourth Ave., Pittsburgh, February 5, 1889.

The weather continues unfavorable, and the roads are in an almost impassable condition. The Monongahela River coal works, after having been idle for two months, started up yesterday, affording work for some 6000 miners. Most of the coal loaded at present will be for Southern markets, as operators are anxious to take advantage of the spring rises to get it out. The Cincinnati, Louisville and St. Louis markets continue well stocked. Cincinnati, it is claimed, has enough to run it for several months. If many of our manufacturers carry their threats into execution, and discard natural gas for fuel, there will be a largely increased consumption of coal here.

The new Rail mill of the Allegheny Bessemer Company, located at Duquesne, a small town on the Monongahela River, a few miles above, were partially started up yesterday for the first time; the mill, while not of the capacity of the Edgar Thomson, is said to be one of the most complete in the country, having been supplied with all the latest appliances and improvements.

Pig Iron.—We have to report a continued dull, unsettled and considerably demoralized market. While the offerings do not appear to be excessive, they are more than the demand. Furnacemen do not see how it is possible for prices to go lower, but they have been feeling this way for some time past, and yet the market has been steadily getting away from them all the while. As compared with prices of a week ago, there has been a further decline of 25¢ @ 50¢ per ton. We now quote as follows:

Neutral Gray Forge.....	\$14.50 @ \$15.00, cash.
All Ore Mill.....	15.75 @ 16.00, "
White and Mottled.....	14.00 @ 14.50, "
No. 1 Foundry.....	16.50 @ 16.75, "
No. 2 Foundry.....	15.75 @ 16.00, "
No. 1 Charcoal Foundry.....	23.50 @ 24.00, "
No. 2 Charcoal Foundry.....	21.00 @ 21.50, "
Cold Blast Charcoal.....	25.00 @ 25.50, "
Bessemer Iron.....	16.25 @ 16.50, "

Included in the sales reported were Forge Irons at \$14.50 @ \$15, and Bessemer at \$16.25, both cash.

Muck Bar.—Continues very dull, and in the absence of sales it is difficult to give reliable quotations; there is no demand, and while it has been offered at \$27, cash, the inference is that it might be bought for less. Buyers who contracted some time ago, when prices were a good deal higher than they are now, are squirming a good deal.

Spiegel.—Continues quiet, with no recent change in prices; sales mostly small—quoted at \$28.50 @ \$29 for 20%; Ferro-manganese, \$56 @ \$56.50, cash, for 80%.

Manufactured Iron.—Demand continues light, and prices are weak and drooping in sympathy with the raw material. It is hoped, however, that orders will be coming forward more freely before the close of the present month. Bars are quoted at 1.70¢ @ 1.75¢; Plates, at 2.15¢ @ 2.20¢; No. 24 Sheet, 2.80¢ @ 2.85¢, all 60 days, 2¢ off for cash. Skelp Iron, 1.75¢ @ 1.80¢ for Grooved, and 1.90¢ @ 2¢ for Sheared.

Wrought-Iron Pipe.—The Pipe trade continues in much the same condition as noted in our last report. There is a fair business for the time of the year, but it is difficult to give reliable quotations, as the market is open and each firm is free to make its own rates. Discounts are quoted, large lines, as follows: On Black Britt-Welded Pipe, 55 and 5 @ 57%; on Galvanized do., 50 and 5 @ 5%; on Black Lap-Welded, 65 @ 67½%; on Galvanized do., 55 and 2½%; Boiler Tubes, 65%; 2-inch Tubing, 11¢ @ 12¢ per foot, net; 5½-inch Casing, 85¢ per foot, net.

Old Rails.—Continue dull and prices are weak and unsettled. Some sales reported at \$23.50 @ \$23.75 for American. The expectations of the more sanguine in regard to the course of the market this winter have not been realized; instead of an advance, as they expected, prices have declined, and here we are in mid-winter, when it was expected prices would be up, and Rails are not worth as much by from \$1.50 @ \$2 per ton as they were during the fall. This may be attributed to the very open winter, and the work of lifting has at no time yet been suspended. Old Steel Rails are quoted at \$18 @ \$18.50 for short and \$20 @ \$20.50 for long lengths.

Steel Rails.—Manufacturers here continue to quote at \$28 cash on cars at works, and while this price is being obtained for small lots, it is well known that no such price could be obtained for anything like a desirable order. As noted elsewhere, the new mill of the Allegheny Bessemer Company is about to be started up, but being new it will require some time to get it fully into operation.

Billets, &c.—The demand continues light, and prices are weak and drooping, and may be quoted at \$28, and Nail Slabs at \$27.50; Domestic Blooms and Rail Ends dull, and in the absence of sales may be quoted at \$18.50 @ \$19.

Railway Track Supplies.—Demand continues light, and prices are weak and drooping. Spikes 2.10¢, 30 days, free on cars at works; Splice Bars, 1.75¢ @ 1.80¢; Track Bolts, 2.80¢ with Square and 2.90¢ with Hexagon Nuts.

Merchant Steel.—There is a very fair business, but prices are no better, and this is about the only source of complaint. Best brands of Tool Steel, 8½¢; Crucible Spring Steel, 4½¢; Crucible Machinery, 5¢; Open Hearth do., 2½¢.

Old Material.—Demand continues light and prices are weak, but without important changes. No. 1 Wrought Scrap, \$20.50 @ \$20.75, net ton; Wrought Turnings, \$13 @ \$13.50; Car Axles, \$24.75 @ \$25; Cast Scrap, \$14.75 @ \$15.25, gross; Cast Borings, \$11.50 @ \$12; Old Car Wheels, \$19.

Louisville.

LOUISVILLE, KY., February 2, 1889.

Pig Iron.—There has been no change in the price of Iron during the past week; a decrease in the number of sales, however, is noticeable, as most consumers have supplied their wants for the following six months. Sales of Close Silver Gray have been made at \$11.75, cash, cars Louisville, which is the lowest price accepted since the present depression. We have no change in prices, and quote for cash in round lots as follows:

Southern Coke, No. 1 Foundry, new classification.....	\$14.75 @ \$15.25

Chattanooga.

Office of *The Iron Age*, Carter and 9th Sts., CHATTANOOGA, February 4, 1889.

Pig Iron.—The tone of the market is somewhat improved, and there is a much better feeling prevalent now than for the past two weeks. The uneven prices at which sales were reported to have been

made have been replaced by steadier prices, and those desirous of buying have made up their minds that if they get much Iron they will have to pay a reasonable price for it, although there is now and then an occasional producer that is inclined to sell under the market. The general opinion seems to prevail that prices have touched the bottom figure, and that prices in the future will take an upward turn. The storage and warrant system seems to meet with special favor, as under its workings a furnace that is indisposed to sell can realize nearly the market value of their product, and, besides, it will no doubt be the means of bringing a good deal of money into the South. As an evidence of a more confident feeling, an offer was made for 1000 tons No. 1 Foundry at \$13, free of commissions, cash in 30 days, which was refused, although the same day 500 tons of Open Bright were sold at \$12.50, cash in 30 days. There is a good deal of Pipe and Stove-Plate Iron moving, and many of the furnaces are well sold up on these grades.

St. Louis.

OFFICE OF *The Iron Age*, 212 N. Sixth st., St. Louis, February 2, 1889.

Pig Iron.—The market is in a dull and apathetic condition, and the few sales reported are generally for small lots. The large purchase made last week by the Shickle, Harrison & Howard Iron Company, which amounted to something over 30,000 tons Southern Coke Iron, and which included Nos. 1 and 2 Soft, and Nos. 2 and 3 Foundry, has about cleaned up the surplus stocks of a number of furnaces which were interested in the transaction, and who say they have no more Iron for sale, at least not at the figures at which it is understood this purchase was made—that is, on the basis of \$13.50 for No. 3 Foundry, which is considered very low. For ordinary sized lots we quote for cash, f.o.b. St. Louis, as follows:

Southern Coke, No. 1 Foundry.....	\$15.25 @ \$15.75
Southern Coke, No. 2 Foundry.....	15.00 @ 15.25
Southern Coke, No. 3 Foundry.....	14.25 @ 14.75
Gray Forge.....	13.50 @ 13.75
Ohio Softeners.....	17.50 @ 20.00
Lake Superior Charcoal.....	21.00 @ 21.50

Missouri.

Charcoal Foundry, No. 1.....	16.00 @ 16.50
Charcoal Foundry, No. 2.....	15.00 @ 15.50

Tennessee.

Charcoal Foundry, No. 1.....	17.50 @ 18.50
Charcoal Foundry, No. 2.....	16.75 @ 17.50

Bar Iron.—Business has been very dull for some time, but indications point to a renewal of activity in the near future. Inquiries are coming in which no doubt will result in business later on. Prices have not been satisfactory, but the outlook is improving and with a spirited demand prices are likely to improve. We quote \$1.90 for lots from store.

Barb Wire.—Shows signs of decided weakness, and business cannot be carried on much longer under the present state of affairs. The "pool," which was formed some time since, and was to go into effect February 1, has collapsed, on the refusal of a few manufacturers to enter the combination, and, as the result, manufacturers are making their own prices, which in some cases are reported very low. The volume of business is in fair proportion to the output, and with an increased demand, which is customary at the opening of the spring trade, manufacturers hope for some improvement in the low prices at present prevailing, which are about as follows: For car lots, 2 and 4 Point Painted, \$2.90; for car lots, 2 and 4 Point Galvanized, \$3.50, f.o.b. St. Louis; less than car lots, 5¢ additional.

Sligo Iron Stove Company, St. Louis, Mo., have been appointed agents for Drill Rods, Hammer, Pick and Wedge Steel,

Spring, Sheet and Machinery Steel and all other kinds of Crescent Steel manufactured by Miller, Metcalf & Parker, Pittsburgh, Pa.
